It is M. Taine's evident distaste for Roman Catholicism which apparently has assisted in causing the reviewer to bring him to book; and while we certainly think the motive a sufficiently good one, we are rather surprised that so clever a writer should not guard a trifle better against its excessive operation. Does he think, we wonder, that he promotes his cause by such remarks as those he lets drop about the English Reformation and the German? Of these movements he says that as "the leverage of the Reformation" in Germany was politics, so its leverage in England was plunder; and he reminds us once more of Luther's "beery, boozy Table-Talk," and scoffs at M. Taine for seeking the causes of the English Reformation in Germany. We do not know precisely how to take the metaphor of "the leverage." The property of the English religious societies was certainly confiscated at the time of the Reformation, under Henry VIII., who as certainly was not a very nice "Defender of the Faith"—either when the infallible Supreme Pontiff gave him that title or when he assumed the right to give it to himself. And no doubt at that time a good many rascally Catholics became more or less rascally Protestants in consideration of receiving certain lands plundered from some of their Roman Catholic brethren. But when this account of the English Reformation has been given, does our reviewer consider the subject exhausted? Rather—for he is not professing to be exhaustive—does he consider it it so much as touched at any very important point? We should say that it is touched at a point of decidedly minor importance if the business in hand is to tell how it happened that the Roman Catholic Church split into numerous fragments in the course of the sixteenth century. And, moreover, we hold with M. Taine that when this question is to be handled, it is quite in order to refer to Martin Luther—whose beeriness and booziness, again, and whose bellowing in bad Latin, and several others of whose ways, are not to the taste of any person now living—outside of certain polemical circles, at least. If we were compelled to describe the condition of mind in which various sorts of persons find themselves when they have in contemplation Martin Luther and his companions, we should describe it as rather childish. Luther brought about the Reformation because he was a monk in love with a nun, we have recently been informed—a cause which might have become operative before his time, one would think. But neither his marrying his wife, we need hardly assure the *Catholic World*, nor his beer-drinking, nor his bad Latin, nor his permitting landgraves and the like to have two wives at a time, nor Henry's allowing himself a still larger number consecutively, nor all of these causes combined, are adequate, without certain others, to account for the facts. One would be glad to know when a rule, based on the perception of this truth, is to be introduced into religious controversy. We do not know that we are justified in expecting its speedy establishment at the hands of the *Catholic World's* opponents, but neither are we ever assured by the tone of its polemics that the *Catholic World* will give it to us much sooner.

Other good articles in this magazine are Mr. De Vere's "Last Days of Oisin the Bard," and a paper on the "Duties of the Rich in Christian Society." The latter is written by a priest who has been long a missionary among the Catholic population of New England factory towns, and we suppose him to be right when he says that while conscientious and benevolent employers are numerous among the New England manufacturers, there is, nevertheless, need of a great and general change. The system is bad, and there are many cases of special oppression in which the operative feels the weight of a real and cruel tyranny. For example, at Manchester, New Hampshire, the writer found in one factory that the hands were kept at work, "voluntarily," of course, till half-past nine o'clock at night. The voluntary nature of the labor outside hours may be judged from the fact that none of the people durst refuse volunteering, because those refusing would incur first the ill-will of the overseers, and afterwards speedy dismissal. At Rutland, Vermont, the laborers in the marble quarries were obliged to accept "store-pay," which is the same as saying that they bought all their goods at the employer's prices, and that the employer probably used but little actual cash in settling his wages account. The strict discipline of life in the cotton-mill and its attached boarding-house is "like that of a treadmill in its dismal and frightful regularity," and the mills are places "that would suit much better for a variety of apes with sufficient intelligence to work machines than for human beings." This, no doubt, is not the sort of oppression and misery of which is born the Commune; but no doubt, too, it will by-and-by work harm to us unless we contrive a way of working good to it. The final conclusion of the article before us is that the Catholic Church, and only the Catholic Church, can deal with the threatening evils which spring from the capitalist's desire to make exorbitant profits, and the consequent wretchedness and discontent among his bondsmen. We wish the Catholic Church showed much sign of being able to deal with them. She would, our benevolent missionary would rejoin to this: we have only to become obedient Catholics, all of us, employers and employed, and we shall soon see how quickly the church will rid us of all our troubles. Meantime, till "the church," thus enlarged, is ready, we shall trust that the workingmen will watch the co-operators, and we trust that the capitalist may never have to watch the Communist with any anxiety, and that in future the sermons which the converted capitalist hears in any and every church may lead him to reflect that, if he is sincere in his belief, he is the professed servant of a Master who probably does not much love his proceedings between Sunday and Sunday, nor indeed on Sunday either. In the "Last Days of Oisin the Bard" the Bard is at his best; we break off the last two of the ten stanzas, which all have freshness and sweetness of perfume:

"O Patrick of the crosier staff,
  The wondrous Book, the anthems slow!
If thou the riddle know'st but half,
  Help those who nothing know!

Who made the worlds? the Soul? Man's race?
  The man that knoweth, he is Man!
I, once a prince, will serve in place,
  Clansman of that man's clan!"

In the *Atlantic*, as in the *Catholic World*, there is some good criticism of M. Taine's book—perhaps as good criticism of him as our press has had, but dealing with him rather in the manner in which he himself deals with the English authors, than as he is dealt with by the *Catholic World's* reviewer. One of the more important of the *Atlantic's* articles is that by an anonymous writer, who begins to tell the story of John Brown's transactions with the Massachusetts Radical Republicans. We think it would be better if an article which offers itself as authoritative in regard to certain historical facts were accompanied by the name of its author, and why the name has not been given we cannot quite see. However, the writer appears to be well-informed as to the facts, and we suppose that his statements may be received as accurate. The article seems to be written with good judgment, too; for, so far at any rate, there is little of that inflamed laudation of John Brown which has been fashionable in certain circles, and which, perhaps, culminated in Mr. Emerson's curious remark that John Brown had made the gallows glorious, as Christ had made the cross glorious. Numerous things many of us say that no doubt would hardly get themselves said if the art of speaking in the Trement Temple had never been invented. This kind of unconsidered eulogy of a man who commands respect, indeed, for his force of character, and compels admiration for his stern courage, but who was as narrow-minded as Stonewall Jackson, and whose mind was far better stored with the politics of Joshua and Adoni-Bezek than with those of the country under whose constitution he lived—this extravagance of praise bestowed upon a man who, whatever his high aim, surely wanted many of the elements which should be present before a wise man's unqualified praise is secured, has greatly interfered with accuracy of estimate as regards him; and it has interfered alike by repelling those who held that he was a dangerous enemy to his country, whom it was impossible not to execute, and by helping to keep at an exaggerated heat of admiration those who knew that Brown, after a life of self-devotion, not to say self-sacrifice, had died a martyr to a sense of duty as controlling as if he had known himself to be sent of God. We are gratified, then, that in this respect these papers are of so good a tone, and that we thus have an additional guaranty of the trustworthiness of their statements. It is, by the bye, always pretty to observe, as Mr. Pepys would say, yet one more manifestation of that obtuseness as to some portions of the moral law which, apparently, never fails to be produced by an extreme susceptibility to the claims of any other portion of it. This writer tells us a story about a pair of gentlemen who were unsurpassed in the war made against the slaveholders; who spent time, labor, and large sums of money in fighting the moral wickedness of holding fellow-creatures in bondage; but whose views as to the righteousness of "economizing the truth" were not such as a moralist would like to see obtain universally, or widely, or indeed at all. It seems that in 1858 some of the Republican leaders became alarmed at the report that Captain Brown meditated an attempt to excite a servile insurrection, and thereupon wrote to the Boston Committee for the relief of Kansas, deprecating the use of arms bought for Kansas in any such expedition as that of which rumor spoke. Reassuring replies were at once written to the Republicans, and especially to Senator Wilson, by the late Mr. George L. Stearns, of Boston, and Dr. S. G. Howe, of the same city. The last-named gentleman replied "in the same spirit" as that which dictated Mr. Stearns's letter, and assured Mr. Wilson that "prompt measures have been taken and will be resolutely followed up to prevent any such monstrous perversion of a trust as would be the application of means raised for the defence of Kansas to a purpose which the subscribers of the fund would disapprove and vehemently condemn." Mr. Stearns, on his side, wrote to Brown directing him to hold the arms subject to "my orders as chairman of said committee"; but this letter, says our author, "while intended to prevent any immediate use of the arms in Virginia, was mainly a blind to satisfy Senator Wilson." Now, what does the reader suppose was the state of this case? As "chairman of the committee," Stearns had officially no control whatever over the arms, nor had the committee, whose opinion Howe pretended to express in his letter, any arms whatever in its possession. The committee having got into debt to Stearns, who at various times advanced them money, had, in the beginning of 1858, turned over all their assets, including the rifles, to Stearns personally. He, in March, 1858, had given Brown verbal permission to make use of this personal property in the Virginian expedition, of which he was fully informed. Brown was, therefore, in full and legitimate possession of it, and it follows that when, in May, 1858, Dr. Howe and Mr. Stearns were writing to Senator Wilson about the disgraceful breach of trust which it would be if the Kansas Committee's property were used in Virginia, they both knew that the committee had no property; that what it once had, and Mr. Wilson supposed it still had, was in Brown's possession; that he had permission to use it; and that Mr. Stearns's promised prohibition as "chairman of this committee" could not annul his previous consent as personal owner of the property in question. This little transaction may or may not throw light, as we have indicated our belief that it does, on the character of extreme reformers in general; but we submit that on the character of these two in particular it does throw some light.

Another article in the *Atlantic* that will attract attention is one on "Immigration," by Mr. Edward Jarvis. Is it true, as Mr. Clibborne told the British Association, that this country is so fatal to the European constitution that, "on an average of three or four generations, extinction of the European races in North America would be almost certain if the communication with Europe were entirely cut off"? Do the foreigners who come to these shores produce children in extraordinary numbers in the first generation, and after that become sterile? What are we to say to M. Carlier, "a French traveller," and Mr. Louis Schade, who both declare that among people of any stock that has been in this country so long as eighty-two years the power of natural increase has been reduced to next to nothing—one and four-tenths per cent. or thereabouts? Did the Bishop of Cashel tell the truth when he got up in the House of Lords and said that "there are seven million natives of Ireland in the United States"? And is Cardinal Berwick, in "Lothair," conspicuously exact or inexact when he announces that there are in the United States twelve millions of Catholics? These questions Mr. Jarvis sets himself to answering, and his answer is that the correct figures appear to show that the whole number of foreigners, of all nationalities, who were living in this country January 1, 1870, including in the count not only parents, but the children born of them since their arrival here as well as before, was about 9,735,000. If to these be added the grandchildren of the immigrants who came here so long ago—1790–1830—that their children born here have married and in their turn had children—we have as Mr. Jarvis's estimate of the total foreign population of the United States, two years ago, about ten and a half millions. "There is not only no ground," says Mr. Jarvis, "for the theory of the limited growth of the American and the unlimited growth of the foreign element in the population of the United States, but, on the contrary, the natural increase is at a lower rate in the foreign than in the American families"; and this, be it remembered, excludes the negroes.

Mr. Parton, Dr. Holmes, Mr. Longfellow, Mr. Whittier, Mr. T. B. Aldrich, Mr. De Mille, Mr. Bret Harte, Miss Kate Hillard, and Mr. Bayard Taylor are the other writers in the April *Atlantic*. Mr. Parton and Doctor Holmes seem to us the best, and Mr. Aldrich's story, which is sentimental enough for the poetess of a seminary for young ladies, has some reasonably well-imagined and pleasing camp studies in it. The critical departments are each well varied and good.

The *Overland Monthly* has an account of a strange colony, somewhat resembling that formed by the mutineers of the *Bounty*, whiah, if the author of the *Overland's* article is to be believed, was discovered in the year 1825, in Sullivan County, in this State, by a surveying party who were laying out a State road along the line of route now closely followed by the famous Erie Railway. The founders of the colony were a pair of youthful Indians, a young man and young girl, lovers; a German youth called Karl Beuhler, and an American girl called Susan Stearns. The two latter, while yet little children, had been captured by an Indian tribe, shortly after Braddock's defeat. Some ten years afterwards they escaped, and reached the neighborhood of their old home, then a wilderness, and soon after were joined by the young Indians, their friends. At the time of their exhumation the colonists numbered some forty or fifty persons, all closely related both by blood and marriage, and they were in complete ignorance of the world without. Whatever became of them this writer is unable to tell; but he seems to think that they shortly afterwards separated. He asserts that Professor Henry, of the Smithsonian Institute, was one of the party that discovered this oasis in Sullivan County, and otherwise comports himself like a truth-teller or a very bold inventor.

The *Overland* contains a fine story. "'Alice de Bracy,' he tremblingly stammered again. 'Touch me not with your foul hands, Sir Hugh Martelle,' she cried." So we may rely upon it that, on the whole, the world is as young as ever. Besides Alice de Bracy and Sir Hugh, there are also Louise and Sir Gaspard de Bracy. "'Touch me not, Sir Hugh Martelle,' she cried. 'Louise,' he murmured, with a conscience-stricken face. Once more he advanced towards her. 'Touch me not,'" she exclaims again, growing very fierce, and her voice rings through the arches with great power." "'I have gold, Louise,'" Martelle says further on. But Louise says: "'I would not touch your gold, Sir Hugh Martelle. There is the mark of blood upon every piece.' . . . . 'Go, then,' he uttered with an oath." The fact is that Sir Hugh, who is in sanctuary in the cathedral church of Saint Pancras at the time when these conversations are described as taking place, has stabbed Sir Gaspard de Bracy, his rival, in the back, the assault being committed in a dark by-street. The set of public opinion seems to be equally against him in London and in Calaveras County, and, as we have seen, to be very strong. His end is wretched. But the *Overland* has two Pacific Coast stories which we can commend as being good in this way, at all events—that they are stories with something of the Pacific Coast in them; an article about Oregon; another about California Indians; another about the wants and advantages of California; and another called "The Yosemite Valley in Flood," which we think will be of interest to Eastern readers as well as to far Western. We speak of this magazine less often than of the others, but not for the reason that it is not as well worth magazine readers' attention. It has at least the merit of being somewhat different from the others.

"The City of the Little Monk," Mr. Moncure D. Conway's second paper concerning Munich, will be found the most valuable and taking article in *Harper's Monthly* for April. Other articles, however, will very well repay examination, as, for instance, that which treats of the Tammany Society in this city. From his earliest days, when Burr killed Hamilton, to his latest, when W. M. Tweed ruled the sachems and warriors, Saint Tammany was never a saint in much danger of martyrdom on the ground of sanctity; and if the writer in *Harper's* is as able as he seems willing to make a full record of the chicane and corruption of this famous association, he will make a record which any country in Christendom will find it hard to beat.

In the *Galaxy* for April, Ex-Secretary Welles begins a series of articles which profess as their object to furnish proof that Mr. Johnson's plan of reconstruction was much the same as that devised by Mr. Lincoln, approved by Mr. Welles, and finally thwarted by the Republicans whom Mr. Sumner led—a political school which Mr. Lincoln would gladly have had away from Washington while he quietly brought the Confederate States back into the Union. The line of Mr. Welles's narrative and argument is not yet made entirely plain, but it looks as if Mr. Stanton was to gain no credit by his colleague's revelations, and as if we were to learn what, at one time at least, Mr. Lincoln, intended, whether or not we learn much concerning what would have happened had the good sense of Lincoln instead of the obstinate impetuosity of Johnson swayed the Executive influence in 1865 and 1866. For the rest, the *Galaxy* has Mr. Justin McCarthy's gossip about Charles Reade; Mr. De Forest's graphic picture from life of the South Caroline Cracker turned Ku-klux robber and murderer; the last chapter of "Fifteen Years a Shakeress," which one is more pleased than displeased to see ended, so repulsive is the Shaker life here vividly set before us; and with these, a story by Mrs. Harding Davis, which is to the full as disagreeable in its display of writhing, distorted humanity as any other production of this writer's imagination.

In *Lippincott's* Mr. Horatio King gives us some not very indispensable reminiscences of the last winter of Mr. Buchanan's Administration, which may, however, nevertheless be read; and in reading which one renews one's sense of the dangers and difficulties of those months, of the good intentions and the feebleness of Mr. Buchanan, and of the insolence and confidence of the Slidells and Davises and Toombses. To do this is, perhaps, little worth while now, their day being so well over; but assuredly they pulled their destruction on their own heads with an arrogance which makes it still not easy to pity them in the thorough ruin that has overtaken them.

We believe there is hardly an unreadable article in this number of *Lippincott*. Mr. Whymper's Alpine climbing is as good as before; Mrs. Louisa Parr has a love story, very agreeably told; Mr. William Black's "Story of a Phaeton" will be much and deservedly liked and applauded by everybody who reads new novels; "Private Art Collections in Philadelphia" is by a critic who, at any rate, takes the reader along with him and talks to him intelligibly, and who appears to us to talk excellently; and Mr. Musters continues and concludes his account of the Patagonians. They are not giants, he says, though he speaks of some who were six feet four inches in height, but they are very well made, with muscular limbs and shoulders, and with the small foot and high instep which belongs to the horse-riding nations. They spend a great part of their time in the saddle.

A writer in *Scribner's* has a very good subject in "Awakened Japan," but like all the other writers from whom we have heard anything about the very remarkable changes going on there, he fails to explain the causes which have brought about the revolution, and leaves us in the dark as to the real motives of the Japanese rulers in suddenly seeking to displace their civilization of three thousand years and adopt ours. This is what it is said they are voluntarily and out of hand doing; and yet such a substitution is without example in history. Mr. Fitz Edward Hall, who last summer contributed to the "Proceedings of the American Philological Convention" a paper on the participle "Is being done," now prints his essay in *Scribner's*, and lays once for all, or we are mistaken, that spectre which has disturbed the repose of so many philosophers. Mr. C. D. Warner, also, the reader may find in *Scribner's*, together with Mr. Eugene Schuyler, who has a description of the Russian Easter; Mrs. Oliphant; Mr. Julian Hawthorne, in a not very expensive story; and Professor Tayler Lewis, in a discussion of the question whether all men are descended from Adam. Professor Lewis decides this question in the affirmative; or rather, he calls upon those who affirm the negative to come forward if they dare and prove that all men are not descended from Adam. Mention should be made of the excellent engraving of the woodcuts in this April *Scribner's*.

Historical View of the American Revolution. By George Washington Greene. Third edition. (New York: Hurd & Houghton.)—We are glad that this modest work has not seen the end of its usefulness, and trust that many editions are yet in store for it. The twelve popular lectures of which it is composed make a surprisingly good text-book, when one considers the temptation to be oratorical in composing them for delivery, and the necessity of entertaining an audience of listeners by methods which readers, more critical and less easily fatigued, might find faulty and disappointing. We do not pretend that these defects are not visible here, but they are slight indeed; and as each lecture (on the "Causes of the Revolution," "Phases of the Revolution," "Congress of the Revolution," etc.) was comprehensive in its survey, it involved a summary and condensed statement which almost perfectly adapted it for the use to which it is now put, or may well be put, as a chapter of a school history. The author's view of the Revolution is a Northern and a New England view, it need not be said; it is also not unnaturally a Rhode Island and, to some extent, a family view, General Greene figuring largely in it, and so often in conjunction with Washington, as to seem like the second personage in the drama of independence, at least as a military hero. We do not object to this, but, on the contrary, apprehend that the author's intimate study of his grandfather's career has enabled him to draw unusually vivid and lifelike pictures of the men and measures of '76. They are, doubtless, not the only pictures that could be drawn, but they furnish trustworthy materials for the imagination. The philosophy of these chapters seems to us in the main sound and wholesome. If we chose to take any exception to it, it would lie against the argument (in the "Martyrs of the Revolution") to prove an inherent difference in the morality of the actions for which Nathan Hale and Major André, respectively, were hung as spies. Professor Greene goes so far as to make account of the difference in magnitude of the military results which would have attended the success of either emissary. But André sought nothing as a spy which he did not as an officer at the head of his troops, and with as good conscience in the one case as in the other. His immorality, therefore, if he must be charged with any, lay in his being in the King's service at all, rather than in that branch of it which promised the most speedy accomplishment of the end for which hostilities had been undertaken.

Better than any work of similar size with which we are acquainted, this one seems to us calculated to give a distinct and rounded conception of the struggle for independence. For details, the reader must go elsewhere—to the larger histories of Hildreth and Bancroft, and to the Revolutionary biographies with which our literature is yearly enriching itself. Any judicious teacher, using the book in his classes, will find it an agreeable task to develop these pregnant chapters by such excursions, or by a parallel course of reading in Laboulaye or Botta. The appendix contains a chronological outline of the Revolution, with tabular statistics of colonial trade, continental and militia forces, cost of the war, emission and depreciation of continental money, etc., etc.

Aus den Tagen der Occupation. Eine Osterreise durch Nordfrankreich und Elsass-Lothringen, 1871, von Theodor Fontane. Zwei Bände. (Berlin: R. v. Decker. New York: L. W. Schmidt.)—The war with France has given character to the whole body of German literature for 1871–2—history, geography, practical science, anthropology, biography, sermons, memoirs, political economy and ethics, poems, novels, and illustrated books of every description. Hereafter this will vie with the Reformation and the Seven Years' War as an epoch from which statesmen, scholars, and authors will date "a new departure." Much of the present literature of the war will of course be evanescent, and much will furnish only the dry details for future historians; but among the multifarious books of 1871 these two volumes of Fontane possess enough of fact to give them authority, and enough of fancy to give them the color of life. His keen faculty of observation, his appreciation of the beautiful, his acquaintance with literature and art, his sympathy with humanity and with intelligent and healthful progress, his poetic power of description, his delicate humor and playful satire, all come into play in these sketches of Epernay, Rheims, St. Denis, Amiens, Dieppe, Rouen, St. Quentin, Sedan, Metz, Saarbrück, Strassburg, Wilhelmshöhe. These are not the sensational pictures of a war-correspondent, nor the journalistic views of an editor or littérateur, but they unroll the panorama of the war, in battle-scenes, marches, encampments, incidents of soldier-life, with the background of historical and monumental associations, and with such groupings, studies, and effects as only a poet-artist could bring out. Under favor of military convoy, Fontane made the tour of the places most celebrated in history and art in Northern France; and he gives us now the adventures of the journey, now the gravities and the drolleries of the camp, and now a wonderful word-picture of a cathedral, a castle, or a bit of natural scenery. To those who know this pleasant author, it will be enough to give this outline of the book. Two brief extracts, however, will whet the appetite. With graphic humor he describes an accidental rencontre in a railway carriage with Thiers (before his Presidency), whose petulant words are worth treasuring: "Paris, c'est une énormité. Nous sommes énervés. Voyez notre existence: de l'Absinthe au Billard, et du Billard à l'Absinthe. C'est la nation française! Quelle est la conséquence? Nous n'avons pas de grands hommes: nous n'avons pas des idées. Des idées, voilà la cause de votre supériorité. Nous avons—Jules Favre, nous avons—Trochu; l'un intéressé, l'autre imbécile. Voilà tout. Nous sommes *puériles.*" It was not till after this vehement utterance that Fontane, catching in profile the Roman nose, recognized his *vis-à-vis;* but when it dawned upon him that this was none other than Thiers, he went on repeating to himself, "Nous *sommes* puériles"!

After this cruel hit at the "Old Roman," Young America must come in for her share of the author's satire; but its keenness will be forgiven for its cleverness. The author has just given a glowing description of the Strassburg minster, in its history and art, when his meditations on the platform of the tower are broken:

> "In my pacing to and fro I had now come to the southern side of the tower, and was wondering, as I looked up, almost perpendicularly, at the gymnastics which had enabled so many fool-hardy persons to write their names upon that part of the clock-bell (nearly the half of it) which hangs clear outside of the sound-window, when I heard myself, without further ceremony, accosted in English: 'Rather bold,' said a stout man of forty standing near me, pointing at the same time to the inscriptions made with chalk upon the bell.
>
> "Either he had taken me for an Englishman, or it was a lucky hit. At any rate I answered, 'Somewhat in the American style.' He laughed approvingly, and with visible satisfaction proceeded: 'Do you think so? I am an American.' We walked away from the bell and paced around the platform once or twice, in conversation upon topics just at hand, and then, without further regarding the Black Forest or the Vosges, settled down to a perfect *chaussée*-whirl of things, which I know not how nor for what purpose were transported to this height. We had naturally dwelt longest upon 'the war' and 'the rising German nation'—but an American (just like a Berliner or a Leipziger) cannot carry on a conversation for five minutes, though it should be about Sanskrit or Vega's Logarithms, without through the simple turn '*with us*' passing over from the general to the particular. This particular is naturally America. Every Yankee, even the best, uses everything else merely as an introduction to the theme upon which alone it is at all worth while to converse. This is somewhat comical, yet neither tedious nor burdensome; and for two reasons: first, because it exhibits such overflowing naïveté, and next, because the reflection forces itself upon one that they possibly have a good right so to do! Perhaps we are now treading more in their footsteps than they in ours. Our whole railroad and telegraph period, this movement in the place of stability, this haste in the place of rest, this money in the place of land and soil—what is all this but Americanism?
>
> "We introduced ourselves, and, laughing, greeted one another as colleagues. He was the chief editor of a Chicago paper. Naturally. I never yet met an American who was not an editor or did not hope to be one. I told him this; and he only answered, 'Just so.' Then he began, as they all do, to paint the big American pictures—the pictures of 'the far West'—which always carry my soul back to Uncas and Chingachgook, and a little also (really only a *very* little) to Alice and Cora and the English Major, whose name I have forgotten. The pictures have changed since then, but even greater, more prodigious—forests vanishing in a night, and cities springing up in a day; in summer, for variety, now a turn upon the Atlantic and now upon the Pacific Ocean; a wedding-trip to Italy, a summer's airing in Japan; and then in winter, in great sail-sleighs that make the snow fly, away over the plains of Michigan. At evening, wherever one is, 'a fire, a paper, a cup of tea!' Now a forest on fire, the heavens all aflame, and like thunder rolls the sound of cracking ice across the lake.
>
> "So the talk went on. Beneath lay Strassburg, the queen of beauty; there was the minster, the most marvellous embodiment of German art and German grandeur; upon it, cut in the stone, was the name of Goethe; and here a chief editor from the other side of the great deep made his peroration, composedly saying to me, 'America, that's the world'! Thus we parted. I had not the courage to contradict him."

Lucia: Her Problem. By Amanda M. Douglass. (New York: Sheldon & Company. 1872.)—Lucia's problem was very much like that of the rest of mankind, namely, how she should do exactly whatever she wanted to do. While the majority of people, whether willingly or not, pay some respect to certain conventional laws and usages of society, the restless Lucia is conspicuous for her total disregard of everything except her own whims and yearnings. At the beginning of the story we find her not unnaturally discontented with her cold, puritanical home, and making an escape by marrying a Mr. Thorndike, a man of twice her age, after a short courtship in which she met him fully half-way. Although by this marriage she has the pleasure of disappointing an older sister, who had nourished hopes about Mr. Thorndike, and gets for herself all the money and social position that she wants, she, like most people who have solved their problem, is not yet happy. Mr. Thorndike has but a sordid soul. On the other hand, Paul Rutherford! "He was very fastidious about his womenkind, this Paul Rutherford, although he had much chivalry for the sex. But the one who commended herself to his attentions must possess some peculiar grace or characteristic. Loud-voiced, dominant women, purse-proud, vulgar ones, or the shallow dolls of society, were alike distasteful. Indeed, he rarely met one to whom he gave more than a passing thought." Could anything more be wanted of a hero? Lucia, at all events, wanted no more; in the first half-hour of their acquaintance, this incorrigible flirt, to be guarded in our language, is confiding to him her loneliness and discontent with her mode of life. Then, too, there is Vaughan Marchmont, whose "eyes were quite light, a kind of steely color, and, gleaming through the long, black lashes, gave them a most peculiar expression and power. They were merciless and, I was about to say, treacherous, and yet they could soften to the most bewitching tenderness." Every novel-reader knows those eyes well, and their phosphorescent flashes in dimly-lit corners—in a word, all the phenomena of a flirtation between the heartless, irresistible pursuer and his innocent, helpless victim. But whenever the matter is going a trifle far, Paul Rutherford, who seems to have given Lucia, at any rate, more than a passing thought, appears and raises a warning hand, to the great indignation of the baffled Marchmont. While matters are in this state, Mr. Thorndike loses his money, and Lucia, unable to adapt herself to this change of circumstances, runs away alone to "a dreamy, refined, aristocratic place, full of old families who were proud of their pure blood." Her family think her dead, and Mr. Thorndike marries the other sister, whom he had at first neglected. After a few years Lucia returns to her people, Mr. Thorndike is good enough to be killed by a railroad accident, Mr. Marchmont kindly marries the girl to whom Paul Rutherford is engaged, and he being now free, Lucia is, of course, rewarded for her nobly-borne sufferings and heroic devotion to her own happiness by marrying him. "A touch of tender, clinging hands, and their lives blended into one, the true level reached at last."

Such is this story. We dwell on it at this length because it is simply a rather exaggerated example of a sort of novel that is far from uncommon, in which the characters are only made interesting to us by their misery, and the blame for that is transferred from their own weak souls to the coldness of the world around them, as if there were a real dignity in worthlessness.

LEGENDS OF THE PATRIARCHS
AND PROPHETS
Current at the East, collected by Baring-Gould.
Crown 8vo, $2.

"We venture to predict that few books will be more delightful to a great part of our readers. . . . He has collected from the Talmud and other Rabbinical books, apocryphal Scripture, and still other ancient sources, a vast store of the most curious—to put it plainly—'yarns' about the fall of the angels, the creation of the pre-Adamites, Adam and Eve, the Fall, the Giants, the Deluge, the remains of the Ark, and the Old Testament personages, especially Abraham, Joseph, Moses, and Solomon."—New York Evening Mail.

"It will be his (the reader's) own loss if he foregoes the pleasure and the profit of reading this entertaining volume."—Saturday Review.

HOLT & WILLIAMS, 25 Bond Street, N. Y.

"Is admirable in point of style as it is full and engrossing in matter."—London Spectator.

AUTOBIOGRAPHY AND MEMOIR.
R. AND W. CHAMBERS.
1 vol. 12mo, cloth, $1 50.

CRITICAL ESTIMATES.

[From the London Athenæum.]

"Mr. Chambers has told the tale of his own and his brother's heartrending beginnings with such concentrated clearness that here may be learned lessons of self-denial, patience, unflagging perseverance, independence, and cheerfulness (the greatest sustainer of all), which comprise a whole education, not for the humblest in station, but for the least intellectually gifted."

[From the New York Daily Times.]

"This modest volume is one of the most remarkable of its class which has appeared for years. It is full of lessons of practical wisdom."

[From the New York Daily Tribune.]

"This book is one of the most interesting reprints of the year."

[From the Scottish American Journal.]

"To all his countrymen the 'Memoir' will be deeply interesting and instructive, and to young persons especially its perusal must ever prove a source of pleasure and of encouragement in well-doing."

The above volume sent to any address, free of charge, on the receipt of the price by the publishers.

The Nation.

NEW YORK, THURSDAY, APRIL 4, 1872.

The Week.

APRIL having set in, with one political convention only thirty days distant and another only sixty, we are now fairly entered upon our quadrennial political strife, which is to last till next November, and which bids fair to be as intense, as bitter, and, we fear, as violent and unscrupulous as any that the country has ever known. The Liberal Republicans of the East have begun their response to the Western invitation, and may be said to have begun well with a very sensible letter and a fairly good list of signers. The best known of them are Mr. Greeley, Judge Fithian, Mr. Waldo Hutchins, Mr. Sigismund Kaufmann, and Mr. Sinclair Tousey, who all have been active in our State politics, and have of late, we think, been more or less active on the Greeley-Fenton side. With the names of these are some less known but excellent names of men who, without having the personal grievances of any of the leaders in politics, are determined that an anti-reform candidate shall not be elected next autumn if anything they can do can prevent it. A clear idea of their views as to the Cincinnati platform, and as to the reforms upon which they are intent, may be got from their letter to the Missouri committee. They are deeply convinced, they say, that the party organization to which they belong is now under the control of persons who will use it for personal purposes, and who are determined that there shall be no discussion of the principles of Liberal Republicanism. They want the disfranchised Southern whites at once admitted to amnesty. They believe that the civil service should be so reformed "as to relieve political action from the influence of political patronage"—or, to put it in the concrete, they believe in Mr. Clinch, who, for thirty years, has done all the work of the Collector of this port, and they do not believe in Thomas Murphy and previous avatars of Thomas Murphy, who, one after another, for these thirty years, have flung about the public money in the interest now of this and now of that candidate for this or that office. They think that since the war was over we have had too much encroachment on the ancient American right of local self-control—that town-meetings are better for towns than resolutions in Congress. Finally, they think that "Federal taxation should be for revenue, and so adjusted as to make the burden on the industry of the country as light as possible."

How Mr. Horace Greeley could put his name to a platform which says that taxation should be for revenue only, he explains in the *Tribune*, saying that he asks of the Cincinnati Convention no more than this: that it shall acquiesce in his doctrine, and the truly Republican doctrine, that the issue between free-trade and protection shall be left for settlement to the people, district by district, when they choose their members of Congress. If the Convention will treat protection with that much of civility, he and his protectionist friends will be satisfied, he says. The probabilities are, we should suppose, that Mr. Greeley and his friends will be gratified. The free-traders who would make naked free-trade a question to be referred this coming summer to the people at large, are enthusiastic men and logical reasoners, but they are few. The *World*, we see, and the Cincinnati *Enquirer*, accept the suggested compromise; and, indeed, it is to the *World*, unless we mistake, that we owe the recent reinvention and formulating of Mr. Greeley's time-honored Republican doctrine about protection in the Congressional districts. The *World* and the *Enquirer*, for their parts, are in more concern about centralization and the Constitution than about economical truths which they believe want only a chance for an undisturbed hearing in order to beat out of the field the economical truths of Mr. Greeley and his protectionist friends. As to some of Mr. Greeley's other friends who have signed the Liberal Republican letter, we suppose they will be as displeasing to many Liberal Republicans as his protectionist friends are displeasing to the *World* and the *Evening Post*, or as "all who were distressed, and all who were in debt, and all who were discontented," were displeasing to David when they joined him in the Cave of Adullam. They dissatisfied him in some respects, no doubt; but it was David that they joined nevertheless; and, as Administration organs who will read their Bible may learn, he and they together accomplished something. In view of these incipient signs of mutual good understanding between important elements of the proposed Liberal party, and in view of the fact that the French arms scandal, whether or not it has offended Germans in Germany, has very thoroughly offended Germans in the United States, we think that it may not be long before the Cincinnati Convention becomes an object of extreme attention from all Administration organs and President-makers, including those of even more than Swiss devotion.

Congress has done little during the week except introduce bills and resolutions and talk about the tariff, on which subject the best opinion appears to be that the duty on tea and coffee may yet be taken off, but that there is small reason to expect a general revision this session. The Republican and Democratic protectionists alike appear determined if possible that a revision planned even by so moderate a body as the Ways and Means Committee shall be prevented if possible, and lose no opportunity to embarrass Mr. Dawes. The feeling that something must be done before the Presidential canvass begins is not nearly so strong as it was, because, as one of the representatives has said, "the dissatisfaction with Grant has not worked down among the people yet," and the supposition is that it will be possible to pull through without taking any dangerous bull by the horns. On Wednesday, salt was the subject of a lively discussion in the Senate, and one of the senators from this State had the hardihood to assert that the salt companies were making a bare living, as was shown by their dividends, which amount merely to interest at seven per cent. on the capital invested; and the other asserted that the Onondaga Salt Company had for two years earned only three and a-half per cent. To these astounding assertions Senator Blair replied that he did not believe one word of them; and though Senator Blair would perhaps like the debates of the Society upon the Stanislaus about as well as he likes the senatorial style of debate, he is a very straightforward sort of a person, and no doubt he got pretty near the exact thing when he charged the informants of Senator Fenton and Senator Conkling with transparent falsehood. Six dividends of twelve per cent. each he asserts that the Onondaga Salt Company has paid in one year, the three and a-half per cent. dividend, for example, being a dividend on tremendously watered stock. On Monday last, Secretary Fish informed the Senate that the alleged American citizen, Dr. Howard, who is now on his way to seven years of penal servitude at Ceuta, is a Dr. Houard of French parentage, and probably of Spanish citizenship, but that the Department is still investigating his case.

Mr. Sumner's protest against the right of the Hamlin Committee to examine him has a dubious look on its legal side, the right of either House to examine its own members appearing *primâ facie* reasonable, and involved in the right to impose orders upon them when speaking in their place. Mr. Sumner, however, is a learned lawyer, though for the matter of that there is always a learned lawyer on each side of every question, and one of the two is always in the wrong. But Mr. Sumner's protest, so far as it was his somewhat circumlocutory but dignified and exhaustive way of telling the committee what he thought of the mode of its construction, what he thought of the conduct of three of its members in consenting to serve on it, and what he thought of the violation of parliamentary usage and the motive of violation, was very good indeed. That the Senate may not, if it likes, set aside its own parliamentary law, and is not at all times a law unto itself—so far as this, at all events, that it is responsible to itself alone, and can be punished by no one—we take to be clear. But it is protests like this of Mr. Sumner's which, whether they be strictly good in their law or not, help to consolidate usage into what is practically law, and if there be law incite to its careful definition and limitation. He has made a forcible and useful protest against a great outrage on good usage and senatorial dignity; and the next attempt at insolent and contemptuous tyranny will be the more difficult for what he has said. In his examination, too, his answers upheld his positions. What can be the mental condition of persons who truthfully say that they believe the "real reason" for his unwillingness to testify was that he now perceives that he never had any grounds for moving an investigation, and that he wished to escape from his attitude of treason, we must let some one else say. We are baffled for once. Senator Carpenter actually says, in writing, that he had to believe of Sumner and Schurz one of two things—either they believed what they said, in which case they were traitors to their country; or else they said what they knew to be false, in which case they were probably doing it to injure Grant's chance of a renomination. Here is a condition of mind and of the moral sense! Some American official, or semi-official, violates law and perhaps steals a million or two of francs in the operation. Then we are to call him the American nation, and all of us stand still adopting his rascality.

The Connecticut contest has resulted, as everybody expected, in the re-election of Mr. Jewell, the Republican governor. "Victory," the *Times* says, in a head-line: "The State Heavily Republican." But then in a minute it says, in another large head-line, "Majority 200," and we are all unsettled again. The majority turns out to be 30, the Temperance Republicans—all for Grant?—polling an unexpected vote of 1,526. The vote was not heavy; the Democracy kept quiet; the Administration put forward its best speakers, and had a fortnight of the services of a prospective Vice-Presidential candidate; the extreme Bourbon Democracy was disaffected, and no attempt was made to conciliate it; some Liberal Republican papers advised abstention, more advised a vote for Jewell; the platforms were the same, and the same as the Missouri platform; and the result of all is a majority of 30 in a poll of 90,000. How glorious a victory this may be we do not know. Nor whose it is, exactly. It certainly looks like a victory for Mr. Hawley as against Mr. English in the campaign for the senatorship. But as the platforms were about the same, and about the same as the Missouri platform, it would seem to be certain that nearly all Republicans and nearly all Democrats like the Missouri platform, and that the nominee who brings upon that platform the highest character and the most reputable associates and "record," can carry the best men of both parties, and that there is no man in the country so strong as to be able to beat him. If this be true, the result in Connecticut would seem to have settled one other thing besides the senatorship, and that is, that it is *nominations* which are to be the important matters at Cincinnati.

Colonel Alexander McClure's contest with Colonel Gray for the seat in the State Senate obtained by the latter in the Fourth Senatorial District of Pennsylvania, has ended in a report from the investigating committee fully establishing the charges of fraudulent voting preferred by the contestant. Colonel McClure was at once sworn in, and signalized the first hours of his senatorship by introducing four important reform measures, two of which the Senate passed at sight. All this speaks well for the purification of the State's politics, and perhaps it has no other significance. Colonel Gray was quite too assuming, we are now told, when he assured his constituents, in the midst of his supposed triumph, that the victory was for Grant and Cameron as well as for himself—at least he had no business to mention Grant. The *Press* is laboring to correct the impression that there is now "one independent, anti-Grant reformer" in the Senate in the person of Colonel McClure, and shows that in accepting the Reform Republican nomination he wrote that he would accept "no candidacy that would endanger Republican success in the Senate, or in the State or Nation"—a pledge which apparently would be redeemed if the Colonel concluded that the nomination of Grant at Philadelphia (considering what had taken place at Cincinnati) would tend exactly to endanger the success of his party. The *Bulletin*, too, quotes from a speech of his just prior to the election the acknowledgment that he is pledged "to obey the well-known sentiments of the Republicans of the district on the Presidency, as on all other questions." In the customary language of one journalist to another on these occasions, we would say to our Philadelphia contemporaries, "The *Press* and *Bulletin* must try again."

This McClure and Gray case is interesting in several ways. McClure is a politician who just before the last State election announced himself as in favor of a fight against corruption at Harrisburg, and opposed to the nomination of General Grant. To oppose the renomination of the President in Pennsylvania is, as we need not say, to oppose Mr. Simon Cameron, and what that means Colonel McClure discovered in his canvass, if he did not know before. He had to fight the Federal Navy Yard, the Federal Post-office, the Federal Custom-house, the Federal Assessors and Auditors, the municipal police, the Mayor's office, the Street Commissioner's office, the Auditor's office, the Registrar's office, the office of the Fire Department, and half a dozen other offices. The Navy Yard furnished the Administration candidate with a gentleman who "acts as judge of election, and carries off the ballot-box to party headquarters"; the Custom-house supplied him with repeaters of its own, and money to hire more; the Post-office gives him a gentleman who acts as judge of election and slips in fraudulent votes for him; the Mayor contributes a large sum to his election fund; every policeman gives a dollar or more of his pay, according as he is patrolman, sergeant, or captain, each in his degree; on election day the police force favors him by letting his repeaters do their duty undisturbed, and by arresting McClure's voters on small pretext and on none; in fifteen districts the returns are falsified to his advantage; in one of them, for instance, it is shown by sworn evidence that during the first hour of voting twelve votes were cast for his antagonist, but the returns say that only seven were cast, the judges having thrown away five votes for McClure. Corruption and fraud in nearly all forms known to American elections, and force in degrees short of murder, are what a person fights who fights against Mr. Cameron and the Administration patronage, and Colonel McClure was defeated. But he is a resolute man, and his supporters are among the weightiest citizens of Philadelphia, united as Reformers, so he went to Harrisburg, and, though resort was had to every device to keep him out of his seat, the evidence was too strong, and he had to be let in. The *Press* will find him but very dubiously like an Administration Republican, we fancy.

There can be no question that the new constitution of Illinois is destined to have a very beneficial influence on all State constitutions hereafter to be framed or made over; and we are inclined to think that it marks as important an epoch as the New York constitution of 1846, happily in a contrary sense. The Legislature, in a laborious nine months' session, has just been giving effect to the charter by passing the laws which it requires, and a correspondent says of this body that it has been, "if not the ablest, certainly the most honest, the most sober, and the purest body of men that ever attempted to make laws for a great State." The salvation of it and of the State, he says, has been the abolition of special legislation, in consequence of which the lobby finds its occupation nearly gone. Two experiments have been instituted, of which the workings will be watched with curiosity. One is in the Municipal Incorporation Bill, and combines the principle of the cumulative ballot with a classification of the terms of office. For instance, if by popular vote any city adopts proportional or "equal" representation, it is to be divided into districts, each of which is to be represented by six aldermen chosen on the cumulative plan; the three highest candidates holding office for two years, and the three lowest for one. An attempt was made in the House, which we regret to say was ineffectual, to render this system less wasteful and uncertain than it is likely to be, by transferring the surplus votes from the more to the less favored candidates. Nevertheless, it may be well to see what party discipline can do under the most difficult conditions. The liquor law passed at this session, in imitation of those of Ohio and Michigan, but still more stringent, and which has awakened the liveliest opposition of the foreign population, is also an example to other States that vacillate between license and prohibition. Finally, we may mention the brief act, which we presume is a special concession to Mrs. Myra Bradwell, editor of the Chicago *Legal News*, and which provides that "no person shall be precluded or debarred from any occupation, profession, or employment (except military) on account of sex: *Provided*, that this act shall not be construed to affect the eligibility of any person to an elective office." The insertion of the word "voluntary" before "occupation" would have saved the necessity of the third clause: "Nothing in this act shall be construed as requiring any female to work on streets or roads, or serve on juries."

The efforts of the friends of woman suffrage in Massachusetts to get the word "male" out of the constitution have been defeated this year in the House, by a vote of 77 to 136, with 27 absent or not voting. This shows a gain in the affirmative of only nine votes over last year, and, if we read aright an article on the subject in the *Woman's Journal*, the leaders of the movement have given up the idea of a "short cut" to their cherished object through premature legislation. "Hereafter," says Mrs. Lucy Stone, "our work lies not so much with the State House as with the people. They who elect representatives and senators must see to it that only those are trusted with power who believe in our theory of government, and who respect equal human rights." The one hundred and thirty-six representatives who voted no, and whose names are to be pilloried in the *Woman's Journal*, may fairly congratulate themselves on this result of their action, namely, that they have brought back the agitation to its legitimate sphere, and reinforced the lesson that, in a republic, reforms must begin at the bottom and not at the top, in order to be either healthy or permanent.

At last, after some months of confused wondering, there is a more or less general expression of belief on the part of our press that the plain truth about the *Alabama* Claims difficulty is, that Mr. Bancroft Davis has succeeded in putting us into a very disagreeable position. So the most influential and popular journals in the country are now saying; and everybody knows what intelligent people have been saying to each other in private for the last month. It is now openly said that, for want of intelligent supervision by the Department of State, an unduly ambitious gentleman—whose most noted diplomatic service previous to his preparation of our case was the Motley correspondence, unless, indeed, he achieved the Gortchakoff correspondence also—has been enabled to endanger the peace of seventy millions of people; to jeopardize and discredit the principle of arbitration which we had honored ourselves by adopting and advancing; and to effect these things while putting his country in the wrong. Mr. Sumner's speech was, we suppose, an attempt to express the height and the depth of our feeling of displeasure at the conduct of the people, especially the governing people, of Great Britain; Mr. Sumner declared that he never meant money; but to get the speech smuggled into a bill for damages was, as Mr. Bright has recently said to an American friend, a piece of "attorneyship rather than statesmanship," of which the credit appears to belong to our Department of State, and probably to the imperfectly supervised Assistant Secretary. The will of the country was good to make a friendly settlement of a troubling question. We are not afraid to say that, when the English expression of regret was made, the public generally supposed Mr. Sumner's indirect damages to have disappeared, and were well pleased that they had. For instance, in the discussion that immediately followed the treaty in our own papers and those of the Provinces, when the talk was on this very question as to which Government had gained most in the transaction, there was not a word of assumption that any claims other than the direct were to be insisted upon. But soon comes Mr. Bancroft Davis's "case," and at once we have everything in fog again—a mountain of mist which no man can gauge, claims that no man can estimate, upon which nobody wants any money, which nobody expects anybody to pay. The country has been kept much in the dark in this matter, but we think it begins to see clearly that there has been gross mismanagement. It is one more illustration of the certainty with which a man in a place too high for him brings discredit on those whom he represents. The Administration may be able to find a way out; but we wish it would say how.

An Italian jurist, Professor Vidari, has published his views on the Treaty of Washington, and they are worthy of consideration. He says the Treaty is so ambiguous as to bear out either of the two conflicting interpretations, and that the only portion of it which might determine one's doubts he finds in the very first article, where it is written:

> "In order to remove and adjust all complaints and claims on the part of the United States, and to provide for the speedy settlement of such claims which are not admitted by Her Britannic Majesty's Government, the high contracting parties agree that all the said claims growing out of acts *committed* by the aforesaid vessels, and generally known as the *Alabama* Claims, shall be referred to a Tribunal of Arbitration, etc."

Now, when we talk, says Professor Vidari, of acts *committed* by the Confederate cruisers, we must mean those acts which they directly intended and effected as the immediate consequence of their cruising, and in these we could not possibly include the transfer of American ships to the British flag, the heightened insurance risks, the prolongation of the war, the greater expenses thus incurred, etc.:

> "To commit an act means to exert one's personal activity directly upon some person or thing; and, therefore, whatever is not the equally direct consequence of this exercise of activity cannot be said to be *committed* by the agent."

This argument will appear less subtle and far-fetched if we bear in mind the double meaning of the word "claims," as pointed out the other day in these columns by Judge Nott, and substitute for it the words "causes of action" in the phrase "all the said claims growing out of acts committed." Professor Vidari relies, however, mainly on the facts antecedent to the Treaty as aids in interpreting it, and reaches what we may call the unavoidable conclusion that the "amicable settlement" referred to in the protocol is the Treaty itself. Under this head, he notices the fact that the British Commissioners, in the session of April 5, accepted the rules of international law, which they at first rejected, and which are now incorporated in Article VI. of the Treaty, for the guidance of the Geneva Tribunal, in order, as they explained, to show the desire of their Government to confirm the "amicable relations" of the two countries, and to establish rules of such a nature as to give satisfaction for the future.

THE FRENCH ARMS INVESTIGATION.

THOUGH the French Arms Investigation has not yet come to a close, still enough has been brought to light to give us a satisfactory understanding of the history of the transactions, to show where the Government has been innocent, and where and to what degree it has been at fault. The discrepancy between the reports of the War and the Treasury Departments, and the wide difference between the sums paid by France for the arms and those received by the Government at Washington, have been explained to the satisfaction of everybody, and have long passed out of the discussion. There still remains a charge of violation of United States law and of our international duties. It is asserted that two United States statutes have been broken. According to the law of 1868, the Secretary of War is "directed to cause to be sold, after offer at public sale, on thirty days' notice, in such a manner as he may deem most advantageous to the public interest," any unsuitable arms, ammunition, etc., he may wish to dispose of. It is charged that in several particulars the sales were not executed in accordance with the provisions of that law; and this charge the accusers of the Administration have, we think, made good. There was one plain violation of the spirit and another plain violation of the letter of the law. The act of 1868, as first proposed by Mr. Garfield, authorized the Government to sell unsuitable arms, ammunition, etc., at public or private sale, without any restrictions or limitations whatever. Mr. Van Wyck objected; he thought it would be unwise to allow arms to be sold privately which had not first been offered at public sale, for the reason that the purchaser might fee the officers of the department to get them for less than their market value. If the arms were first put up at public sale, it is plain there could be no chance for cheating; for the officers of the Department could not take less than what was publicly bid for them, while no private purchaser would offer a bribe to get them for more. Mr. Van Wyck, therefore, moved that the arms be advertised for thirty days at public sale before any were sold privately. This amendment Mr. Garfield accepted. The wording of the resolution was careless, and, from the account of the proceedings in the *Globe*, we should say that the amendment was tossed into the resolution in a hasty and inaccurate manner. The War Department construed this law to mean that the offer at public sale for thirty days must precede the private disposal not of each lot of arms, but of the particular kind advertised. According to this strange construction, after the 10,000 muskets of a certain kind had been offered at public sale for the requisite thirty days, another 10,000 might be sold privately without the formality of putting up this second lot at thirty days' notice. Six months later, still another lot could be sold. Nothing would be wanted, then, but a dishonest officer and a dishonest purchaser to cheat the Government out of the full value of the arms sold. Ten thousand muskets, which in the market might bring four dollars apiece, might be sold at three dollars apiece to a purchaser who would give the officer in charge of the sale $5,000 for the favor. This was the very possibility Mr. Van Wyck's amendment was intended to guard against.

The officers of the War Department, then, plainly violated the intention of the law, and that intention was so obvious that we must believe they were conscious of the violation. In the manufacture of ammunition for the purpose of selling it, they violated the letter of the law. Plainly, the Government can only sell what and in what manner the law authorizes it to dispose of. If it can manufacture cartridges without authorization, there was, then, no need of any law providing for the sale of arms. The quibble of the defence will be that they have the right to manufacture such things as they think necessary, and that after their manufacture, if they be unsuitable, they have the right to sell them. The ammunition is up to the time of manufacture suitable; after it, unsuitable. If the cartridges were suitable, it was unlawful to sell them, and no country can be supposed to authorize its government to manufacture things which are unsuitable. Moreover, if the cartridges sold could have been used for the breech-loaders of the pattern of 1868 (and they could at least have been made to be so used), of course the statute was directly contravened. As the case stands, we feel no hesitation in saying that the law was pretty well violated.

The other law the Government is accused of disregarding is that directing that no arms, the property of the United States, shall be sold to the agent of any friendly power when at war with another friendly power. It is charged that the officers of the War Department disposed of old arms to persons whom they knew to be French agents. In the main, it seems to us that this charge has not been made good. Certainly, up to the 13th of October, 1870, no arms were sold to any persons known by the Department to be the authorized agents of either belligerent. On that day, Secretary Belknap and General Dyer discovered that Mr. Squire, to whom they had just made a large sale, was an agent of the French Government. Secretary Belknap at once ordered that no more arms be sold to him; but he delivered what had been purchased, and for this he is censured by some. Perhaps it would have been better had he not done so; he had not yet received from Mr. Squire the margin commonly exacted from purchasers, and could have renounced the bargain with propriety had he chosen so to do; still, there was nothing in his action deserving of severe censure. It is not proved that the Government sold arms to persons whom its officers knew to be agents of France, and, with an exception or two, they seem to have taken all the precautions to prevent a violation of United States law that could have been reasonably expected at the time. The officers of the War Department could not possibly have guarded against selling to French agents. They refused to sell to the Remingtons as soon as they understood their true character, but the Remingtons might have employed a dozen agents, who, in their turn, might have employed a dozen sub-agents. The law required they should sell to no one whom they knew to be buying for France or Germany. It was necessary they should do that much; it would have been useless and impolitic to have attempted more. It was impossible that the officers should know that the buyers were not French agents; their only obligation was to maintain a condition of ignorance that they were. The War Department notified its New York agent not to sell arms to the Remingtons. This was not enough: it ought to have notified him not to sell to any person he knew to be an agent of either of the countries at war. The officers in charge of the sales did not fail, so far as we know, in maintaining the proper state of ignorance. We think, however, they went a little too far in delivering arms from the Government lighters directly to the decks of the French steamers. The officers in charge of the sale may say that they did not know the purchaser was a French agent; that the arms, so far as they were aware, were still in the hands of private speculators. Still, this is one of those things which seem to be more significant than they are: it could have been avoided, and the Government would have been wise to refuse to deliver the arms. In a word, we think the War Department has been, perhaps, a little careless, while we acquit it at this point of any violation of United States law.

No charges of bribery or peculation have as yet been fixed upon any one. We see clearly brought out two wants of our Government with which we have been long familiar. These wants are dignity and respect for law. The mere fact that the Government should have been willing to break or strain a statute to get a good price for a lot of second-hand goods is unworthy the dignity of a country like ours. Whether the law-making has been slovenly or capricious, or whether the law-makers are not held in very high esteem, it is certain that executive officers at Washington have long shown a disposition to look upon laws (particularly in small matters) as things rather to get around than to obey. They certainly will continue to think in that way until the country notifies them that they must cease to do so; and it is important that the public shall speak distinctly on this point. It may have been very well to break the law in the interest of self-preservation, as we did in the war; it may have been well even to get rid of an obnoxious President, as we so narrowly and happily escaped doing in 1868; but nobody will say it is good to trample under foot restrictive statutes in order to sell off old arms or any other accumulations of the Government's garrets and cellars. We notice, too, an incipient greed and selfish carelessness in our conduct towards other nations, against which we should particularly guard. Since the Revolution, we have perhaps had the purest foreign policy and practice of any country under the sun; but we, nevertheless, need special caution as to the future. Our position among the nations is so entirely anomalous that we are scarcely likely to think of putting ourselves in the places of others; and we are so strong and so distant from any possible enemy that it will hardly be in human nature to help presuming a little on our advantages.

THE RECENT COMMERCIAL AND FINANCIAL EXPERIENCE OF BELGIUM.

WHATEVER tends to throw light—especially the light derived from experience—upon the present commercial and financial policy of the United States, is eminently worthy of attention; and of all the records of recent experience, none are more valuable or comparatively so little known as those of the small kingdom of Belgium. We, therefore, propose to ask the attention of our readers to a brief review of the commercial and financial history of that country since the commencement of the present century: a subject which Dr. Elder, of Philadelphia, in his recent book, has so wilfully or ignorantly misrepresented, with a view of bolstering up the system of Pennsylvania protection.

Passing by the historical fact that the "Low Countries," including Holland and Flanders (Belgium), owed their growth and prosperity during the sixteenth and seventeenth centuries mainly to their exceptional freedom from the commercial and industrial restrictions which then fettered all the rest of Europe, we find that during the French occupation of Belgium by the first Napoleon the protective system was carried out practically, and under military rule, to a degree rarely if ever equalled. Not only was the introduction of all foreign goods into the country strictly forbidden, but all goods of foreign growth and production found within the state were seized and publicly burned in the streets, and the persons concerned in their importation summarily shot or otherwise severely punished. The result of twenty-two years of such rule under the French was, that the whole country, when the Dutch assumed the sovereignty in 1814, had become desolated, and to a considerable extent even depopulated. The Dutch, however, a practical, honest, and industrious people, brought in a new and altogether different policy: a cardinal feature of which was a customs system in which the maximum duty levied on the import of raw materials was only *three* per cent., and upon all manufactured articles *six* per cent. Under this period of free-trade legislation (1814–1830), the principal manufactures of Belgium were again brought into existence, and developed with great rapidity: a fact demonstrated by an exhibition of national industry about the year 1829, which at that time attracted the attention and comment of Europe by reason of the excellence and diversity of the manufactured articles contributed.

But the deep-rooted antagonism which existed in respect to many political questions between the Dutch and the Belgians, coupled with differences of language and religion, finally overshadowed all other subjects, and in 1830 a revolution broke out which resulted in the separation of the two countries. Then, like the United States, Belgium underwent one of those intense social and political crises—inseparable always from a bloody civil war—and trade and industry were naturally laid prostrate. The manufacturers of Belgium, although enjoying almost unparalleled advantages in respect to the price and supply of skilled labor as compared with the rest of Europe, embraced the opportunity afforded by this condition of affairs to institute a movement in favor of protection; and, mainly through the popular hatred of the Dutch and of the general policy by which they had for fifteen years governed the country, fully succeeded in overthrowing the previous free-trade legislation. In its place they induced the new government to adopt a tariff almost as restrictive and illiberal as that now in force in the United States; with sliding scales to maintain the price of bread at artificial fixed rates, differential duties, and drawbacks in complex multiplicity.

A recent letter from a leading statesman of Belgium—M. Corr Van der Maeren—thus describes the result of such a fiscal policy, which, without prejudice, might be reasonably regarded as a correct picture of the present condition of affairs in the United States. He says:

> "The manufacturers being in full possession of the home market, neglected to keep pace with the improvements in productive machinery which were going on in other countries, and produced only for the consumption of their own limited market. Rendered thus incapable of competing in foreign markets with their neighbors, they lost the commercial support of the mercantile community, who had hitherto exported their products; many of the principal trades combined together in order to maintain high prices, which weighed heavily upon their unfortunate consumers; but this and every other means which they put in practice to profit by the monopoly conceded to them by the new legislation, could not last. Producers and consumers, shut up in one cage, found it too small for their movements, and trade continued to decrease. I will give you one example, illustrative of the situation. Foreign coal was taxed with a prohibitory duty. The glass and other manufactories established in the neighborhood of the coal districts were, of course, obliged to pay the price fixed by a combination of the coal owners and miners, until at length these manufactories actually stopped working, because of the high price of fuel. They claimed on their side the 'protection' of the government against the monopoly of the coal-masters; and the final result was that, in order to save the industrial establishments from ruin, the government was obliged to use the power given it by law, and take off the duty provisionally on the importation of coal. In short, the protective legislation, with its privileges and monopolies, produced such effects as this every day in various ways and by conflicting interests."

Moved by such disastrous results, the Minister of Finance, M. Frère Orban, came forward in 1851 and denounced, in the most energetic terms, before Parliament, the whole policy of protection, which he asserted would, if continued, be the ruin of the whole system of Belgian domestic industry. He further declared that from that time it would be the purpose of the government to reform progressively the existing customs legislation of Belgium, eliminating from it all protective duties, and placing it, finally, upon a purely revenue basis. But, upon their side, the manufacturers were no less determined to defend what they called their rights and privileges. They termed themselves "the supporters of national industry." They contested inch by inch every foot of ground, and made the proposed reforms for many years, in Parliament and out of Parliament, the principal topic of public discussion. M. Orban, however, made steady progress in carrying out his declaration of principles, and in 1855 succeeded in passing a new and reformed tariff; and from that time tariff reforms went on steadily until 1866, when the present tariff, framed entirely on the basis of revenue, and without one feature of protection (and which Dr. Elder, in assuming the position of public instructor, seems never to have heard of), was enacted.

This tariff (see "Comparative Tariff of all Countries, Treasury Department, 1869") will be found, on inspection, to be the most liberal, with the possible exception of that of Great Britain, of any civilized country, and framed solely with a view of obtaining revenue. Its effects have been so entirely satisfactory that, at the present time, there is no political party in Belgium which thinks the policy of protection to be worthy even of consideration; and no public man, author, or journalist of any repute, who advocates or is in any degree identified with protection. Within the last ten years, furthermore, the various Chambers of Commerce of the kingdom have unanimously voted resolutions in favor of the desirability of the government's devising some financial scheme whereby it could be enabled to dispense with the raising of revenue through the customs, and so, by suppressing them altogether, attain the position of *perfect free trade*. In a speech by the Finance Minister, delivered in Parliament November, 1867, he uses the following language:

> "There is no doubt that very few people could be found who would maintain our customs for the sake of the institution itself. Those who support the necessity of customs do so for the sole reason that it is a means of procuring revenue. The principal obstacle we meet, when we attempt to abolish our customs, is the considerable revenue they yield to the State—revenue which we should have to replace by other taxes."

In the same speech, the Minister presented the following remarkable statistics, showing a comparison between the results for twenty years in France of trade and industry under a protective system, and the results for the same period in Belgium (a border country), where, for the major part of the time specified, the customs duties had been in a condition of continued and progressive reduction:

		Frs.	cts.		Frs.	cts.
General importations into Belgium (consumption and transit) per inhabitant was....................	In 1847...	90	55	In 1865....	272	99
Do. do. in France....	"	36	35	"	92	83
Difference in favor of Belgium..		54	20		180	16
General exportations (consumption and transit) of Belgium per inhabitant was....................	"	72	80	" ...	240	86
Do. do. in France....	"	29	56	"	107	54
Difference in favor of Belgium..		43	24		133	32

Under the protective tariff of 1854, the customs duties of Belgium produced 10,928,535 francs; but under the free-trade legislation of 1865, the revenue increased to 15,764,608 francs—a gain of nearly forty-five per cent. Such, then, is the lesson to be learned from the recent fiscal history of Belgium; and whatever else it may teach, it is conclusive to this effect—namely, that protection, whenever it existed in Belgium, under either French or home rule, proved most disastrous to the industry and commerce of the country.

THE HAXO-STREET TRIAL.

Paris, March 13, 1872.

As a class, and if you only judge them by their manners, our working-men are certainly superior to those of any other country. They have a very nice artistic feeling, an extraordinary amount of natural wit; but their cleverness covers a great ignorance, and their amenity can at times give place to the most cruel instincts. There is more brutality in the Anglo-Saxon character, and more ferocity in the French The disease is chronic with one race, and acute with the other. Al the phrases and theories about the Commune seem to me worthless beside the plain statement of facts. Mr. Frederic Harrison would not indulge in his apologies if he saw in our courts the heroes of his imagination. The last trial which has taken place has hardly attracted any attention, as the sensibility of the public has been almost overtaxed. But I believe that the drama of Haxo Street is perhaps one of the most instructive, and I will give it to you in all its most horrible details.

It is now quite evident that the massacres which ended the reign of the Commune were not committed in a sudden outburst of rage. They were preconceived; every day in succession had its massacre. On the 24th May, the archbishop was executed with his companions in the prison of La Roquette. On the 26th May, at three o'clock in the afternoon, sixty Federals came to the prison, with an officer at their head (the name of this officer is still a secret), bearing an order from Ferré (who was executed with Rossel) addressed to the director of the prison, named François, to give him as many hostages and other prisoners as the company could safely conduct away. The latter at once gave the order to have all the hostages led out of their cells, as well as fifteen others, of whom he himself made the list. He went himself into a passage which runs before the cells, and one of the guardians called out the names. All the hostages had been led out of their cells. The guardian, named Ramain, did not pronounce well the name of one of the hostages, Father De Bengy. De Bengy? said he quietly, and, stepping forward, he placed himself by the other victims. Father Guérin, a missionary, offered meanwhile to M. Chevriaux to answer for him, if his name was called out, as this last prisoner was a married man with children. He had already made him this offer the day before, as he was dressed like a layman: his life was a life of martyrdom; he could never die better. Chevriaux refused to accept the sacrifice. Fortunately, neither the one nor the other was called. But such examples of simple heroism ought to be remembered.

François, the director of the prison, gave to the officer in command, whom he did not know and whose name he says he is ignorant of, fifty prisoners in all, knowing very well that they were to be executed. The hostages were counted one by one at the outside door. The unfortunate men placed themselves in the midst of two files of Federals. There were thirty-five gendarmes (the gendarmes are all of them old soldiers, and are generally married men), ten municipal guards of Paris, ten priests, and two common citizens—three gendarmes were fortunately in the infirmary of the prison. This troop went up the Rue de la Roquette as far as the Père la Chaise Cemetery, then followed the Boulevard de Ménilmontant as far as the Boulevard de Belleville. The priests were praying fervently and exhorting the gendarmes. At the lower part of the Boulevard de Ménilmontant the troop was stopped by a barricade and the 174th battalion of Federals. The officer who conducted the prisoners asked the commander of this battalion for some more men. This commander himself followed with a company and its officers. The crowd began to surround the cortége, but it was quiet at first. In the street called by the name of Puebla (the Mexican town) the crowd almost suddenly became delirious, ferocious, and began to utter horrible threats. The cortége entered the *mairie* of Belleville, which was the headquarters of Ranvier, a member of the Commune, and one of the men who had set fire to the Tuileries and the Hôtel de Ville. Ranvier knew the hostages. He had often visited them at the Prison of La Roquette, and he showed them like curious beasts to his friends. He gave the order for an immediate execution on the ramparts, allowing the prisoners only a quarter of an hour to make their wills.

The troop now left the *mairie* amidst a howling crowd. Men and women in arms threatened and struck the prisoners; some orators made speeches and inflamed the mob. This continued all along the Rue de Paris and the Rue de Haxo. At half-past five only did the prisoners reach the ramparts at the headquarters of the legions of Belleville and Ménilmontant. Four military commanders had successively occupied this post in four days—a Pole called Mutasewitch, who had fled on the 22d May, as soon as he heard that the Versaillais had entered Paris, and three other men who fled in their turn. When the prisoners arrived, Parent, who had just been named delegate of war in the place of Delescluze, was there with eighty officers. He was on the point of making his escape to the Prussian lines. Parent had besides with him a number of members of the famous Central Committee, who made the insurrection of the 18th of March. When the hostages arrived, Parent, turning to the members of the Central Committee, told them ironically: "Show your influence—now is the time; hinder these people from dishonoring the Commune." The first hostages were already entering one by one through a *grille*, and each one was pushed through with a violent kick by a herculean artilleryman. They were placed against a house, and they were shot almost at the muzzle. Then a new batch came in, and the newcomers had to witness the last convulsions of their predecessors. This massacre lasted more than a quarter of an hour. Only one man attempted something like a revolt. An under-commissioned officer of the Guard of Paris, a handsome man, still young, was offering his breast to the gun of a pseudo-sailor of the Commune, when an old priest threw himself on the gun and placed himself between the sailor and the soldier. He was almost immediately shot, and the mob struck his body with violence. After it seemed all over, when all the bodies heaped together were motionless, three Federal officers, two soldiers, and a woman walked for some time over this human barricade, watching, revolver in hand, for some movement.

It is impossible to give an accurate idea of the sullen aspect of the men who appear before the Council of War as accomplices of the massacre of Haxo Street. A man called Benot, who hardly answers the questions of the President, was Bergeret's right-hand man, and a colonel in command at the Tuileries. He was once a soldier, and spent 42 months in prison during the time of his service. Bergeret disappeared after the burning of the Tuileries. Benot, with 1,500 men, went first to the *mairie* of the eleventh arrondissement, where the Commune resided for a while. On the 26th, he retired to Haxo Street along the rampart; and he insisted upon the execution when Parent made a faint effort in behalf of the victims. His only defence is that he did not give the order himself to take the prisoners out of the Roquette prison. There is not one man among the 26 accused who does not wear an air of stupidity and brutality. They all deny everything, and they have not even the intelligence to choose between what they may safely avow and what it would be dangerous to avow. Two hundred witnesses are to be heard in this case, and the trial will perforce last at least a week.

I have carefully gone through all these criminal trials of the Commune, and each one has left on me a more painful impression. There is a great deal of ferocity in all the men who committed these murders, but there is no courage in their ferocity. Now that the excitement is over, their attitude is the most contemptible that can well be imagined. It is also very striking that all the leaders of the movement, almost without exception, escaped to the Prussian lines and abandoned their foolish instruments. Delescluze is one of the few who died on a barricade. But many are now in London, holding meetings in the cafés of Leicester Square, and making quietly their preparations for the next social rising. I recommend you to read the Parliamentary inquest which has just been made on the week of the 18th March. These two volumes in quarto contain the depositions of all the men who played a part in these sad events; and nothing can be imagined more interesting in a social as well as in a political point of view. I have been particularly struck by the accounts given of the state of the Parisian workingmen by some employees of the police, who for years have been watching the secret societies. Their description of the Paris *prolétaires* is far from flattering, and the events of the Commune have, to a great extent, proved the veracity of the opinion of these functionaries of the detective force. The sufferings of workingmen in Paris are becoming very great. So long as Paris is not the political capital, there will be no confidence in the future; foreigners will abandon it. It requires some courage to buy and to furnish handsomely a house for some future Commune. Everybody is struck by a change in the manners and the attitude of the people: the *ouvriers* are no longer polite; they have become very rude, especially towards foreigners. They have a hostile look, and when they have a chance they speak of revenge. *They* also have a *revanche* to take; they have a defeat to avenge. I see everywhere the seeds of social war; the gay capital of pleasure is now a sort of New Jerusalem. It is kept down by a strong army, but as soon as the Government, for whatever reason, is disorganized, and there is nobody to give a clear order, we may expect new and perhaps more frightful troubles, and the middle classes will no more resist the Communists than they did on the 18th of March. Remember, that a few weeks after the Commune the Conservatives could not even find a candidate for election; and that the nomination of M. Vautrain, one of the mayors of the 18th of March who made a compromise with the Commune, was considered almost as a triumph. There is something awful and tragical in the aspect of Paris as it is now; nor do I speak only of the material ruins, of the ghastly Tuileries, of the ruined Hôtel de Ville. I saw the other day through the walls of the Tuileries the Victory which surmounts the Arch of Triumph of the Carrousel: this curious optical coincidence is realized everywhere in the moral world. I see everywhere the marks of decadence beside the traces of past greatness.

BISMARCK IN THE HOUSE OF LORDS.

BERLIN, March 12, 1872.

ONE of the most memorable and eventful of parliamentary debates—brilliant and effective as a display, and historical in its issue—was the discussion of the new school law in the Prussian House of Lords upon the 6th, 7th, and 8th of March. The "ancient and honorable" were out in full force—Baron, Graf, Herzog, Fürst—to preserve the traditions and dignities which constitute their life from the invasion of Bismarck and his mushroom peers; the "clericals" had rallied their last man, the Catholic through his allegiance to the church, the Evangelical through his jealousy for the faith, to retain the prerogative of ecclesiastical supervision over the common schools; and the supporters of the ministry felt that not one of them must be wanting, lest through his absence the Government should either lose the measure so hard won in the Chamber of Deputies, or fail of such a majority as would give to this great reform strength and permanence in public opinion. Baron Senfft von Pilsach, leader of the opposition, one of the oldest members of the house, and representing one of the oldest and proudest families in the realm, declared that he could not remember ever to have seen so large an attendance of the peers, and added, in a tone of petulance and contempt, that there were present many members utterly unknown, who had evidently been brought in for the sole purpose of voting against the old working members. But on his own side, also, were to be seen lords who had scarcely appeared in the house for twenty years, two of them, the Princes Anton and Boguslaw Radziwill, connected with the Royal family, upon the Catholic side, who had come to cast their votes against the Government in a measure which seemed to threaten the privileges of their order and the prerogatives of their church.

The whole spectacle was one of curious and exciting interest, and some of the by-play had a spice of drollery. The chamber in which the peers assemble is by no means so large and imposing as the Senate Chamber at Washington. It is a square hall, plainly decorated, situated within a court and garden, the entrance to which is through a doorway and a hall that present only the common aspect of a good Berlin house. The floor is seated with cane-bottomed chairs, bound together in rows after the manner of a concert-hall; and at the back of each chair is a small movable wooden leaf, which serves for a table to the chair directly behind it. At the upper end of the hall is a double platform, on the higher part of which is the President's box; in front of this is the tribune, a small pulpit upon which speakers may lay their notes, papers, and books of reference while addressing the house; in front of this again is the stenographers' table, and on each side of the table are the desks of the ministers; the first of these to the left (at the right of the president) is occupied by Prince Bismarck; the second, by General von Roon, the Minister of War; the third, by the new Cultus-Minister, Dr. Falk, a tall slender man of forty-five, with black hair and eyes, and a quick, nervous manner. Directly in front of these, as a member of the house, with a very modest countenance and quiet demeanor, sits the great master of strategy, the conqueror of Austria and France, Von Moltke. In the gallery fronting the president are boxes for the Royal family, the diplomatic corps, and members of the Chamber of the Deputies; upon the two sides are galleries for reporters and spectators.

The school law, as reported from the lower house, provides that the supervision of the schools—which had come to be regarded as a church prerogative—shall belong to the state alone; and that the office of school-inspector, which by usage has pertained to the parish clergy *ex officio*, shall hereafter be filled only by appointees of the state—that is, shall be a civil and not an ecclesiastical office; and an appropriation was called for to pay this new order of school-inspectors. The Ultramontanes had strained every nerve to secure the defeat of this law by the peers. They had flooded the house with petitions and remonstrances; they had stirred up a threatening agitation among the Poles; they had appealed to the pride and prejudices of the nobility, and to the fears of the devout; they had invoked pacts and precedents, and in general had made so great a rout that the friends of the law had fears for its safety.

The debate was marked by signal ability. The conservatives and clericals put forward their ablest men, and many strong and fitting things were said, and many sharp hits were made at Bismarck, though some speeches read from the tribune were insufferably dull, and at times the house showed its impatience by indulging in loud conversation during such an infliction. There was nothing that would answer to the American notion of eloquence—oratorical declamation upon great principles, and passionate appeals to partisan interests; but the debate was a downright matter-of-fact talk upon the case in hand. When at last Prince Bismarck rose, all ears were attentive, all eyes were fixed. In deference to his military sovereign, the Chancellor aways appears in his uniform as a general. During the debate he had sat twisting his moustache, twirling his pen, or turning hurriedly over his portfolio for a note or memorandum; and in his speech he manifested the same exuberance of nervous or electrical vitality—this is also an indication of that impatience of control or contradiction, and of that prodigious energy of will, which are written upon every feature, and especially in the lines of the forehead and mouth. He makes no attempt at oratory, uses little gesticulation, hardly varies his tone, sways his body slightly back and forth, keeps his left arm akimbo, twirls his pencil in his right hand, or thrums at intervals with both hands upon his desk—thus working off his superfluous nerve-power. He speaks rapidly, occasionally hesitating, not for words, but to choose the particular word which he would utter, not in that assembly alone, but of Europe and of the world. And his words are both weighed and weighty.

I am inclined perhaps to a higher moral estimate of Prince Bismarck's power than many would accord to it. Some of his greatest admirers content themselves with exulting over his keen state-craft. But he seems to me to belong to that far higher and rarer class of men who, whether in church or state, are the *diviners* of their times. There are men, for instance, in church affairs, whose speeches always seem to prevail, whose measures always seem to carry, and who, because of this, are suspected of manipulation and Jesuitical scheming, yet who never plan beforehand to control an assembly by secret measures, or to secure a majority through a caucus. Such men in church or state combine these three elements: a far-sighted and comprehensive sagacity that embraces in its view all the causes, motives, and tendencies of events; a quiet confidence in the working of principles, laws, and tendencies—which, in the theological sense, is also a faith in Providence; and, thirdly, a knowledge of human nature which enables them to touch occult motives and springs of action, and at the critical moment, long foreseen and patiently waited for, to bring these into conjunction with the ripening tendency of things, and so to secure the desired consummation. This prophetic sagacity and this philosophical handling of men and events are, it seems to me, far more to Bismarck than political manipulation or diplomatic craft. It is because of these that his impetuosity of temper does not frustrate his aims, and that he dares to use a frankness and boldness of speech which cunning and ignorant men alike mistake for the trick of the prestidigitator to divert attention from his sleight-of-hand. And by these same qualities he leads other men to do, or to imagine they do, what he has simply made patent by timing their latent feelings to the latent causes which he had divined and mastered.

Thus, in the spring of 1870, when urging a larger appropriation for the army than the house was disposed to grant, he said openly, "It is *Donner-*

wetter; I snuff war in the air." No man could divine his meaning. The political atmosphere was calm and clear, especially in the quarter of France. "I must be ready," he continued; "and I cannot create an army out of the ground, nor make it from my fingers." Only Von Roon and Von Moltke understood him. Bismarck retired to his country-seat too "sick" to see any one; but the king, the minister of war, the chief of police, were within this circle of diplomatic seclusion. Summer came; the king went to Ems; one morning the "sick" chancellor reappeared in the Reichstag, and announced that Napoleon had declared war, but Germany was ready. The house cheered over the preparation which *they* had made for war!

The struggle of to-day with the Romish party in Germany dates from Sadowa and Sedan; and having deposed Austria from the political leadership of Germany, and France from the military leadership of Europe, in the logical sequence of events he will now depose the Pope from his hierarchical headship over the states and peoples of the continent. Events have brought Bismarck face to face with Pius IX., and have found him prepared to rally German honesty and German unity against ecclesiastical meddling in political affairs. This has been the aim of all his speeches upon the school question, but in this speech of March 6 it was put more directly than ever before. He unmasked the conspiracy now working in French diplomacy to seek revenge upon Germany first in Italy; paralyzing Germany through internal religious disorders and the fear of a Polish insurrection, then seizing upon Rome and holding it for the Pope, and thus once more creating a Catholic power strong enough to threaten Germany and curtail her influence. He showed that, so long as Prussia was a little state wedged in between Austria and France, the Romish Church was content to enjoy her toleration; but from the moment that Prussia began to create in the heart of Europe a great and commanding military power under an evangelical dynasty, all the craft of the Jesuits was directed either toward manipulating the state for the church, or destroying the Government through the church. For this the Catholic clergy were an organization under more stringent discipline than the army; the confessional gave them the means of instigating opposition to the Government through false representations; they had appealed to the ignorance and bigotry of the people by telling them that the Government would make heathen of their children by excluding religion from the schools; at the same time, the Polish clergy had used the schools solely for teaching their dogmas, so that on coming to the higher schools the Polish children were far behind the German in their common studies, and thousands of the Poles were so ignorant that they had signed the clerical petitions against the school law with the mark of the cross. The German people, reading the German papers and thinking for themselves, could not be imposed upon by the cry that the Government intended to heathenize their children; the people who read the discussions could be trusted to judge for themselves; but the Poles could see only what their priests would suffer to appear in their own language; and, in view of these facts, he demanded that the common schools should be taken out of the hands of the clergy, that their teachers should be amenable only to inspectors appointed by the state, and, as the most essential point of all, that all children of whatever parentage should be taught the German language as the language of the schools and of the nation.

After this weighty speech there was a rambling discussion of two days, in which Prince Bismarck kept up a running fire of wit against his opponents. He is never at fault for a retort. As a German friend expressed it, "Bismarck first serves a substantial meal, and, if they do not relish that, he throws in cayenne pepper." At the close the school law passed by 125 ayes to 76 noes; and Germany entered upon a new era of emancipation and progress—*Germany,* I say, for the liberals in church and state in all parts of the empire feel that Bismarck has fought their battle and won their cause.

AUSWANDERER.

Correspondence.

EMILE ERCKMANN AND ALEXANDRE CHATRIAN.

TO THE EDITOR OF THE NATION:

SIR: You do not like the French and you adore the Germans. That is a matter of taste. I may be permitted to say, that I do not envy yours. You criticize our authors rather sharply. That is your right as a bohemian. Tear our authors to peaces, if that be your pleasure, but leave the man entire. Mr. Erckmann-Chatrian will not thank you for severing his contiguity by splitting him into two. Such treatment could drive an angel into a passion. For the very same thing we are all in a passion just now, all my countrymen and your servant, a french girl,

G. d. A. M.

P.S.—I confess to be ignorant in geography, but if I were to write on it, I would first stick my nose into a book, not to commit a *blunder*.

DESCENDED FROM ADAM.

TO THE EDITOR OF THE NATION:

SIR: In the notice of *Scribner's Monthly* (March 28), the critic of the *Nation,* in allusion to an article on "The One Human Race," says as follows: "Prof. Lewis decides this question in the affirmative, or rather, he calls upon those who affirm the negative to come forward, if they dare, and prove that all men are not descended from Adam." This statement is incorrect, because incomplete. The words were: "Let those who say that there are beings seemingly human, now upon the earth, who are not of Adam's race, prove their assertion; let them tell us *who* they are and *where* they are." In view of the fact that the argument on the other side is mainly built upon alleged diversities so great that all men now upon the earth could not have descended from the Scriptural Adam, this demand is a very rational and pertinent one. Do all except the Caucasian, as they are called, belong to the unadamic and the Christless lines? If not, *who* and *where* are they? The question is capable of an answer, though it may be but an opinion, and those who so confidently build their argument for preadamic races on these alleged diversities are bound to give it. It is not, therefore, a challenge to prove a negative; and there was, moreover, no "*daring*" in the business. T. L.

EXECUTIVE RESPONSIBILITY.

TO THE EDITOR OF THE NATION:

SIR: I cannot refrain from uttering an "Amen" to your last article about our "Case." You say most justly that "any member of the British, German, French, Italian, or Belgian Parliament can get up and compel the Foreign Minister to state then and there why he did this or left that undone in his management of foreign affairs. But our President and the State Department are almost as secure from all enquiries as the Venetian Council of Ten in its palmiest days."

Is it true, however, that this evil is any greater in the State than in the other departments? Mr. Boutwell was sustained in his action as to refunding by a purely party majority, and the same instrumentality keeps the country in a state of mystification as to the principles on which the finances are conducted which would soon be unravelled if individuals had the power of direct enquiry. At this moment there are five committees of investigation examining, at great expenditure of money and time, into different branches of executive conduct. It was thought that the friends of the Administration showed great folly as well as wrongheadedness in opposing fair enquiry by committees. But they were wise enough in their generation to see that all the harm the committee could do lay in its appointment as implying doubt. They knew that before the report could appear, the public attention would have passed on to other topics. A large mass of printing would be placed on file, and some newspapers might comment on it, but the public at large would know little but the fact that the Administration was accused, and might therefore be guilty. The absurd part of it is that within gun-shot were men who could in a half-hour's debate have done the whole work of the committees, and either have convicted of error or have triumphantly vindicated themselves before the country.

One of the questions which you propose to put to the Executive is also very striking. In discussing the subject, as, I suppose, everybody does who takes any interest in it, I have maintained that our "case" was almost wholly prepared by Mr. John Bancroft Davis, and that the country was committed to back up a position which endangers our relations with Great Britain simply that the ambition of that gentleman might be gratified. It is said that Mr. Evarts, after perusing it, laid it down with the remark that it was a "stump speech." Now, if you and I have come to this conclusion, may there not be hundreds or thousands of others who would like an authoritative answer to this question? Such an answer would probably do more than anything else to induce the people to consider whether our position is well founded. But whatever might be its value, one thing is pretty certain, that we shall not get it.

It is not merely, however, in executive responsibility that we fail, but equally so in efficiency. The other day in the cars, an officer of the Society for the Prevention of Cruelty to Animals was speaking of the transport of animals from Texas and intermediate points to the East, and said that not only great cruelty and danger to the public health, but also pecuniary loss to shippers, might be avoided by proper laws regulating transport. A listener observed that to get such laws would require an executive scheme backed by the voice of the people; that now they could only be lobbied through Congress. The officer assented, and said that if he had a million of dollars he would at once go to work to buy up votes. Here was a gentleman devoting his time and efforts to a cause of purely Christian charity, and that in behalf of those from whom no voice of reward could be expected, yet who would not scruple to resort to means, as being the only ones practicable, which would tend directly to the corruption and demoralization of the people. The truth is, that no great public question, as tariff and civil-service reform, can be carried unless by the same methods as are used to obtain a land-grant and a railroad charter, and we all know what chance principles have against private interest in such a conflict. When will people begin to see that direct communication by the Executive with its constituents—the whole people—instead of allowing that communication to be monopolized by the local interests of which Congress is composed, is absolutely essential to the permanent stability of our institutions? What sort of a plank would it make in a party platform?

G. B.

BOSTON, March, 25, 1872.

Notes.

A WORK which neither Arnold's Life nor any other memorial of Lincoln has indisposed the public to examine is Ward H. Lamon's "True Life of Abraham Lincoln," embracing his most important and confidential correspondence, announced by J. R. Osgood & Co. This house has also in preparation: "Poetry and Criticism," by R. W. Emerson, and "Art Education, Scholastic and Industrial," by Walter Smith, State Director of Art Education in Massachusetts.——"An Open Question," by James De Mille, is announced by D. Appleton & Co.——George Routledge & Sons will publish a new edition of "Men of the Time," brought down to date, and—what is of some consequence—revised as to its American biographies by an American editor. Also, "Discoveries and Inventions of the Nineteenth Century," by John Henry Pepper, profusely illustrated; and "Gems of Prose," selected by Charles Mackay.——"The Story of the Plébiscite," and Dean Stanley's "Lectures on the Church of Scotland," are in the press of Scribner, Armstrong & Co. ——"Joseph Mazzini: His Life, Writings, and Political Principles, chiefly from Autobiographic Sources," is announced by Hurd & Houghton.

—Mr. Charles Collins, a director of the Mercantile Library, recently addressed a letter to the Rev. Dr. Washburn, Rector of Calvary, in which he recounts that he and all the other directors desired to throw their reading-room open on Sunday; that he and they desired this because they know that thousands of their subscribers are clerks and salesmen who live in hall-bedrooms and other comfortless places, and who are apt to walk the streets on Sundays, or waste their time in worse places; that knowing many of these young men to be too poor to pay pew-rent, too proud to beg a free seat in church, and constantly exposed to temptation as well as to discomfort, the directors unanimously passed a resolution opening the reading-room on all holidays, including Sundays, and submitted it to the Clinton Hall Association —a board of incorporators who own the Library Association building, and whose tenants the directors are; that these gentlemen, having considered the resolution, replied that they could not comply with it, closing their answer with these words: And with the laws of God and the laws of our country relating to that day before us, we recommend, etc., etc., etc. What Mr. Collins wishes from Dr. Washburn is an answer to the question whether or not the opening of the reading-room would really be, as asserted by the trustees, an infraction of the laws of God, and, if so, which law, and Dr. Washburn complies with his request in a letter which Mr. Collins has put into print. In this paper, Dr. Washburn says at the outset, in effect, that the Sunday is one thing, and the Sabbath of the Jews is another, for he remarks that, in his opinion, the authority of the Sunday does not rest upon the Decalogue, but on the law of Apostolic and Christian history, which gives us that day as the feast of the resurrection; and he thinks it would be eminently in the spirit of Christ's teaching to give some thousands of poor clerks and apprentices a means of spending the commemorative day in improving their minds and morals. To the objection that the opening of reading-rooms would be a step toward the license of "a Continental Sunday," Dr. Washburn replies that it is well to ask "how far the straitness of past usages has provoked the license of to-day." It is certainly a very pertinent question; as also are the questions whether we shall make the day less holy by making it more happy; and whether we shall increase the authority of the Sunday by making it odious to the child, irksome to the workingman, perhaps depraving, as well as irksome, to the apprentice and clerk. It is desirable, Dr. Washburn thinks, that there should be more of a reverend piety, but it is also very desirable that there should be more of what a sound divine has styled "faith in a good God and in common sense." He would go further than to say that good Christians may not only enjoy their own library on the Sunday, and may throw open larger libraries to poor people; he would insist upon the opening of the libraries to the poor people as a Christian duty. These views were not particularly new, for this is a question which has been much discussed in one place after another, and is a question which it is not necessary to discuss very long before the subject is exhausted and a conclusion reached. We suppose the natural reaction against the horrors of the Puritan Sabbath would before this have removed American Sabbatarianism even more thoroughly than it has, had the revulsion not been partially checked by the Roman Catholic Sunday's being put before us too suddenly and carelessly.

—It was the Roman Catholic Sunday rather than the "Continental Sunday" or the "Infidel German Sunday" that delayed the final ruin of the Americo-Hebraic Sabbath. As imported to these peaceful shores by a peasantry the finest in the world, indeed, but individually so constituted that no soul of them could turn a hand over without somehow giving the true-born New Englander a shock, the Roman Catholic Sunday was a rock of great offence and stumbling. It began in the morning with the mass, which was Popish, and the confession of sins to a man, which to the Yankee mind was almost inconceivable, and was entirely disgusting—unless, indeed, it were done in the Small Vestry at Evening Meeting, or from the anxious seat in the Larger Vestry. The mass and absolution were followed by a day of out-and-out relaxation—the men smoking short pipes, joking the girls, and taking a drop now and then, the younger fry roaming the fields or swimming in shoals in the river or the pond, and some little Cassidy of them getting himself drowned each summer, and pointing a moral for the envious little Eleazars and Justins who would fain have run his risk for the sake of the ducking and the Sabbath-breaking. Then came the evening, and, as was not unlikely, it was an evening of occasional wild hoots, of uproarious and dismal howling, of wranglings, of contentions, of protracted screeching between Mrs. Murphy and Mrs. Conlan, of an active personal contest between Mr. Conlan and Mrs. Murphy's son Owen; the latter armed with the axe, and Mr. Conlan, in his haste to defend himself, with one piece of furniture after another, and, finally, with a scythe borrowed for him by his nephew. Nobody who knows what the "Limerick" quarter of our towns used to be twenty years ago, how frequently the Sabbath night was made hideous by the misplaced outcries of some of its residents, all of whom seldom got into bed three Sundays running without a visit from the town constable, will wonder that after the advent of the Irish Sunday the Yankee clung with renewed tenacity to his traditionary beans in the morning, his three sessions of "meeting" in God's house, his Sabbath-school at noon, his funereal length of visage—to all Jewish rigidity of ceremonial preciseness with which he observed his Lord's Day. It certainly, as he managed it, was no day for a human being; and, but for the whiskey, and the black eyes, and the Monday morning necessity of going bail for your friend Doorly before you could get the week's work begun, Mr. Doorly's Sunday might have had an ameliorating effect upon Dr. Hopkins's—though, as we have said, the true Yankee and the Irishman have a wonderful talent for misunderstanding each other, or of failing to understand any but the bad points of each other. Then the Sunday beer-drinking of the Germans, and their habit of laughing and talking in the open air after church, offends the American's notion of what is "respectable" as well as his respect for what he holds sacred. But nothing, we suppose, will long prevent so small a modification of our exacting practice as the opening of libraries on Sunday. It cannot be shown that the audiences in the church would not by-and-by have more recruits from the reading-rooms than the reading-rooms ever will have from the church audiences. The church, at any rate, should prefer to think so, one would say, and should be willing to see the experiment tried.

—A member of the General Court of Massachusetts could hardly aspire to a more useful position than that of representative of the State Board of Health—we mean, by making it his business to see that the legislation proposed by the Board in its annual reports is duly enacted. The third of these reports has now been published, and, like that of last year, is full of scientific testimony on a variety of topics which concern the daily habits and practice of the people, not only of Massachusetts, but of all parts of the country, conveyed, too, in simple and perspicuous language not above the popular comprehension. The third paper, for example, is on "Arsenic in certain Green Colors," and the Board, not content with describing the fabrics to be avoided on account of the presence of arsenic in them, binds in with the text three sheets of green paper of whose coloring it has procured a chemical analysis, and which therefore at once instruct the eye both as to the general aspect of paper thus colored and as to the relative amount of arsenic employed. Further on, we have a highly valuable discussion of the question whether the sewing-machine is injurious to the health of women, the conclusion being that, in domestic use, it is not likely to be so, but that in factories not making use of steam-power it can hardly fail to be; and, as the question turns upon the motion of the treadle, cuts are given of two improved treadles which appear to obviate the evils of the one generally in vogue. Again, Dr. Bowditch’s elaborate review of the wide range of testimony published last year on the use of stimulants in all countries is illustrated by a map of the world, appropriately colored, showing the areas of drinking and drunkenness, of vine-growing, of light wines and ardent spirits, and their relation to the climate—for one thing, that intemperance is everywhere very rife above 50° Fahr. isothermal line. Some of the other papers in this admirable collection relate to “Mill-Dams and other Water Obstructions,” “Adulterations and Impurities of Food,” “Vegetable Parasites, and the Diseases caused by their Growth upon Man,” etc., etc.

—While copying or intending to copy from England some of her devices for facilitating the speed of intelligence, we might do well to borrow an idea from the Meteorological Office, which proposes to issue lithographic charts illustrative of the daily weather report. “These,” says the *Athenæum*, “will be forwarded from the office of the printer between 1 and 2 o’clock P.M. each day, and sent by post to any part of the kingdom upon payment of 5*s*. per quarter. In addition to the returns from forty stations, charts of the British Isles and a portion of the Continent are given, showing the movements of the barometer and thermometer, the conditions of the wind and sea, and the quantity of cloud and rain.” With such a practice as this, we should imagine that great light could be thrown on the nature and extent of the local disturbances which still, in a large percentage of cases, falsify the predictions of our efficient signal service.

—For other than religious readers the English book-lists are not just now especially attractive, though there are some excellent works announced. The following are some of the new books: “Socrates” is the latest volume of the pretty and useful “Bayard Series”—all excellent as presents for boys, by the way—and is a new translation from the “Memorabilia” of Xenophon, with good notes by Mr. Edward Levien. Doubtless it would amuse some of our irreverent readers to peruse the latest of Mr. Beeton’s penny books; it is a “Life of His Royal Highness, Albert Edward, Prince of Wales,” and consists of sixty-four octavo pages, which Mr. Beeton has no doubt made worth the money. Messrs. Ward, Lock & Tyler are the publishers. “Men of the Second Empire” is by “The Member for Paris,” and will be found very lively reading. Mr. Robert Black begins a translation of Guizot’s “History of France,” and other works translated, or in process of translation, are the Duc d’Aumale’s “History of the Princes Condé”; A. G. De Cassagnac’s “History of the Working and Burgher Classes”; the fourth volume of Curtius’s “Greece”; and the “Memoirs of Baron Stockmar.” To this department of history and biography belong also these other new books: Mr. Henry Reeves’s “Royal and Republican France”; Sir Edward Creasy’s “Imperial and Colonial Constitution of the British Empire”; Mr. E. A. Freeman’s “Growth of the English Constitution from the Earliest Times”; a very welcome “Aristotle,” by Mr. Grote; the sixth volume of Mr. Spedding’s “Life and Letters of Bacon”; a volume of Diplomatic Reminiscence, by the Hon. John Ward; a volume of recollections of “The Radical Years 1817 and 1820 in Kilmarnock,” by Mr. James Patterson, who appears to have been a hot reform politician, and, no doubt, has a lively story of partisanship to relate; and finally, a volume for theatre-goers, containing a collection of criticisms, personal descriptions, and anecdotes of celebrated English actors of the last three centuries.

—Outside of History and Biography, we have first a promised volume of essays and lectures on social and political subjects, by Professor Fawcett and Millicent Garrett Fawcett; a volume, perhaps of the same general character, announced as being “Notes of Thoughts and Conversations,” by “A Manufacturer”; and a volume entitled “Stray Thoughts,” short essays on ethical, social, and other subjects, by J. R. Prettyman. For the reader of fiction, we see very little. A novel called “The Queen of the Regiment,” by Katharine King, a new writer, is one of three solitary announcements in the last *Bookseller;* but we see it praised for being unbigamous, for being neither “horsey” nor “doggy,” though it deals with military men and military life; for a taintless purity and freshness of thought; for gleefulness, heartiness, and ease of style; for being neither slangy, nor vulgar, nor sentimental, but, on the contrary, brave and original; for having a captivating girl as its heroine; for having among its heroes no blackguard, no bully, no roué, no fop; and for manifesting youth, health, high spirits, and feminine taste—all of which certainly sounds like a readable book for the novel-reader—if, indeed, she likes all of these things. It is Mr. Charles Reade who says that the sex of the novel-reader is feminine; and some of the novels written for her would throw a doubt upon her likings. But a famine in fiction no doubt we shall not suffer, the magazines being sure to keep up the supply. Under the head of Poetry there is still less to notice than under the head of Fiction. Indeed, we find nothing except it be the fact that Mr. Howells’s “Their Wedding Journey” is so placed in the *Bookseller’s* classified list.

—One of the leading Sanskrit scholars of the world passed away early last month—Theodor Goldstücker, professor in University College, London He was of Hebrew descent, and came from Germany to England about 1850. He was a man of immense erudition, and in two departments of Hindu literature, especially grammar and philosophy, is believed to have had no equal as regards extent of reading and mastery of details. His untimely death will be the more lamented inasmuch as he has left almost nothing to represent his learning, and as hopes were entertained of important additions to knowledge yet to come from him. He had a remarkable indisposition to finishing up anything and letting it go from his hands: the only thing of importance which he ever produced was an introduction on “Panini’s Place in Sanskrit Literature,” which, along with great learning and strong convictions, showed also a want of logic and narrowness of criticism which seem to have been characteristic of him. In matters of learning, an intense conservatism was one of his leading qualities. He was long an active member of the Philological Society of London, and at the time of his death held the office of its President: of his many communications to it, hardly one, it is believed, ever got into print. It is greatly to be hoped that he has left material to be gathered up and published. He had great enthusiasm and earnestness, and his long labors may yet bear fruit in the persons of pupils whom he has trained and inspired with zeal for scholarship. He exhausted himself during the last months of his life over the comparatively useless labor of producing a photo-lithographic copy of an Indian grammatical manuscript, and an attack of bronchitis, neglected in its early stages, carried him off suddenly, at the age of about fifty.

—The liberal Protestants of Paris have not met with success in the recent elections to fill vacancies in their *conseil presbytéral*. There were eight candidates in all to be chosen, and in each case the orthodox party carried the day. M. Guizot, however, only succeeded at the second polling, his opponent being the commander at Belfort, who held that place against the Germans till the end of the war. His coming lowest on the list—owing, on the one hand, to his unpopularity among the liberals, who look upon him as a persecutor, and, on the other, to the distrust with which the orthodox regard his Protestantism—was attended with some inconvenience to his party. According to usage, the Presbyterial Council had announced before the election that the six highest candidates would be considered as appointed to the six-year vacancies, and the two lowest to the three-year—practically, five and two-year, as the elections were delayed a year on account of the war. Two years hence, however, if religious freedom is protected in France, it is more than probable that M. Guizot would be rejected altogether, and deposed from the authority that he has so long enjoyed, and, as the liberals say, abused. To obviate this, the Paris Consistory has given notice that the two-year terms will be filled by the two lowest *new* candidates; thus introducing a principle of selection opposed as well to the understanding of the electors as to the explicit declaration of the council. The *Renaissance* treats this pretension as null and void, and asserts that it will be contested.

—It looks as if the long dispute between the Dutch and Germans over the invention of printing had been settled, and that Lourens Janszoon Coster would have to retire from the field, leaving Haarlem to make the most of its metal statue in honor of him. The work in which his claims are effectually set aside is, happily, by a Dutchman, Dr. van der Linde, who, indeed, has so much regard for the truth, and so much contempt for chauvinism, as to be almost passionate in exposing what he calls the “Coster villany.” Errors and frauds he discovers without number, beginning with Koning, who vindicated the Haarlem claims in 1816, and who mixed up Coster with another Lourens Janszoon, who died, conveniently for his purpose, in 1439, whereas Coster lived till 1447 at least. De Jonghe’s original ascription of the invention to Coster is also shown not to hold water, and to be fatally at fault in its dates; and the pretended pedigree of Coster is pronounced a forgery unique of its kind. Coster’s first work, “Speculum Humanæ Salvationis,” Dr. van der Linde says, must have been printed between 1470 and 1480, or thereabouts, that sort of literature having flourished during the last quarter of the fifteenth century, “just as the ‘Mysteries’ of all the capitals of Europe formed a separate popular literature in the second quarter of *our* century.” The translator furnishes an introduction to this work, summing up the controversy since its appearance in Dutch, and adds a classified list of forty-three works attributed to Coster’s press.

ELZE’S “LORD BYRON.” [*]

FIRST and last a small library has been written about Byron, but we believe we have here the best single volume about him that can anywhere be found. This we say because of the goodness of Professor Elze’s critical work, and because the editor's notes often supplement and sometimes correct Professor Elze's fairly good biographical work. The two together, author and editor, have made a volume convenient in point of size, yet on the whole sufficiently full in narrative, which has the advantage over all other books on the same subject that it appears so late as to afford opportunity for a more judicial estimate of the poet's writings than has always been made, and the further advantage that it appears at a time when there has been much profitable investigation into the poet's character. Nevertheless, we think that it will not be hard to make future editions of this biography better than this one. In our judgment, the translator would consult the interest both of the book and the reader if he would considerably enlarge the notes. For instance, Moore's "Life of Byron" is not an inaccessible work; but it is not now read by one in ten of the readers who will go through a comparatively brief volume like this of Professor Elze's, and clearly it would be better if the editor, instead of referring us now and again to such and such a page of Moore, were to quote what is there said either as it there stands or in substance. Most of the references to other writers are made as now is customary, namely, so that readers doubting one's statements may look for themselves at the evidence on which they are based or at the words of the original authors of them. Moore's "Life," on the other hand, is referred to as if it were still read by everybody, as it certainly is not in this country, and as it probably is ceasing to be in England—a thing not to be regretted so far as concerns anything of his own that Moore put into it.

---

[*] “Lord Byron: A Biography. With a Critical Essay on his Place in Literature. By Karl Elze.” Translated, with Notes. London: John Murray; New York: Scribner, Welford & Armstrong. 1872.

And as with the notes, so also in regard to quotations from the poet's verses; we think that Professor Elze's critical labors might be made more generally useful if the passages quoted were considerably more numerous Although it is by less of a fiction in the case of Byron than in the case of some other poets that everybody is presumed to have his words in memory, it is nevertheless truer than an all-digesting German student of him might suppose that over much of his poetry oblivion has already stolen, and that over still more of it oblivion is stealing. For example, apparently it would surprise Professor Elze to be informed that "The Island," of which he thinks so well, is a poem not thought of at all, well or ill, by the English-speaking readers of the poet. Thus it is that the gods sell us their gifts, giving us nothing for nothing, and, if we belong to a nation of erudite commentators on poets, we partly pay for this honor of knowing more about them than other people by knowing rather differently about them than the nation which produces the poets. The party of English gentlemen to whom, as Sir Henry Holland relates, the Herr von Schlegel civilly remarked, that "if Englishmen wished to understand Shakespeare, they must go to Germany," might perhaps have consoled themselves with this reflection.

As to the wit, the eloquence, the fewness and barrenness of the ideas, the passion, the masculine energy, the gloom, the vanity, the cynicism, the personal force, the haughty pride, the spirit in disease—to use that word in its etymological sense—as to all these it will be safe, we suppose, for some generations yet, to leave the unaided reader to discover and feel them, and it will be fair to presume that illustrative passages are pretty thoroughly in his mind. Yet, even so, the reader's perception of the critic's judgments and his testing of them are greatly assisted if with the judgment is presented the illustrative passage. Still more desirable is this when the question is of the less obvious merits and demerits of a poet—as of the melody, sweet and strong, of Byron's best lyrical music; the habitual inferiority and frequent badness of his blank verse; the great skill with which he conducted in musical verse a train of reasoning—a trait of his poetry first pointed out, we think, by Mr. F. T. Palgrave, and which he illustrates by citing the lines "To Thirza." To vivify Professor Elze's very good criticism by bringing into court the poet himself, with the evidence which he can so much better give than any one else, would greatly increase the permanent value of this volume.

Good criticism we have called Professor Elze's, and good it is, but it is not in all cases to be accepted without abatement. The key to what is perhaps the faultiest part of it is probably to be found in these words of Goethe's, spoken in 1824 we believe, and of which the extravagance is partly to be excused by the fact that the poet was then newly dead: "Now," says Goethe, "the conviction uplifts us that his nation will suddenly awake from the frenzied fits of censure and invective which burst forth on him to sobriety of judgment, and will understand that all the husks and dross of the individual and his time, through which and out of which the best has to work his way, were only momentary, fleeting, and perishable, whereas the astonishing fame to which he has now and for ever raised his country remains boundless in its glory and incalculable in its effects." And Professor Elze dwells at much length on Byron as the introducer of literary England to foreign nations before unacquainted with her; Byron as the poet who inspired Lamartine with the sentimental world-sorrow—*Weltschmerz*—which is breathed by "Childe Harold"; who inspired De Musset with the cynical world-sorrow revealed in "Don Juan"; who inspired Victor Hugo, Casimir de la Vigne, many other Frenchmen, Don Jose de Espronceda, greatest of recent Spanish poets, and Giovanni Berchet, celebrated in Italy; who set multitudes of young Germans half-crazy; whose poetic tales, glowing with passion, aroused all the Slavic East, previously reached only by the literature of France. Let all this be admitted for truth, and still it is not so good when considered as literary criticism as it is when taken as a contribution to the history of literature, and in no sense justifies anybody in placing Byron where Professor Elze places him, above every other English poet except Shakespeare. To inspire De la Vignes, De Mussets, Pushkins, to be read in a dozen languages at once, is to be a tremendous literary and spiritual force, no doubt; but it does not make a man an English poet who may take his seat beside Milton and above Chaucer, Spenser, and Wordsworth. The magnificent Milton, with all of the pride of spirit that possessed Byron and set him at war with heaven, earth, and himself, making his life a chaos, was further gifted with an intellectual power and a commanding force of will which compelled and subjected his passions and feelings, methodizing, controlling, and ordering his whole life, both outward and inward; and, as his last gift, the result of mental, moral, and physical grace and strength in happy union, he was endowed with a perception of the beautiful which enabled him to work with an artist's hand to the production of complete results. What fine lines and tens of lines are in comparison with finished poems; what Lara is to Satan, and Manfred to Samson—

> "Eyeless, in Gaza, at the mill, with slaves,"

and yet hero and demigod; what the tossing of the wave is to the movement of the tidal stream, is what Byron is when weighed in the balance against Milton.

We should say that Professor Elze's error in allowing in his estimate of Byron's poetry too much weight to the extraordinary effect which his career had upon the literature and politics of his generation, is further complicated by another error. He appears to be a little ridden by his professional character and functions, and to have been partly led astray by something which looks a little like critical pedantry. There are four principal orders of poetry, he says, and in each England has produced a poet of unsurpassed genius. Shakespeare is unsurpassed in dramatic poetry, Milton in reflective poetry, Scott in epic poetry, and Byron in lyrical poetry. Had it not been requisite to have four departments of poetry and a distinguished name for each, we should have supposed that a writer who says so many good things about poetry as Professor Elze, would not have brought Scott into this company, nor hardly have described his poems as epics, epical though they be. And although Byron's muse was grandly lyrical in voice and gesture, it would be going far to say that of English lyrics of their various kinds he has produced any that are in their kind unsurpassed by the work of other poets, his inferiors in force of feeling and sensitive power, or weakness, but not his inferiors in other requisites of the poet. Nor, but for the four departments and the necessity of making Scott represent one of them, should we, it is probable, have had Milton designated as the leader of the Reflectives—a singular term to apply to his poems, which, apart from the lovely delicacy, the refined elegance and picturesqueness of the smaller imaginations, are essentially epics.

We have indicated at some length the sources of certain defects which the reader will meet with in this work, though all the defects themselves we have of course not indicated; but it is, as we have said, a very good book, and may reasonably content the reader of Byron both as biography and as criticism. It may be worth while to say that the author and the editor are extremely severe upon the Stowe-Byron accusation, which both regard as destitute of probability, and that they present us with the popular rather than with what may be called the Miss Martineau view of Lady Byron's character.

EDUCATIONAL TEXT-BOOKS.

THE several works belonging to the series known as the "Student's Histories" (Harper & Bros.) differ considerably from one another in character and value. Three of them—the student's Gibbon, Hume, and Hallam—are abridgments of the *chefs d'œuvre* of these eminent historians; but even these stand on a very various footing. Gibbon's great work has no rival in the ground which it covers, but it is so voluminous that very few read it in full nowadays except professed scholars. It was, therefore, every way desirable that its most important parts should be culled out, and put by themselves in a form adapted to the general student and reader. This has been done with great judgment in the edition before us; there is, perhaps, as much to be said for as against the leaving out those portions which are most characteristic of the author, but at the same time most offensive to the majority of readers. With Hume it is different. He is still extensively read, and that not by students, but by the general public. His merits are literary, not scholastic. Gibbon is still the undisputed foundation for study on a great part of the period of which he treats; but no one thinks of going to Hume for special information as to any period, but to Kemble, Freeman, Hallam, and —with all their faults—Froude and Macaulay. Any abridgment can hardly fail to hurt a book whose merit is distinctively literary; and there is no reason, as in Gibbon's case, why persons who have not time to read the whole should desire selections from this, rather than a new and independent work. In short, we have no doubt that there are a hundred persons now living who could make a better history of England of its size than an abridgment of Hume. Still this is a good and serviceable book. It may be remarked, by the way, that the editor has found it necessary to expurgate Hume's Toryism as well as Gibbon's infidelity. Hallam stands on a different footing from either Gibbon or Hume. We welcomed the "Student's Hallam" when it first appeared some months ago, and have no disposition to take back anything that we said then. Further examination, however, has shown that it is defective, not so much in what the editor has done, as in what he has not done. Hallam's merit, like Gibbon's, is in his matter; but whereas Gibbon's history is the matured result of finished investigations, Hallam's was one of the steps in such investigations. He was one of the earliest, most industrious, and judicious of those students who have in the present century revolutionized our knowledge of mediæval institutions; but in the very fact that he was one of the earliest lies the reason why he is not fitted to be our teacher now. He was a worthy co-worker with Guizot, Thierry, and Palgrave; but another step forward has been taken by the generation of Waitz, Roth, Giesebrecht, and Von Maurer. The editor has added to the original work some excellent passages from English writers, which add much to its value. But he has not attempted to incorporate the results of the latest enquiries, and, in fact, we doubt whether it is possible to make of these chapters a treatise which should be satisfactory in the present stage of scholastics on these subjects. We speak, of course, only of the chapters on institutions, which are those most characteristic of the author; the historical chapters, if somewhat heavy, still retain their value.

We turn next to those volumes of this series which are original works. Dr. Smith's "History of Greece" is every way an admirable work, but President Felton's edition (Brewer & Tileston) is much superior to that of this series. Dr. Liddell's "History of Rome" is, as a history, marked by very high excellences. It is written with good judgment, in a graphic style, and shows careful scholarship. Its chief defect is one which is literally fatal to its pretensions as a work of the first rank; we mean its inadequate treatment of the Roman Constitution. This defect in a history of Rome is like the play of "Hamlet" with the part of *Hamlet* omitted. The author shows no acquaintance with the late development of views in Germany upon this subject. To be sure, when he wrote Mommsen was hardly known in England; but this is no excuse for a prominent English scholar who sets out to write a history of Rome. Mr. Philip Smith's "Ancient History of the East" is also excellent. It is considerably briefer than Lenormant and Chevallier's "Manual," and, at the same time, covers less ground—part of this is, however, made up by the "Student's Old Testament History." It is also more graphic in style, and less crowded with detail. Both books may fairly be criticised in that neither of them is a "History of the East" properly speaking, but rather of the nations of the East individually. In both we miss a general view of the course of empire in these regions in the early ages—a want which it is easier to supply in detail from M. Lenormant's "Manual" than from Mr. Smith's. The "Manual" again gives a great deal of very desirable information on the arts, religion, literature, etc., of these people, which the work before us has to pass over cursorily. This lack is, however, made up in part by the illustrations, which the other book does not contain. Both grope helplessly in attempting to reconcile the historical fact that the Canaanites and Phœnicians spoke a Semitic language with the Scripture genealogy, which makes Canaan the son of Ham; Mr. Smith has recourse to the not very encouraging suggestion that in the fact that Canaan was Ham's youngest son may have lain a hint of some ethnic affinity with the Semites; but he proceeds to demolish this theory in the next paragraph by saying that the language of the Cushites also was Semitic. As might be expected, he sides with the English scholars against the French in chronology of the early Assyrian Empire, and certainly with good reason, so far as can be judged by one who is not an expert; but we wish he had taken pains to place before his readers, in a comprehensive form, the arguments in favor of each theory. The "History of France," the name of whose author is not given, is a book of a good deal of merit. It is written in an interesting style and a fair spirit, and will give the reader a pretty good idea of the events of the mediæval period. The institutions likewise receive due attention for a work of this scope, and there are excellent genealogical tables. When, however, the author approaches the complications and bewildering details of modern times, he shows a total lack of two important powers—of seizing upon essential points to the neglect of trifling ones; and of grouping events in such a way as to impress them upon the memory. Nothing could be more confusing to the young reader than the account of the Huguenot wars and the wars of Louis XIV., simply because he is overwhelmed with a multiplicity of bewildering details having no apparent connection with one another, and no adequate emphasis laid upon the most important. The story is crowded with names and dates, while international relations and the facts of historical geography are left very much in the dark. The Revolution and subsequent times are treated much more satisfactorily. In the genealogical table, p. 454, the important fact is left out that Louis XIV., as well as Leopold I., was grandson of Philip III.

As a whole, these books deserve high praise for the numerous original documents and discussions on fundamental and recondite points that are introduced; and especially for the illustrations, which are of just the sort that help to throw light upon the facts of history. We wish that the compilers of American histories would take a lesson from this series, and introduce *genuine* illustrations into their books, instead of made-up sensational pictures.

Crosby's "Greek Grammar" (Woolworth, Ainsworth & Co.) has always ranked as one of the most creditable works of American scholarship. Its somewhat metaphysical character was an attraction to a great many, although interfering in some degree with its success in ordinary classes; on the other hand, there was a peculiar symmetry and completeness in its processes which made it remarkably efficient in class drill. Accuracy in things great and small is eminently characteristic of the author, and we venture to predict that there will be found fewer misprints in this new edition than in any Greek book of its size ever printed in this country. The new edition preserves all the merits of the old, and avoids some of its defects. Among the marked improvements, we would notice the table of irregular verbs (§. 50), in which the old edition was very inconvenient, and the rearrangement of conditional sentences (§§. 631–4), in which Prof. Goodwin's analysis is adopted, not, however, without some modifications.

Prof. McIlvaine's "Elocution" (Scribner) would be a much better book if it were only half as large. It is prepared on what we consider the faulty plan of introducing each section by a sentence, which states in full the doctrine of the section; these sentences were no doubt originally the syllabus of a course of lectures. For this purpose they are excellent—terse, forcible, and judicious—and no doubt they would do good service in this capacity; but when it comes to expanding them in a book, the result can hardly fail to be diffuse and commonplace, for it is felt to be a duty to expand them, while in many cases no expansion is required at all. The book contains, therefore, an unusual proportion of mere padding; this apart, it is in the main judicious, well-arranged, and calculated to do good. We like especially the sections on self-control as a source of power to the orator. Mr. Coates's "Comprehensive Speaker" (Porter & Coates) is an excellent selection of pieces for declamation and reading. We think it a mistake, in the prose selections, to include so many familiar and standard extracts. Probably, if the number of books could be counted that contain Webster's eulogium on Massachusetts, Lord Chatham on the war with America, Grattan's reply to Mr. Corry, and twenty others that we could pick out from this volume, it would not come far from the number of towns in the United States named after Washington and Jefferson. What is wanted is a collection of exclusively *fresh* extracts—such as many that we find in these pages. Lord Erskine, for instance, would afford quite a number of admirable pieces, hardly familiar at all to the present generation of boys. The "Poetical Selections" are, in this respect, relatively better than the prose, and contain many very desirable pieces. We note an historical error in the last explanatory note on p. 672, where Gustavus Vasa is called "the rightful king" of Sweden. He became a rightful king, but he was not born to the throne. Mr. Cathcart's "Youth's Speaker" (Ivison, Blakeman, Taylor & Co.) is, on the other hand, best in its prose selections, which are fresh and brief, very well adapted for school use. The pieces of verse have the merit of being fitted for the use of quite young scholars. The dialogues we do not like—although perhaps they are as good as can be found in that very dismal branch of literature. These are almost, without exception, dull and stilted; the boys and girls are either priggish or vulgar. After all, is there anything better in this line than our old friends "King Alfred" and "Alexander and the Robber"? It is a real pleasure to take up such a school-book as Monroe's "Fifth Reader" (Cowperthwaite & Co.), by the accomplished Superintendent of Elocution of the Boston Schools. It is rare that a book for the use of common schools shows any marks of a refined taste; but this book is tasteful from beginning to end—the brief, practical rules of elocution, the fresh and interesting selections, the whole getting-up of the volume, and especially the illustrations, which are the best we have ever seen in a school reader. A book like this, put in the hands of a class, is a real instrument of civilization.

Word-building, as treated in most text-books, can hardly be of much service to pupils who are unacquainted with Latin—not because the compilers do not recognize the needs of mere English students, but because they for some reason fail to make them practically serviceable to such. Now, this is precisely the strong point of Mr. Swinton's little book, "Word Analysis" (Ivison, Blakeman, Taylor & Co.) He has succeeded in preparing rules and exercises that will, we think, really teach common-school pupils something of the structure of the words of their own language. At the same time, it is not without very grave defects. It is very well to classify as English suffixes all those, whether of English or Latin origin, which are actually used in forming new words from those already existing in the English language; so that *justify*, for example, is an illustration of English derivation, although both parts are of Latin origin. Still, there is considerable confusion of ideas in regard to these. Why, for instance, is *ion* in *navigation* (p. 19) called an English suffix, and in *probat-ion* (p. 56) a Latin one? There is, indeed, remarkable inaccuracy shown in classical derivations; on p. 108 we find *galax*, milk; *plane*, a wanderer; *zodiakos*, animal; and *epi*, away! It will be seen that the book has decided faults. These are rather in details than in anything that is essential to the plan, but it needs careful revision. The "Condensed United States History," by the same author and publishers, is on a plan that we do not like; but, inasmuch as there are a great many people who do like it, we will do justice to its merits of execution. The plan of having brief, dry, hard statements of fact, with numerous names and dates, to be learned by heart, and calling this *history*, goes upon the assumption that these names, dates, and bare events have an absolute value of their own; whereas their only value, to those who learn them, is to enable them to get into a higher grade of school, after which they are straightway forgotten, as they deserve to be. We hope the time will come when boards of education, teachers, publishers, and book-makers will understand that a book or a history is good for nothing unless it is interesting to those who are to use it. With this general reservation, we will say that Mr. Swinton's book is prepared with a good deal of skill, and that in particular the topical reviews are excellent. The arrangement is very good, and there are serviceable maps. Barnes's "Brief History" (A. S. Barnes & Co.) has just the merit that Swinton's lacks. It is a very well-told story, that we should think would engage the attention of pupils, and impress the knowledge of the events upon the memory. We appreciate the paucity of names and dates, and the abundance of interesting incidents, many of which, too, are added in foot-notes. We are surprised that the story of Pocahontas is still given as a fact. With its other illustrations, the book has some good maps and portraits, but is very defective in plans of battles and campaigns.

Sir Charles Lyell is always sure of a welcome for his works, even when they come in garments many times made over and a little out of fashion. The "Student's Elements" (Harper & Bros.) will be recognized by the old student as the "Elements of Geology," which, with its bigger brother, the "Principles," was his best friend years ago. Looking closely to its shape, he will find that much of the original matter has gone, though what remains has been a good deal worked over and mended to suit the great changes of the science. The author's object has been to limit the "Elements" to what the name implies, leaving the discussion of the more general questions to his "Principles of Geology," its complement and deserving fellow in every student's library. With this view, he has materially reduced the bulk of the volume. This condensation has been so managed as to increase the value of the book to the English student, while it deprives it of much of its usefulness as a *vade mecum* to the American beginner in the science. He has as far as possible limited himself in the selection of examples to the geological phenomena of Europe, and especially of England; for instance, in the chapter on silurian rocks, twenty pages are given to the rocks of Great Britain and but two to the more extensive and, geologically, more important beds of the same age in this country. Over forty figures are given to the European and only one to the American fossils of these rocks. These facts are enough to exclude the work as an American text-book, though they do not lessen its value to the student who can afford to own several works on the science. The most serious objection to the book is that it has retained the very objectionable order of arrangement in that part which is devoted to the consecutive stages of the earth's history. In place of beginning with the earliest known forms of life, and proceeding, step by step, to its successive stages of development, he begins with the present time, and then takes in reverse order the formations down to the lowest known beds containing life. In geological history, each stage is as much dependent upon that which preceded it as in the history of a nation. The reader would, it is true, gain something if, knowing English history well, he should start from the present and work back in the same order of occurrence over all the facts there recorded, but he would not do well to begin his studies in that way. The most serious criticism which can be brought against the work is the way in which the question concerning the genus Eozoön is set forth. This fossil is represented as organic, the opinions of Dawson, Carpenter, and Jones being given, while no reference is made to those able naturalists who have contested that conclusion. Withal, the book is an admirable condensation of the important results of the science.

The reprint is not very well made; some liberty has been taken with the outside title, so as to bring it into the "Student's Series" of the reprinters. The paper is poor, the engravings want the clearness of the originals. The student who can afford it is recommended to buy the original edition, though the American is much the cheapest.

With the excellent works of Dana, Lyell, and others in existence, and kept well up to date by careful revision from time to time, some reasonable excuse may fairly be demanded for an addition to our array of elementary works on geology. There should assuredly be some difference in matter or some change in the point of view from which the principal questions are considered, in order to secure a place for a new book in a field which has been so extensively occupied. We are unable to see that Prof. Alleyne Nicholson's "Text-Book of Geology" (D. Appleton & Co.) has this *raison d'être*. Although unobjectionable in most important points, there are portions of the book which do not fairly represent the views of the scientific men who are best entitled to an opinion on such subjects. The question of the internal condition of the earth, now one of the most doubtful points in the minds of the greater number of geologists, is passed over with a brief assertion which would lead the reader to suppose that the universal opinion was in favor of the old dogma of its fluidity. The chapter on ice action, though on the whole more successful than most efforts to introduce the results of the researches of the last few years on this point into our text-books, is marred by the same dogmatism. It asserts as a general rule that "erratic blocks" "have been carried not by glaciers, but by icebergs." This is an assertion which contradicts the opinion of about all the students who have given much attention to the subject. We have also the assertions that the coal formation is nearly always conformable to the silurian rocks, that the most important limestones are dolomites—which will not commend themselves to practical geologists.

The figures are for the most part rather rough copies from Lyell's "Elements." For these the author has had the grace to acknowledge his indebtedness. On the whole, the book is not bad as text-books go. The worst that can be said of it is that it is an easily made compilation by a man who evidently has a very fair knowledge of the subject, but who has done little more than to use the materials which other text-books supply without any effort to consult the original sources or to recast the matter.

The same author's "Text-Book of Zoölogy" (Appleton & Co.), compared with others having the same aim, has much to be said in its favor. It is better up to the science than the translations of Milne-Edwards's manual, and is very much better than works fashioned on the model represented in Tenney's "Zoölogy." Agassiz and Gould's "Elements" is in general form better suited for the beginner, but it is already out of date for want of re-editing. Of course, as Mr. Nicholson is neither a Cuvier nor a Müller in the range of his researches, there is all the imperfection shown in the book which comes from making a patchwork of the labors of men of very different views and methods of working, and putting it before the reader as an outline of the animal kingdom. This is not altogether to the author's discredit, but is, in fact, inherent in the pretension of all text-books of zoölogy. It might have been limited by giving the sources of the classification, or by stating when views of naturalists conflict. For want of this the student is frequently led to believe that views concerning the relations of animals, which are held by only a part, and at times a small part, of the students of the subject, are among the uncontested points in the science. There are few students in this country at least who would accept the division of the animal kingdom which makes the annuloida the third primary division, including under it the echinodermata and the scolecida, yet the author here, as in many other cases, states the most disputed and most doubtful opinions in an *ex cathedrá* way. The gravest difficulty with the book is in its omissions. There is nothing about the geographical distribution, the geological succession, or the embryonic development of animals—the great general facts which give meaning to the details of the science—except occasional and imperfect references in the descriptions of the groups. Nor is there any reference to the great questions connected with the origin of species. The book is much more limited than its title would lead the reader to suppose; it is, in fact, a text-book of systematic zoölogy. There are abundant points of detail where the critical eye can detect omissions, but all such objections are overborne by the considerable merits of the book. The figures, one hundred and fifty-eight in number, are pretty well chosen and reasonably well made;

many of them are original, and all of them are free from the straining after the picturesque which so often spoils such representations.

The author of "First Lessons in Physics" (Hendricks & Chittenden, St. Louis) in his preface thus introduces his book: "Its object is the presentation of a number of phenomena, laws and applications of the same, specially adapted to the perceptive capacities of the pupils of the upper grades." This is certainly a praiseworthy object. The difficulties in the way of its attainment are not very great. Every child is ready, to a greater or less degree, to notice phenomena and to ask questions: there is no difficulty in collecting a set of facts which will interest the juvenile mind and lead it to observe. The author of this little treatise does not pretend to do more. A number of laws are stated, and examples are given to be worked out by the principles stated. To do this is to do much; still, we should like to see in these modern days the child's attention directed, in a rational way, to the elements of the subject of conservation of force, and to the relations which bind the phenomena of physics together. The teaching of familiar facts alone has but little disciplinary value. Mr. Hotze gives many illustrations to bring the facts before the pupil's mind. Some of these are of rather questionable homeliness; for instance, under "gravity," p. 10: "A cat may fall from a housetop; a careless child tumbles down stairs; coals fall through the grate; meal falls through the sieve; and soot falls through the air." The occurrence first mentioned might seem highly improbable to the juvenile mind. There are also many typographical errors. On page 14 the question is asked: "For is not a pound of water as heavy as a pound of oil?" And the language is often careless; witness p. 27: "Lightning mostly passes from one cloud to another." The book, however, is evidently an earnest attempt to overcome ignorance.

The best logic for instruction in colleges is, in our judgment, Fowler's ("Elements of Deductive Logic"—New York: Macmillan). A young man who has been through it under a teacher of power will have had his mind enlightened and strengthened, and will be better prepared for life. In short, it to some extent fulfils the function of an elementary logic, a thing which most text-books do not begin to do. Mr. Fowler closely follows Mill's work, of which this must be allowed, that it represents the best scientific thought of the age more nearly than any other systematical exposition of the subject. It contains, however, in our opinion various important errors not only upon its philosophical side, but also in its relation to practice, against which the student ought to be put upon his guard. To these we have not space here to refer; but as they are of interest we shall take an early opportunity to recur to them.

The vices of American teaching are nowhere more strongly illustrated than in our arithmetics. Common arithmetic is not the theory of numbers or any part of it; it is only the art of using the decimal system of numeration. It has no theoretical value, and the only object of teaching it is to give boys and girls necessary practice in ciphering. It is therefore the simplest subject possible, and affords an admirably clear field for pedantic evolutions. Most of the books are crammed with all sorts of worthless scholastical stuff, while the simple precautions which are necessary to lead pupils into good habits of computing are entirely neglected. Mr. Sanford's "Analytical Arithmetic" (Philadelphia: Lippincott) is free from nonsense, and may be recommended; but it does not enforce attention to good habits. For this, "Orton's Lightning Calculator," in some respects a poor book, is to be preferred. Every teacher ought to be practically versed in the most useful of the rules which Orton gives (which are well-known to accountants), and to insist upon their being followed by his pupils. It would be very well if some person of common-sense and of practical experience in computing, after consulting De Morgan's Arithmetic and paper upon Numerical Computation in the "Companion to the British Almanac," would produce a new Arithmetic for schools. Let all writing-master's rules, such as those for Alligation (which serve only arbitrarily to limit the result to a single one of a large number of possible solutions) be swept away. Let the important rules of Single and Double Position be reinstated. And let the design of the whole be to make the pupil an accomplished accountant.

An elementary geometry without errors of logic does not yet exist. Any attempt to write such a book without a thorough study of the mathematical researches of Lobatchewsky, Riemann, Helmholtz, Klein, etc., as well as of the logical studies of Delbœuf, Ueberweg, Hoüel, etc., or without a full appreciation of the conceptions of modern geometry and of quaternions, must prove a failure. Mr. Thomas Hunter's "Elements of Plane Geometry" (New York: Harpers) is only a fragment of Euclid, marred. We may say that his one perfect demonstration is that of his own incompetency to deal with the problem he has attacked.

We doubt if most of the children for whose juvenile understandings such countless numbers of story-books are specially prepared would not, if they were tried, repeat our experience as to such razeed literature. We remember very well how wanting in color, movement, and life seemed the "Stories from Shakespeare" to our own very juvenile understanding, already by good fortune accustomed to "Romeo and Juliet," "As You Like It," "The Two Gentlemen of Verona," and "Lear," in their undwarfed integrity. Still better, perhaps, should we have liked this excellent edition of the plays prepared by Mr. Hudson ("School Shakespeare, First Series and Second Series." Boston: Ginn Brothers). The object is to make an edition which teacher and scholar can use together as a reading-book or a parsing-book in the school-room, and to this end he has removed from the text, with a gentle hand, obnoxious words and phrases, and, with a hand not so sparing, has annotated the text in a sensible and instructive fashion. To each drama, also, there is prefixed an introduction, telling the pupil what is known of the origin of the story and the characters, and making some general criticism, always candid and intelligent, in a rare degree independent in view, and often racily and vigorously expressed. We will not say that we think there is not sometimes a taste too much of raciness in the language of these notes and criticisms; but we have enjoyed it as being unaffected in its plainness, and we decline to condemn it, for, though unlettered American is rude and even rowdy, lettered American is dreadfully apt to be such very nice English as to be more nice than good. It will be seen that Mr. Hudson's general scheme is excellent. We cannot think of pleasanter work for a teacher than reading these plays thus annotated with a bright and interested class. And in the course of a year or two he would have given himself an education in Shakespeare perhaps better than all the education in other things which he had been able to give his scholars. But whether in one important matter Mr. Hudson's execution of his scheme is not faulty, we are not sure. He has himself for a long time used the plays in the school-room; he has a practical knowledge of the matter which we have not, and on all grounds we dislike to say that we think he has in some instances failed. We shall say, however, that in our opinion Mr. Hudson's hand in expurgating has been too gentle, and that, if we were using the book, we should expect from the pupils—there are always some in every class—who conscientiously wish to leave nothing obscure, a question once in a while as to the meaning of certain expressions retained in the text which we, for our part, should find it difficult to answer. We shall not dwell upon this matter, except at a point where it has been somewhat insisted on by Mr. Hudson himself. The crazed Ophelia sings a song not fit for maidenly lips, which some of the critics have agreed to say is indicative not of a sensual nature, but of a nature for which Coleridge suggested the term sensuous; and we presume Mr. Hudson would say that to explain her warm love for a cool lover, as exhibited in the earlier scenes, we must entertain this opinion of Ophelia's temperament, and let her sing her song as a piece of self-revelation. He retains it in the text for the reason that it seems to him necessary to the completeness of this creation of the great master, and so cannot quite bring himself to remove it. We will not reply that the completeness of a great master's creations is in most places and circumstances a matter of immense importance, but that in schools for the young it is of precisely not the least importance in the world, when the question is whether to keep the completeness of the creation and sully some pupil's mind, or to sacrifice the completeness and save the purity. We will not so reply, because we are thoroughly persuaded that Mr. Hudson knows all this better than we can tell him, and that in the daily practice of his profession he feels it more constantly and deeply than we. But this we take leave to say, that commentators have written nonsense of all kinds about Shakespeare's meanings—nonsense flat and atrocious, beetle-headed, dull nonsense, learned nonsense, beautiful nonsense, and the nonsense of supersubtle refinement of thought; and that we for our part should not have retained Ophelia's song for any such reason as that we have quoted above, and which, we believe, was spun by Mr. Coleridge. We do not say that the song is not in keeping with the character, but that the character is portrayed in sufficient distinctness without that scrap of an old ballad.

Aus meinem Bühnenleben. Erinnerungen von Karoline Bauer. Herausgegeben von Arnold Wellmen. (Berlin: R. v. Decker; New York: B. Westermann & Co.)—The best critics of the German stage of thirty years ago, Tieck, Robert Blum, Gustav Kühne, agreed in assigning to Caroline Bauer the first place in the lighter drama, and a creditable success also in severer tragedy. Her voice and manner carried an irresistible charm; Kühne speaks of the "witchery of her musical voice," as Julia in the balcony scene; but that which gave her pre-eminence was that she "did not play her *rôle* but *lived* it," so that for the time being she became the character which she personated. This was in part the result of a sympathetic genius which entered into the very spirit of the poet, but it was mainly due to diligent, conscientious, persevering application. She herself describes the many bitter experiences, the stern and severe strivings, through which the gay little comedian won her way from her childish illusion of a genius for the drama to her womanly triumphs as an acknowledged artist. But no art could be so touching as is the simple natural story of her first success, when, a girl of fourteen, moved by the inspiration of the drama and eager to support her widowed mother, she first stepped upon the stage in the little theatre of Carlsruhe; the anxious dressing hours before the time, the parting kiss to her mother, the palpitating heart during the overture; the sudden fear, in which she forgot everything, as the bell rang for the rising of the curtain for the scene in which Margaret must appear; the equally sudden return of self-possession to the point of self-forgetting. "How I represented Margaret I know not; I only remember that it was to me as though I really were Margaret; that I played with transport, loved the Count in spite of his forty-five years, wept, laughed, as the *rôle* required, and when the Count spoke the last words, as he handed me the wild flowers, 'Blühe wie sie, nütze wie sie, und bleibe dem Schmucke getreu, mit dem Deine Felder Dich schmückten,' I sank upon his breast, and awoke as from a dream when, on the falling of the curtain, came the stormy call, *Margarethe!*"

Margarethe has long known what it is to be a countess indeed, and the privacy of her domestic life should be guarded as sacredly as that of the convent, but we are grateful to her for lifting the veil so far as to afford these charming glimpses of her artist life—the whole career of which is described with the same naïveté as this girlish *débût*. As a picture of the stage in a past generation, of travel before the day of railroads, of court-life in Berlin, Petersburg, Vienna, and Dresden, and of artistic and literary celebrities, the book has value apart from the thread of personal narrative. There is an amusing anecdote of the old King of Saxony, who, as Bauer was singing in "Ophelia," expressed his admiration so audibly that the audience, impatient of the interruption, began "Pst! pst! pst!" when the king broke forth still louder, "No! no! but a man *must* speak out!" and Ophelia hearing all, and singing the while. A pleasing trait of the book is its generous tone toward other artists. With a refreshing self-consciousness in the autobiography, there is yet no trace of selfishness, but the mirror reveals a pure, refined, and truly noble character.

⁂ Publishers will confer a favor by always marking the price of their books on the wrapper.

Fine Arts.

THE METROPOLITAN MUSEUM.

III.

WE will, in conclusion, take some notice of the class of works in which the Museum is richest. Of ideal schools and portrait schools its specimens are random and without connection, but it shows a strong representative chain of those painters whom people think of as the Dutch painters—the artists who turned out the groups of droll little figures, the interiors, and the sleepy landscapes. These Flemings and Dutch make little or no display of thought, they have only attained, in simple barbarian fashion, the secret of quality. They are the scorn of literary people, and they distil ennui into the marrow of the bones of tourists. It is in studios that their fame is guarded, and it is the dream of the modern landscapist, in whose conception we find so much soul and poetry, to steal a grace or a felicity of technic from these lethargic scenes that have no soul visible.

"The Mills" and "The Hillside" are a small pair by Jan Brueghel, which once belonged to Rubens, afterwards to the Duc de Praslin, and to the expert Le Brun, who caused "The Mills," or "Les Moulins," to be engraved by Le Bas for his gallery. In them we see landscape art still tentative, but using the perseverance and care that will set it on the right road. In the "Mills" a very pretty suggestion of blowing cloud-shadow over the fields is given; but the enumeration of leafage on small, far-away trees is full of puerile innocence, and the deep-blues (said to be due to the absorption of the yellows by the colors with lead basis) must be imagined "out." This Brueghel was a friend of Rubens, who painted in association with him the large garden-of-acclimatization picture called "The Terrestrial Paradise." He was personally a neat creature, always dressed in velvet, and so-called Velvet Brueghel. By his father, Pieter, born in the commencement of the sixteenth century, there is something in the Museum of ruder fibre—a scene of gamblers quarrelling, in which we recognize the sort of art to which Leys and Tissot, in modern times, have applied for their archaic groups and costumes. Another father of artists is David Teniers the elder, whom the Museum exhibits in two specimens. Neither gives much proof of the facts that he was a pupil of Rubens and that he spent ten years at Rome among the works of Raphael and Michael Angelo in their freshness. The sturdy Flanders stock was too healthy to be affected by a change of atmosphere, and the painter continued his explorations of human homeliness. His principal exhibition here, however, is not human, but supernatural. He gives us his idea of a Temptation of Saint Anthony. The holy man, with book and rood, cowers in his cave, the air of which thickens with ugly, shrimplike creatures, swimming level-bodied across it, giving altogether a strong sentiment of the aquarium. The damsel who is supposed to be the heroine of the drama, and whom a goat-headed chevalier leads forward with courtly action, is neat and modest-looking, but a pair of sharp siren's claws peep from the hem of her dress. Should she prove ineffectual, another is coming, more seductive to the imagination; she advances from the shadows behind, sleeping, one elbow buried deep in the mane of the donkey she rides—a sort of sluggish, narcotizing nightmare. There are hosts of other figures, but withal a pitiful want of the noble grotesque—no hint of Albert Dürer. By the great Teniers, the son, the collection has a fine work, and one well known over Europe. Its French title is the "Lendemain des Noces"; it has been engraved by Le Bas, and owned by the Duc de Morny and the Marquis of Salamanca. The younger Teniers was son-in-law of Velvet Brueghel, and continued the story of Flemish art through a rich career until 1694, when he died in Brussels.

Meantime in Holland, Van Goyen, engraver and painter, was exuding his placid gray landscapes, interminably and inimitably, and educating a school of talented young men. Of the two views by Van Goyen in the gallery, one, the Moerdyck, is considered his masterpiece. The imprisonment of light in the central stratum of the picture—it is a motive of cumulus cloud reflected in a canal—is wonderful; it does not seem to be due to the somewhat opaque arch of clouds above, nor to the line of dark figures, like a row of small bronzes, which points upon it from the front; cover these contrasting objects, and the picture still shines on, with its steady silver blaze. It is just the sort of technic which seems to have been studied by P. J. Clays, the accomplished Brussels painter, who has learned a similar art of dazzling with gray lights a breadth of quiet water.

Among the long-skirted Leyden youths who studied with this master was Jan Steen, a kind of Dutch Cupid, whose attractions were too potent to be resisted by the daughter of the house, Margaret van Goyen. The easy-going father, on learning the facts, thought best to consent to a patched-up wedding: he gave his benediction and embraced a little grandchild at nearly the same time. By this reprehensible Jan Steen there are two paintings in the gallery, both showing a singular vivacity of talent. His "Kermesse" has some of the wealth of characterization of Rubens's large "Kermesse" in the Louvre. There is satire in the stout-legged fiddler, evidently playing his fastest to tire out the superannuated old beau who dances; a toper hails with gestures of his flagon a boat-load of more distant revellers; all takes place in the green before the Elephant Inn, which hangs out its sign and flies its flag over the roysterers; somewhere in the foreground there is a globular Holland baby, into whose bulbous face is kneaded an almost Satanic intelligence. Jan Steen has many styles, and another and finer manner is displayed in the repulsive subject No. 61. The principal object in this masterly composition is simply a group of tumbled bedding; the sheets form a principal light in the middle, and the draperies around them grow darker, until the two figures in pure black, at the sides, receive and deaden the last rays of illumination. The twisted sheets are here painted with wonderful beauty, and to look at them, and then at Gérôme's much-admired flying drapery in the garment just twitched off from his "Phryne," one would fancy that the French professor had made himself a pupil of the disreputable old Dutch artist.

In fact, if our modern painters have the culture which comes from a universal literary habit, and so give interests of a literary kind to their work, they must go back for many practical lessons to these tranquil, large-stomached, sly-eyed observers of the seventeenth century. And wise artists are perfectly sensible of this, and yearn with all their souls for the gifts of the old masters' transparency and atmosphere, while they are grinding out idyllic subjects or archaic subjects for the market of the day. There was Théodore Rousseau, the hermit of Fontainebleau, who seemed to have created the oak-tree of modern landscape, but who in his own privacy was paying vows to all the specimens of Hobbema he could get sight of. From the Museum's example, No. 53, we can get some notion of the valuable lessons derivable from the master. The shadow on the curved road and on the earth bank is real shadow, and the soil is real soil beneath; the transparent film seems as if it might be directed away with a mirror, leaving the mire in its proper color. The trees are real trees, and through the grill-work of their stems we see the leading lines of the composition, all tending to a point on the right margin, in a delicate system of curves.

In Solomon Ruisdael, a pupil, like Steen, of Van Goyen, we see a craftsmanlike celerity of method. In the "Kermesse" the sky is trowelled on with liberal thicknesses of azure and white paint, while the buildings are brushed very thinly, and lined and hatched like English water-color; the groups of skaters and riders are dexterously built into the motive—a dark crowd clustering in the middle, while the heavy black roof is relieved with white caps, a white horse, and a roan horse, red saddle-cloth and red petticoat. Another liberal share of sky brightens the view of Alkmaar—a sky that is an arena, wherein the white-dappled clouds seem to be riding around in races; a feathery tree balancing in the breeze, windmills and a circumfluent canal, a towering church which dominates the village roofs, make up the picture, a tender portrait of a real locality. Both these complicated scenes, however, yield in beauty to the little gem, the Marine from the collection of Maximilian I. of Bavaria, in which the aspect of water, curdling and crisping under a wind and beneath a local cloud-shadow, is admirably given.

Sometimes the methods are so obvious that the effectiveness seems due to a trick. The little subject by Pieter Wouverman would be a ball of blue-and-white sky held in a cup of dark foreground objects but for the introduction of the white horse, which repeats among the shadows the corpulent forms of the clouds. Similarly, the Berghem, by its diagonal line of deeply-shadowed forms, throws back the sky into surprising distance and brilliancy.

Another class attempt, with greater complication of idea, to paint real landscape poems, in the style so radiantly perfected by Claude. Van der Neer contributes to the Museum a little moonlight jewel, and a beautifully-focussed sunset. By Huysman there are three canvases of elaborate pomp, so rich as to suggest, but not detrimentally, the theatrical drop-curtain. The largest is particularized by M. Chesneau as "a gigantic picture of Huysman's, of Mechlin, taken from a castle of the Marquis of Hastings, whom the Derby ruined at twenty-six years of age." It is nine feet across, and realizes the Shenstone ideal of landscape, with forests that "frown" and azure mountains that "nod." Seen at high noon, in a direct light that will alchemize its darkened umbers, it is a peace-bringing and satisfying breadth of scenery, for which nature seems to have been tamed and made Virgilian. A smaller motive of very similar details, and a still smaller and still more beautiful sketch, make one feel, perhaps, as if there was about enough of Huysman, whose factitious scenes are less good to breathe in than the freshly-aired meadows of the simpler men. Finally, almost the full and most opulent enjoyment derivable from Claude Lorraine may be got from the large Italian view by the brothers Both. Of these co-workers, Jan was a pupil and imitator of Claude, while Andries put in the figures; and the partners died in the same year, 1650, the landscapist at Utrecht and the figure-painter at Venice.

There are not many of the endlessly-curious and quaint Dutch street-scenes and architectural views in the Museum, but that by Jan van der Heyden is a curiosity and a perfection that fills the gaps left by many another. It is as highly-finished a piece of work as it is possible to see; the bricks even of distant chimneys being regularly squared and plumbed, while the trees contain three leaves clearly drawn in the space of every pin's head. The tone is by no means lost or frittered off in this detail, but is beautiful on its own account; the limpidity of the canal is unsurpassable. This painter, who interests us by his lavish industry and care, seems to have been a sensible man with a taste for odd experiments; in one of his pictures is painted an open Bible, five centimetres in height, whose pages, covered with print, are legible. His researches in the practical part of hydraulics led to his being in ease at last on a pension which he obtained for improving pumps.

Another street-perspective, by Van Kessel, shows with ability the look of a storm just cleared away and leaving a leaden shadow on part of the city, while among the rain-washed brick walls peep forth the first passengers, and the swans come out from under the bridge and plume their white coats in the sun.

A broader and sketchier method, in similar subjects, marks the Italians who are represented here. Guardi, the pupil and counterfeiter of Canaletto, shows excellent canal views in Venice—the Rialto and the Salute Church—the architecture being washed with flat tints, and then drawn over with something that works like a crayon and ruler, leaving the stonework very sunny and luminous, almost, in places, like lithographic work of Prout's. For an interior, that of St. Peter's, by the scene-painter Pannini, is a good Italian specimen; the chalky look of distemper-painting is unpleasantly conspicuous when the work is compared with any of the good atmospheric interiors of the northern schools hung near by; but the charming little figures are dotted in with a glittering ease that the Dutch gentry did not dream of.

To conclude with dessert, there are some superb fruit-pieces, besides the Velasquez we have before alluded to. It needs but a minute's attention to detect the fact that there are different ways of regarding even this innocuous *genre* of painting; it seems that one group of artists thought of piles of fruit as jewelry, and painted contentedly away at the glitter and color; another class, deeper-souled men, seized fruits as things that grew and lived, and gave all their force to bringing out the developing power, the combat for existence, of vegetable life. Thus did Velasquez, and thus did Snyders, the magnificent painter of hunting-scenes. In the fruit-subject by Snyders here present, the objects seem to have rolled into place of their own volition; the branch of figs is visibly pushing forward and bursting, while the palmated fig-leaves and grape-leaves seem to be earnestly gesticulating. In contrast to this proudly-felt work, the elegantly painted fruits and vases by the two Van Heems, the forerunners of all the miracles in that line that Desgoffe and Preyer are elaborating in our day, seem like fixed and unchangeable objects, valued merely for their superficial charms of shape and hue, or for the vanity of giving immortality to the bloom that nature makes so perishable.

LEGENDS OF THE PATRIARCHS

AND PROPHETS

Current at the East, collected by Baring-Gould.

Crown 8vo, $2.

"We venture to predict that few books will be more delightful to a great part of our readers. . . . He has collected from the Talmud and other Rabbinical books, apocryphal Scripture, and still other ancient sources, a vast store of the most curious—to put it plainly—'yarns' about the fall of the angels, the creation of the pre-Adamites, Adam and Eve, the Fall, the Giants, the Deluge, the remains of the Ark, and the Old Testament personages, especially Abraham, Joseph, Moses, and Solomon."—New York Evening Mail.

"It will be his (the reader's) own loss if he foregoes the pleasure and the profit of reading this entertaining volume."—Saturday Review.

HOLT & WILLIAMS, 25 Bond Street, N. Y.

W. C. WILLCOX'S FAMILY SCHOOL

FOR BOYS,

AT STAMFORD, CONN.

Established 1850.

Prepares for college or business. No bad boys or evil influences. Pupils admitted at any time.

CASSELL'S PRACTICAL DRAWING BOOKS.

1. LINEAR DRAWING. 150 Engravings. Price $1.
2. PROJECTION. The Development of Surfaces and Penetration of Solids. 40 Engravings. Price, $1.
3. SYSTEMATIC DRAWING AND SHADING. 38 Engravings. Price, $1.
4. BUILDING CONSTRUCTION AND ARCHITECTURAL DRAWING. 130 Engravings. Price, $1.
5. DRAWING FOR CARPENTERS AND JOINERS. 250 Engravings. Price, $1 75.
6. PRACTICAL PERSPECTIVE. 64 Engravings. Price, $1 50.
7. DRAWING FOR MACHINISTS. 140 Engravings, Double and Treble-page size. Price, $2.
8. DRAWING FOR STONEMASONS. Price, $1 50.
9. MODEL DRAWING. Price, $1 50.
10. GOTHIC STONEWORK. Price, $1 50.

CASSELL, PETTER & GALPIN,
596 Broadway, New York.

NEW BOOKS

ADDED TO THE AMERICAN EDUCATIONAL SERIES.

The publishers have much pleasure in calling attention to the fact that the following books have been recently issued by them. They will be glad to receive orders for any or all of them:

SWINTON'S CONDENSED HISTORY OF THE U. S.

A Condensed School History of the United States, constructed for definite results in Recitation, and containing a new method of Topical Reviews. By William Swinton, A.M., Professor of History in the University of California, and author of "Campaigns of the Army of the Potomac," etc., etc. Illustrated with Maps, Portraits, and other illustrations. 1 vol., cloth, 300 pages. Price, for examination, 75 cents.

This work was published last August, and has had an unprecedented success—near 25,000 copies having been sold.

"Swinton's 'Condensed School History of the United States' was adopted as one of the text-books of this school soon after it was issued. The examination and approval which I gave, previous to its introduction, have been unanimously endorsed by the teachers of the grades in which it is used. The history bears traces in every part of that mastery of diction, of that practical acquaintance with the work of instruction, and of those studies in history with which the name of Mr. Swinton has been associated."—Rev. Edward Wall, Prin. Stevens High School, Hoboken, N. J., Nov. 6, 1871.

"For younger classes we think it superior to any that we have used."—Principals of the Columbia College Grammar School.

"Swinton's 'Condensed History' is an attempt—very successful, I think—to disentangle and classify the leading facts of American history, so as to bring the subject within the grasp and mastery of teachers and pupils of average ability in the time usually allotted to the study in the public schools of our country. I consider it a very timely and valuable contribution towards the practical solution of that exceedingly difficult problem, 'How to teach United States history successfully in the public schools?'"—Hon. Newton Bateman, Supt. Schools, Illinois.

"I think Swinton's 'Condensed History' inaugurates a new era in school histories. In performing this task, Prof. Swinton seems to me to have succeeded admirably in making the book concise and clear; for the boys and girls who will study it, this is one of its greatest recommendations."—Hon. Wm. T. Harris, Supt. Schools, St. Louis, Mo.

"The work is, in fact, what can rarely be said of any book, precisely what it professes to be, and what it ought to be, in order to serve the purposes for which it was designed."—New York Times.

"After a careful examination, I can say, without hesitation, that I think Swinton's 'Condensed History' a most excellent work. The total absence of partisan bias or sectionalism is a feature that I was much pleased to observe. I was also much pleased with the method of topical reviews."—Prof. H. M. Evans, Prin. Preparatory Department, Bowdon (Ga.) College.

"I like the plan of Swinton's 'Condensed History' very much, and shall be willing to ask its introduction."—Hon. W. H. Baker, Supt. Schools, Savannah, Ga.

KERL'S SHORTER COURSE.

A Shorter Course in English Grammar. Adapted for use in schools where only one text-book in Grammar is required. By Simon Kerl, A.M., author of "Kerl's Series of English Grammars." 240 pages. Price 38 cents for examination.

"I am well pleased with Kerl's 'Shorter Course.' Its first claim to public favor is its size—it is a small book. The false syntax is well selected, and hence valuable. The work abounds with the life and vivacity of the author himself."—Prof. J. H. Hoose, Prin. State Normal School, Courtland, N. Y.

"After a careful examination, I have concluded that the 'Shorter Course' is the best Grammar for School use I have seen. It is certainly the most practical."—F. W. Parker, Prin. Normal School, Dayton, Ohio.

"I have had occasion to examine a number of different grammars, with a view to select the best for the use of our Public Schools, and have evidenced my preference for Kerl's 'Shorter Course.' I consider this work unsurpassed for practical instruction, scientific arrangement, and clearness."—Winfield S. Luther, Prin. Public Schools, Luthersburg, Pa.

"I like the 'Shorter Course' very much. I have examined others recently, but give this the preference."—B. S. Irwin, Prin. Female Seminary, Washington, Ga.

"The practical working of Kerl's 'Shorter Course' is gratifying indeed, even beyond my expectations."—N. C. Dougherty, Prin. Morris (Ill.) Classical Institute.

"Kerl's 'Shorter Course in English Grammar' is what teachers have labored for a generation to obtain; a basis for oral instruction in harmony with the text-work; brief in its Etymology; full and clear in its Syntax."—Geo. S. Albee, Supt. Schools, Racine, Wis.

"For the schools in which it is designed, Kerl's 'Shorter Course in English Grammar' is the best work I have ever seen."—J. C. Pickard, Prin. High School, Milwaukee, Wis.

"We are free to commend Kerl's 'Shorter Course' as one of the best, if not the very best grammar we have ever met with."—Rev. Thomas K. Beecher, in the Christian Union.

"We opine that the work will stand the only real test, that of the class-room."—American Educational Monthly.

KIDDLE'S SHORT COURSE.

A Short Course in Astronomy and the Use of Globes. Designed to supply a brief course of Lessons in Astronomy for the use of Young Pupils, or of those whose opportunities do not permit a more exhaustive study of the subject. By Henry Kiddle, A.M., Supt. Schools, N. Y. City. 1 vol., 180 pages. Price 45 cents for examination.

'I am very much pleased with Kiddle's 'Short Course in Astronomy,' and consider it admirably adapted to the purpose for which it was written. It presents, in concise form, yet in a clear and attractive style, all the important features of the science as determined by the latest investigations and observations. I do not hesitate to recommend it as a most excellent text-book on the elements of Astronomy."—Prof. Albert C. Hale, Prof. Nat. Science, New Jersey Classical and Scientific Institute, Hightstown, N. J.

"Mr. Kiddle's 'Short Course in Astronomy' seems to me to deserve commendation for the simplicity of its style, the judicious character of its selections, and the large amount of information which the author has compressed into so small a compass. The questions added for solution, and the exercises with the Globes, form a valuable feature of the book. It is one of the very few text-books from the American press, in mechanical execution, worthy to be compared to the best specimens of the Clarendon press."—Prof. F. H. Smith, University of Virginia.

"The book, Kiddle's 'Short Course,' is got up in a very attractive form, and is fully illustrated. The matter is well selected and well arranged. Indeed, we are acquainted with no elementary work on the subject of which it treats so well designed in all respects for the purposes of a text-book."—Pennsylvania School Journal.

SWINTON'S WORD ANALYSIS.

A Graded Class-Book of English Derivative Words, with practical exercises in Spelling, Analyzing, Defining, Synonyms, and the Use of Words. By William Swinton, Prof. of the English Language in the University of California, author of "A Condensed History of the United States," "Rambles Among Words," etc., etc. 1 vol., 128 pages. Price 25 cents for examination.

☞ The prominent points in this work are: 1. The clear and simple method of word analysis and definition; 2. The practical exercises in spelling, defining, and the use of words in actual composition; 3. The adaptation of the manual, by its progressive character, to the needs of the several grades of public and private schools.

"I have examined Swinton's 'Word Analysis,' and found it admirably adapted to the wants of common schools. It should find a place alongside of the grammar and spelling-book. It suggests and exemplifies a method of word study which can hardly fail to promote greater exactness in the use of words, and a more correct habit of thinking as well as expression."—From Prof. John S. Hart, LL.D., Prof. Rhetoric and the English Language, College of N. J.

"Swinton's 'Word Analysis' is the best work of the kind I have ever seen. Etymology is a dry study at best to children, and when a text-book consists wholly of long and tedious lists of prefixes and suffixes, roots and derivations, it can hardly be otherwise than distasteful to young scholars. But this is so practical, and is so fully illustrated, that, in the hands of a capable teacher, it can but lead in many cases to a more extensive study of the beauties and riches of the English language."—Prof. A. J. Swain, Prin. Stevens High School, Claremont, N. H.

"We consider this work the very best of the kind that we have ever seen, and hope for its early introduction into all our schools."—Rev. W. M. Berkstresser, Prin. High School, New Cumberland, Pa.

"This is one of the very few school text-books on the English language which we can heartily recommend. It should be in every elementary school in the country."—New York Public School Journal.

CATHCART'S YOUTH'S SPEAKER.

Selections in Prose, Poetry, and Dialogues, suited to the capacities of Youth, and intended for the Exhibition Day requirements of Common Schools and Academies; with many new and original pieces. By Geo. R. Cathcart, A.M. 190 pages, cloth. Price, for examination, 75 cents.

☞ The prominent points of this book are: 1. The selections are suitable to the exhibition day requirements of Common Schools and Academies; 2. They are adapted to the understanding of the younger pupils; 3 As far as practicable, only pieces that are fresh, or that have not heretofore been used in a book of this kind, are presented.

"Having carefully examined Cathcart's 'Youth's Speaker,' I can most cheerfully recommend it to my fellow-teachers as a little work of great merit. The selections are to a great extent new, admirably arranged, and thoroughly adapted to awaken the interest of the youthful student of oratory."—Prof. Thomas Hunter, Pres. Girls' Normal College, New York City.

"A careful examination of Cathcart's 'Youth's Speaker' shows admirable skill and good judgment in the selections. The book is carefully adapted to meet a want long felt in our schools, and will commend itself to both teachers and pupils from the interesting and pleasing character of the pieces, many of which are literary gems."—Prof. Geo. W. Felter, Prin. Girls' Normal School, Philadelphia.

"The 'Youth's Speaker' is a gem in its way, and fills a place in our school literature quite unoccupied hitherto."—Prof. S. M. Capron, Prin. Hartford (Ct.) High School.

"We have looked over the 'Youth's Speaker' pretty carefully, and we find it an excellent work. Teachers who are often at their 'wit's end' to find pieces adapted to younger children, and of appropriate length, will do well to examine it. The author has acted quite successfully upon the true idea that boys should attempt in declamation such extracts as they comprehend."—Massachusetts Teacher.

ROBINSON'S EXAMPLES.

Arithmetical Examples, Mental and Written. With numerous Tables of Moneys, Weights, Measures, etc., designed for review and test exercises. By D. W. Fish, A.M. Cloth. 282 pages. Price 75 cents for examination.

"The 'Arithmetical Examples' is a complete thesaurus, and is remarkable for neatness and beauty."—Rev. C. J. Collins, Supt. and Prin. of Public Schools, Wilkesbarre, Pa.

"Every live teacher of Arithmetic will be grateful to you for the 2,500 'Examples.' It would have been a great boon to me had it come three months earlier. I shall find occasion to use it, however, with succeeding classes."—Prof. A. J. Swain, Prin. Stevens High School, Claremont, N. H.

"The 'Arithmetical Examples' fills a place in the mathematical course which has hitherto been almost vacant. In arrangement and completeness it has no superior, and these characteristics entitle it to a high place among text-books."—H. O. Harris, Prof. Mathematics, Excelsior Normal Inst., Carversville, Pa.

"We have used 'The Arithmetical Examples' during the past month in giving test exercises to a class somewhat advanced in mathematics. We have been much pleased with the variety of original and ingenious problems which it presents."—Pennsylvania School Journal.

THE SPENCERIAN DRAWING BOOKS.

Prepared by H. HITCHINGS, Teacher of Drawing in the Boston English High School, and late Prof. of Drawing, U. S. Naval Academy.

A Series of an Elementary and Progressive Character, designed especially for the use of Schools, on a new and excellent plan. To be completed in 6 books. Nos. 1 and 2 now ready. Price 30 cents each for examination.

"The two numbers of the 'Spencerian Drawing Books' before us commend themselves strongly to favor. By giving a lesson upon each side of the pattern-sheet, each book has twice the usual number of lessons, and the copies come in the most convenient position for the pupil. These lessons are admirably arranged, and take the pupil through the usual course of lines and figures in such a way as to awaken his interest and exercise his taste. The copies are exceedingly well printed, and of attractive form, and the method by which they are to be reproduced indicated. Teachers and Committees will find them worthy of examination."—Massachusetts Teacher.

"The copy of 'Spencerian Drawing Book, No. 1, has been examined with pleasure. I can say, without hesitation, if the remaining numbers are as good as this, it will be, in my judgment, the best series before the public."—Prof. T. F. Nelson, Prof. Drawing and Penmanship, Zanesville (Ohio) University.

☞ *Any of the works above mentioned, if required for introduction, will be furnished on the most reasonable terms. Single copies will be forwarded b mail to teachers on receipt of the appended price, if required, for examination with a view to introduction.*

☞ *Our New Descriptive Catalogue, just ready, comprising more than* 100 *pages, and containing full titles, descriptive notices, and prices of our publications, will be mailed free to Teachers or School Officers on application; as will also The Educational Reporter, an interesting journal full of useful information*

MACMILLAN & CO.

Beg leave to call attention to the following List of VALUABLE EDUCATIONAL WORKS, most of which are written by Scholars of Eminence in the Universities and of large Experience in Tuition, and have already attained a wide circulation in England, the United States, and the Colonies:

SCIENTIFIC CLASS-BOOKS.

Popular Astronomy. With Illustrations. By G. B. Airy, Astronomer-Royal. Sixth edition. 18mo, $1 50.

Elementary Lessons in Astronomy. With Illustrations. By J. Norman Lockyer, F.R.S. With Colored Diagram of the Spectra of the Sun, Stars, and Nebulæ. Eighth Thousand. 18mo, $1 75.

"The book is full, clear, and sound."—Athenæum.

QUESTIONS ON THE SAME, 50 cents.

Lessons in Elementary Botany. With Illustrations. By Professsor Oliver, F.R.S., F.L.S. Twelfth Thousand. 18mo, $1 50.

"We know of no work so well suited to direct the botanical pupil's efforts as that of Professor Oliver."—Natural History Review.

Lessons in Elementary Chemistry. By Professor Roscoe. With numerous Illustrations and Chromo-lithographs of the Solar Spectra. Thirty-first Thousand. 18mo, $1 50.

"A small, compact, carefully elaborated, and well-arranged manual."—Spectator.

Elementary Lessons in Logic, Deductive and Inductive. By Professor Jevons. With copious Questions and Examples, and a Vocabulary of Logical Terms. Second Edition. 18mo, $1 25.

Lessons In Elementary Physiology. With numerous Illustrations. By Prof. Huxley. Twentieth Thousand. 18mo, $1 50.

"A small book; but pure gold throughout. There is not a waste sentence or a superfluous word, and yet it is all clear as daylight."—Guardian.

QUESTIONS ON THE SAME, 50 cents.

Political Economy for Beginners. By Millicent Garrett Fawcett. With Questions. 18mo, $1.

Lessons in Elementary Physics. By Balfour Stewart, F.R.S. Professor of Natural Philosophy in Owens College, Manchester. With Colored Diagram and numerous Illustrations. Second Edition. 18mo, $1 50.

ENGLISH.

A Shakespearean Grammar. An Attempt to Illustrate some of the Differences between Elizabethan and Modern English. By E. A. Abbott, M.A., Head Master of the City of London School. Extra fcap. 8vo, $1 75. New Edition, enlarged.

"Will be found a welcome help wherever a play of Shakespeare's forms part of the regular course."—Guardian.

The Elements of Grammar Taught in English. By the Rev. E. Thring, M.A., Head Master of Uppingham. Fourth Edition. 18mo, 75 cents.

On the Study of Words. By R. C. Trench, D.D., Archbishop of Dublin. Fcap. 8vo, $1 25. Fourteenth Edition, revised, just ready.

English, Past and Present. By R. C. Trench, D.D., Archbishop of Dublin. Seventh Edition. Fcap. 8vo, $1 25.

Shakespeare's Tempest. With Glossarial and Explanatory Notes by the Rev. J. M. Jephson. Second Edition. 18mo, 50 cents.

CLASSICAL WORKS.

A Grammar of the Latin Language, from Plautus to Suetonius. By H. J. Roby, M.A., late fellow of St. John's College, Cambridge. Part I. Crown 8vo, $2 50.

An Introduction to Greek and Latin Etymology. By John Peile, M.A., Fellow and Tutor of Christ College. Second Edition. Crown 8vo. $3 50.

First Latin Steps; or, An Introduction, by a Series of Examples, to the Study of the Latin Language. By Josiah Wright, M.A., late Head Master of Sutton Coldfield School. Crown 8vo, $2.

The Seven Kings of Rome; an Easy Narrative, abridged from the First Book of Livy. A First Latin Reading-Book, with Grammatical Notes. By the Rev. J. Wright, M.A. Fourth Edition. Fcap. 8vo, $1.

VOCABULARY AND EXERCISES, 75 cents.

Cicero's Orations against Catilina. With Introduction, and Notes translated from Halm, with Additions. By A. S. Wilkins, M.A., Professor of Latin in Owens College, Manchester. Fcap. 8vo, $1 25.

Cicero. The Second Philippic Oration. With an Introduction, and Notes translated from Karl Halm. Edited by J. E. B. Mayor, M.A. Third Edition. Fcap. 8vo, $1 25.

Juvenal. Thirteen Satires. With Commentary by the Rev. J. E. B. Mayor, M.A. Second Edition, enlarged. Part I. Crown 8vo, $1 25.

Sallust. With English Notes. By C. Merivale, D.D. New Edition. Fcap. 8vo, $1 50.

The CATILINA and JUGURTHA may be had separately, price 75 cents each.

Tacitus: Agricola and Germania. A Revised Text and English Notes. By A. J. Church and W. J. Brodribb. New Edition. Fcap. 8vo, $1 25. Separately, 75 cents. A Translation, by the same Authors, $1.

Mythology for Latin Versification. A Brief Sketch of the Fables of the Ancients, prepared to be rendered into Latin Verse for Schools. By F. HODGSON, B.D., late Provost of Eton. New and Revised Edition. 18mo, 75 cents.

Hints towards Latin Prose Composition. By A. W. Potts, M.A., Head Master of the Fettes College, Edinburgh. Third Edition. Revised and Enlarged. Extra fcap. 8vo, $1.

Hellenica; or, A History of Greece in Greek: being a First Greek Reading-Book. With Explanatory Notes. Third Edition. With a Vocabulary. By the Rev. J. Wright, M.A. Fcap. 8vo, $1.

First Greek Reader. Edited after Karl Halm. With Corrections and Additions by J. E. B. Mayor, M.A. Second and Cheaper Edition. Fcap. 8vo, $1 50.

Greek for Beginners. By Joseph B. Mayor, M.A., Professor of Classical Literature in King's College, London. New Edition. Fcap. 8vo, $1 50.

Demosthenes on the Crown. With English Notes. By B. Drake, M.A. Fourth Edition. To which is prefixed, ÆSCHINES against CTESIPHON. Fcap. 8vo, $1 50.

Thucydides: The Sicilian Expedition. Being Books VI. and VII. of Thucydides. With Notes, by the Rev. P. Frost, M.A. New Edition, Revised and Enlarged. Extra fcap. 8vo, $1 50.

MATHEMATICS.

Algebraical Exercises, progressively arranged. By C. A. Jones, M.A., and C. H. Cheyne, M.A., Mathematical Masters of Westminster School. New Edition. 18mo, 75 cents.

Elementary Geometry. Angles, Parallels, Triangles, Equivalent Figures, the Circle, and Proportion. By J. M. Wilson, M.A., Mathematical Master of Rugby School. Second Edition. Extra fcap. 8vo, $1 25.

Solid Geometry and Conic Sections, with Appendices on Transversals and Harmonic Division. For the Use of Schools. By J. M. Wilson, M.A. Extra fcap. 8vo. $1 25.

Note-Book on Practical, Solid, or Descriptive Geometry, containing Problems with Help for Solution. By J. H. Edgar, M.A., and G. S. Pritchard. Second Edition, enlarged. Globe 8vo, $1 25.

An Elementary Treatise on Conic Sections and Algebraic Geometry. With numerous Examples and Hints for Solution; especially designed for the Use of Beginners. By G. H. Puckle, M.A. New Edition, revised and enlarged. Crown 8vo, $2 50.

Geometrical Treatise on Conic Sections. By W. H. Drew, M.A. Fourth Edition. Crown 8vo, $1 75. SOLUTIONS, $1 75.

A Book of Mathematical Problems, on Subjects included in the Cambridge Course. By J. Wolstenholme, M.A. Crown 8vo, $2.

The Elements of Plane and Spherical Trigonometry. With the Construction and Use of Tables of Logarithms. By J. C. Snowball, M.A. Fourth Edition. Crown 8vo, $2.

An Elementary Treatise on Mechanics. For the Use of Junior Classes at the University and Higher Classes in Schools. With Examples. By S. Parkinson, D.D., F.R.S. Fourth Edition, revised. Crown 8vo, $3.

A Treatise on Optics. By S. Parkinson, D.D. Third Edition, revised and enlarged. Crown 8vo, $3 50.

Elementary Hydrostatics. With numerous Examples. By J. B. Phear, M.A. Fourth Edition. Crown 8vo, $2.

A Treatise on Astronomy. For the Use of Colleges and Schools. By Hugh Godfray, M.A. 8vo, $4 50.

A Treatise on Magnetism. Designed for the Use of Students in the Universities. By G. B. Airy, Astronomer-Royal. Crown 8vo, $3.

A Treatise on Dynamics of a Particle. By Professor Tait and Mr. Steele. Third Edition, enlarged. Crown 8vo, $3 50.

An Elementary Treatise on the Dynamics of the System of Rigid Bodies. With numerous examples. By E. J. Routh, M.A. Second Edition, enlarged. Crown 8vo, $3 50.

HISTORY.

Old English History. By E. A. Freeman, D.C.L. With Five Colored Maps. Second Edition, revised. Extra fcap. 8vo, $1 75.

Cameos from English History. By Charlotte M. Yonge, Author of "The Heir of Redclyffe."
Vol. I.—From Rollo to Edward II. Second Edition. $1 50.
Vol. II.—The Wars in France. Extra fcap. 8vo, $1 50.

European History: Narrated in a Series of Historical Selections from the Best Authorities. Edited and arranged by E. M. Sewell and Charlotte M. Yonge. 2 vols. crown 8vo, $1 75 each.

*** Full Descriptive Catalogues will be sent on application.

MACMILLAN & CO., 38 Bleecker Street, New York.

MR. TODHUNTER'S
MATHEMATICAL WORKS.

EUCLID for COLLEGES and SCHOOLS. New Edition. 18mo, $1 25.

MENSURATION FOR BEGINNERS. With Examples. New Edition. 18mo, $1 25.

ALGEBRA for BEGINNERS. With numerous Examples. New Edition. 18mo, $1 25; Key, $2 25.

TRIGONOMETRY for BEGINNERS. With numerous Examples. New Edition. 18mo, $1.

MECHANICS for BEGINNERS. With numerous Examples. Second Edition. 18mo, $1 50.

ALGEBRA for the USE of COLLEGES and Schools. Fifth Edition. Crown 8vo, $2 25; Key, $3.

An ELEMENTARY TREATISE on the Theory of Equations. Second Edition, Revised. Crown 8vo, $2 25.

*PLANE TRIGONOMETRY. Fourth Edi*tion. Crown 8vo, $1 75.

*A TREATISE on SPHERICAL TRIGO*NOMETRY. Third Edition. Crown 8vo, $1 75.

A TREATISE on CONIC SECTIONS. With Examples. Fourth and Cheaper Edition, Revised. Crown 8vo, $2 25.

A TREATISE on the DIFFERENTIAL CALCULUS. With Examples. Fifth Edition. Crown 8vo, $3 50.

*A TREATISE on the INTEGRAL CAL*CULUS. With Examples. Third Edition. Crown 8vo, $3 50.

*EXAMPLES of ANALYTICAL GEOME*TRY of Three Dimensions. Second Edition, Revised. Crown 8vo, $1 50.

A TREATISE on ANALYTICAL STATICS. With Examples. Third Edition. Crown 8vo, $3 50.

*RESEARCHES in the CALCULUS of VARIA*TIONS. Principally on the Theory of Discontinuous Solutions. 8vo, $3 50. [Just published.

LIDDELL & SCOTT'S LEXICONS.

Universally acknowledged to be the best Greek Lexicons published, and in use by all students.

I.

A GREEK-ENGLISH LEXICON. Compiled by Henry G. Liddell, D.D., Dean of Christ Church, and the Very Rev. Robert Scott, D.D., Dean of Rochester, late Master of Balliol College, Oxford. Sixth Edition. 4to, pp. xvi. 1864, $12; half-mor., $18.

The present edition has been again carefully revised throughout, and, though brevity has been studied, the number of pages has been increased by one-eighth. Much of this increase is due to a collation of the copious Greek-German Lexicon of Palm & Rost, and of the last numbers of Dindorf and Stephanus; much also to the length at which the forms of irregular verbs have been treated—an addition for which full acknowledgments ought to be made to the exhaustive list of these verbs by Mr. Veitch, lately published at the Clarendon Press.—Author's Preface.

II.

THE SCHOOL EDITION.

LIDDELL & SCOTT'S GREEK-ENGLISH LEXICON, Abridged. New Edition, carefully Revised throughout. Square, half-bound, $3.

The present edition has been completely revised, and has also been considerably enlarged—chiefly by the addition of a number of irregular tenses of verbs.

III.

*A COPIOUS GREEK-ENGLISH VOCABU*LARY. Compiled from the best authorities. 12mo, cloth, $1 50.

The Greek-English Vocabulary which is now submitted to the public is intended to furnish within the narrowest compass a useful and convenient manual of reference. It will be found copious in regard to the number of words, and the explanations of them have been given from the Lexicon of Liddell & Scott with as much brevity as possible.—Preface.

MACMILLAN & CO.'S Educational Catalogue, containing a Complete List of their Educational Works, with a short description of each, will be forwarded, mail free, on application to

MACMILLAN & CO.,
PUBLISHERS TO THE UNIVERSITY OF OXFORD,
38 Bleecker Street, New York.

THE CLARENDON PRESS SERIES.

The attention of Professors, Schoolmasters, and all persons interested in Education, is especially directed to the following Series of Works which have been lately issued from the Oxford Clarendon Press, and are written with immediate reference to the present state of science and learning, and to urgent educational needs.

GREEK AND LATIN CLASSICS.

A GREEK PRIMER in ENGLISH for the Use of Beginners. By the Right Rev. Charles Wordsworth, D.C.L., Bishop of St. Andrews. Fcap. 8vo, 60 cents. Second Edition.

HOMER'S ODYSSEY. Books I.-XII. With Introduction and Notes. By W. W. Merry, M.A., Fellow and Lecturer of Lincoln College, Oxford. Extra fcap. 8vo, $1 50. Second Edition.

*GREEK VERBS, IRREGULAR and DEFECT*IVE; their Forms, Meaning, and Quantity. By W. Veitch. New and Revised Edition. Extra fcap. 8vo, $4.

XENOPHON, SELECTIONS adapted from. With English Notes and Maps. By J. S. Phillpotts, B.C.L., Assistant-Master in Rugby School. In extra fcap. 8vo, $1 25. Part I.

THEOCRITUS (for Schools). With Notes. By H. Snow, M.A., Assistant-Master at Eton College. Extra fcap. 8vo, $1 50.

CICERO PRO CLUENTIO. With Introduction and English Notes. By the late Professor W. Ramsay, M.A. Edited by G. G. Ramsay, M.A. Extra fcap. 8vo, cloth, $1 25.

CÆSAR'S COMMENTARIES. The Gallic War, with the Supplement of Hirtius. Edited by C. E. Moberly, M.A., Assistant-Master in Rugby School. With Introduction, Notes, and Maps. In extra fcap. 8vo, $1 50.

CORNELIUS NEPOS. With English Notes. By Oscar Browning, M.A., Assistant-Master at Eton College. Extra fcap. 8vo, $1.

*EXTRACTS from CICERO, Narrative and De*scriptive. Edited, with English Notes, by H. Walford, M.A. Complete in 1 vol. extra fcap. 8vo, $1 25; or in Three Parts, each 60 cents.

OVID. Selections for the Use of Schools. With Introductions and Notes. By the late Professor W. Ramsay, M.A. Edited by G. G. Ramsay, M.A. Extra fcap. 8vo, $1 75.

*LIVY. Book I. By Professor Seeley. With In*troduction, Historical Examination, and Notes. 8vo, $2 50.

PASSAGES for TRANSLATION into LATIN. For the use of Passmen and others. Selected by J. Y. Sargent, M.A., Tutor of Magdalen College, Oxford. Second Edition. Extra fcap. 8vo, cloth, $1.

MENTAL AND MORAL PHILOSOPHY.

The ELEMENTS of DEDUCTIVE LOGIC. Designed mainly for the use of Junior Students in the Universities. By T. Fowler, M.A. With a Collection of Examples. Fourth Edition, extra fcap. 8vo, cloth, $1.

ELEMENTS of INDUCTIVE LOGIC. Designed mainly for the use of Students in the Universities. By Thomas Fowler, M.A. With Notes and Index. Extra fcap. 8vo, $1 50.

A MANUAL of POLITICAL ECONOMY, for Schools and Colleges. By Professor Rogers. Second Edition, revised, with Index, extra fcap. 8vo, $1 25.

MATHEMATICS AND PHYSICAL SCIENCE.

*A TREATISE on ACOUSTICS. By W. F. Don*kin, F.R.S., Savilian Professor of Astronomy, Oxford. Crown 8vo, $3 50.

*CHEMISTRY for STUDENTS. By A. W. Wil*liamson, F.R.S., Professor of Chemistry, University College, London. With Solutions. Second Edition, extra fcap. 8vo, $2 50.

EXERCISES in PRACTICAL CHEMISTRY— Qualitative Analysis. By A. G. Vernon Harcourt, M.A., F.R.S., and H. G. Madan, F.C.S. With numerous Illustrations. Crown 8vo, $2 50.

An ELEMENTARY TREATISE on HEAT. By Balfour Stewart, LL.D., F.R.S. Extra fcap. 8vo, with numerous Woodcuts and Diagrams, $2 50. Second Edition.

GERMAN LANGUAGE AND LITERATURE.

*GERMAN CLASSICS. Edited, with Introduc*tion and Notes, by Dr. Buchheim.

Vol. I. Goethe's "Egmont." Extra fcap. 8vo, $1 25.
Vol. II. Schiller's "William Tell." Extra fcap. 8vo, $1 25.

ENGLISH LANGUAGE AND LITERATURE.

SPECIMENS OF ENGLISH LITERATURE. From "The Crede" to "The Shepheardes Kalender," A.D. 1394 to A.D. 1579. With Introduction, Notes, and Glossarial Index. By the Rev. W. W. Skeat, M.A. Extra fcap. 8vo, $3.

THE PHILOLOGY OF THE ENGLISH TONGUE. By John Earle, M.A., sometime Professor of Anglo-Saxon at Oxford. Extra fcap. 8vo, $2.

The PRINCIPLES of GRAMMAR. By the Rev. E. Thring, M.A., Head-Master of Uppingham. Extra fcap. 8vo, $1 50.

EXERCISES in ANALYSIS. By the Rev. E. Thring, M.A., Head-Master of Uppingham. Extra fcap. 8vo, $1.

The VISION of WILLIAM concerning PIERS the PLOWMAN. By William Langland. Edited, with Introduction and Notes, by W. W. Skeat, M.A. Extra fcap. 8vo, cloth, $1.

TYPICAL SELECTIONS from the BEST English Authors from the Sixteenth to the Nineteenth Century. With Introductory Notices and Notes. Extra fcap. 8vo, cloth, $1 50.

This valuable work is designed both as a text-book for the student and as a collection of able essays on topics of special interest at the present day.

PLINY.

HIS LIFE AND LETTERS.

By A. CHURCH and W. J. BRODRIBB.

16mo, fine cloth, $1.

This work forms the twelfth volume of a Series of Ancient Classics for English Readers, which is proving a great success.

For sale by Booksellers generally, or will be sent by mail, postage paid, on receipt of the price, by

J. B. LIPPINCOTT & CO., Publishers,
715 and 717 Market Street, Philadelphia.

"Get the book and read it lovingly. It is about one who walked modestly, who worked hard, who looked not to the right or left, who ever strove to do good, and who died blessing God that she had achieved some measure of usefulness. It is the rarest and most practical and most suggestive of stories."—Philadelphia City Item.

JUST PUBLISHED,

12mo, extra cloth, price $2.

UNA AND HER PAUPERS:

MEMORIALS OF AGNES ELIZABETH JONES.

By her Sister. With an Introduction by Florence Nightingale. First American from the Second London Edition. With an Introductory Preface by the Rev. Henry Ward Beecher, and a Supplementary Chapter on Hospital Training and Nursing in the United States. By the Author of "Woman's Work in the Civil War."

"I call her Una, for when her whole life and image rise before me, so far from thinking the story of Una and her lion a myth, I say here is Una in real flesh and blood—Una and her paupers, far more untamable than lions."—Florence Nightingale.

"Her Christian love was wide and brave, and she laid down her life for her friends. Her example is a glorious one."—Spectator.

"As a record of heroic, self-sacrificing life, we most warmly recommend this book, confident that to not a few hearts it will carry a message, and that to some it will bring the gladdening sense of a clear course on which they may walk in the fruitful service of God and man."—Nonconformist.

"There are few memoirs better calculated to produce a profound impression upon all who are susceptible to the exhibition of remarkable Christian excellence. It is one of the few books which renders piety attractive."—Henry Ward Beecher.

"I have no power to put into speech the emotion moved in me by such a life as this. In this loud, egotistical day, it comes with a touch of pealing. It is a benediction in the air, hushing discord into peace. Listening to its lesson, in the presence of God's poor and sick, I must marvel that so many women of means, of leisure, who fill the world with their outcry for 'opportunity' and work, who rebel against the meagreness and littleness of their pursuits, do not see how broad are the fields, how wonderful the harvest of bodies and of souls, waiting, wasting for woman's touch of mercy."—Mary Clemmer Ames, in the Independent.

⁂ For sale by all booksellers, or will be mailed, post-paid, to any address in the United States on receipt of price by the Publishers.

GEORGE ROUTLEDGE & SONS,

J. SABIN & SONS,

84 Nassau Street, New York.

HARVARD UNIVERSITY, CAMBRIDGE, MASS.

1872-73.

HARVARD COLLEGE. A four years' course for the degree of Bachelor of Arts. Studies are elective in the main after the first year. There will be more than seventy elective courses in 1872–3, in addition to the studies of the first year and the other courses required of all students. If any student, or his parents, prefer the assorted studies which make up the common curriculum of American Colleges, he has only to select those subjects. . . . There are *extra* voluntary examinations in the Classics at admission; *honors* in the Classics and in Mathematics at the end of the second year; and *honors* at graduation in the Classics, the Modern Languages, Philosophy, History, Mathematics, Physics and Natural History. . . . The College respects and does not seek to influence the religious convictions of its students. . . . The annual expenses of a student are not necessarily any larger than at many other colleges. Many students pay *all* their expenses with from $500 to $600 a year. There are ninety-three Scholarships, of the average annual value of about $250 apiece, besides beneficiary funds, a loan fund, monitorships, and prizes for English writing, elocution, and reading.

DIVINITY SCHOOL. A three years' course for the degree of Bachelor of Divinity. There are no tests concerning opinion or belief applicable to either teachers or students. There are four resident professors, two lecturers, two instructors, and a librarian. The School library is large and valuable. Liberal pecuniary aid is given to those who need it.

LAW SCHOOL. A two years' course for the degree of Bachelor of Laws. The subjects of examination for the degree are Real Property, Contracts, Torts, Criminal Law and Procedure, Civil Procedure at Common Law, Evidence, and Equity. Instruction is given in all these subjects, and in sundry others, every year. The Library (16,000 vols.) has no rival among libraries belonging to Law Schools. There are eight scholarships of $100 each.

MEDICAL SCHOOL. A three years' progressive course of study for the degree of Doctor of Medicine. *The attention of all persons interested in medical education is invited to the new organization and plan of study of this school.* Full information may be obtained by applying to Dr. C. Ellis, Dean of the Medical Faculty, 114 Boylston Street, Boston.

DENTAL SCHOOL. This school is in one sense a branch of the Medica School; but it has three distinct professorships of dental subjects, maintains separate laboratories and an infirmary for dental operations, and gives the separate degree of Doctor of Dental Medicine. The instruction covers the whole academic year; but there is a winter session (Sept. 26 to Feb. 10) and a summer session (Feb. 17 to June 25).

LAWRENCE SCIENTIFIC SCHOOL. This school has been entirely reorganized, and now offers very systematic and complete courses of study in all departments of science, pure and applied. 1. A four years' course of study in CIVIL AND TOPOGRAPHICAL ENGINEERING for the degree of Civil Engineer. 2. A three years' course in PRACTICAL AND THEORETICAL CHEMISTRY for the degree of Bachelor of Science. 3. A three years' course in NATURAL HISTORY for the degree of Bachelor of Science. 4. A three years' course in MATHEMATICS, PHYSICS, AND ASTRONOMY for the degree of Bachelor of Science.

The school also offers to *teachers*, or persons who mean to become *teachers*, a one year's course of study in the elements of Natural History, Chemistry, and Physics, which is intended to qualify teachers to teach science by the modern methods of experiment and observation.

Lastly, the school offers thorough instruction for advanced students in Physics, Chemistry, Zoölogy, Geology, Botany, and Mathematics.

Students in the Scientific School may take rooms in College buildings; they have all the general advantages of connection with the University. There are four Scholarships of $150 each.

MINING SCHOOL. A four years' course of study for the degree of Mining Engineer. The first three years of the course are identical with the first three years of the Engineering Course in the Scientific School. The fourth year is devoted to Economic Geology, Exploitation of Mines, Metallurgy, and Assaying.

BUSSEY INSTITUTION. The School of Agriculture and Horticulture recently established in execution of the will of Benjamin Bussey, gives thorough instruction in Agriculture, Useful and Ornamental Gardening, and Stock Raising. In order to give the student a sound basis for a thorough knowledge of these Arts, the School supplies instruction in Physical Geography, Meteorology, and the elements of Geology, in Chemistry and Physics, in the elements of Botany, Zoölogy, and Entomology, in Levelling and Road-building, and in French and German.

This School is intended for the following classes of persons: 1. Young men who intend to become practical farmers, gardeners, florists, or landscape gardeners. 2. Young men who will naturally be called upon to manage large estates—such as the sons of large farmers and of city men who own country-places. 3. Young men of character, good judgment, and native force who have neither taste nor aptitude for literary studies, but who, being fond of country life and observant of natural objects, would make, when thoroughly trained, good stewards or overseers of gentlemen's estates. 4. Teachers, or young men preparing to be teachers, who expect to be called upon to teach some of the subjects taught in this school. 5. Persons who wish to familiarize themselves with some special branch of agriculture, horticulture, or applied zoölogy.

The regular course of study, to be pursued by candidates for a degree, will fill three years. The instruction of the first year's course is given at the Lawrence Scientific School, in Cambridge; that of the second and third years' courses at the Bussey Institution, which is situated near the village of Jamaica Plain, about five miles southwest of Boston. The teachings of the School are illustrated by the rich scientific collections of the University, and by a botanic garden, a large and profitable farm, greenhouses, propagating houses, and field experiments. The single object of the School is to promote and diffuse a thorough knowledge of Agriculture and Horticulture.

Full information about this School may be obtained by addressing Prof. F. H. STORER, Jamaica Plain, Mass.

THE DEGREES OF MASTER OF ARTS, DOCTOR OF PHILOSOPHY, AND DOCTOR OF SCIENCE. After Commencement, 1872, the ordinary degree of Master of Arts will be conferred only upon examination. The degrees of Doctor of Philosophy and Doctor of Science have recently been established. They are given on examination. *All three degrees are open to graduates of other colleges*, as well as to graduates in Arts or Science of this University; but certain additional examinations may be required of Bachelors of Arts, Science, or Philosophy of other institutions. . . . Candidates for the Degree of Master of Arts must pursue some course of liberal study at the University for at least one year after taking the Bachelor's degree; candidates for the Degree of Doctor of Philosophy must study at the University at least two years after taking the degree of Bachelor of Arts; candidates for the degree of Doctor of Science must pursue for three years a course of scientific study embracing at least two subjects, but only two of these years need be spent at this University. In special cases the requisition of residence at the University may be remitted to Bachelors of Arts or Science of Harvard University who are candidates for higher degrees.

For information concerning these degrees address Prof. J. M. PEIRCE, Secretary Academic Council, Cambridge.

The numerous elective courses of instruction in Harvard College have recently been opened to Bachelors of Arts of Harvard College *and of other colleges*. An undergraduate of Harvard College cannot, at the best, pursue more than fifteen of these courses before taking the Bachelor's degree. The seventy elective courses for 1872–73 therefore offer a wide choice of new studies to Bachelors of Arts of Harvard College, as well as of other institutions. . . . Three courses of instruction in the Divinity School will be open to Bachelors of Arts, viz., those on Ecclesiastical History, New Testament Criticism, and the First Three Centuries of Christianity. . . . Instruction in Sanskrit, Icelandic, and Gothic is offered to competent students. . . . Courses of University Lectures will be given during 1872–73 on Jurisprudence, History, and some topics in Social Science. These lectures, taken in connection with the College courses on Political Economy and Roman Law and certain of the College courses on History, will provide a full year's work in Political Science. . . . There will be courses of University Lectures on some Art subjects and on some special subjects in Science, as heretofore. . . . Advanced students will be received into the Botanical Laboratory (Prof. GRAY), the Chemical Laboratory (Prof. COOKE), the Physical Laboratory (Prof. GIBBS), the Physical Laboratory (Asst.-Profs. TROWBRIDGE and HILL), the Laboratory of Agricultural Chemistry (Prof. STORER), the Physiological Laboratory (Asst.-Prof. BOWDITCH), and into the Museum of Comparative Zoölogy (Profs. AGASSIZ, HAGEN, and SHALER). There is field-teaching in Geology and Botany both in term-time and vacation.

The Academic Year begins in all departments of the University on the Thursday following the last Wednesday in September, and ends on the last Wednesday in June. There is a recess from Dec. 24 to Jan. 6 inclusive.

Examinations for admission to Harvard College will be held this year, on June 27, 28, 29, *and Sept.* 26, 27, 28, *beginning at* 8 *A.M. of June* 27 *and Sept.* 26. *Examinations for admission to those departments of the Scientific and Mining Schools and of the Bussey Institution for which there are admission examinations will be held on June* 27 *and Sept.* 26, *beginning at* 9 *A.M.*

For Catalogues (second edition, 1871–72*), Examination-papers, or Circulars, address James W. Harris, Secretary, Cambridge, Mass.*

NOW BEING ISSUED.

ANCIENT CLASSICS

FOR ENGLISH READERS.

A SERIES OF BI-MONTHLY VOLUMES.
Small 12mo. Fine Cloth. $1 each.
Edited by REV. W. LUCAS COLLINS.

JUST PUBLISHED.

PLINY,

HIS LIFE AND LETTERS.

By ALFRED CHURCH and W. J. BRODRIBB.

RECENTLY PUBLISHED.

1. Homer's Iliad. 2. Homer's Odyssey. 3. Herodotus. 4. Cæsar. 5. Virgil. 6. Horace. 7. Æschylus. 8. Xenophon. 9. Cicero. 10. Sophocles.

Other volumes in preparation.

The aim of the present series will be to explain, sufficiently for general readers, who these great writers were, and what they wrote; to give, wherever possible, some connected outline of the story which they tell, or the facts which they record, checked by the results of modern investigations; to present some of their most striking passages in approved English translations, and to illustrate them generally from modern writers; to serve, in short, as a popular retrospect of the chief literature of Greece and Rome.

"This admirable plan is admirably executed."—Albany Journal.

"This volume is simply delicious. Mr. Hare tells the story of actual Rome so as to freshen everything. The reader sees it all over again."—New York World.

WALKS IN ROME.

BY AUGUSTUS J. C. HARE.

Crown 8vo, 710 pp., extra etruscan cloth, price $3 50.

"No one who has ever been to Rome, no one who hopes to get there, no intelligent traveller now there, can afford to be without this valuable work on the most noted city in the world's history."—Hall's Journal of Health.

"It is the most complete monograph for the traveller that has, we think, ever been published. It is a cyclopædia on the sights of Rome; it is of interest to those who are going and to those who have returned; to the one as 'guide, philosopher, and friend'—and now that it is written, no sight-seer should go to Rome without it—to the other as memento; but it is, further than this, so generally interesting that few will find it other than delightful reading."—Evening Mail.

"Invaluable in suggesting what should be seen, and the best way of seeing it. Mr. Hare is evidently a man of education and refinement, with a nice sense of historical perspective, and a thorough appreciation of the beautiful. The plan of his work is original in its collation of the most interesting passages from modern literature that have reference to the spots and buildings described, and it is a matter of special interest to the American reader to note how largely the writings of our own authors enter into the record."—Evening Post.

THOROUGH BOOKS FOR SCHOOL USE.

HURD & HOUGHTON, New York,
THE RIVERSIDE PRESS, Cambridge,
Publish and commend to notice:

I.

FIRST STEPS IN ENGLISH LITERATURE.

By ARTHUR GILMAN, A.M.

One volume 16mo, pp. 231. Price, $1.

The book has been prepared by an American for American students; hence the American side of English literature has been carefully presented, and the Publishers are confident that it will be found a most valuable introduction to the study of English literature and a handbook of reference. The author has never lost sight of the fact that there is an urgent need of a small book that can be mastered by the scholar, and so systematically arranged as to aid and not to task the memory.

"It is the most concise, comprehensive, intelligent, and the best arranged outline of English literature that has ever been printed, so far as we know.

"Its classification is admirable, and its criticisms are impartial and well considered. It gives a running view of English history, as connected with literature, and is such a thorough survey of the field that the student who has attentively regarded it will know just what portion of it is most profitable for him to cultivate. It has a series of valuable chart-exhibits."—Hartford Courant.

John S. Sewall, Professor of Rhetoric, Oratory, and English Literature in Bowdoin College, says: "For Normal Schools, Academies, High Schools, post-graduate classes at High Schools, and private students, it seems to me a very useful outline course. I like the clearness with which each chapter accomplishes just what it sets out to do, and the neat summary of each period before proceeding to the next. The charts and the bibliography strike me as very valuable features. I shall be glad to see this little book in general use."

II.

A HISTORICAL VIEW OF THE AMERICAN REVOLUTION.

By GEORGE WASHINGTON GREENE.

Author of "The Life of Nathanael Greene, Major-General
in the Army of the Revolution," Non-resident
Professor of American History in
Cornell University.

In one volume crown 8vo, cloth, $1 50.

Professor Greene has given in this volume emphatically the best statement we have in compact form of the causes of the American Revolution, the phases through which it passed, and the ideas which were at work in it. Nowhere else can the young student get so thorough and comprehensive a view of the war which established our nation, and this because the book deals with facts and principles together.

III.

A HANDBOOK OF LEGENDARY AND MYTHOLOGICAL ART.

By CLARA ERSKINE CLEMENT.

Profusely illustrated. In one vol. crown 8vo, cloth, $3 25.
(Fourth Edition.)

This book, though not designed for a text-book, has been found very useful in young ladies' schools, and is already becoming an important auxiliary to refined education. In it Mrs. Clement has gathered and arranged alphabetically those legends of mediæval popularity which form the subjects of the great body of religious art. She has narrated them simply, without comment, and has packed a wonderful amount of curious and most interesting information, which serves to explain at once much that is obscure to the student in literature and art.

IV.

The Great English Classic in a Convenient Form.

PARADISE LOST.

With explanatory notes prepared under the advice and
with the assistance of Professor W. H. Torrey, of
Harvard University. In one vol. 16mo,
cloth, $1 25; full gilt, $1 75.

"In these two most important particulars (a correct text and a judicious punctuation), as well as in the full but brief and very intelligible notes, I find the care and learning of the editor manifest, without ostentation, on almost every page."—James Jennison, Tutor in Elocution at Harvard College.

SCHOOL TEXT-BOOKS.

HAGAR'S ARITHMETICS.

1. Hagar's Primary Lessons in Numbers	$0 30
2. " Elementary Arithmetic	0 50
3. " Common School Arithmetic	1 00

This Series, prepared by Prof. D. B. Hagar, M.A., Principal of the Massachusetts State Normal School, at Salem, contains many new and valuable features. Mental and Written Exercises are combined in each Book; the Lessons are arranged in a natural and logical order; the Problems are numerous and varied; the Methods are such as are used by business men; the Lower Books are profusely Illustrated, and the Mechanical Execution is of the very highest order. No other series is so economical of the time of the student, or so practical and thorough in its teaching.

MONROE'S SERIES OF READERS.

1. Monroe's Fifth Reader. Just Published	$1 50
2. " Sixth Reader. " "	1 75
3. " Complete Series. In Press.	

The publishers have the pleasure of announcing that they will soon issue a Series of Readers, by Prof. Lewis B. Monroe, of Boston. These books will be profusely illustrated by the best artists, and the publishers intend to make them, in mechanical execution, superior to any School Books now published. The advanced Books of the Series are now ready for examination, and the Lower Books are in active preparation.

WARREN'S NEW GEOGRAPHIES.

1. Warren's Primary Geography	$0 75
2. " Common School Geography	1 88
3. " Physical Geography	1 88

This Series has recently been thoroughly and carefully revised, giving population and other statistics, according to Census of 1870. It now presents a complete Geographical Course, adapted to all grades of Schools, and is the most Compact and Economical Series published.

The superiority of these Books is fully demonstrated by the fact that nearly all the more recent Geographies have adopted some of their important features; and also by their long-continued use, and their readoption as fast as revised, in nearly all the larger cities in the country.

GREENE'S IMPROVED GRAMMARS.

1. Greene's Introduction	$0 56
2. " English Grammar	1 05
3. " Analysis	0 80

The author, Prof. S. S. Greene, of Brown University, has recently revised these Books, and has condensed, simplified, and otherwise improved his System, which is now preferred by almost all the leading Teachers of the Country. They form a connected Series; but each Book is complete in itself, and may be used independently of the others. Their best recommendation is the fact that they are in general use as Text-Books throughout the United States.

Descriptive Catalogue sent free. Liberal Terms will be given for First Introduction. Teachers and School Officers are invited to correspond with us in regard to any of our books.

TEXT-BOOK OF ZOÖLOGY.

By HENRY ALLEYNE NICHOLSON.

12mo, pp. 354, with nearly 300 engravings, $1 75.

This work is intended to promote the study of Natural History in Schools, while it is also suitable for the use of Junior Classes in Colleges. Illustrations are introduced where necessary, and an explanation of every unavailable technicality has been given in a copious glossary. The researches of Professors Owen and Huxley have been turned to account, and all important Modern Discoveries are noticed in their proper places.

TEXT-BOOK OF GEOLOGY.

By HENRY ALLEYNE NICHOLSON.

12mo, pp. 266, with 200 illustrations, $1 50.

The object of this work is to present to the learner the leading principles and facts of Geological Science in as brief a compass as is compatible with the utmost clearness and accuracy. Illustrations have been freely introduced in all parts of the work where it has been thought the progress of the learner would be in this way facilitated.

The style is as untechnical as the nature of the subject will permit, and all unavoidable terms are explained in the text. The work is, therefore, thoroughly adapted for the use of beginners, and, at the same time, the subject is treated with such fulness as to render the work suitable for advanced classes.

CORNELL'S PHYSICAL GEOGRAPHY.

Just published. Price $1 60.

Its illustrations are numerous and beautiful. The researches of Humboldt, Dove, and other eminent writers have been turned to the best account. The physical features of our own country receive minute attention.

LOCKYER'S ELEMENTS OF ASTRONOMY.

(American Edition.)

By the greatest of living astronomers. Price $1 75.

YOUMANS'S FIRST BOOK OF BOTANY.

Object lessons made practical. Almost every teacher
knows the merits of this book and the wonderful success attending it during
the past year. Price $1.

Specimen copies of any of the above Books, for examination with a view to introduction, will be mailed, postage prepaid, on receipt of half-price.

A complete Descriptive Catalogue of over 300 Text-Books, embracing all the departments of Science, Literature, and Art, can be had without charge on application. Teachers and professors are cordially invited to call and examine the works. Respectfully,

D. APPLETON & CO.,

549 and 551 Broadway,

NEW YORK.

VALUABLE EDUCATIONAL WORKS.

CUTTER'S PHYSIOLOGIES FOR SCHOOLS.

BY CALVIN CUTTER, A.M., M.D.

During the past ten years more than two hundred thousand (200,000) have been sold for schools. This is the only series of works upon the subject that is graded for all classes of pupils from the primary school to the college; the only one that embraces Anatomy, Physiology, and Hygiene for schools, and the only one arranged so as to be used advantageously with illustrating Anatomical Charts.

NEW SERIES.

NEW ANALYTIC ANATOMY, PHYSIOLOGY, AND HYGIENE, Human and Comparative. Without Questions. 322 pp. With 194 Illustrations. $1 60.

NEW ANALYTIC ANATOMY, PHYSIOLOGY, AND HYGIENE, Human and Comparative. With Questions, Diagrams, and Illustrations for Analytic Study and Synthetic Review. 380 pp. With 230 Illustrations. $1 70.

QUESTIONS, DIAGRAMS, AND ILLUSTRATIONS FOR ANALYTIC Study and Recitation and for Unific and Synthetic Review of Cutter's New Analytic Anatomy, Physiology, and Hygiene. 60 pp. With 35 Illustrations. 15 cents.

SECOND BOOK ON ANALYTIC ANATOMY, PHYSIOLOGY, AND Hygiene, Human and Comparative. With Questions, Diagrams, and Illustrations for Analytic Study and Unific Topical Review. 309 pp. With 186 Illustrations. $1 50.

OLD SERIES.

CUTTER'S ANATOMY, PHYSIOLOGY, AND HYGIENE. $1 70.

CUTTER'S FIRST BOOK ON ANATOMY, PHYSIOLOGY, AND HYgiene. 80 cents.

HUMAN AND COMPARATIVE ANATOMY, PHYSIOLOGY, AND Hygiene. By Mrs. E. P. Cutter. 50 cents.

NEW ARITHMETICS.

SANFORD'S ANALYTICAL SERIES.

COMPRISED IN THREE BOOKS.

The Science of Numbers Reduced to its last Analysis.

Mental and Written Arithmetic successfully combined in each Book of the Series.

BY SHELTON P. SANFORD, A.M.,

Professor of Mathematics in Mercer University, Georgia.

"I think that Sanford's Arithmetics are the best books on the subject ever published. In my judgment, they are the very perfection of school-books on arithmetic."—Professor B. Mallon, Superintendent in the Public Schools of Atlanta.

SANFORD'S FIRST LESSONS IN ANALYTICAL ARITHMETIC, comprising Mental and Written Exercises. 16mo, half-roan, 35 cts.

SANFORD'S INTERMEDIATE ANALYTICAL ARITHMETIC, comprising Mental and Written Exercises. 16mo, 232 pp., 50 cents.

"The work here presented is preliminary to the author's larger 'Analytical Arithmetic,' and is intended to make the pupil, by easy and uniform steps, expert in the use of figures, and at the same time to teach him the *reason* of each operation."—Extract from the Author's Preface.

SANFORD'S HIGHER ANALYTICAL ARITHMETIC; or, The Method of Making Arithmetical Calculations on Principles of Universal Application, without the Aid of Formal Rules. 12mo, 419 pp., half-roan, $1 50.

"For the last thirty years the opinion has been gaining ground that the proper method of teaching Arithmetic is by the *Analytic* System; but no one, so far as the author is aware, has carried out this system completely. The work here presented is an attempt to supply an existing demand, its peculiarity being that it is *Analytical* throughout."—From the Author's Preface.

CHAUVENET'S MATHEMATICAL SERIES.

BY WILLIAM CHAUVENET,

Prof. of Mathematics and Astronomy in Washington Univ., St. Louis.

"This distinguished author has placed the whole science upon a consistent logical foundation, such as it has scarcely known since the time of Euclid."—Prof. Howson, of the English High School, Boston, Mass.

ELEMENTARY GEOMETRY, with Appendices containing Copious Exercises and an Introduction to Modern Geometry. 12mo, extra cloth, $2.

"It is the only geometrical text-book which is based on true principles."—C. Judson, Prof. of Mathematics in Furman Univ., Greeneville, S. C.

SPHERICAL AND PRACTICAL ASTRONOMY. Embracing the general problems of Spherical Astronomy, its special applications to Nautical Astronomy, and the Theory and Use of Fixed and Portable Astronomical Instruments. With an Appendix on the Method of Least Squares. Illustrated with Engravings on Wood and Steel. Subscription Edition. 2 vols. royal 8vo, cloth, $10; half-turkey or half-russia, red edges, $15. University Edition, 2 vols. medium 8vo, cloth, $7.

PLANE AND SPHERICAL TRIGONOMETRY. New and Revised Edition. 8vo, cloth, $1 75.

A TREATISE ON THE METHOD OF LEAST SQUARES; or, The Application of the Theory of Probabilities in the Combination of Observations. 8vo, cloth, $1 75.

LIPPINCOTT'S
PRONOUNCING DICTIONARY
OF
BIOGRAPHY AND MYTHOLOGY;

CONTAINING

Memoirs of the Eminent Persons of all Ages and Countries, and Accounts of the Various Subjects of the Norse, Hindoo, and Classic Mythologies, with the Pronunciation of their Names in the Different Languages in which they occur.

BY J. THOMAS, A.M., M.D.

One Volume Edition, containing all the matter in the *Two Volume* edition. Imperial 8vo, toned paper, sheep, $15; half-turkey, $17; half-calf, $18.

Two Volume Edition, imperial 8vo, toned paper, fine cloth, $11; sheep, $12; half-turkey, $13 50; half-calf, $15.

This invaluable work embraces the following peculiar features in an eminent degree: I. Great Completeness and Conciseness in the Biographical Sketches. II. Succinct but Comprehensive Accounts of all the more interesting Subjects of Mythology. III. A Logical System of Orthography. IV. The Accurate Pronunciation of the Names. V. Full Bibliographical References.

"Lippincott's Biographical Dictionary, according to the unanimous opinion of distinguished scholars, is the best work of the kind ever published."—Philada. Ledger.

LIPPINCOTT'S
PRONOUNCING
GAZETTEER OF THE WORLD,
OR
GEOGRAPHICAL DICTIONARY.

Giving a Description of nearly 100,000 Places, with the Correct Pronunciation of their Names. With an Appendix, containing nearly 10,000 additional Notices.

EDITED BY J. THOMAS, M.D., AND T. BALDWIN.

Imperial 8vo, sheep, $10.

"I consider it a desideratum alike to the scholar and the man of business, as well as a very valuable contribution to our American literature."—From Eliphalet Nott, D.D., LL.D., President of Union College.

☞ For sale by Booksellers generally, or will be sent by mail, postage paid, upon receipt of the price by

The Nation.

NEW YORK, THURSDAY, APRIL 11, 1872.

The Week.

THE latest and most interesting piece of news about the Treaty of Washington comes from the Washington correspondent of the *New York Tribune*, who says, on official authority, that there is no truth in the story that our Government had agreed to exclude from the consideration of the Geneva Conference the claim for indirect damages, provided it were allowed to remain in the "case" as an argument in favor of a large award, if the Commissioners decide to give damages in a gross sum. He says the Cabinet has determined, and adheres to the determination, not to withdraw or modify the "case" in any particular. We have heard from a highly respectable source that a way out of the difficulty will probably be found by our Government's giving Mr. Adams, and the British Government's giving Sir Alexander Cockburn, a hint that we do not look for any award under the fifth item, and that on a private understanding of this kind the Commission will go to work. We confess, however, that we are still unshaken in our belief that neither Government can venture to attempt an escape from its present embarrassment by any sort of dodge or contrivance. In the present or any probable state of public opinion in England, the Ministry dare not go before the Board, on the fifth claim, on any understanding whatever; and public opinion in England on this point is, it is right to say, supported by an overwhelming preponderance of the public opinion of the Continent. There is no Continental jurist or publicist who has spoken on the subject who does not treat this claim as preposterous and even outrageous.

On the other hand, we are equally well persuaded that the present Administration will not venture to modify the "case," or withdraw it, or confess by any sort of evasion that it was badly drawn, with a Presidential election pending. What it will probably do by way of extricating itself from the difficulty it has begun to do already, viz.—(1) to give the British Government to understand that no money is expected under the fifth claim, but that it is desirable to submit it and get the decision of the Board on it, so that it may be settled hereafter as a rule of international law that no neutral is liable for such portion of the cost of a war as may have been incurred after the escape of a cruiser or cruisers from the neutral ports to take service under one of the belligerents—which sounds very much like a man's insisting on getting a solemn decision of the Court of Appeals in order to settle for ever the question whether the owner of an orchard was entitled to cut the hamstrings of any boys he might find robbing it. (2) To shift the responsibility of making the claim on Mr. Sumner as its great inventor, or on Mr. Bancroft Davis, who was charged with the immediate duty of drafting the "case," or on Mr. Seward, who first licked the controversy with Great Britain into shape. On these devices we have only to remark that it will not do to say that the Administration is bound to follow either Mr. Seward's lead or Mr. Sumner's, for if it is bound on one point it is bound on all, and it is known to all men that there was nothing which both these gentlemen urged so vehemently as the liability in damages of Great Britain to the United States for the premature concession of "belligerent rights" to the insurgents. When arbitration was first talked of, Mr. Seward insisted on the submission of this point as essential, and Mr. Sumner treated "belligerent rights" in his speech as the "fons et origo" from which all British responsibility to the United States flowed. Yet this claim the Administration has twice formally waived, the first time in General Grant's first message, the second through the Commissioners who negotiated the Washington Treaty.

Public attention, so far as can be judged from the public prints, is concentrated principally on the two great May and June conventions; but a little of it has been given to the South, where there is soon to be, at New Orleans, a national convention of colored men to look after their rights, and, perhaps, as a principal object, to consider the attitude of Mr. Sumner, which is understood to be a matter of much solicitude to this class of voters. In Texas there is a manifesto, signed by some of the most prominent Republican leaders, in favor of the Cincinnati movement; but, as a prominent Republican leader of Texas is not *ipso facto* a fair specimen of a reformer, it would be easy to attach too much importance to this piece of news; the Republican party of the South has not a history which would make it very welcome in the councils of a reformed party. In South Carolina the Republicans endorse the Administration. In Louisiana, the Warmothites appear to be losing ground, and the Custom-house faction, allied with Lieutenant-Governor Pinchback (colored), have the State pretty much in their own hands, and hold it at this present moment for General Grant. In Alabama, the Administration is said to have "hurt the party" by some of its recent appointments—the Mobile post-office having been taken from a Mr. Bromberg and given to a Northerner, a Mr. Pierce, against whom the business men petitioned on the ground that he had taken liberties with the school fund of the State and did not inspire confidence. So, too, there is a wrangle about the Mobile assessorship of internal revenue. In Georgia, also, the party is badly divided and without hope of carrying the State, and the same is true of North Carolina and Virginia. In Arkansas, there is open war between the Clayton faction and another; but offices and money heal these divisions among brethren in that latitude, and nothing prevents the Administration from having Arkansas if it likes. In Florida, Reed, the Governor, by some hocus-pocus escaped trial before the Senate, and now issues his proclamation, adorned with "the great seal of the State," to the effect that, as the High Court of Impeachment adjourned without finishing him, he is as good as ever, so he assumes the reins once more—and seems likely to keep them.

One or two political signs at the South are good, so far as it is good to see the distinct abandonment of Alexander Stephensism in its extreme form. Mr. John Forsyth's *Register* says that it can support Mr. C. F. Adams for President on the Missouri platform. Mr. Stephens appears to be ready to postpone the formation of a party with his favorite platform of glosses on the Constitution-as-it-was, and there are not many Democratic editors who are nailing the flag to the mast. We up here have something good to be set against all the office-holding corruption and greed which make the South such a spectacle in the eyes of most men who are not extreme partisans; but up here, too, the grounds for discouragement are not small. Our "Reform Legislature" has somehow turned out to be not very different from the Legislatures that the Ring bought and sold. Fenton-Conkling disputes whether a Greeleyite or an anti-Greeleyite should have the speakership; how to keep in Senator Wood, bribed by Tweed and Jay Gould, and liable to expulsion; how to get Mr. Green out of our Comptroller's office, where we were all so glad to put him when the Tweed frauds were first discovered; how to deal with the Seventy's charter so as to have no minority representation and a fairer grab at the offices—these are the principal matters which have occupied the Legislature from which so much was expected, and a new point is given to a question which we asked last summer when the attack on the Ring was begun—"Jimmy" O'Brien in the van—whether, considering all that we should have to reform, we had much in hand with which to effect a reformation. It suggests, also, the question which more and more people are every day asking themselves—which, we hope, will be faithfully pondered by every honest Republican—whether the Republican party, as at present constituted, is a party that can be trusted to do the work which is most necessary. The latest rumor in New York politics is that, by an arrangement with the Administration managers, O'Brien is to have the mayoralty, and his Irish followers are to serve in the Administration ranks next fall.

So far as we have observed the Philadelphia *Press* of late, we should think its editor not altogether sincere in saying in his issue of the 8th: "We anticipate no difficulty in giving our electoral vote to General Grant in November," while we are quite prepared to believe when he adds: "but we do anticipate a sharp and angry struggle in the preceding October election." In fact, politics in Pennsylvania are in a sad state at present, the Legislature that has just adjourned having earned the usual reputation for wisdom and incorruptibility, and done nothing to satisfy the reformers of the Fourth District but to admit Col. McClure to his rightful seat—and that after a bold attempt to overlook his case altogether. None of the measures he proposed got beyond the Senate, while, by an express act, a new judgeship was created for Mr. Briggs, the counsel of his fraudulent rival, Col. Gray, in appointing whom, by the way, Governor Geary is held to have violated the State constitution. The reformers seem to have been still further slighted in the provisions made by the Legislature for a constitutional convention, the bill allowing twenty-eight members at large to be chosen on tickets holding fourteen names, which of course divides the honors between the Republicans as a whole and the Democrats, but takes no account of third parties.

In the midst of the unpleasant feeling occasioned by these circumstances, the Republicans meet to nominate a Governor for the next three years, with a result that will be known to our readers by the time this reaches them. As we write, it looks as if the nomination of Gen. Hartranft, the present Auditor-General, had been determined on by the regular party managers very much in the same way that Grant's nomination has been laid in advance upon the National Philadelphia Convention. The *Press*, which appears to acquiesce in the latter dictation, kicks against the former in the article from which we have quoted, and makes it clear that Gen. Hartranft is not acceptable to the reformers, and that the reformers are worth conciliating. The General is, in short, a henchman of Senator Cameron, and has too much need of the whitewash which the investigating committee in the Evans case gave him to excite enthusiasm amongst the foes of political corruption; and the weight of him is felt to be too great to be borne in the November election.

The great difficulty of the Cincinnati Convention is likely to be the tariff. Mr. Greeley and his friends from the East are anxious to have the tariff left an open question, on which the friends of the new movement shall be at liberty to differ, as the members of the Republican party have been, but we do not see how such an arrangement can be made by any process short of self-stultification. The questions of greatest interest in politics for many years to come will be economical questions; that is, such questions as the nature, amount, and disposition of the taxes, the regulation of the currency and banking, and the proper relation of Government to labor and capital, just as for many years past slavery and the nature of the federal bond have been the main questions in politics. It has been easy enough, heretofore, to leave the tariff an open question; but we might as well talk of leaving civil-service reform an open question hereafter. The new party, therefore, if a new party there is to be, cannot escape the necessity of taking some distinct ground on the subject of currency and taxation. An ambiguous or incomprehensible resolution, such as figures so prominently in most of the current Republican platforms, will not do. It is all very well for the party in power to avoid committing itself on doubtful points, but a party seeking power can play no such tricks.

The editor of the *Sun* recently made divers serious charges against Mr. Robeson, the Secretary of the Navy. He accused him of entering into partnership with a ship-chandler in Philadelphia named Cattell, and through him making purchases of supplies of various kinds for the navy, in which the Government had been swindled of over a million, and Robeson himself rose from poverty into affluence. There were other minor accusations, which there is no use in repeating, as they have not been made good. Mr. Robeson took the very sensible course of asking for a committee of investigation, and before this committee Mr. Dana, the editor in question, was summoned, and asked to furnish his proof. He was obliged to confess that he had no personal knowledge of the truth or falsehood of the charges himself, and could not produce anybody who had. In short, the case broke down totally. Now, we sincerely hope, in the interest of decency and of public morality, that this is the last display of this kind we shall have. The substitution of committees of investigation for libel suits is a serious matter for editors engaged in "exposing" people.

When people hear, as they now hear, that though Mr. Dawes will this week report a new tax-bill from the Committee of Ways and Means containing a careful revision of all existing legislation, there is little or no chance of its passing, because there is little or no chance of the House and Senate agreeing on it, they will wonder what Congress has been holding the present session for. The tariff bill which the House sent up to the Senate some weeks ago was sent back again by the Senate so terribly amended that nothing was left of it except the House number, and the House not unnaturally treated it as to all intents and purposes a new bill, and thereupon refused to act on it, and accused the Senate of violating the Constitution by "originating bills for raising revenue." The Senate is now said to be in such a huff that it will not give due consideration to any other revenue bill that comes up from the House, and thus the session will be closed fruitlessly in a senseless quarrel, or at the last moment some unconsidered farrago will be huddled through. In the meantime, the fate of business men whose affairs are affected by tariff legislation is pitiable enough.

Harper's Weekly holds under advisement quite a list of questions about President Grant, which we put to the conductors of that journal some time ago. We now wish to add two or three more. Is a President sincerely desirous of reforming the civil service who reappoints to such an office as the Comptrollership of the Currency a man whose official conduct is at the time undergoing investigation by a committee of Congress? In case a President has not informed himself of so important and so pertinent a fact as this which we mention, would *Harper's Weekly* say that he is careful and intelligent in the discharge of the duties of his station, or would it say that he is not very intelligent in the discharge of them, and that he would seem to take too little interest in civil business? In case a President did know that the appointee's conduct was under investigation by the Banking Committee of the House of Representatives, and that there was very grave reason to believe the accused official to be guilty of criminal delinquency, what would *Harper's Weekly* say of the President's action in the matter then? We know what we should say under the circumstances if we were supporters of the President's renomination: we should say that we were supporting the renomination of a President who, whatever else he might be, was in no danger of overworking himself in sincerely reforming the civil service.

We shall now ourselves make a contribution to his defence which his supporters have in a most extraordinary manner left unsupplied (although it has, one would think, been within easy reach), by answering the charge made by the Liberal Republican platform, that he had "packed" the Supreme Court for the purposes of the legal-tender decision. The silence of the champions of the Administration on this point has led many people to believe that they thought packing the court a thing to be proud of. We have been assured, within the last week, by Judge Hoar, the late Attorney-General—and he ought to know—that Judges Bradley and Strong were selected, and we believe nominated, several days before the first legal-tender decision was delivered, and before the Government knew what it would be; and that they were selected solely with reference to their standing and character. Judge Strong had rendered a decision in favor of the constitutionality of the act in the State court, it is true, but so had almost all State judges before whom the question had been brought, and Mr. Bradley, though counsel to repudiating corporations, had advised them to pay their interest in coin. We consider this a good and sufficient answer to one of our late questions, though it does not change our opinion on the propriety or expediency of bringing up the legal-tender cases for a fresh decision when it was known that the advent of the new judges would cause the reversal of the first one, and when the majority in Congress had the power to add fresh members to the Court in their discretion. A heavier blow at judicial independence, or one better calculated to shake popular respect for the Supreme Court, could hardly have been struck.

There appears to have been an unexpected transfer of Democratic votes to the Republican side in Connecticut the other day, and unsupported assertions have been made that the transfer was effected in pursuance of directions from ex-Collector Murphy. This is the story: "Votes were openly bought," says the New Haven *Register*, "in the First, Third, and Fourth Wards. In the Third Ward those Democrats who could be bought were paid immediately after their ballots were deposited. In at least one instance where there was doubt, the box-tender gave the voter a slip of paper on which was written, 'This man voted all right.'" In the large cities of Connecticut there are, of course, many ignorant and vicious voters whom Tweed could buy, whom anybody could buy, who are always for sale; and in such places an Administration agent employing Murphy's talent could easily procure an "endorsement of the Administration," or any other Administration, in his favorite way. The very marked falling off in the Democratic vote of New Haven, Hartford, and other cities was in great part because the ex-Collector's talent was there vigorously employed. The returns show no falling off in the rural districts. There were, no doubt, local Democratic differences here and there which caused some of the cross-voting, but the other cause is held to have been the more operative one. It will be curious to watch during the coming struggle and see whether the ex-Collector will put the native managers up to any new thing in guile, fraud, corruption, trickery, mendacity, and general political knavery, or whether, on the other hand, Mr. Barnum's fellow-citizens will be able to teach Thomas himself some new forms of political roguery. They are sharp in Connecticut; and the closeness of their political contests has made even some of the deacons go near to be thought but little better than some of the wicked about election time. Only last year, a sound Democrat of Fairfield County, after having been at great charges in keeping six electors in a state of continued alcoholic narcosis for a week, and up to the very verge of the election, had his whole lot of drunkards stolen out of the shed by a neighbor, a Republican deacon, who at once loaded a wagon with them, and voted them as soon as the polls were open, thus preventing a Democratic gain and uniting morality and cheapness in a way that should be the envy of Tom, both as a Christian and as a collector and disburser.

The letter of our English correspondent gives what we believe to be the rational and fair view of the recent performances of the English Republicans and their opponents in the House of Commons. There is something almost silly in putting in the foreground of an agitation having for its object to induce a great and wealthy people to change the form of the government under which they have lived for six centuries the argument that by so doing they would *probably* save two millions of dollars a year. But there is also something monstrous and absurd in the belief of the Conservatives that the discussion of the form of the government even in our day can be prevented by brute force, or that the fact that a republican is *ex vi termini* disloyal to the Queen is any longer a reason why he ought not to be listened to. But, then, there is one aspect of the case which is probably present to thousands of thoughtful minds in England, and must occur to all thoughtful observers everywhere, though our correspondent does not touch on it, and that is the fact, that a deep and widespread difference of opinion among a people as to what the form of their government ought to be is perhaps the greatest misfortune which can overtake a country. It includes nearly all political evils. It arrests all rational reform; it destroys patriotism; and breeds hates which last centuries, and often makes all return to ways of pleasantness and paths of peace impossible. The United States had a brief taste of it previous to the adoption of the present Constitution; the South has drunk deeply of it; and unhappy France has had the poison of it in her veins for eighty years. If England is now really about to enter on this great contention, as seems not altogether unlikely, it will need more wisdom and discretion than there is any good reason to look for to prevent it playing great and speedy havoc with all her glory and greatness.

The Commercial Treaty between France and England has been formally "denounced"—that is, the required notice has been given by the French Government of its intention to abrogate it at the expiration of a year. The London *Economist* treats the matter somewhat philosophically, and enumerates the changes likely to occur, as, first, a diminution of England's exports to France, which, however, as the exports of 1870 were in round numbers $56,000,000, while the imports (which will not be much, if any, diminished) were $186,000,000, will not be so serious as it seems; secondly, a rise of from 10 to 15 per cent. on duty on woollens; third, a general rise, probably heavy, on "raw materials" and on goods manufactured from them; and, fourthly, heavy differential duties on English shipping. The French papers, which seldom discuss financial or economical questions, generally express the hope that some means of renewing the treaty will be found before the year expires.

Prince Bismarck is still hotly engaged in his new fight with the Ultramontanes over the educational question, and it is safe to predict that, if his health lasts, the Ultramontanes will get the worst of it, as he is bringing into play every weapon within his reach. The Bishop of Ermeland has excommunicated two of his flock for declaring against the dogma of infallibility. This is illegal without the consent of the Government, so the Bishop has been called on to explain his violation of the law; and one of the excommunicated, a schoolmaster, is retained in his position, while the other, a canon, is still paid his salary; and it is announced that unless the Bishop retracts, his own salary will be withdrawn. At Cologne, another bishop has forbidden the performance of mass in the garrison church, because the Government lent the building to the Old Catholics. But the general in command ordered the military chaplains to disregard the prohibition, and while one of them sides with the bishop, the other reads mass as usual. Saxony and Baden have followed the lead of Prussia on the educational question. Baden has even forbidden monks to teach, and is leaving the Old Catholic priests in the enjoyment of their salaries and the possession of their churches; and, to crown all, Dr. Döllinger has been eulogizing Luther in his lectures at the Munich University as an intellectual Titan and the greatest genius Germany ever produced, and as blameworthy only in abrogating the episcopal office.

MAY DEMOCRATS BE REFORMERS?

We all agree that the Democratic party has no high aims, no patriotic intentions; its purpose seems to be simply to get back into power; and the only plea which can make its existence excusable is that there is so much looseness, vulgarity, and selfishness among the managers of the party which rules the country, that it may pay to keep up a political organization for the sole office of chronic and interminable opposition. This is the national impression about the Democratic party, and it is the truth. But our impressions about the composition of the party need, we think, some examination and revision. The common view is that it is composed of selfish demagogues, disagreeable village malcontents, and "the Irish vote." Where we do not think of individual Democrats, and just summon before our minds a Democrat—the typical Democrat—half a glance suffices to satisfy us that there is something bad about the whole stamp of him, something in his style of thought and speech essentially mean. But let us not be content with this impression. It must be remembered that the aggregate Republican majority in the United States is but 40,000 out of 5,000,000. Taking the Irish vote at the largest possible reckoning, there should remain an immense number of the native voters of the Democratic ticket who, it is to be hoped, are better than the typical Democrat. A State standing so high as Connecticut for wealth and intelligence has the two parties almost evenly balanced. We wish now to ask who are Democrats; to examine the composition of the party; and to see if there be any among them who may make material for supporters of reform. Can they be of any service against Tweed and Murphy, the Tammany frauds, the civil-service vulgarities and abominations? or must they remain to the end of the chapter in American politics the sons of Belial and the children of darkness? For some of them we think there is hope. The managers of the Republican party organization do not believe it, or at least do not desire to believe it. They are like the old lady who said, "The Universalists expect that all will be saved, but we look for better things."

The Irish are the most conspicuous, fundamental, and inevitable members of the party. The first Irish immigrants were, no doubt, attracted by the name, and they found it what its name indicated, the real Democratic party of the country. Each successive generation of immigrants went where their fathers had gone before them. They could not be said to have belonged to the party, for, of course, they had no opinions; they huddled together in it by the common gregarious instinct. The fact that the Republican party seemed to be the Know-Nothing party reinspired with a new idea, helped to perpetuate their opposition. Antagonism to their rivals in the field of labor, the negroes, finished whatever remained to be done. It is certain that the Irish immigrants will continue to be Democrats during the lifetime of the Democratic party—perhaps during the lifetime of any party called by that name. The native Americans who composed the party before the war were acted upon by two classes of influences. Upon many the older and purer enthusiasm of the party still exercised its spell. People who only know the name of Democrat from its recent associations, cannot conceive what that name meant to men who were boys when Andrew Jackson was President. To us, as we see it on the printed page, the word has an expression sinister and forbidding. To them its syllables represented liberty, simplicity, purity, hope for mankind, and the belief in the devotion and competency of the people. What America was to the world, the Democratic party was to America. Some one told General Jackson that a distinguished German travelling here had remarked to him that all the intellect and culture of the country seemed to be on the side of the Whigs. "You should have told him," exclaimed Jackson with ire, "that all the virtue and integrity of the country was upon ours." Democrats nowadays do not take quite so high a tone. Were Pendleton or Fernando Wood to make such a speech, each would laugh at the other.

There are at the North a great many people who relied upon the South for trade and employment. Our merchants had their purchasers all over that country. They and the manufacturers reaped great profits from the want of ready money at the South, and the large prices the planters were willing to pay for credit. They knew their Southern customers and liked them. From childhood habit had used them to the idea that over a large part of the Union men were bought and sold. The Constitution was said to acknowledge the existence of slavery, and they revered the Constitution. They revered the Union, and the Abolitionists they regarded as the enemies both of the Union and the Constitution. There were two passions which patriots felt in that time—the old passion for the Union, and the new passion to purge the country of the imperfection of slavery. Men were Democrats or Republicans as one or the other of these sentiments predominated in them. Both sentiments were noble. The man who loved the Union so entirely that he dreaded the agitation of any question that might in the slightest degree endanger it, did not seem to himself or to his family a very terrible person. If he had personal or commercial relations with the South, or if he were a Democrat by education and association, these things made it all the easier for him to believe himself the only pure politician in America.

Secession came, and the winter of 1860 and 1861 found us pretty much all Democrats. Some of the States modified their fugitive slave laws; the position of the country seemed to be that everything must be sacrificed to the Union—which was just the position of the Democrats before the war. Very few people yet contemplated the possibility of war, or believed that we would or could invade the Southern States and compel them back into the Union. And had we kept on feeling in that way, we could not have done it. But suddenly out of the clouds there fell upon the hearts of men a joyous enthusiasm, an impulse to defend the Union to the last, and the belief that we could do it successfully by force of arms. This sentiment was a surprise to the very men it aroused. But it took all hearts by storm; the sweep of the impulse was irresistible; none, not even the Democrats, could withstand it. They either said nothing or they fancied that at the end of a ninety days' skirmish the South would return, that we should shake hands, and should love each other better than ever. The most patriotic and, we suppose, the worthiest of the Democrats made up their minds that the duty of the hour, or the year, or the decade, was to crush the rebellion, and such substantially came over to the Republicans. But as the combat deepened, and successive Bull Runs taught us their bitter lessons, a large portion of the old Democrats began to draw themselves apart. They believed we should never beat the rebels, and, with inconceivable folly, they imagined the possibility of a peaceable settlement of our differences. So soon as the wedge was entered, the old habits of thought and the old associations were too strong for the fresh ideas of the war. As the South was again and again successful, the cause of the North became more and more identified with that of abolition. Necessary violations of law furnished the Democrats with grievances. The public lost patience, and began to call them bad names. This, of course, has intensified and embittered their hostility. The vitality the party has exhibited since is not at all difficult to explain. Of late, many things have come to pass to make it easy to see how any man who was a Democrat during the war should have been an intenser Democrat after the war. There has been something in the general intent of the controlling power of the country to fill any conservative with disgust, and to root in him a heartier satisfaction with himself and a profounder contempt for his rulers. One recent principle of the Republican party may be fairly formulated as follows: to break the law is a commendable thing if you have a good reason, an excusable thing if you have a good pretext. We passed the Fifteenth Amendment by readmitting into the Union a few rebel States on condition that they should accept it. The incidents of Andrew Johnson's impeachment—the construction of the oath to vote according to the "law and the testimony," as permitting senators to vote as they thought best for the interests of the country; the visiting committees who came to expostulate with senators sworn to vote according to the "law and the testimony"; the clergy who came to pray with them; the avowed intention of the Republicans to put out Johnson in order to make way for Wade, who was to use the civil-service to elect the next President, and so "save the country" for the twentieth time—all these proceedings are so outrageous that they now read more like farce or burlesque than history. If we did not know what great things the Republican party has done, we should wonder how it survived such a record.

Such was the Democratic party of the North during and since the war. If we remember with any gratitude the 500,000 soldiers who perished in the struggle, we can never consent that the party which was sneering, dabbling, and hindering while they were fighting shall in its old form and character again come to the front. But in case the field of politics breaks up and readjusts itself, is there any portion of the Democratic party which we can turn to good account in the formation of a national party of reform? We all of us know individual Democrats who are very nice people. They are some of them good husbands and good fathers; they pay their debts, are often religious, etc. Yet taken together they go to make up this dreadful Democratic party. Eliminate from a respectable Democrat his democracy, separate him from his evil associations, and we believe you can make of him a useful citizen in the new era of our politics. *Cæteris paribus*, an old Republican will be a better reformer than an old Democrat. In constituting the new reform party, we must rely mainly upon what has been the great, enduring, patriotic, heroic, national party of the country. Hatred of slavery and hatred of robbery may be the qualities of men slightly differing in their mental constitutions, but they both have at the root the love of justice and of public purity. The fact that a man did not rightly discern the duty of the hour in 1864 is *prima facie* evidence that he will not discern it correctly in 1872. Yet the qualities which fit men to act intelligently in the two periods are not identical. Sympathy, indignation, love of perfection, made men Republicans in 1856. The mass of that great reform party which is hereafter to rule this country, or at least to endeavor to purify it, will be composed of men who unite these qualities to others not necessary to the patriot of 1856—a clearer discernment and firmer texture of mind, the knowledge of a rogue or demagogue at sight, and the hearty detestation of him and his kind. It will happen, however—it has happened—that men who had heart enough to set their faces against slavery, have been so demoralized by *laissez-faire* and loose impressions that they may not see that civil-service reform is imperative, or that it is any wrong for a cabinet minister to break the law a little. We can easily conceive of a man whose instincts led him aright on the negro question saying upon the doctrine of rotation in office that every dog should have his day; we can conceive of him endorsing as most original and statesmanlike the remark of Mr. Morton that "we have upon the whole the best civil service in the world." Down in his heart such a person believes Tweed not a bad sort of fellow. He thinks that it is very well for Mr. Tom Murphy to get his $50,000 a year (he would take it, he knows, if he could get it) while Mr. Clinch does the work and is content with a twelfth of the pay. He believes a good politician to be one who "sticks to his friends," and he thinks these new-fangled people are making an unnecessary fuss about things with which he has been long familiar, and which nobody ever before thought of finding fault with. On the other hand, a man whose instincts, interests, and prejudices did not incline him to espouse the cause of the slave, might have a respect for technicalities and restrictions, a love of order, and a wholesome detestation of public thieves which would make him excellent material in the work of reform.

THE PROPER AND IMPROPER USE OF JUDGES.

We publish in another column a letter which illustrates in a striking way the danger of mixing up legislative and judicial or legislative and administrative functions, and which illustrates, too, the widespread tendency of the day to forget that there is such a danger. In Missouri, people have been seized by the prevailing mania for issuing bonds in aid of railroads, and they saddled the judges with the duty of seeing that the bonds were properly issued. The result has been what might have been expected. The speculators are going to work to get judges elected for the express purpose of getting bonds "approved," and judges already on the bench have joined the rings, and have "approved" bonds fraudulently, as in the Cass County scandal, for a share of the plunder. Our correspondent says the people in Missouri are becoming roused, and will put a stop to these performances. We hope he is right; indeed, we must believe he is right, because if such things did not rouse people, and were not stopped, society would go to pieces. But we may be permitted, in the light of our own experience in this State, to doubt whether they will go to work in the right way, and take such measures as will not only put an end to existing abuses, but will prevent their recurrence. If there be any State which has been scourged and tormented by a corrupt judiciary, it is this. Indeed, we believe no community of ancient or modern times has ever produced such a pair of judges as we are at this moment trying to bring to justice. There have been judges as corrupt, perhaps, as either Barnard or Cardozo, but there never have been judges as shameless in their corruption and as open in their defiance of public opinion; and the appearance of the "rowdy" on the bench in the person of Barnard is something absolutely novel, not in degree only but in kind. Moreover, the question of the purification of the judiciary has been all but universally admitted to be the main question of the present reform movement. All are agreed that no legislation will mend our case as long as the criminals have confederates on the bench. We think we may also assert confidently that it is very generally admitted that these infamous judges are the natural and legitimate products of the system under which they are selected—that is, that Barnard and Cardozo are not accidents, but the result of the working of a law which produces bad judges as surely as dirt produces vermin. Bad men will occasionally make their appearance in the judicial office under all systems, but the peculiar kind of badness displayed by Barnard and Cardozo is the special product of our system.

Now, the most prominent feature of our system is that it makes a seat on the bench the reward of adhesion to a political party, and makes the retention of it dependent on subservience to the party. In other words, the judge is expected to use his office administratively for the benefit of the party in all cases in which the party is interested; and he is expected to maintain an active or, at all events, open connection with it while off duty. The appearance of New York judges as members of party committees, and in party caucuses, and as speakers at political meetings, long ago ceased to be a scandal, and became in this city almost a necessity of their position. Barnard and Cardozo differed from many others of their colleagues in this matter only in carrying out the new theory of their position to its extreme limits in practice. Our experience of the results of this state of things would, one would think, have inspired reformers at least with a salutary dread of everything tending even remotely to draw judges into the political arena; but if we are to judge by what has happened at Albany, it has done nothing of the kind, for the Senate has actually proposed under the new charter to give the appointment of the members of the Police Board to Judges Curtis and Sedgwick—that is, to impose on them, over and above their judicial functions, other functions which are purely administrative, and which no man can discharge in this city without either lending himself to party manœuvres or being suspected of doing so. These two gentlemen were elected to the bench under the influence of the reform movement last fall. They are men of the highest standing and character, and are absolutely incapable of abusing any powers with which they may be armed; but even if they had the time and kind of knowledge necessary for the proper selection of Police Commissioners, they could not, in the present condition of our politics, choose them without exposing themselves to the imputation of jobbery from some quarter or other, and an imputation of this kind, from whatever quarter, is certain to injure a judge, for it is not only necessary to the proper administration of justice that a judge should be pure, but that everybody should believe him to be pure, and should have no show of reason for thinking him otherwise. In other words, you cannot set a judge to doing any work but judging without seriously diminishing his usefulness, no matter how upright he may be, and there is no place in the Union in which this multiplication of duties is attended with greater danger than in this city.

The failure of the charter may perhaps prevent this scheme from being carried out; but the fact that it has been seriously contemplated in a reform legislature shows how far we are still from having reached a solid foundation for our attempts at reconstruction; and this may be said of reformers in other places than in New York. A kind of latent Cæsarism is constantly showing itself in these attempts, by which we mean a disposition to rely on the greatness or goodness of some individual to help us out of our sloughs. We all remember that most ludicrous incident of the reform movement—the recognition of Barnard by a portion of the reform press as an upright magistrate and patriotic citizen, when he first granted the Foley injunction. Since then there has been always somebody in particular whose removal or absence would ruin us. There is always somebody whose heroic virtue is standing between us and perdition, and whom we are expected to trust to or "stand by," if we ever expect to work our way out to firm ground. But if there be any way well settled by innumerable examples and warnings, it is that a community like ours, or indeed any community, cannot be saved either by individual virtue or courage. The supply of saviours of society is limited, and must always be limited. We have, and shall always have hereafter, to trust the conduct of our affairs to the average man, and we can only improve the mind and morals of the average man by improving the mind and morals of the community, and should never count on his proving a hero every day. The lamentations one constantly hears over his incapacity and dishonesty in office are really, considering the temptations to which we expose him and the sacrifices we expect of him, simply lamentations that he is any lower than the angels. We put him in office on low pay for short terms, and then wail and gnash our teeth and despair of society when we find he has been cheating and neglecting his business to attend caucuses. We put him on the bench and surround him with all sorts of inducements to sell or deny or delay justice, and then, when we discover that he has fallen, can think of no better remedy than putting another man of the same kind in his place under precisely the same conditions.

The first and great condition of all administrative and judicial reform is to take it for granted that there is a great deal of human nature in man, even in the best man, and that every man loves the good things of this life—viz., money, social consideration, freedom from the paltrier cares, and security for his old age. These are what everybody is striving for, and we cannot get people to stop striving for them by giving them judgeships or places in the custom-house. What we have to do is to turn their eagerness for them to account, and make them enure to the public advantage instead of to the public injury The second is the substitution of real for sham responsibility; that is, we must make all officers accountable for their manner of performing their duties, not to the universe, or posterity, or "their own conscience," or "the people," or "the great party," and at some future and undefined period, but to John Brown or James Smith on the first day of the quarter. Moreover, we must remember that human nature, even at its best, is weak, and that one of the most efficacious ways of keeping man good is to remove as far as possible from his path all temptations to be bad.

PELLEGRINI'S CARICATURES.

We wish some such service could be rendered American politics as Mr. Pellegrini has rendered English politics in his *Vanity Fair* caricatures. We think, for example, that if the American voter could take a good look at a portrait of Mr. Leet as Mr. Pellegrini would draw it, a portrait giving with a slight, emphasizing exaggeration the essential character of the man, and his personal appearance as visible in the vestibules of our hotels, there would not long be danger that a young gentleman of Mr. Leet's apparent value would continue to figure as the incubus of the port of New York. One can easily fancy what would be the result if, instead of taking our notions of general-order men and great statesmen from Senator Howe's Report and the *Congressional Globe* (revised), or from the great statesman's "home organ," we could have an opportunity to study "the attitude, the gesture, the expression of face which often so cruelly epitomize the man" who passes before the eye of Mr. Pellegrini. Its retina may be said to reflect with absolute faithfulness a sort of selection from the traits which are truly characteristic, and which give one not the whole man as the man would like to be seen and as his friends may see him, but which give the main drift of his nature—the man as the world would know him if the world could get at him and see him closely. This is, we think, to be said of the best of these pictures. Of course, it happens that in turning over the leaves of this third volume of the "Vanity Fair Album" we come upon pictures which give no clear indication of character; and that we find some of them to be caricatures of oddities of feature and dress rather than revelations of character. But usually in such cases we find, too, that photographs of the originals would hardly be other than this; to "draw three souls out of one weaver" is what the utmost skill of the caricaturist will not do unless the three souls are there to be drawn. But it is impossible to believe that Lord Ebury, for instance, "A Common Prayer Reformer," who "believes in the value of good intentions of a mild nature," is not truly depicted in the so-called caricature. Dress, pose, expression—everything shows us the well-meaning gentleman, not in robust health, with excellent intentions, who goes sniffing up to great reforms, timidly fussing about the surface of them, deprecating attention to the real core of them, anxious to make a superficial cover for them, frightened at the thought of joining battle on the main issue, and seriously believing that, if only certain changes were made in the Prayer-Book, nobody would any longer be discontented with existing religious systems. What would not become of numbers of our political reputations were their owners exposed to the searching eye and the skilful hand of such an observer as takes Lord Ebury's likeness? We see that in the latter half of the "Album" the pictures by Mr. Pellegrini are few, and that his place is occupied, though it is not filled, by another artist. Would it be possible, we wonder, for some one of our illustrated journals to secure him for a while? He would be invaluable in a country where popular knowledge of the measures and policy of public men is necessarily slight, and in which the popular instinct for character might count for so much in shaping public opinion. For example, the best statistician in the world, and the wisest political economist opposing a showy financial policy, full of brag, and which he might believe to be the most ignorant trifling with national interests, would talk many months before he could produce the impression which a pictorial analyst of character would in a moment produce by a well-accented portrait of a finance minister with the look and air, say, of a hardware dealer, who might expect to be made, in due course, Selectman and Town Treasurer. Or the malicious enemies of a senator accused of much thievery might quadruple their chances of unseating him if they could secure from Mr. Pellegrini a good portrait of him in the act of "hurling back" the charges upon which they hoped to get him out of the Senate, and, if justice should be done, into jail. The eye that saw and the hand that drew one of these English personages now before us—the gentleman with Pecksniffian unctuousness of face and ill-distributed obesity of figure; with the sly, watchful, sidelong glance; the meek, pietistic expression, so marked in many faces which are so extremely pious that it is not as being good that one speaks of them; with the peculiar air which is worn by men of a certain degree of sincerity when they become converts to a creed at the moment popular—the eye which saw these traits, and the hand which could so well portray them all, would be better than much foolscap covered with charges and specifications in letting us all know the real character of the senator, always sound on the popular main question, always for all subsidies, and whose whole political life reeks with jobbery. The affected heartiness, the sleepless and vigilant selfishness which it covers, the cunning which schemes unrestingly for plunder, and, though incapable of real political thought and indifferent to progress, deludes simple people by zealous ardor for any project of "advanced thought"—these traits Mr. Pellegrini would find as fully embodied in some of our Indian Ring senators and Railroad Ring senators as ever he found narrow ecclesiasticism and inability to reason embodied in Archbishop Manning, or the honest arrogance, intolerance, and hardness of the illiberal education in Professor Huxley.

We already have in this country an English artist who has made a reputation for himself by his work for the periodical press in England, and who is now doing good work for *Frank Leslie's Illustrated Paper*. But Mr. Matthew Morgan's best cartoons, done for the *Tomahawk*, had for their distinctive merit not divination of character, but an effective and imaginative handling of some situation setting forth sternly and even grimly, rather than humorously, some moral lesson. Such was the cartoon containing the Prince of Wales and George the Fourth, made at a time when the Prince's conduct was most severely and openly reprehended, in which he appears as *Hamlet*, rushing forward after *The Ghost*, and, as he advances, addressing his profligate relative with the words, "Go on! I'll follow *thee*." Such, too, was the cartoon in which the Press is represented as the Man with the Muck-Rake described by Bunyan. In the only one yet published of Mr. Morgan's attempts to practise in Mr. Pellegrini's field, we do not see much promise that he is to give us the true character-caricature portraits of American public men. The picture of Mr. Sumner, the first of the series, is fairly good as a likeness; but the accentuation which would bring out the leading traits of his well-marked and uncomplex nature is not successful—if, indeed, it was at all endeavored. No doubt much that is good, but, no doubt, too, nothing that is of the best will be done by forsaking Mr. Pellegrini's plan of making fidelity of inner portraiture the principal object, and keeping partisan considerations altogether out of sight. In his very best productions, everything, let alone partisan considerations, is subordinated to the divining power; in others of his pictures there is more or less insistence on secondary matters, but a partisan he has never been charged with being. We have even fancied that we could detect a detachment, we cannot say contemptuous—rather a good-natured, tolerating detachment, not only from English parties, but from the people itself—as if the foreigner were always saying to himself "These English" as he gently satirized them. Still, personal portraiture is never sacrificed. But the Mr. Sumner of Mr. Morgan's picture is not Mr. Sumner; it is the great and good and mild Republican statesman of the present week, who is in favor of General Amnesty and Civil-Service Reform, and, if opposed to the renomination of General Grant, opposed to it on grounds of high polity. And the picture has this other fault, springing perhaps from the same source, that it tends towards the lowest level of Mr. Nast, who is an effective caricaturist and pictorial satirist when he has coarse subjects to deal with, as Tweed's fatness and the prognathous face of a Sixth Ward rioter, but whose highest level is not that of Mr. Morgan's model, nor that of Mr. Morgan himself, and whose lowest is suited to the sense and taste of ingenuous youths employed in stables and behind bars. Because Mr. Nast draws Mr. Schurz as a person with extravagantly long legs, and then writes underneath, "A tower of strength," Mr. Morgan, an artist of imaginative power, with a sense of humor, and no capacity for buffoonery, need hardly diminish Mr. Sumner's longitudinal extension and give his frame greater compactness. It may, however, well be doubted if Mr. Morgan's talents will enable him really to emulate Mr. Nast; and, as we have said, we doubt if he does well to emulate Mr. Pellegrini in the particular field in which the latter has attained a skill which, so far as we know, is certainly pre-eminent, if indeed it is not unique. Mr. Morgan is too good in his own field to make it probable that he is to be eminent in Mr. Pellegrini's also, and we shall still wish for Leets, and Brownlows, and O'Briens, and Alvords, and Wades, and Murphys, and Logans, and Ingallses, and Bankses, and Fentons, from the hand of the magician himself.

All of our readers who have it for one of their amusements to study the physiognomies of celebrated people we strongly advise to procure these *Vanity Fair* albums. This latest of them contains the portraits of fifty-two persons, mostly English, of whom one is constantly hearing and whose faces one would be glad to examine. As is said in the preface to the "Album," which speaks of the necessity for such pictures as these, we are apt, unless we are very careful, to substitute for the real men whose books we read, whose speeches we hear, whom we make our leaders, the strangest monsters—distorted creatures, whose component parts have relations very different from those which are borne to each other by the component parts of the actual being. Thus we deceive ourselves, and prepare ourselves to be deceived by others, and often to be wofully undeceived. Think, for example, how we all said to ourselves that Mr. Butler was a good enough man who certainly had energy and resources, and how we then went on to believe all that Mr. Parton said when he told us that Mr. Butler was the best of men, and a man of extraordinary energy and boundless resources, and how we have since, by sad experience of Mr. Butler's energy and resources, been obliged to learn that the tale is not all told about him when his energy and resources have been dilated upon, and that something still remains to be said about the effrontery of him, the dishonesty, the ignobleness, the cunning, the treachery, and the other qualities which make him so valuable a friend to his country, and which his honest countenance so plainly reveals. It is significant, by the bye, that in his life of our favorite general, Mr. Parton put for a portrait of the hero an engraving of the profile outlines of a portrait bust of Butler, the sculptor of which was one of that breed of artists who "idealize" portraits by leaving out the likeness. Mr. Pellegrini, giving us the testimony of the gentleman's own face, would probably have saved us the incident of the barrel of telegrams and some millions of the money which we paid for repudiation speeches by Mr. Butler and others. In the case of scores of English public men, the English public will have little excuse if it makes any such egregious blunder as we made in Mr. Butler's case. Some of the pictures seem to us mistakes—as, for instance, that of the Emperor of Germany, drawn by Mr. Pellegrini's associate, which we take to be, on the whole, the worst in the book, and to be appropriately accompanied by the accompanying letterpress. We are not really competent to speak of the drawing, coloring, and the other technical matters; but we may say, under correction, that in these respects, as well as the others to us more important, the picture shows the sort of ignorance and bad taste which the letterpress constantly shows when it attempts to speak of persons and events outside of a certain semi-social, semi-journalistic circle of London "society." This is not saying that the letterpress is not often clever; it is sufficiently smart, and the writer of it has not yet attained omniscience; but it will be pronounced good when one thinks of the very wide range of topics with which "Jehu Junior" had to make himself familiar, or at least take a look at. It was matter of course that he should be inferior to his associate; one does not learn all about the inside of Mr. Tennyson's head, Mr. Darwin's, Archbishop Manning's, Millais's, and Bismarck's so easily and quickly as a gifted person, with a sympathetic imagination, draws the outside appearances of these gentlemen. It would be curious, by the way, to enquire what Mr. Pellegrini thinks of the letterpress which accompanies his portrait of Mr. Millais at the easel and in front of the figure of a woman which he is painting.

But if "Jehu Junior" is not a prodigy, and if some of the pictures are not of much consequence, most of them will, we think, be found instructive and very entertaining. So far as we know Professor Huxley, for example, we should say that this picture of him is perfection. It makes him, we suppose, a little harder-featured than a photograph would, but no photograph could so well depict him—his pugnacity, his strong sense, his frankness, his want of ideality, his martinet trimness, his alertness of intellect, and readiness to give and take. So, too, of the portrait of Manning; all of him is to be seen in it—the man who can reason subtly if one will only give him his premises, accept his dreams as data, and call wire-drawing argumentation; the eager ascetic, in whose hands the priestly office is in no danger of not being magnified; the mediæval monk, superimposed upon the well-bred Englishman of "elegant scholarship," whose intellect neither nature nor education ever fitted to take hold upon the realities of life. Lord Ebury's portrait we have spoken of. Among others that are good we should name Mr. Miall's, Captain Eyre Shaw's, Mr. Monsell's, Mr. Borthwick's, Count Cadorna's—a really excellent picture of an excellent face, full of intelligence and breeding—Lord Laurence's, Mr. Tennyson's, Sir Francis Grant's, and that of "the Tichborne claimant," whom Mr. Pellegrini evidently did not conceive to be the genuine Sir Roger. Good, too, though not by Mr. Pellegrini, are the pictures of Mr. Matthew Arnold—though his self-consciousness and grimace are made too prominent—Mr. Dawson-Damer, Mr. Whyte-Melville, Sir Charles Dilke, and Mr. Voysey. To Mr. Darwin, the artist—Mr. Pellegrini's associate—has done injustice; but he has made an entertaining caricature which answers his intention of extorting a momentary laugh by making Darwin's figure suggest the ancestral monkey, while the savant's face, fully human, wears a leering grin of enjoyment at the perplexity into which he has thrown all his fellow-descendants from Adam. Parson Knak, of Berlin, who knows that the earth is flat and that it does not go round the sun, and who is "as happy as a child," let the men of science say what they like, would be very much pleased with this picture.

ENGLAND.

LONDON, March 22, 1872.

WE have seen the end—at least for the present—of the great Dilke agitation. On Tuesday last, one of those scenes took place in the House of Commons which we have lately been accustomed to regard as characteristic of the ill-regulated minds of French Republicans. The House resolved itself, for more than an hour, into a howling and disorderly mob. When strangers were readmitted—for some member, jealous of the honor of a great legislative assembly, had insisted upon their withdrawal at an early period of the disturbances—the opinion of the speaker was being invoked upon a very singular point. He was asked, that is, whether it is parliamentary for a gentleman to crow like a cock. Mr. Brand had no difficulty in declaring that crowing was distinctly out of order, and he added that he had never witnessed a scene in the House which gave him so much pain. The history of this animated expression of political sentiment deserves a few words of explanation.

Sir C. Dilke had brought forward a motion for certain papers, with a view to enabling the House to enquire into the civil list. His object was, of course, to have an opportunity of justifying himself for the now celebrated Newcastle speech. It was generally felt, even by Conservatives, that after the bitter attacks which had been made upon him he had a right to a patient hearing, and accordingly the House listened to a long and, it must be admitted, dull declamation setting forth the right of the House to enquire into the employment of the Civil List funds, and giving reasons for presuming the existence of a certain number of abuses. The matter has been discussed too fully to be worth further examination. Sir Charles has abandoned the really serious charge that the Queen had not paid her income tax according to promise, and the grievances which he alleged to exist were not of themselves of any serious moment. If Mr. Gladstone had consented to give some of the papers requested, or if he had confined himself to a brief refusal, on the ground of the republican animus displayed by Sir Charles, there would probably have been an end of the matter. He chose, instead of this, to deliver himself of a very vigorous and eloquent assault upon Sir Charles for his various inaccuracies and delinquencies, and sat down after raising the House to a pitch of enthusiasm. It was just dinner-time, and the members naturally desired to go to their local comforts with the pleasant consciousness of having put down an impertinent demagogue. But it was not so to be. Mr. Auberon Herbert, one of our most well-meaning and enthusiastic young Radicals, persisted in coming to the aid of his friend. It was nothing to him that the House was at once hungry and loyal. Three hundred throats strained themselves in vain to roar him down. At each lull in the tempest he injected a word or two, and slowly pieced out his sentences in the intervals of the gusts. At one moment despair prompted the members subject to this infliction to rise in a body and retire from the House; but as this manœuvre failed to lower the members sufficiently for a count out, they straggled back, and the storm recommenced. For an hour together they cried out vehemently, with one accord, Great is the British Constitution! and, as I have told you, Alexander the coppersmith, or one of his friends, was at last forced to relieve his feelings by unparliamentary crowing. When at length order was resumed, the division showed that Sir C. Dilke and Mr. Herbert were alone against the rest of the House. Mr. Peter Taylor was absent by force of circumstances, or the minority would again have reached that sacred number of three which was opposed to the Princess's dowry. Mr. Fawcett, the shrewdest member of the extreme party, explained very sensibly why he abstained from backing his friend on this occasion. He stated substantially that he would not allow himself to be dragged into a republican agitation based on the propriety of paring down the Royal salary. He declared himself to be an intimate friend of Sir C. Dilke, but made it known pretty distinctly that, in his opinion, his intimate friend had done the most that could be done to cover the Radical party with ridicule, and to place their opinions in the most unfavorable light.

The whole affair, in truth, is anything but creditable. Whether monarchy is good or bad, it is absurd to attack it on a question of infinitesimal economical considerations, and Sir Charles Dilke's agitation, in spite of his attempted disavowals, was naturally regarded in that light. The proceeding does not speak well for the judgment of our Radicals, though, on the other hand, the Conservatives have met it in the worst way possible. Inarticulate howls and cock-crowing are arguments which recoil, properly enough, upon those who employ them.

Mr. Goldwin Smith, in a very able article contributed to the last number of the *Fortnightly Review*, has told us what should, in his opinion, be the line of policy for English reformers. He remarks apologetically that it is not easy to follow the course of our politics from the other side of the Atlantic. He thinks, however, that our popular party is in danger of losing its steadiness of action and swerving from its original aim; and he expects them, if I understand him rightly, to make the House of Lords their next object of attack, as being, in his eyes, the great obstacle in the way of obtaining a truly national Government in place of a class government. Everything that Mr. Goldwin Smith says from either side of the Atlantic will be read by a large class of reformers with respect and interest; and the article of which I speak shows no loss of his admirable vigor of style. Yet I cannot think that the suggestion which he makes will be in fact accepted. The popular party are, indeed, going through a period of depression and distraction; and I should be at least as sorry as Mr. Goldwin Smith to see them attempt to find a way out of their difficulties by following the direction indicated in Sir C. Dilke's speeches. For various reasons, some of which Mr. G. Smith very faintly expresses, an attack upon the monarchy, to say nothing of an attack of the particular character I have described, would be obviously injudicious at the present moment. I venture to doubt whether an attack upon hereditary legislation, strongly as Mr. Smith puts the indictment against our present system, would be much more to the purpose. But I am still more strongly convinced that, whatever may be the wish of judicious liberals, the next movement towards reform or revolution will take a different direction.

A very significant debate took place on Wednesday night, to which I call your attention in this connection. Mr. Fawcett brought in his bill for the reform of Dublin University. The policy which he is to advocate is to throw open Trinity College with all its rich endowments to all creeds equally; and, in fact, to make it the centre of the highest educational system in Ireland. It is, of course, plain that, after the overthrow of the Irish establishment, Trinity College cannot remain as it formerly was, and as it still is to a great extent, in the hands of the dominant creed. But a change may be made, either by making it a united university, where a system of mixed education may be carried out, or to distribute its endowments equally among the various denominations, and to have two or three universities side by side, devoted respectively to Anglicanism, Romanism, and Presbyterianism. The former is the policy of Liberals and of the great bulk of the Conservative party which dreads Popery more than it dislikes Liberalism. There has, however, long been an uncomfortable suspicion that Government had more or less pledged itself to carry out the views of the Roman Catholic hierarchy in Ireland; and the priests have been trying their hardest to force Mr. Gladstone to become their ally. Accordingly, great interest was felt in the mode in which Mr. Fawcett's motion would be met; and I may say that the result has been eminently unsatisfactory. In the first place, Mr. Gladstone's speech was directed for the most part to a minor point; and he bestowed much irrelevant criticism on matters which might have been dealt with in committee. The effect of this was that Mr. Fawcett's measure was talked out, and it is probable that the debate will not be resumed during the present session. That was in itself indicative of a suspiciously temporizing policy; but in the next place, Mr. Gladstone, according to his too frequent habit, indulged himself in the general expression of opinion which was rather ambiguous, and yet pointed decidedly in the wrong direction. He used language, that is, which went to confirm the general suspicion that he intended a concession to the Roman Catholic demands. He spoke of their claims as founded in justice, and though he refrained from announcing any distinct policy, he seemed to betray a leaning towards the foundation of a denominational system. I cannot, of course, discuss the justice of his arguments. When, however, this avowal is taken in connection with the views of Government upon English elementary education as expounded by Mr. Forster, and when it is remembered how far Government has already gone in the direction of alienating the Dissenters upon that question, there cannot be a doubt that Mr. Gladstone's declaration will produce a most unfavorable effect upon the country.

After all that has been said about the religious difficulty, it is becoming every day more certain that the battle upon that subject has yet to be fought out; and how long it will take in the fighting is a very difficult matter to decide. All over Europe it is plain that the war between the advocates of secular and ecclesiastical education is rapidly gaining intensity. In Germany, France, and Italy there are agitations of a similar character, and there is every reason to suppose that the wave of feeling which is sweeping over so great an area depends upon some deep and general causes. In England it will lead inevitably to a discussion as to the claims of the state church; and for that reason I do not feel much doubt that the next agitation to excite strong feeling in England will be an agitation for disestablishment. The state church will be attacked sooner than the House of Lords. The feeling of the Dissenters against it is already very bitter, and the educational controversies have given it a very powerful stimulus, and meanwhile there is no want of allies within the church itself. I eschew prophecy, but I may say without much hesitation that the anticipations of Radicals are pretty much to this effect. Government, they think, will probably drag over this session unless, as may happen at any moment, some unexpected difficulty turns up. But for the American difficulty they would probably have been turned out by the Collier scandal. At present, however, the Conservatives prefer to make no great effort, partly because they distrust their unstable leader, Mr. Disraeli, and partly because they lose nothing by waiting, so long as Mr. Gladstone is daily accumulating unpopularity with the extreme wing of his own supporters. Before long, however, in one way or other, there must come a catastrophe. The present Government will be turned out on the Irish university difficulty or some other of their numerous stumbling-blocks. The Conservatives will then have an inning, and Liberals will then have to look out for a new rallying-cry to supplant the old. The ballot will probably have been carried this session, and undoubtedly the most telling cry will be the disestablishment of the Church of England. Mr. Gladstone is at present opposed to it, but he has been converted so often that there is no reason why he should not go through the process once more, and he has only to furbish up again the old series of speeches which did such good service in the case of Ireland. In a few years, he may make his appearance in this new character, and upset one of the last things that remains to be upset in the country. The House of Lords and the monarchy can wait. Such is the programme, and whether it will ever be carried out, and, if so, how soon, is a matter upon which my opinion would not be particularly valuable, and with which I will therefore not trouble you

Correspondence.

THE MISSOURI JUDGES.

To the Editor of the Nation:

Sir: I have read the *Nation* too long to believe you guilty of intentional misrepresentation; but I think you were mistaken on p. 163 of March 14, when you hinted at a "shaky condition" of the "framework of society" in Western Missouri. I have lived in this section nearly five years, and can testify to the general good character of the inhabitants. The causes of such disgraceful episodes as the Cass County bonds affair may be considered the two following: First, we have not yet outgrown the notion that it is right to dispose of the public credit—in other words, vote bonds—in aid of railroads. Second, the whole financial management of each county is lodged in what is called the county court, which is composed, when full, of three members. These judges are, by their position, peculiarly exposed to temptation from speculative rascals who may have designs on the county purse. For instance, the charter of the Tebo and Neosho Railroad authorizes county courts of counties through which said road (*or any of its branches*) may pass to issue county bonds in its aid. Henry County subscribed liberally; but one of the judges fell sick, and confessed that $1,500 was the price of his consent to the subscription. Of course, there was much talk of repudiation, and much dissatisfaction is still felt.

This was bad, but, what is worse, *branches* of the above road are in danger over various parts of the State, and it was in aid of one of these proposed "branches" that Cass County was victimized. The present legislature has deprived county courts of the power of issuing bonds without a two-thirds vote of the people; still there is plenty of room for sharp practice so long as the people are allowed to vote "bonds." One case is now pending: a "branch" of the notorious T. & N., now called the M. K. & T. R. R., is proposed to run from Holden, on the Pacific R. R., to Green Ridge, on the T. & N., a distance of thirty-four miles. This scheme is in the market asking "bonds." Elections were ordered in three townships through which the road was to pass. In two of these it soon became evident that no bonds would be voted, some of the chief managers having been so deeply interested in the Cass County affair as to get in jail, and thus be deprived of the privilege of "speaking" as much as was deemed necessary, which "speaking" has great effect on the average voter of the South and West. Under the circumstances, the man who pulled the wires induced the court of Johnson County to postpone the elections till July. This was done only two days before the election was to take place, and many voters were obliged to lose a day's work at the bidding of a citizen of Henry County.

Something may now be expected to take place—either a division of the townships mentioned or "colonization"—both of which means have been tried in Johnson County to carry a railroad election. By "colonization" is meant beginning work on the railroad, and thus bringing laborers from some other part of the county, who become voters in their adopted townships after a residence of thirty days. In either case, the bonds may be voted. All the people have to prevent this gerrymandering is the uprightness of two old men (one judge having died), and both of these were elected on the score of availability, each having a reputation slightly damaged before he arrived at the doubtful honor of judgeship.

This is a bad state of affairs, but I am persuaded that the growing intelligence of the inhabitants will correct such evils, though some cases of municipal embarrassment, and consequent bankruptcy or repudiation, may occur beforehand. It is but just to say that most of these railroad schemes of public robbery are engineered by Eastern men; and though native Missourians are often drawn in, yet they rarely originate such projects, which are almost invariably brought about by professional railroad speculators, who get a liberal share of such sums as they can induce the people to vote. You will recollect that Nichols, of Cass County fame, claimed that the $35,000 worth of bonds found in his possession was his share for acting as attorney for the railroad company. By the way, the same Nichols was, before his arrest, a prominent "speaker" in favor of the Holden Green Ridge speculation.

One good result of these disorders is, that the better class of natives and Eastern men are drawn together by the common peril, and old political spites are almost forgotten. I repeat, we shall outgrow this state of things, but you must not be surprised to hear of some vigilance committees and consequent Lynch law before this result is arrived at.

This is rather a long vindication of our section, but I could not well use less space and cover the ground.

I am, respectfully, An Emigrant.

March 30, 1872.

WEATHER CHARTS.

To the Editor of the Nation:

Sir: By direction of the Chief Signal Officer of the Army, I have the honor to refer to one of the "Notes" on page 218 of last Thursday's *Nation*, commending a proposed plan of the Meteorological Office in London for the issue of lithographic weather-charts, and to enclose a specimen set of the bulletins and maps which have, since Nov. 1, 1871, been issued thrice daily from this office for gratuitous distribution, embracing reports from over sixty stations, and from observations made synchronously, not at "local" time.

The daily issue of a single chart of the same character, embracing the reports of 7.35 a.m., commenced on January 1, 1871, and copies of them have been regularly mailed from here to the Royal Meteorological Office. Besides their preparation at this central office, charts substantially the same have been struck off at the same hour at twenty-four of the most prominent points in the United States, where they can be procured without the delay of transmittal by mail.

Under these circumstances, it cannot be asserted, as may be inferred from your "note," that the plan is copied from one of a similar but not equally extensive character about to be introduced in England. In fact, the English meteorologists give full credit to this country, in support of which statement I quote from Symons's *Monthly Meteorological Magazine* (published in London) for July, 1871, page 85, under the head of "Weather Maps," as follows:

> "'Is Old England on the Wane?' the title of a modern song, rises to our mind in sober earnestness after carefully examining some maps and tables recently issued by the War Department of the United States, comparing them with those issued through all her troubles by distracted France, and then reflecting that nothing of the kind is being done in England. We have no desire to write depreciatingly of many good works carried on in this country, but why is the subject at the head of this article utterly neglected?"

And from the same magazine for January, 1872, page 219:

> "The development of what may be described as synchronous or, still better, as cartographic meteorology, is bearing its natural fruit in advancing with rapid strides our knowledge of the 'laws of the winds.' Our Meteorological Office have not yet given us daily, or, like our Transatlantic brethren, *tri-daily*, weather-maps, but we understand that we are to have them."

I have the honor to be, respectfully yours,

Garrick Mallery,
Capt. and Bvt. Lieut.-Col. U.S.A., Acting Signal
Officer and Assistant.

War Department, Office of the Chief Signal Officer,
Division of Telegrams and Reports for the Benefit of Commerce,
Washington, D. C., April 6, 1872.

[We were not ignorant of the lead taken by this country as to the idea and essential features of the Signal Service. We doubt, however, whether the public is generally aware of the gratuitous distribution of the weather charts, and we do not see (what we had chiefly in mind in our "Note") that any provision exists for supplying these charts by mail, as the English propose to do, to persons who do not happen to reside at or near one of the "twenty-four of the most prominent points in the United States."—Ed. Nation.]

Notes.

LIPPINCOTT & CO. have in press "Women Helpers in the Church—Their Sayings and Doings," edited by William Welsh; a translation of Büchner's "Man"; the "Autobiography of Stephen Collins, M.D., of Baltimore"; "Historical Memoirs," by George B. Wood, M.D.; and "The English of Bunyan," a class text-book, by J. B. Grier.——"*Inter-Ocean*" is the not very felicitous name of the paper which succeeds the late Chicago *Republican*. The following extract from its prospectus gives all the necessary information in regard to it: "It is a Radical paper, holding to the faith of Human Progress. Its motto is *Upward and Onward*, and its cardinal declaration is: Independent in nothing [?]; Republican in all things [!]; just to all. . . . It advocates the re-election of President Grant, and will 'fight it out on this line if it takes all summer.'"——Another Chicago publication, the *Lens*, was ready to be launched at the time of the fire, and only now appears bearing date of January. It is designed to be a quarterly journal of microscopy and the allied natural sciences, and this first number gives excellent promise. "The Flora of Chicago and Vicinity" is one of the articles outside of the department of microscopy; and others will follow, illustrative of the natural history of the West. As the organ of the State Microscopical Society of Illinois, the *Lens* publishes the transactions of this body, and also (on the present occasion) those of the Chicago Academy of Sciences.

—At a meeting of High-School Teachers in Boston last week, a piece was read in favor of lowering the standard of admission to college by abolishing Greek. The arguments for its discontinuance were the old-fashioned ones—"that the study of Greek accomplished nothing in gaining a knowledge of the language that should be of any practical value in after-life," etc., etc., etc. The Principal of the University of Louvain puts the matter with infinitely more spirit and directness: "You see me, young man; I never learned Greek, and I don't find that I have ever missed it. I have had a doctor's cap and gown without Greek; I have ten thousand florins a year without Greek; I eat heartily without Greek; and, in short, as I don't know Greek, I do not believe there is any good in it." It was also said "that a very large majority of those who devoted seven or eight years to the study of Greek could read it at the end of the time only by the aid of the lexicon and the notes of commentators." If this is true—and perhaps it may be—to what is it due? In other countries young men can do more than that after seven or eight years' study. Is the American boy an inferior and degenerate animal? Or is the elementary instruction in some degree at fault? This evil might be remedied by raising the entirely inadequate salaries of the teachers in classical schools, and tempting into the profession some of those ambitious spirits that now rush into the law or the whirl of business as a matter of course. At all events, the present standard of our colleges is low enough.

—The late Professor Morse came of an ingenious and scholarly blood, and, in virtue of being descended from New England clerical stock, may be looked upon as a foreordained inventor. When England sent to New England the pick of her Puritans, she sent out some of the best heads that she owned, and of these it would no doubt be safe to say that those in which the nervous fibre was most delicate, sooner or later found themselves in the pulpit. The certainty with which the acute and sublimated Englishman produced in New England sets himself to inventing appliances for saving labor is known to all the world, and Professor Morse as well as his brother Sidney, and we believe his father Jedediah, were noted for their skill in this sort of practical wit. The late Mr. Sidney Morse, for example, took out a patent for a flexible piston-pump, and invented an art which he called cerography, of which the object is to print geographical maps at the same time that the letterpress is printed, and on an ordinary printing-press. If common notoriety is to be trusted, he and his father Jedediah also invented the American and European religious press by projecting and establishing the *Boston Recorder* in 1815. His father, by the way, was a great polemic, settled over a church at Charlestown, Massachusetts, whose life was made miserable by the spectacle of the Unitarian success in the controversy among the Congregational churches. It was literally and seriously made miserable, for he was an ardent champion of all the extreme Calvinistic doctrines, and was compelled to look on while the Unitarians turned the tables on their former fellow-worshippers, and got the churches into their own hands. He is the author of a greatly improved series of school geographies, which Sidney Morse afterwards improved still further. Whether to Professor Samuel Finley Breese Morse is to be awarded the full credit or the original credit of the wonderful invention with which his name is associated has not yet been settled. Even up to the time of his death he was engaged, it is said, in arraying and fortifying the evidence with which his claim is to be supported against various claimants, and, amongst others, the same Dr. Jackson, of Boston, who disputed Dr. Morton's claim to be regarded as the discoverer of ether as an anæsthetic. But the popular view of his services has at the very least this foundation—that it is to him we owe the utilization of the discovery on a large scale so early as the year 1843, and to whom we probably owe much more. He was a patient and active advocate of his scheme before incredulous Congressmen and capitalists, and in the year just named he succeeded, after many discouragements, in getting an appropriation of $30,000 for the establishment of a line between Baltimore and Washington. How incredulous the Congressmen were one of them tells in a recent letter, which relates that when in 1844 an officer of a political convention sitting at Baltimore telegraphed to Mr. Silas Wright for an answer to certain action taken by the convention, and received a telegraphic message in reply, the convention refused to receive it, thinking the speedy transmission, if not impossible, at least too doubtful to base any action upon. Now the whole world from furthest continent to furthest continent uses the wire to send news, orders, and warnings, and in every civilized country it is the medium of common conversation. Professor Morse lived to see a statue erected to him in the city of his residence, to enjoy for many years a large fortune drawn from his invention, to wear more medals and ribbons from foreign potentates than any other American, and has died in a good old age. He was born in April, 1791, and had nearly reached his eighty-second year.

—Mr. J. F. D. Maurice, just deceased at the age of sixty-seven, is something of a loss to the "Broad" party in the Church of England, for he has long been prominent among that earnest but not altogether intelligible body of men within the confines of the Establishment who succeed to their own satisfaction in blending faith, the authority of reason, the authority of history, and the authority of the personal perception of the true, the beautiful, and the good, into a mixture rejected alike by the rationalist and the great body of believers. He was one of the men whose moral sense, whose charity and benevolence of character, whose desire to "reconcile science and faith," to bring religion into daily life, and to make men of thought and of the world give a practical and hearty adhesion to the church's form of belief, kept him constantly busy; and his activity was, without doubt, a cause of good in his generation, though that he ever got his own mind very clear, or cleared the minds of many others in regard to the topics which he undertook to handle, one would not say. He is of the school to which belonged many of the more thoughtful young Englishmen of his day; men like the two Froudes, the two Newmans, Pusey, John Sterling, and, after these, Clough, and the pupils of Arnold, each of whom felt that on him was laid the burden of finding a solution of the universe, and whose history is a history of moral and spiritual seeking and groping and struggle, and also of literary activity, for they carried on their struggle in public, and, each having the true solution, each of course felt a natural desire to bring it to the knowledge of the others, his friends. These men have had a great influence upon their day; that their influence is to extend much beyond their day does not yet appear, though, in the case of Mr. Maurice at least, it might be safe to say that he had already for some time survived his greatest influence. He is, by the way, the Maurice to whom his friend Tennyson gives the poetical invitation to the Isle of Wight:

> "Godfather, come and see your boy."

His friendships were with many of the best Englishmen of the time, beginning with Sterling, who was greatly fond of him, and his acquaintance included most that are most worth knowing in literary England.

—The number of suicides in England ought to be disproportionately large this spring. A German doctor, who knows all about eyes, and especially about diseases of the eye, and who also knows a good deal about art, has apparently been proving what a great many plain people dubiously suspected, and a great many wise and tasteful people indignantly and decidedly denied—namely, that Mr. John Ruskin's Turner has painted vast numbers of pictures which, to tell the exact truth, seem like absurd productions. In the beginning of last month, Mr. Liebreich, the ophthalmic surgeon of whom we speak, was invited to deliver a lecture at the Royal Institution, and make good his repeated statements that Turner's latest pictures are the result of an optical disease which appears to have attacked the painter about 1831, after which year his pictures, Mr. Liebreich maintains, are altogether out of drawing. As we make out, this disease consists in an affection of the crystalline lens, which, in its first stages, causes in the eye of the painter a diffusion of light, preventing his seeing with precision and definiteness the lighted parts of the object of vision, and this diffusion got expression in the pictures in a sort of bluish haze; then afterwards, as the disease made progress, a limited opacity developed itself in the crystalline lens, the consequence of which was, speaking roughly, that the painter could see illuminated surfaces vertically but could hardly at all see horizontally—a mere point of light he saw as a vertical line which was the longer in proportion to the intensity of the light. Thus there will proceed from the sun in one of Turner's later pictures a vertical streak of light dividing the picture into two halves unconnected by any horizontal line. Objects less illuminated are distorted less, but still are all distorted more or less; thus persons in a boat, or houses near a canal, blend so entirely with their own reflections in the water that no horizontal line of demarcation between substance and shadow is in any way visible. The justice of these criticisms, which confounded many of his auditors, Dr. Liebreich is said to have demonstrated by means of a screen, a magic lantern, a lens, and a copy on glass of one of Turner's Venetian pictures, painted before his eyesight had become affected. Placing the copy in the magic lantern, he threw on the screen the picture as painted; then applying to the lantern a lens simulating the diseased eye, he showed to the audience the picture as Turner painted it on his second visit to Venice in 1839; "the resemblance to his pictures painted after this date was certainly very striking," says the *Academy;* and it adds that, "by the same contrivance an ordinary tree was converted into a Turneresque one." The article in full is to be published in the April *Macmillan's*, and will be the most noticeable of recent magazine articles.

—Dr. Liebreich's disclosures concerning the pictures of Turner's last twenty years were not the whole of his lecture at the Royal Institution; he explained also how it happened that Mulready's later works are too blue—too "purple," as the popular objection puts it. As Turner's incipient cataract caused him to see nature incorrectly as regards the forms of objects, so the disease of Mulready's eyes caused him to see colors wrong, though his eye for form remained true. Twice Mulready painted the same picture—"The Little Brother," or "Brother and Sister"—once before and once after the complaint had injured his eyesight. In the latter picture the shadow of the flesh is blue, the face is purplish, the blue draperies are a glare of blue. But if the spectator will look at it through a yellow lens he will by-and-by find himself looking at a picture precisely the same as the earlier one; the blue of the draperies is softened, the purple face becomes a natural red, the blue shadows of the flesh become gray. In the latter part of Mulready's life the crystalline lens of the eye turned yellowish, and therefore absorbed a certain small quantity of blue light. Now in nature the light is so vast and intense that Mulready, even though his lens was yellowish, could still see nature correctly. But in his picture the intensity of the light being so immensely less than in nature, the small quantity of blue light absorbed by the yellow lens was enough to produce an appreciable effect, and everything was made much bluer than was right. He saw his picture yellow, and, intensifying the blues, in the endeavor to get them right he got them too blue. Considering all the pother that has been made by the art critics and the Turner men, and how very dogmatic they have been and how contemptuous of the general public, and all this, as now appears, while they were as ignorant as the rest of us, it was to be expected that they should come in for a bit of advice at the close of the lecture, and Dr. Liebreich advises them "to make the results of scientific investigation their own"—which, if it means that they should keep up with the latest researches in hypermetropia, astigmata, and the like, strikes one as rather a German and professorial word of counsel. It is true of them as of other men, that they can hardly know too much; but our own impression is that if all the time they have to spare after studying objects of art and the history of art they would spend in cultivating humility of soul, and self-mortification, in meditation on pride, arrogance, impudence, contempt for the vulgar herd, conceit, and similar qualities, they would do themselves and all the rest of us more good than by becoming proficients in science.

WILLIAM AND ROBERT CHAMBERS.*

THIS book tells the story of a typical Scottish career. It is the record of a slow rise by dint of shrewd intelligence, close saving, and steady, hard work, from obscure poverty to wealth and worldly consideration. Characteristic, too, of the better Scottish career, whether under the sky of Hudson's Bay or of Ceylon, of North Carolina or Madagascar, is the combination, with canniness and all the self-regarding virtues, of a practical benevolence which makes of the Scot a good citizen, not only in that he becomes a wealth-producing member of society, but in that he is ready to give without much effusion, but without grudging, to all good works; and that, above all, he never falters in the faith that the community prospers according as it is intelligent. It would be a good thing if this little volume could be put into the hands of half the boys in the country—so good a thing that we expect the fact to be at once recognized, and the book to become widely popular.

Mr. William Chambers was born in 1800 of poor parents, whose family had anciently been of repute, but which at the date of William's birth belonged to the lower middle-classes. The father was a weaver, a small manufacturer, himself working at his trade and employing others, and leading the unruffled, easy-going life of a burgher in a quiet, a very quiet Tweedside hamlet—"as still as death or as Peebles," the saying was. But the burghers enjoyed it; "Paris, a'thing considered, is a wonderful place," said one of them on his return from France, "but Peebles for pleesure." The neighbors were cronies together at the political clubs; they abused each other's minister together, or, better still, their own; they had a tavern or two whither they resorted at evening, and where pipe in hand they discussed Boney, sang Allan Ramsay, and drank punch—a little punch at first; then some more punch; then some theology; then some entirely unpremeditated punch, which no one thought of when the first jug was procured; then a song; then more punch; then, when they had all had quite enough, some elder would bethink himself to mention to the company the Peebles coat-of-arms. As the Peebles coat-of-arms was three fishes, and as the elder and his friends blindly held that fishes drink much more than any other creatures, the elder's suggestion would lead to another jug of punch in honor of the town's escutcheon; then when they had all had just a little too much to drink, and eleven o'clock had arrived, Miss Ritchie, the landlady, became inexorable, and the Peebles heads of families would be ordered home "to the wife and bairns." So, though Paris was a fine city, all things considered, yet Peebles for pleasure.

It does not appear that Mr. Chambers's family ever suffered much from the habits of free drinking prevalent in Peebles, and which there, no doubt, as in every other Scotch town, brought ruin on many a family; nevertheless, it was in his person that the Chamberses descended lowest in the social scale, and but for his wife, evidently a superior woman, they might not have risen again; at least could hardly have risen so soon. Yet it must be remembered that, although the Chambers boys owed much, perhaps most of their good fortune in life to their mother's firm character, it may nevertheless be true that much of their success they owe to their father. In view of the fact that fathers seem to be getting rather hard measure just now from their autobiographical sons, it may be worth while to point out to our author that the literary taste and aptitude to which as well as to industry and good moral principles a part of his success has been due, would seem to have been inherited from the father, whose somewhat easy-going disposition, impracticable independence, and unbusinesslike ways get little or none of his surviving son's admiration. We do not wish the reader to infer that in this autobiography there is anything like the degree of bitterness with which Mr. Dickens has written of his father and mother. But we think there should be none at all, nor even a suspicion of it. If people's fathers are bad business managers and bring their families to want, the children may, we suppose, under some circumstances, take offence, and may, we suppose, express their sense of the injustice done them and their opinion of the parental folly. But whatever may be the demand of filial piety in such cases, there need be little doubt as to what is the demand of good taste when the sufferers write a book. All such matters it is surely better to avoid altogether. William Chambers and his brother Robert rose from a low estate to a high one, greatly to their own credit and the credit of the stock from which they sprang, and what the reader cares for is the story of this rise, and not whether their father was indiscreet in trusting his customers, or spent too many hours at his spinet, or was irritably independent, or once displeased the brothers by foolishly going to law and costing them two or three hundred pounds because he would not listen to reason. This, however, does not assume the magnitude of a great blemish in Mr. Chambers's book; perhaps it might escape notice entirely were it not for the fondness of affection which the narrative never fails to show when the mother's name is mentioned, and beside which any ordinary obedience to the fifth commandment would seem cold.

The calamity of the Chambers family began when the introduction of the power-loom ruined the hand-loom cotton-spinners, and it was completed when Mr. Chambers, who had turned draper and tailor, was compelled to go into bankruptcy. Mrs. Chambers appears to have been a woman of a high spirit and remarkable self-reliance, and she decided upon a removal from Peebles to Edinburgh, where, in new scenes, the family could struggle for existence without being under the eyes of friends who had known them in better days. It turned out to be a severe struggle indeed. In 1813, when the removal was made, Robert was at school in Peebles, and it was decided to keep him there, he being the predestined candidate for ordination which every Scotch family had to have in those days. William, however, was nearly fourteen years old, money was excessively scarce, and something must be found for him to do. The first thing that offered was the place of a porter in a grocer's shop at Leith; but as the boy was slightly made, and as a Leith grocer's porter had to do the work of a horse, it did not take long to decide that the porter's place was not the right thing. The boy turned back again to Edinburgh, no doubt feeling this disappointment of a hope which was in itself a misery as bitterly as he ever afterwards felt the disappointment of greater expectations. But before he reached home he had found his destiny, for in the window of Mr. John Sutherland, a bookseller in Calton Street, he saw a notification that an apprentice would be received, and early next morning his mother had negotiated with Mr. Sutherland an apprenticeship of five years, the apprentice to be on wages of four shillings a week. His work began at seven in the morning with sweeping out the shop, taking down the shutters, and cleaning the oil-lamps, and it ended at nine o'clock in the evening, the time between being occupied in constant employment, for Mr. Sutherland was a severe disciplinarian. For about a year his family remained at Edinburgh, but the father, not succeeding in his business in that city, removed to Joppa Pans, and became a sort of overseer in some salt-works there, which supplied the neighboring English with smuggled salt. This removal threw William upon his own resources, as he must now find himself in board and lodging out of his four weekly shillings. He discovered a widow woman who agreed, for eighteenpence a week, to give him lodging, to cook for him, and to let him sit by her fire in the evening; he found that for one and ninepence a week he could buy all necessary food, and the remaining ninepence of his wages he reserved for shoes, clothing, and pocket-money. It was not long before he made an addition to this income in the shape of seven penny rolls a week, which he earned by reading aloud to a literary baker for an hour and a half in the morning before his own work began. For self-improvement he had the evening, after nine o'clock, and Sundays. These holidays he always spent at home, going to the Pans after the shop was shut, and taking with him his clothes to be washed; the walk was always hurried, no matter what the weather, for the washing had to be done between the time of his arrival and midnight, when the Sabbath began. He thus describes one of these visits, made at a juncture when his father had lost his situation, and his mother was meditating the establishment of a small shop in which to earn the family's living:

---

* "Memoir of Robert Chambers. With Autobiographic Reminiscences of William Chambers." New York: Scribner, Armstrong & Co. 1872.

> "The house at the Pans had been about the most revolting of human habitations, but it at least gave shelter, and bore with it some means of livelihood. Now, all that was at an end. The future was to be a matter of new contrivance. Of course, I hastened from town to condole over present distresses, and share in the family counsels. On my unexpected arrival near midnight, cold, wet, and wayworn, all was silent in that poor home. In darkness by my mother's bedside, I talked with her of the scheme she had projected. It was little I could do. Some insignificant savings were at her disposal, and so was a windfall over which I had cause for rejoicing. By a singular piece of good fortune I had, the previous day, been presented with half a guinea by a good-hearted tradesman, on being sent to him with the agreeable intelligence that he had got the sixteenth of a twenty thousand pound prize in the state lottery. The little bit of gold was put into my mother's hand. With emotion too great for words, my own hand was pressed gratefully in return. The loving pressure of that unseen hand in the midnight gloom, has it not proved more than the ordinary blessing of a mother on her son?"

Perhaps, after such a record of severe and protracted struggle, we should say nothing of good taste and its requirements as to what shall and what shall not be told of trials and toils like these. They were hardly the school in which to learn canons of taste, whatever higher and better things they could teach. "I do not remember ever having entertained a feeling of despondency," says Mr. Chambers, in speaking of his prospects when cast upon the world at fourteen. And in another place he relates how he adopted for his motto some words which he often saw as his errands about Edinburgh took him past a certain old house over whose entrance they were carved in stone: "He that tholes overcomes." To thole, to endure, was certainly his business in the first thirty years of his life, and well his apprenticeship fitted him for his manhood. He perfectly learned self-reliance, he never unlearned his cheerfulness, and his industry and energy and ambition amounted almost to faults, so mercilessly did he task strength and health in the pursuit of independence.

We must send our readers to the book itself, and a taking book it is, for the further history of this remarkable man. They will there see how he began business at a book-stall on the sidewalk of the Leith Road, with ten pounds' worth of books procured on credit from an Englishman who was pleased with the young man's zeal and attention to his work; how, to increase his scanty profits, he taught himself enough of bookbinding to put his books into boards, and thus was able to buy his new books in sheets; how he copied verses in a fine hand and made poetical albums of them; how afterwards he bought thirty pounds of battered brevier type, learned type-setting, and printed a pocket-copy of Burns, himself doing the press-work and never working less than sixteen hours a day; how he advanced slowly by petty degrees and only by the employment of close frugality and the most exacting industry, until by the happy thought of establishing *Chambers's Journal* he put himself and his brother and partner, Robert, on the sure road to opulence, and constituted himself a true benefactor to his country. To other countries as well; he cites with pardonable pride from a speech delivered by Mr. Milner Gibson, in 1863, that gentleman's opinion that but for the goodness of the cheap literature in the hands of the artisans it would have been harder to tide over the cotton famine caused by the American war. Long before the war, however, America and England had experienced the advantages of Chambers's exertions in diffusing knowledge among the people, and there is no community in which English is spoken where his name and that of his brother Robert is not known.

It is mainly to do honor to Robert Chambers that this volume was prepared. Of a more sensitive disposition than his brother, and of a more literary turn, he devoted much of his time after he was thirty to study and the composition and compilation of books. Of these works, some seventy volumes in all, a monument of well-spent labor, all are readable and many very readable, and this though their author was rather a literary artisan than a literary artist or a scholar. But behind the pen there was always an honest man of warm affections, with a great fund of out-of-the-way reading and Scottish reminiscence, and with a pleasant dash of humor. To give something of the Scotch flavor of the book, we quote the following brief scene at the house of the Peebles widow with whom William lodged when an apprentice. It is such as might have been enacted every evening:

> "'Weel, Tammie,' enquired the widow one evening of Tammie Tod, a journeyman mason lately arrived from the country, 'what was the doctor on last Sabbath afternoon?'
>
> "'He was on the Song'—meaning the Song of Solomon.
>
> "'Ah, the Song! that would be grand. He's a wonderfu' man the doctor; and what was his text?'
>
> "'It was a real fine text,' said Tammie, 'the deepest ever I heard: 'For my head is filled with dew, and my locks with the drops of the night;' fifth chapter, second verse, the second clause of the verse.'
>
> "'I ken that text weel,' responded the widow. 'I heard a capital discourse on it thirty years syne; but how did the doctor lay it out?'
>
> "'He divided it into five heads, ending with an application, which it would be weel for us a' to tak' to heart.'
>
> "And so Tammie, who had a proficiency in dissecting and criticising sermons, proceeded to describe with logical precision the manner in which his minister had handled the very intricate subject; his definitions being listened to and commented on with extraordinary relish."

The volume, of course, contains the assertion—which should be contained in all Scottish works that wish to be thought humorous—that the Scotch are a very humorous people; but there is little of illustration or proof. Sydney Smith is once brought in, and is made to atone for the English gibe that a surgical operation is necessary to get a joke into a Scotch head. He called on Mr. William Chambers to make his acquaintance, and, introducing himself, Mr. Chambers shortly after remarks to him that he, Mr. Smith, must allow that the Scotch have a great deal of fun in them. To this Mr. Smith good-naturedly responds that he has observed the fact, but that some sort of an instrument, he thinks, is always necessary if one would get it out, and that he has found the corkscrew to be most effectual. We believe this is the best anecdote and the best joke in the book, which, however, is the work of a person who is not of a discursive mind, and who has some right to be egotistical. He has a story to tell which needs no adventitious aids.

EDUCATIONAL TEXT-BOOKS.

II.

WE do not know when a respectable publication has been prefaced with more boastful words than Mr. Proctor's "Star-Atlas" (London: Longmans). In a previous publication, Mr. Proctor had announced that all such works hitherto had been constructed on radically wrong principles, and had put forth a demonstration that there was only one proper way of making a star-atlas. This he repeats in the "Letterpress Introduction" to the present book, only it is a different manner of construction which he demonstrates to be the right one. A regular dodecagon is inscribed in the sphere, and then each face is produced so as to cut off a part of the sphere, and that part is represented on one map. There are, therefore, twelve equal circular maps which overlap each other slightly, except in five points on the circumference of each. The North Pole is made the centre of one of the maps. But after all this theorizing about the method of projection, Mr. Proctor fills in with stars in a very simple manner. He has apparently merely entered them from the British Association Catalogue. The result, at any rate, is that the magnitudes are so extremely inaccurate that there are many parts of the heavens which are perfectly unrecognizable; and on every map the errors are a source of great inconvenience. Let any one who possesses this atlas compare, for example, the Little Bear in the map with the heavens, and he will find that a bare majority of the stars are rightly inserted or omitted. When the author says, "I believe no atlas was ever constructed in which more pains were taken than in the present to avoid errors," he clearly forgets that stars exist in the sky as well as in the B. A. Catalogue, and that some makers of atlases have taken the trouble to examine them. Argelander's "Uranometria" is justly regarded as one of the most perfect works of observation, perhaps in fulfilling its purpose *the* most perfect ever executed. Its atlas is renowned in all lands for its resemblance to the heavens and for its convenience in use. Its accuracy is such that its scale of magnitudes has been everywhere adopted as the standard. But Mr. Proctor has apparently never heard of it. England is eminent in astronomical observation—the Greenwich Observatory alone would suffice to make it so. But Englishmen are generally so naïvely ignorant of what takes place in the great world of science (which does not centre in London, as they seem to imagine) that it is possible for a respectable man to publish a book there the existence of which depends on such ignorance as would disgrace him in Sicily or in Spain. As for the method of dividing the sphere upon which Mr. Proctor prides himself so much, it is exceedingly inconvenient in practice. It cuts Gemini

Orion, the Great Bear, Hercules, all in two. In short, if anybody interested in the stars has not Argelander's incomparable work, then let him take Elihu Burritt's or any other, but not this new one. We speak from experience.

Heat is still the most interesting part of physics, for the time; and we have devoured Mr. Clerk Maxwell's "Theory of Heat" (London: Longmans). It is not intended, however, primarily to amuse, as Tyndall's was; and it also differs from that work in giving a correct idea of the mechanical theory of heat. It is intended for a class-book, and is the very best text-book of physics which has been published for some years. Its study will demand some thought from the student, which will be a fatal objection to its extensive use in this country. It is not made with reference to satisfying examining committees, and to getting boys over the ground with the least possible trouble to them. It discusses a good many subjects not strictly a part of the theory of heat, and we could have wished that some things which do belong here had been enlarged upon more, and that more special facts and tables had been given. Yet it must be allowed that within these 300 pages a more beautiful and perfect account of the theory could not have been given.

The old sensationalists, Hartley, Brown, and the Mills, never wrung many admissions from the advocates of *a-priority*. But Dr. Wilson's "Lectures on the Psychology of Thought and Action, Comparative and Human" (Ithaca: Andrus, McChain & Lyons) is evidence that the new physiological materialists are making more impression. The author gives up the whole of sensation as involving no mind or consciousness, and hopes by that admission to strengthen spiritualism in reference to the other parts of the intellect. But though the new position has strength, yet the retreat will encourage the anti-supernaturalists and will make for them new converts. Respectable writers cannot long defend a theory which involves such suppositions as that animals and men acquire a knowledge of external things by an immediate action of the spinal cord without the agency of any external organs, as Dr. Wilson does on pp. 249 and 250.

We said last week that the best book for instruction in logic in colleges was Fowler's "Deductive Logic." We added that a young man who has been through it under a teacher of power will have had his mind enlightened and strengthened, and will be the better prepared for life. In point of fact, we did not intend to apply these expressions to Fowler's "Deductive Logic," but to his Deductive and Inductive Logics taken as one work. The mistake enables us to express, in a more emphatic way, our opinion of the almost utter worthlessness of deductive logic in education, except as an introduction to the logic of science. In former ages, logic was a pretty good representation of the methods of thought of the greatest minds. The systematic exposition of the art of thinking naturally lagged behind the practice, and men always reasoned better than if they had strictly followed the rules of their logic. Still, the discrepancy was not very great. The logic of Petrus Hispanus (which was written about 1270) exhibits well the character of thought of his time, as that of Oldham does that of his school, and those of Paulus Venetus and Buridanus do that of the latest scholasticism. At the time of the Renaissance, the treatises of Ramus and of George Agricola show pretty adequately the peculiarities of the humanist mind. But when the scientific age came, so great an intellectual step was made that logic could not well keep up with science. Then some writers, such as Bacon in his "Novum Organum," and Locke in the "Conduct of the Understanding," inconsiderately put aside the old syllogistic and topics as though they contained something false, instead of being only incomplete; while others either weakly endeavored to apply the old theory to the new practice or else abandoned the attempt to represent scientific methods in their logic altogether. These last writers invented the word "extralogical," and apply it to scientific reasoning, thus concealing the fact that they shirk their main duty in not investigating this reasoning. Pedants love to teach the least possible, and to teach it in as formal a way and with as complicated a system of big words as possible. Most of the school-books have, accordingly, been limited chiefly to the logic of deduction. At the same time, they have taught, not the only syllogistic system which was ever actually used—the mediæval logic—but one which could be of no practical avail whatever. The result has been to confirm the natural tendency of the young to reason from words, and to produce a captiousness which is very different from wise caution, and is simply mischievous. Indeed, the only thing to be said in favor of the study of logic as it is ordinarily taught is that it does tend to make the pupil reflect about his reasoning, and to be a little more precise in his thought and language. The greater number of logics which have come to us in the last few years have been of this vicious kind. A boy or girl could not be put to a more useless task than studying either of Day's logics. The work of Professor Bowen, a convenient though not very intelligent compend of the logic of Hamilton, Thompson, etc., is nearly without value in educating the mind. We hoped for something better from Mr. Jevons, because his previous books, while showing very little acquaintance with the history and literature of the subject, have contained some good original thought, and because he belongs to a school which thinks. But we have been sadly disappointed with his "Elementary Lessons" (New York: Macmillan), and cannot think it of any use. It is because Mr. Fowler has made his "Deductive Logic" very short and simple, and has laid the stress chiefly on the inductive logic, and because he does represent in some degree the methods of thought which modern science and learning actually use, that his books seem to us so recommendable, provided *both* are to be studied. To confine the student to the deductive part, a thing which, we fear, will be done by many teachers, owing to this part making a complete book by itself, would be just as bad as to use any of the old text-books.

We promised last week to discuss some of the errors, as they seem to us to be, of Mill's theory of logic which Mr. Fowler adopts. But we have only space here to refer to Mill's doctrine of scientific hypotheses. This was doubtless suggested by a doctrine of Auguste Comte, who divides the sciences into five classes having different degrees of certainty; and by a hypothesis means a proposition which is not proved with the degree of certainty which belongs to the order of science to which it relates. His maxim of hypothesis is, that such a proposition may be allowed a provisional and secondary place in science, provided it is capable of being proved (or disproved) with the degree of evidence appropriate to its order of science. But Comte's conception of a hypothesis is a peculiar one. A scientific hypothesis is usually defined (and is defined by Mr. Mill) as the supposition of a circumstance which, by the action of known laws (or a generalization of known laws), would result in facts such as have been observed. It is also common to use the term scientific hypothesis to denote a very doubtful conclusion of science. These two meanings are apt to be confounded, and Mill has plainly confounded them when he says that the one condition of the admissibility of a hypothesis is "that it be not destined always to remain a hypothesis, but be of such a nature as to be either proved or disproved by comparison with observed facts." Here, being proved has not the definite meaning that it has in Comte's maxim. There is no absolute distinction to be drawn anywhere between the probability of that which has a bare possibility of truth and that which has a bare possibility of falsehood. A supposition which by the known action of the laws of nature will explain a single known fact, thereby gains some slight probability. This is susceptible of exact demonstration. As the number of facts which the hypothesis explains increases, and as their variety (depending on the laws their explanation involves, and the elements of the hypothesis upon which they depend) increases, the probability of the hypothesis increases indefinitely, until it becomes as certain as any fact we know. But, as a general rule, that which was a hypothesis at first, remains a hypothesis to the last. All that we receive upon testimony is hypothesis; it explains the fact that the witnesses agree. The existence of the relation of space among things, and all that we remember, are hypotheses in the same sense in which it is a hypothesis to say that Marshal Bazaine surrendered Metz treacherously. Between these extremes, hypotheses of every degree of probability may exist, and no absolute line is to be drawn among them. A hypothesis, therefore, does not differ from any other inferential proposition; and the only thing to be considered in reference to its admissibility is the actual evidence upon the matter. Mr. Mill's view is that a hypothesis is not something inferred, but something taken as the basis of enquiry; so that the question is not what the existing evidence is, but what evidence is forthcoming. Here two questions must be distinguished: the first, in reference to what a man may logically do; the second, as to how he may best economize his scientific energies. Now a man may investigate the truth of any proposition whatever, and if he makes no false inference there is nothing illogical in his procedure. But he will be very unwise to spend a large portion of his life in putting anything to the test which can hardly be true or which can hardly be false. When the questions put to nature will only be answered by yes or no, he will advance with the greatest rapidity (as in the game of twenty questions) by asking questions an affirmative answer to which is equally probable with a negative one. He must, however, consider what degree of certainty the answer will have, and the rule will be, among questions of equal importance, to make that investigation which will have the greatest effect in altering existing probabilities. Mr. Mill seems to suppose an absolute distinction between the adoption and the rejection of a hypothesis; but every scientific man has passed that rude state of mind, and takes into account, in every case, as well as he can, the degree of evidence. Making distinctions absolute which are really only relative is the source of most of the errors in Mill's system of philosophy.

There are various other modern schools of logic besides those to which we have referred. In the first place, oole, De Morgan, and others have made a more exact investigation into purely formal logic, and have greatly advanced the subject. Their researches are still in a very immature state, but they have already succeeded in throwing much light upon the subject. The metaphysical part of logic has been chiefly prosecuted in Germany. Such questions as these: What is the connection between the following of a conclusion from its premises and the following of an effect from its cause? and what is the connection between the relation of a subject to its predicate and the relation of a substance to its attributes? have a high philosophical importance. Hegel considers the real relations of existing things and the formal relations of thought to be strictly identical; but he is led to modify profoundly the usual views regarding the maxims of reasoning in making out his point. His philosophy is now exploded; that is to say, hardly any of the rising men adopt it. But its historical importance has been considerable. For a short time it had immense influence in Germany. Mr. Carroll Everett's "Science of Thought" (Boston: William V. Spencer) is regarded by Hegelians as a good exposition of the fundamental positions of their philosophy. Vague conceptions and complicated reasoning are continually causing Mr. Everett to fall into fallacies; and this is the universal fault of Hegelians. The consequence is that their conclusions are entirely uncertain; and the interesting and profound suggestions with which their philosophy abounds only serve to make the bad influences of their loose reasoning upon half-educated minds all the greater. Ueberweg's treatise ("System of Logic and History of Logical Doctrines," London: Longmans) is an excellent specimen of a modern German logic. The view defended is that the construction of the mind corresponds with the order of nature, so that metaphysical conceptions have a double character, first, as true of things as they really exist; and, second, as merely formal principles of thought. It is a carefully written and scholarly book. The style is clear and precise, more precise than American readers enjoy, but real students do not wish a writer to beat about the bush to avoid an expression merely because it is a little too formal for the taste of literary people. The translator, we regret to say, betrays an ignorance of two things rather essential to his task, logic and the German language. On page 402, we read this extraordinary sentence: "An infinite straight line can proceed but from a figure bounded on all sides in the same plane on two sides only by means of intersecting the boundaries." This will bear a second reading. What Ueberweg says is: "Eine unbegrenzte gerade Linie kann aus einer allseitig begrenzten Figur in derselben Ebene auf beiden Seiten nur mittelst Durchschneidung der Grenzen heraustreten." This is perfectly clear. A straight line lying within an enclosed figure in the same plane cannot be extended indefinitely in either direction without cutting the boundary of that figure. The translator says, "Dr. Ueberweg has himself revised the sheets; and, as he knows English well, this translation may be held to give his opinions as he wishes them expressed in our language." There must be a misrepresentation here.

Mr. Martin Larkin, who compiles "The Rival Collection" (J. W. Schermerhorn & Co.) says that it "contains the best pieces, serious and amusing, in prose and poetry, that can be comprised in a work of this kind." Some of them it contains. And it also contains some of the worst, especially among the "amusing" pieces, a good many of which are frightful examples of vulgarity. All the same, it is a good collection, in the sense of containing a great many poems and other pieces fit to be declaimed or recited by the boys and girls on declamation day. With the old favorites are many new selections, which, if not so likely to become and remain favorites, will be a very welcome addition to any young orator's repertory of borrowed eloquence.

THE HON. JULIUS L. CLARKE, Insurance Commissioner of the Commonwealth of Massachusetts, having associated with himself the following eminent business and professional men who are in no manner connected with, or interested in, the management of the Equitable Life Assurance Society of New York, to investigate its affairs, viz.: HENRY F. SPAULDING, of Spaulding, Hunt & Co., 80 Wall Street, New York; GUSTAV SCHWAB, of Oelrichs & Co., 2 Bowling Green, New York; GEORGE B. UPTON, Boston, Massachusetts; WM. H. FOGG, of Wm. H. Fogg & Co., 32 Burling Slip, New York; FELICIANO LATASA, of Latasa & Co., 178 Pearl Street, New York; EUGENE KELLY, of Eugene Kelly & Co., 21 Nassau Street, New York; DAVID DOWS, of David Dows & Co., 20 South Street, New York; MORRIS K. JESUP, of M. K. Jesup & Co., 59 Liberty Street, New York; JULIUS B. WHEELER, Professor of Civil and Military Engineering and Science of War, United States Military Academy, West Point; THEODORE W. DWIGHT, LL.D., Professor of Municipal Law, Columbia College, New York, this Committee have made the following

REPORT:

NEW YORK, March 30, 1872.

In the month of January, 1871, the Equitable Life Assurance Society of the United States were informed by the Superintendent of the Insurance Department of New York that La Roy S. Gove, who had insured his life in said Society, about one year previous, for the sum of $2,500, had presented certain grave charges against the Directors and management of said Society.

Whereupon the President of the Society addressed the following letter to the Superintendent:

"JANUARY 6, 1871.

"HON. GEO. W. MILLER, Superintendent of the Insurance Department of the State of New York:

"DEAR SIR: The Counsel of this Society has handed to me a copy of charges, with specifications, sworn to by a policy-holder. As some of these charges and specifications have not the slightest foundation in truth, and in other cases are grossly exaggerated and the truth perverted, and, as I fully believe each charge admits of the fullest and most complete explanation, I have felt it my duty to address to you this communication.

"Conscious that the affairs of this Society have been conducted by the Officers with a high integrity of purpose, and with a view to the best interests of the policy-holders, and having nothing to conceal as to the condition of the Society, or the manner in which its affairs are conducted, I would respectfully request that, in the exercise of that authority conferred upon you by law and appointment to your position as Superintendent of the Insurance Department, you would institute such investigation into the condition, affairs, and transactions of the Society as you in your discretion may consider that the presentation of these charges demands.

"Feeling aggrieved that charges so unfounded should be preferred, jealous of the honor of the Society, and that of its Officers and Directors, I would respectfully solicit that, with as little delay as possible, you would give your attention to the subject.

"I am, very respectfully, your ob't servant,

"(Signed) WILLIAM C. ALEXANDER.

"President."

The Superintendent subsequently replied that he would commence an examination of the Company at as early a period as his official duties would permit.

Before an examination had been made by the said Superintendent, a person professing to be the representative of a newspaper in this city called upon the Officers of the Society, and informed them that this newspaper had in its possession, for publication, a copy of charges against the Society, made by La Roy S. Gove, and that he, the professed representative of the newspaper, was prepared to enter into a negotiation for their suppression. The officers of the Society refused to pay for such suppression, and the charges were thereupon published in the newspaper which the person claimed to represent.

The Directors of the Society again requested the Superintendent of New York to make the examination without delay. But, in consequence of the legislative examination of the Insurance Department of this State, the Superintendent was again unable to give it immediate attention. The Directors also requested the Commissioner of the State of Massachusetts to make an additional or concurrent examination, which he consented to do, and has associated with himself the undersigned to assist him in the investigation.

Upon assembling at the offices of the Society, the undersigned at once entered upon the investigation of Mr. Gove's charges made to the New York Insurance Department, and since widely spread before the public in printed form. The Massachusetts Commissioner, at the meeting called to make the investigation, stated that he caused Mr. Gove to be notified in writing of the investigation, and had invited him to furnish testimony in support of his charges, and presented the affidavit of personal service of the notice upon him.

Mr. Gove did not appear or offer any testimony to sustain his allegations.

The minutes of the Society and of the several Committees, the account books, cash books, and check books of the Society were then laid before the undersigned, and carefully examined. The Officers of the Society and such other persons as the undersigned desired, were examined under oath, and each specific charge was carefully and exhaustively enquired into; and the undersigned certify that, excepting a clerical error in publishing among the list of paid policies a contested claim, which error was rectified as soon as discovered, the charges and specifications are untrue and malicious. The amount of the policy referred to was returned to the Insurance Departments as a liability in accordance with the rules of the Departments with regard to contested policies, which fact corroborates other testimony showing that the error was merely clerical.

The undersigned, following in their investigation the order in which the charges and specifications are presented, find:

1. That the Society possessed the legal power to erect their building, which contains the offices of the Society, at the corner of Broadway and Cedar Street, and the undersigned refer to the opinion of Prof. Theodore W. Dwight respecting the same.

2. They further find that the erection of the building was a wise and judicious measure, and is a safe investment, yielding an increasing annual income of more than five and a half (5½) per cent., leaving the Society free from rent for its own offices; and, if the value of the offices occupied by the Society is taken into account, we are of opinion that it has no money invested to better advantage.

3. They further find that, in reference to the compensation of the officers, both the method of payment and the amount paid as charged are untrue. From the evidence submitted to them, the aggregate sum paid for salaries by the Society during the first eleven years of its existence, as compared with its income during the same period, produces a ratio at least as favorable as that of any life company—(for the same years from 1860 to 1870 inclusive)—organized during the year in which the Equitable was organized, or since that time, or even prior to that time, with the exception of two, the preliminary expenses of those two companies not being taken into account in the estimate, because they were organized more than fifteen years previous to 1860.

4. They further find that no loan was made on the 20th of September, 1870, or at any other time, upon New York Central and Hudson River Railroad stock. But they find, on the contrary, that no loan has been made by the Society except upon security authorized by and in accordance with the law.

5. The charge that the building committee or any of the Directors are or were interested, directly or indirectly, in the quarry from which the stone for the building was taken, or pecuniarily interested in any other contract of the Society, was most carefully and minutely examined, and the undersigned declare the charge to be both false and malicious. On the contrary, the undersigned find that the erection of the building in all its details was carefully watched over by the Directors, and particularly by the Building Committee, with as much attention as a prudent man gives to his own business.

6. That the mode of loaning the money of the corporation was particularly examined, and meets the approval of the undersigned, who find the charges of favoritism wholly unfounded, and, other things being equal, principals are given the preference over brokers.

7. The Secretary of the Society, who formerly was in business as a fire insurance agent and general broker, relinquished the charge of the fire insurance business of this Society when he became connected with it three years ago. The Secretary has not attended to the fire insurance business of the Company, and no director or officer is or has been interested in such business, nor has the Secretary loaned money on policies as charged.

8. It is proved to our satisfaction that the Directors of the Society have not loaned the money of the Society to themselves upon securities not allowed by law, and that no loans have been made through the favoritism of its Officers and Directors on inadequate security or contrary to law.

9. In the opinion of the undersigned, the Directors, so far from having managed the affairs of the Society wastefully or extravagantly, have managed them prudently and successfully, and have made no false returns to the Insurance Departments.

10. The rates of commission paid to agents as charged are untruly stated. No salaries are paid to agents in addition to commissions.

11. They find from the testimony given by the Officers and Directors, that the establishment of an Agency in Great Britain has not proved a failure; that the agent sent there is not inexperienced in the insurance business; that he receives no salary, but that his commissions are guaranteed for three years to an extent of $10,000 per annum; and that the result of his labors, in introducing the Society's business there, has been satisfactory to the Board of Directors.

12. The charge that money has been wastefully spent upon the building is sufficiently answered by our opinion of the investment.

13. They further find that the Society does not falsely advertise itself as a mutual company. The necessity of a capital stock arises from the fact that, before the organization of the Society, laws were enacted in New York requiring all companies organized after such enactment to have a capital stock and to make a deposit of one hundred thousand dollars with the Insurance Department, as a guarantee to policy-holders. The annual dividends upon this stock are limited to seven per cent. This amount is nearly earned by the investment of the capital; all of the profits are divided amongst the policy-holders; the stock bears no such market price as is charged, and, as no unlawful gains can be made thereon, the ownership of the stock can only be desirable for the protection of the Company. The provision as to a stock management is not concealed from policy-holders, but, on the contrary, the Directors are of opinion that it forms one of the greatest safeguards of the Company.

14. In conclusion, the undersigned desire to say, that they are unable to find an honest motive for the presentation of charges so totally unfounded. This investigation has shown only an honest and efficient management of the Society. The Massachusetts Commissioner, with Profs. Theodore W. Dwight, of Columbia College Law School, and Junius B. Wheeler, of the West Point Military Academy, will at once proceed to examine the details of the management of the Society from its foundation, and Messrs. Upton, Spaulding, Latasa, Kelly, Schwab, and Fogg will examine its assets and investments, which the undersigned will report upon as soon as the investigations are concluded. From the wide publicity given to these charges, it is thought best to make this report upon them at once. The undersigned desire to express their unqualified approval of the action of the Society in resisting the attempt to extort money from it under color of these charges. And, finally, the undersigned take great pleasure in bearing their unanimous testimony to the faithful and successful management by the Trustees and Officers of the Society of the great trust reposed in them.

THE SHEFFIELD SCIENTIFIC SCHOOL

Offers professional training to Civil and Dynamical Engineers, Chemists, Geologists, Naturalists, etc., and also courses preparatory to such pursuits as Mining, Medicine, Agriculture, Manufacturing, etc. Letters may be addressed to Prof. D. C GILMAN, Secretary,
New Haven, Conn.

BARNES' ONE-TERM HISTORY.

A BRIEF HISTORY OF THE UNITED STATES, $1 50.

This is probab'y the MOST ORIGINAL SCHOOL-BOOK published for many years, in any department. A few of its claims are the following:

1\. BREVITY.—The text is complete for Grammar School or intermediate classes, in 290 12mo pages, large type. It may readily be completed, if desired, in one term of study.

2\. COMPREHENSIVENESS.—Though so brief, this book contains the pith of all the wearying contents of the larger manuals, and a great deal more than the memory usually retains from the latter.

3\. INTEREST has been a prime consideration. Small books have heretofore been bare, full of dry statistics, unattractive. This one is charmingly written, replete with anecdote, and brilliant with illustration.

4\. PROPORTION OF EVENTS.—It is remarkable for the discrimination with which the different portions of our history are presented according to their importance. Thus the older works, being already large books when the Civil War took place, give it less space than that accorded to the Revolution.

5\. ARRANGEMENT.—In six epochs, entitled respectively Discovery and Settlement, the Colonies, the Revolution, Growth of States, the Civil War, and Current Events.

6\. CATCH-WORDS.—Each paragraph is preceded by its leading thought in prominent type, standing in the student's mind for the whole paragraph.

8\. KEY-NOTES.—Analogous with this is the idea of grouping battles, etc., about some central event, which relieves the sameness so common in such descriptions, and renders each distinct by some striking peculiarity of its own.

8\. FOOT-NOTES.—These are crowded with interesting matter that is not strictly a part of history proper. They may be learned or not at pleasure. They are certain in any event to be read.

9\. BIOGRAPHIES of all the leading characters are given in full in foot-notes.

10\. MAPS.—Elegant and distinct Maps from engravings on copper-plate, and beautifully colored, precede each epoch, and contain all the places named.

11\. QUESTIONS are at the back of the book, to compel a more independent use of the text. Both text and questions are so worded that the pupil must give intelligent answers in his own words. "Yes" and "No" will not do.

12\. HISTORICAL RECREATIONS.—These are additional questions to test the student's knowledge, in review, as, "What trees are celebrated in our history?" "When did a fog save our army?" "What Presidents died in office?" "When was the Mississippi our western boundary?" "Who said, 'I would rather be right than President?'" etc.

13\. THE ILLUSTRATIONS, about seventy in number, are the work of our best artists and engravers, produced at great expense. They are vivid and interesting, and mostly upon subjects never before illustrated in a school-book.

14\. DATES.—Only the leading dates are given in the text, and these are so associated as to assist the memory, but at the head of each page is the date of the event first mentioned, and at the close of each epoch a summary of events and dates.

15\. THE PHILOSOPHY OF HISTORY is studiously exhibited—the causes and effects of events being distinctly traced and their interconnection shown.

16\. IMPARTIALITY.—All sectional, partisan, or denominational views are avoided. Facts are stated after a careful comparison of all authorities without the least prejudice or favor.

17\. INDEX.—A verbal index at the close of the book perfects it as a work of reference.

It will be observed that the above are all particulars in which School Histories have been signally defective, or altogether wanting. Many other claims to favor it shares in common with its predecessors.

☞ To teachers who will adopt the work, if approved, a sample copy will be sent on receipt of 75 cents. Send for our Catalogue.

Just Published:

A COMPENDIUM OF COMMERCIAL LAW,

ANALYTICALLY AND TOPICALLY ARRANGED,
WITH
Copious Citations of Legal Authorities, for the use of Lawyers, Law Students, Business Men, Commercial Colleges, etc.

By CALVIN TOWNSEND,

Counsellor-at-Law; author of "Analysis of the Constitution of the U. S.," "Analysis of Civil Government," etc.

One vol. 8vo, 600 pages. Price, $4.

The chief peculiarity of this work consists in the topical and logical arrangement of the subjects embraced, and their analytical divisions and subdivisions.

The range of topics embraces Contracts, Negotiable Papers, Agency, Partnership, Corporations, Guaranty, Sales, Payments, Tender, Liens, Hire, Insurance, Arbitration, Wills, Administrators, or Executors.

Though recently published, it has been very warmly commended, as will be seen from the appended extracts taken from a few of the many testimonials that have been received by the publishers:

Judge E. Darwin Smith, of the Supreme Court of New York, says: "The 'Compendium of Commercial Law' is admirably arranged for teaching to the best advantage, and in the shortest possible time, the subjects embraced in the work.

"I think it an excellent book for the young lawyer, the law student, and the business man. They could hardly put their hands on a better one of an equal number of pages."

T. M. Cooley, Chief-Justice of Michigan, says: "I find the work admirably adapted to the purposes for which it is designed. The author has evidently done a great deal of patient and conscientious work upon it. His methodical habits of mind have enabled him to make its subdivisions clear, and the important points distinct and palpable."

John F. Dillon, Judge of the U. S. Circuit Court for the 8th Circuit, says: "It is especially adapted, by reason of its analytical features, for the use of Commercial Colleges, business men, and law students."

George F. Danforth, one of the most Eminent Lawyers in Western New York, says of the book: "I have carefully examined the work, and find its arrangement excellent—the statement of legal rules and principles accurate, and the whole book well adapted to serve the designed end.

"It cannot fail to be useful in the hands of students, and will serve the purpose of business men better than any similar work to which my attention has been directed."

From the Albany Law Journal, Feb. 3, 1872.—"The Topical Analysis of Contracts, with which the work begins, is complete and exceedingly clear. It is alone worth the price of the book. It may be made profitable to the student of the legal profession. It is copiously furnished with citations, and the statement of principles is, in every instance, concisely made. The style, indeed, is in marked contrast, in point of terseness and brevity, with many of the professional and educational productions of the present day."

Copies will be forwarded by mail on receipt of the price.

The Nation.

NEW YORK, THURSDAY, APRIL 18, 1872.

The Week.

THE canvass was opened on the Liberal Republican side in this city on Friday by a mass meeting in the Cooper Institute, and we believe it was the most densely packed meeting which ever met there. All approach within fifty yards of the entrance was next to impossible in the early part of the evening, so great was the crowd in the street. All this is a matter of fact. The composition of the meeting is a matter of opinion. To all outward appearance, the audience was composed of that sober, thoughtful middle class, equally removed from wealth and poverty, which one has seen in the same room on all great occasions since 1860, such, in short, as was there at the first emancipation meeting in 1862, and at the reform meeting of last spring. It is, of course, open to anybody to say, and it is said, that the crowd was drawn together by curiosity; but, if we may judge by outward signs, it was as enthusiastic a meeting as was ever got together in this city. The speaking was done by Senators Trumbull and Schurz, the former making a strong, clear, but unadorned statement of the charges brought by the promoters of the new movement against the Administration, and the latter clothing it all with that powerful and *telling* rhetoric of which he is now the greatest master in America.

Mr. Schurz made a good point in his speech when he asked attention to the fact that within the last twelve years of war and reconstruction about one-third of the whole number of voters in the country had attained majority and had been receiving their political training. For good or for bad, necessarily or unnecessarily, this period of twelve years has been full of a spirit which was not that of the fathers and founders who ordained a government of constitutional principles, of respect for constitutional checks and for law; who held in wholesome and jealous fear the government of men and of momentary measures; who believed in local self-control, and looked with suspicion upon the advances of the Federal Government towards the centralization of power. The boy born in 1851 has, ever since he was ten years old, seen in operation not Personal Liberty laws, but general orders promulgated by major-generals, and resolutions of Congress, and commands of the President directing State governments how to frame their fundamental law. Unless we are permanently to change our form of government as already we have for the moment changed it, it is time the new voters should take lessons in something besides centralization.

It ought to and must be admitted by the friends of the Cincinnati movement that, owing to the condition of local politics, it makes its appearance in this city under some serious disadvantages. It gets the support, as a matter of course, of a large number of persons who are dissatisfied with the Administration, for disreputable as well as respectable reasons. But there is no mode that we know of keeping them out of it; and if they support a good ticket on a satisfactory platform, good men have no more reason for complaining of them than of complaining of Satan for suffering himself to be sprinkled with holy water. Those who insist that every reform organization shall be supported from the outset only by Christian patriots, and shall only be composed of saints and sages, are, we greatly fear, considering that they are aware of the present state of human nature, not particularly anxious for reform at all; that is, like our Congressional civil-service reformers, they are in favor of a party of reform, but they cannot bear a party which allows bad men to attend its meetings, and are determined to wait for reform till a party appears which shall contain none but the pure and good. A large number of persons will go to Cincinnati, both from New York and Philadelphia, in the character of hungry and dissatisfied vultures who have not had a fair chance at Custom-house and other carrion; but there is this to be said about their appearance, that they have a keen scent, and go to no place where they do not believe there is a good chance of a carcass. So that we may conclude from their adhesion to it, that they at least believe the Cincinnati movement is going to succeed.

The friends of the Administration are at this writing preparing for a counter-demonstration, which will take place after we have gone to press. To their call is appended a list of names of merchants and bankers which could hardly be surpassed in respectability. It would, however, have more value—we were going to say some value—as a political sign, if any other candidate than General Grant were in the field. Merchants and bankers very naturally, and indeed properly, dislike and distrust the unknown, and cling to the thing that is. We venture to say that there are hardly ten men on the list before us who, if Charles Francis Adams, for instance, is nominated at Cincinnati, will not vote for him, in spite of their present endorsement of the Administration. It must be remembered, too, that when that eminent man, Richard B. Connolly, wanted to get *his* administration "endorsed" before the election of 1870, he went down town and took his pick of the merchants and bankers, the very pink and pride of Wall Street, and they not only "endorsed" him, but certified that his accounts were correct without properly examining them. Fernando Wood's "endorsement" in 1855 was also unsurpassed in commercial respectability. We say these things not by way of casting discredit on the motives or the character of the signers of the present call, but to enable observers at a distance to appreciate the demonstration properly. We must remind them, too, that the Custom-house and the special agents of the Treasury weigh heavily on the souls of importers. It is hard for a man to refuse to endorse an Administration which might any day fill his office with police, and carry off his books, papers, and private letters, on a mere allegation of suspicion of frauds on the revenue. The absence of German names from the call is a fact that we take to be significant of much.

A meeting to support the Administration was held in Brooklyn on Wednesday of last week, which was made remarkable by Mr. Henry Ward Beecher's first appearance in the canvass and, as usual, it was a very happy one. He is unqualified in his adhesion to General Grant, but he admits that the Cincinnati Convention may do good by its debates if it does not by its nomination. "If," he said, "they can raise up a more loyal power within the land; if they can raise a platform which shall be higher than it would have been if raised by us, we will accept their influence and use it." Of Sumner, and Schurz, and Trumbull, he spoke in terms of generous and manly praise. He did full justice to Mr. Sumner's claims to the respect of the Republican party, and declared that, no matter how Mr. Schurz might be "caricatured and traduced," he listened to him with great respect as a "wise" and "eloquent" and "honest man;" and that the same was true of Mr. Trumbull. Now, we would call the attention of the champions of the Administration to the fact that the value of Mr. Beecher's support of General Grant, instead of being diminished, was greatly increased by this decent acknowledgment of the personal merit of General Grant's leading opponents.

The latest important accessions to the Liberal Reform ranks are those of Governor Blair of Michigan and Governor Palmer of Illinois. Governor Palmer is a politician, in the best sense of that word, who is on the intellectual and moral level of Trumbull, Governor Cox, Mr. Schurz, and the other best adherents of the new movement. He adds one more to the roll of distinguished Illinois Liberals enumerated by Mr. Trumbull the other night. Another reported accession is that of Mr. Foster of Connecticut, late acting Vice-President, and by the time this reaches our readers announcement will probably have been made of a delegation from Massachusetts. If rumor speaks truly, it will be a delegation containing some names which are no gain to any cause—names which cannot be refused rather than names much to be desired; but these will be greatly outnumbered by those of patriotic men sick of the present state of affairs, hopeful of bringing it to an end now, and determined at all events to bring it to an end soon. We think that with every day the movement increases its claim to the respect and furtherance of all good citizens, and as we look to see many wise men in council at Cincinnati week after next, we suppose its claim to respect may reasonably be expected to go on increasing until next November, when it should certainly be in a position to contest the election with every prospect of success.

General Bartlett, of Massachusetts, has just written an excellent letter full of good sense and right feeling, and full, too, if we are not mistaken, of that political sense which is not always found in union either with good sense or with right feeling. It had been said that General Bartlett was going to Philadelphia as a Grant delegate and his letter he writes for the purpose of saying that he is not going to Philadelphia, that he is opposed to General Grant's re-election, that his eyes are turned towards Cincinnati, and that he hopes for the nomination of Mr. Charles Francis Adams, and expects that gentleman's election if the Liberal Reform party should place him before the country. All this General Bartlett says, not only in a straightforward soldierly way that is quite taking, but also with a happiness of political phraseology which ought to shake the soul of Dr. Loring within him. It must be sufficiently alarming to chronic candidates for the Governorship to find a young soldier who can turn out such a campaign "war cry" as the statement that he believes in "Administrations which are above suspicion, and not in Administrations which are above investigation."

The most important incident of the week in Congress, except the attack on civil-service reform, has been the split in the Committee of Ways and Means, the free-trade majority of which, after four months' labor, produced a bill which the chairman, Mr. Dawes, cannot approve of, and he has accordingly suffered something in the nature of deposition. The new bill adds to the free list, and makes divers serious reductions in duty; that on pig-iron, for instance, is reduced from $7 to $6. The duties on wool, woollens, and cotton goods are all reduced, but as there is no chance whatever that the bill will pass, it is interesting merely as an indication of the drift of sentiment in the House, and as an illustration of the trouble which surrounds the tariff. The protectionists are very angry with Mr. Blaine, who appointed the committee.

The vote of $50,000 for the expenses of the Civil-Service Commission came up in the House last week, and, after a short debate, in which it was fiercely denounced by the friends of the Administration as a "humbug" and "the greatest humbug" of the age, the appropriation was contemptuously cut down to $10,000, the whole performance being accompanied with loud laudations of General Grant and professions of zeal for his service, by a majority of 92 to 59. Revenue reform was also vigorously denounced in the course of the debate as another "humbug." General Butler moved to strike out even the $10,000, but afterwards repented. "Reform inside the party lines" is evidently no easy work. It apparently has about as hard a time as "liberal views" had in the last Œcumenical Council. The political infallibilists are evidently as stern and unrelenting as the ecclesiastical ones.

The *Sun* broke down in its charges against Mr. Robeson, but that does not make it any the less true that Mr. Robeson has committed a violation of the law in disposing of the public money, which would deserve the severest punishment, if the Republican majority in Congress had not deliberately condoned last fall a disregard of the law on Mr. Boutwell's part still more serious; and the two cases together furnish a striking illustration of the state of mind into which the officers of the Government have got with regard to the law, and of the necessity for some upturning which shall crush this growing tendency to arbitrary and insubordinate conduct. The fact is that certain contractors named Secor, who had built vessels for the Government during the war, pleaded that, owing to the rise in prices, they had lost money by it. This was a wrong which only Congress could right; so a bill was passed directing an enquiry by a board of officers. This board awarded the contractor $115,000 additional, which Congress appropriated and directed to be paid. But the Secors came again, and said to Secretary Robeson that this was not enough, so he, without any authority of Congress, appointed another board of his own subordinates, which awarded the Secors $93,000 more, and this he paid, without any appropriation whatever, or any warrant of law.

The Administration managers in Pennsylvania certainly seem to have been smitten with blindness, and to have offered the decency of the State so flat and insulting a defiance as will make it absolutely impossible for Pennsylvania to be carried by the Administration Republicans either in October or November, unless there is great "breaking of slates," and indeed, in our belief, the State can nohow be carried for the Republicans. We cannot conceive what they have been thinking of, but it seems as if it must be true that the State ticket was dictated from Washington, where people do not know the rapidity with which public sentiment outside has changed within the last month; or else as if it must be true that Pennsylvania is helplessly bound, hand and foot, by railroad rings that are more nearly omnipotent than the country has ever yet believed. The State ticket is on all hands denounced as one not fit to be made, and many Republican organs are urging the people to repudiate the action of the Convention, and elect their own delegates to the Philadelphia Convention. We have advices pointing to the gubernatorial nomination of McClure as a Liberal Republican; but nothing seems very definite, and it is difficult to believe in a Democratic break-up in the face of nominations like those of Hartranft and Allen, while the Democracy have men like Cass and Buckalew to nominate, and Liberal Republicans like Hickman and Lowery, and the Reformers in Philadelphia stand ready to destroy the Hartranft and Cameron Republicans, as years ago they abandoned the Democracy. Hardly anywhere else in the Union is there a livelier picture of the transition state of politics than Pennsylvania presents. The Republican party there, diseased, confused, without a policy, wretchedly corrupt, the prey of rings and political rascals, seems to want but the *coup de grace*. A party approaches its end when men such as McClure and Forney can figure in it as reformers; we only hope the finishing stroke may be given it by men who will head an assault in which the McClures and Fentons and Curtins are to be found in the rear, and taking instead of giving orders.

The Florida trouble is becoming more complicated and amusing. Reed, the Governor, was impeached before the Senate on the 10th of February, and by the constitution he was thereupon *ipso facto* suspended from office, and the executive authority lodged in the hands of Day, the Lieutenant-Governor. But the Senate adjourned without trying the impeachment, and this, Reed now maintains, operated as a discharge, and, getting the Secretary of State on his side, he launched a proclamation fortified with "the great seal," declaring Day a usurper, and claiming the allegiance of all good citizens for himself. Two, however, can play at this game. So Day has got out another proclamation, which is as good as Reed's, but of course wants "the great seal," a fact which he evidently feels bitterly, and says Reed got it for his proclamation through the perfidy of the Secretary of State. We should think that, under the circumstances, Reed would be justified in using any big seal he could find, but he contents himself by stating, "in lieu of a seal," that "the same has been secreted or stolen." Fears are entertained that the two rivals may have a fight, and it will be a knotty point for the President to decide which is entitled to Federal assistance.

The brief history of the Mormon troubles now just brought to an end by a decision of Chief-Justice Chase's, appears to be pretty much as follows. A year or so ago, Dr. J. P. Newman, a Methodist clergyman of Washington City, went out to Utah, on the profitable errand of having a grand discussion of polygamy and its Biblical warranty, he to be on one side with his more or less profound erudition, and such eminent Hebraists as Pratt and Orson Hyde on the other. Whatever else this valuable conference accomplished, it determined Dr. Newman to encourage a crusade against the Mormons, and to this end he instigated the President to authorize their prosecution and to pursue them by all means available, and, as now appears from the Chief-Justice's decision, by means as illegal and regardless of law as any that could well be thought of. The principal instrument of this prosecution was Judge McKean, an enthusiastic Methodist, who went out to Utah not to do his work as a judge, but to root wickedness out of the land and crusade against polygamy. He is ignorant of law, somewhat feather-headed, and as much out of place in a court of justice where he sat on the bench delivering stump speeches as any man well could be anywhere in the world. Judge McKean perceived that he could do nothing unless he could erect his Territorial court into a United States Court, and this he proceeded to do. Why he did not declare himself to be the Federal Executive and Legislature, and proceed to levy troops and make war upon the Territorial government, is to be explained by prudential reasons, we suppose; as for color of law, he had as good right to do that as he had to do what he did. The law, as again and again enounced by the Supreme Court, is that such courts as his are not United States courts, except for certain specific purposes, and that they never can be United States courts for the enforcement of a Territorial statute, which is in no sense a law of Congress, and which a Territorial court must enforce. It must enforce it, too, by means of its own Territorial officers. What McKean did was to make his court a United States court when it was not; to enforce in it Territorial statutes which, had his court really been a United States court, would have had no place in it; to mix with these laws of Congress; and for executing the processes of this hybrid tribunal, to use not constables and sheriffs of the Territory, but United States marshals, and this because by their assistance grand and petty jurors pledged to indictment and conviction could be secured.

All this was done not in a corner, but against the reiterated appeals of the United States District Attorney, who insisted upon the foolish and lawless violence of the whole proceeding. It was done, nevertheless, till now the Chief-Justice brings McKean up with a very round turn, declaring that for a twelvemonth past the Territorial court has been committing monstrous judicial usurpations and trampling on law. This decision will at once release 138 persons from illegal arrest or imprisonment. The position was a delicate one for the Administration. It was indeed between the devil and the deep sea. On the one hand, it had to adopt and sanction the grossest illegality; on the other, it had to offend—or fancied it had to offend—the Methodist denomination, which it appears to have paid the compliment of presuming to be less regardful of the authority of the law than most of the Methodists' fellow-citizens suppose them. The Chief-Justice has relieved it from this embarrassment, for Dr. Newman himself will not now ask the President to go on further in Judge McKean's direction. Meantime, the Mormons, to whom all this futile harrying has attracted a sort of sympathy which is not their due, have formed a State Government, though they probably have not more than three-fourths of the requisite number of inhabitants to make even one of our absurdly small Far Western State populations, and have elected as prospective Senators Mr. Hooper, long their delegate, a monogamous and otherwise respectable person, and the Hon. Thomas Fitch, a person such as is apt to be sent up as first Senator from newly-formed States.

The *World* desires to know why, if, as we say, Continental jurists treat the consequential damages claim as preposterous and outrageous, we object to their submission to the Geneva Commission, as in that case they are sure to be rejected. We object to the submission of the claim, and hope England will not agree to it, because we do not wish it to pass into history that the United States ever laid anything so absurd before a respectable tribunal. We prefer that it should be said that the Treaty was killed by the blunder of one enterprising gentleman, and that the two Governments had to begin over again; we object to it, also, because we do not wish to see even as much recognition as would be contained in the submission of the claim given to the theory that the escape of a belligerent cruiser from a neutral port made the neutral liable for the cost of the subsequent military operations of the war. It would be certainly revived, no matter how the Commission passed upon it, and would be a standing menace to all small or unarmed powers in the hands of great ones; and, thirdly, we fear that, if the first great attempt at international arbitration is allowed to contain a strong element of the farcical and ridiculous, the whole principle will fall into disrepute. The great military states are already laughing over it; their laughter would become uncontrollable when Mr. Bancroft Davis rose to prove, as self-respect would compel him to do, that Lee would have disbanded his forces after Gettysburg if he had not heard that the *Alabama* was at sea, with two guns and a crew of one hundred and twenty men.

We believe, also, that it would be fatal to the principle of arbitration, if it were once established as a precedent that anything could be submitted to the arbitrators except what the parties agreed to submit—if, in short, the impression got abroad that there was a danger that the Boards of Arbitration would be converted into courts of general jurisdiction, before which any power could cite any other power on any charge it pleased. The world is not yet prepared for any such tribunal, and we doubt if it ever will be. To make international arbitration succeed, the jurisdiction of the arbitrators must be confined to points which the parties concur in presenting, and not points which either party would like to present, or thinks, for some reason or other, ought to be presented. In short, the object of the Treaty of Washington was really to settle what the American "case" should contain by way of claim; and, therefore, all talk of "not submitting to British dictation as to what our case should contain" shows either ignorance of the whole matter or a want of comprehension of the nature of the process called arbitration. The latest news from England shows that the ministry have filed the English replication in due course, with a statement which leaves no doubt that they will withdraw if the Commission is asked to pass on the claim for consequential damages. In this country there are visible signs of a disposition on the part of the Administration to drop these claims. We should be sorry to see this mark of good sense made the occasion of a party triumph over them. A resolution looking in this direction was brought into the House last week, and the organ of the Administration in this city makes a suggestion of the same nature.

One of the strangest bits of news which has come from Europe since the overthrow of the French Empire is that the Austrian Empire is paying its way—that is, that its revenue equals its expenditure, including the interest on its debt. The Minister of Finance had last year calculated on a deficit of $15,000,000, and asked for permission to issue $30,000,000 bonds to meet it; but it has turned out that there is no deficit at all, that the bonds will not have to be issued, and that, indeed, there are signs of a surplus. In spite of all the disorders, convulsions, and dissensions of the last four years, the revenue has been steadily increasing at the rate of about nine per cent. a year. Such are the effects of publicity and freedom, even if it is tumultuous freedom, on popular energy and national wealth!

THOSE JUDGES.

THE Bar Association has completed its labors in the matter of the prosecution of the corrupt judges, in so far as the presentation of the evidence in the preliminary enquiry before the Investigating Committee goes, and have published a summing-up through the newspapers. Judge Barnard has also made and published a protest, in which he denies the right of the Legislature to remove him by concurrent resolution without trial, or to take cognizance of any charges against him arising out of acts committed, or alleged to have been committed, before his last election in 1868. The evidence in full will, we believe, be laid before the public in a week, or thereabouts, and we think we can say with safety that nothing like it has ever been laid before a civilized community before. Whether the Legislature can punish Barnard for misconduct occurring before 1868 is a point of some interest, even if it possesses no legal importance, and his raising it shows a very shrewd appreciation of the wide prevalence, and increasing prevalence, in the public mind of what we may call a low estimate of the importance of character, either in officers or individuals. It is, in fact, this indifference to a man's general course in which Barnard and Cardozo, and all their kind, find their greatest security against justice. Even the Bar Association has, in an incautious moment, given some countenance to the practice of taking short and disconnected views of men's careers in Mr. D. D. Field's case. That gentleman, a member of the Association, was charged in proper form before them with various acts of professional misconduct, and he challenged investigation, and the case was referred to the proper committee. It has, however, never since been heard of, owing—if we are rightly informed, and we think we are—to the fact that the committee concluded that inasmuch as the acts complained of were committed, if committed, before 1869—that is, before the formation of the Association—the organization could take no cognizance of them two years later. Now, the object of the enquiry was not to find out whether Mr. Field had committed certain acts, and, if he had, to punish him for them specifically—for the Association had no such power—but to find out whether he was a fit person to belong to an organization having for its *raison d'être* the purification of professional morals; and of course it ought not, on any view of human character ever propounded, to make any perceptible difference in one's estimate of a lawyer's fitness for the membership of any such body whether he committed certain offences in 1867, '68, or '69. Nothing would suit all the great body of evil-livers better, and nothing more surely break down all moral restraints on them, than the adoption by the public of short statutes of limitation under which every one could "make a fresh start" every year or two.

Judge Barnard is now trying to take advantage of this same tendency. He was re-elected in 1868 by a community which was in a great measure ignorant of his real character. It is true he was somewhat abused by the newspapers, and lawyers talked in private over his iniquities, but nobody had risen up to make distinct charges against him, and the great mass of the voters knew of nothing positive against him. If, however, he committed in 1867 acts of gross corruption and indecency, it is proof enough to all reasonable men that he is unfit to administer justice in 1872, unless it can be shown that his character has in the interval undergone a complete transformation, such, indeed, as it is very doubtful if anybody's character ever underwent, and the existence of which has never yet been proved except by many years of probation. If Barnard, between the years 1860 and 1868, was guilty of doing what the Bar Association says he did, and offers proof that he did—granting orders unknown to the law, entering into corrupt leagues with counsellors and suitors for the denial of justice, the perpetration of fraud, and the spoliation of property-holders, using indecent and obscene language on the bench and boasting of it afterwards, and during that period causing, by his violence and unscrupulousness, great loss and damage to the citizens of New York, and indirectly great depreciation in American securities, he is still unworthy of a judicial position—first, because there is no reason for believing that he is any better now than he was in 1868, and a good deal of reason for thinking he is worse; and, secondly, because even if he is better, people cannot be got to believe that he is. This last point is constantly overlooked in estimating a judge's qualifications. People talk as if a judge's misconduct only affected those who came into court, and as if, if nothing positive could be proved against him, nobody had any right to complain of him. But this is a most mischievous delusion. Every judge on the bench owes it to every man in the community not only to do justice but to bear a good reputation; that is, he has not only to be pure, but he has to conduct himself in such fashion that there shall be a general belief in his purity. If he so conducts himself as to expose himself to general suspicion, we are entitled to his removal, because the value of every man's property and earnings depends in some degree on the general confidence in the integrity of the courts. If judges are generally believed to be rascals, all stocks and bonds and real estate and commodities of all sorts within their jurisdiction, and through these things the wages of all labor, are depreciated under the influence of this belief in a greater or less degree. It is not for the service of actual litigants only that judges exist, but for the protection, peace, and security of every man who has rights which may at any time become the subject of litigation; and for the purposes of judicial reputation, it makes little difference whether the judge took bribes in October, 1868, or in January, 1869.

The importance of these considerations will appear all the more plainly if we call to mind the fact that what is called "equity" in our jurisprudence, and which all our judges are now empowered to administer, is emphatically a system which depends for all its value on the character of the judge, and it has grown up here and in England on the assumption that judges will always be men of the highest character. Under it judges are armed with literally tremendous powers. It gives single judges a discretion in dealing with men's property and liberty which is unknown at common law, where justice is in the main administered by juries, or by the full bench of judges, and which nobody dreams of committing to any other class of functionaries. The Court of Chancery in which the system was created has in five or six centuries had its scandals in the way of delay and expense, but, if we remember rightly, Bacon's case was the only one in which the integrity of its judges was ever assailed by a breath of suspicion; and his fault has come down in history, though it was never shown that it amounted to positive corruption, as an example of human weakness and folly over which men still shudder. He took presents from suitors, but he never sold justice; and yet, great, famous, and learned as he was, his downfall was sudden, complete, and frightful. Men felt instinctively, and they ought to feel still, that a court of conscience, such as a court of equity is, into which the property of widows and orphans is carried by guardians and trustees, in which property in dispute is locked up for safe keeping till the dispute is over, in which men seek for those exact, wise, and perfect remedies for wrong which abstract justice marks out, but which the barbarian plan of pecuniary compensation does not supply, is a court over which even the slightest cloud cannot be permitted to rest. We venture to say that it had not entered the head of any human being till about ten years ago that these vast powers which this system lodges in the judge's hands, would ever in a Christian community come to be used simply as instruments to enable depraved cheats and rowdies to enrich themselves and their companions; that the "master," or referee, whose function it is to inform the conscience of the court as to the facts, would be converted into a common "pal" of the judge, and that the two would combine to extort money from suitors and share it between them; that the "receiver," whose function it is to take solemnly into safe custody funds or effects whose ownership is in controversy, so that nothing may be lost till the question is settled, would become a sort of footpad or burglar, carrying a judge's order of appointment like a "sand-bag" or a "jimmy" or a false key, and prowling round houses and offices in search of plunder; that an "injunction," which is intended to restrain a man from the doing of what may to some one else turn out to be an irretrievable wrong till his right to do it has been judicially ascertained, would be used as a gag or handcuff to keep honest people from crying out or resisting while thieves were rifling their safes. And yet this has come to pass in this State. If anybody doubts it, let him read the evidence taken before the Investigating Committee. Yet the miserable men who have brought it about have not run away; have not resigned; have not ceased to appear on the bench; and one of them has even put in the plea that if he did it at all he did much of it four years ago, and that that part of it ought not to affect his credit. Was ever impudence like this? Does not the very spreading of such a plea before the public, with a preface and commendation signed by two leading lawyers, give us a glimpse of depths of degradation such as civilized men have rarely looked down into?

What heightens the effect of this spectacle is that it is gravely doubted still, first, whether the committee can be got to report in favor of impeachment, and, secondly, whether the Assembly can be got to impeach, not because they think there is nothing against these judges, but because some members think that, unless you can prove that a judge sold his decision for cash down, and can trace the money into his pocket, you have nothing against him. In other words, we are almost told that, as long as a judge is successful in destroying proof of bribery in money, he may be what he pleases. This is worth notice as an illustration of the danger, in a community in which the righting of wrongs and the remedy for all abuses has after all to be sought in public opinion, of letting things get very bad before you go to work to improve them. The mere familiarity with abuses blunts the perceptions on which we have to rely for reform, and when we think the time has come to begin the good work, we find that people are in doubt whether there is really anything wrong. In other words, we find the fulcrum for our lever is gone. After having endured the spectacle of an indecent and corrupt rowdy on the bench for twelve years, we find that men have begun to believe that indecency is not punishable, and that corruption consists only in the receipt of pecuniary bribes, and that even this is not reprehensible in law, unless somebody has seen the money paid. It is this state of the public mind that is the serious feature in the present crisis. The existence of thieves and robbers and rowdies among us is nothing. They can vex a community much, but they cannot mar it. The pistol and halter can, at worst, always remedy wrongs of their making. What is gravest in our condition is the rarity of honest indignation, the sneaking dread which decent men feel of looking a scoundrel in the eye or taking him by the throat, and, worst of all, the sickly and resigned amusement with which we watch the basest and meanest men masquerading in robes of office.

THE REQUIREMENTS OF THE PRESIDENCY.

In thinking of America, it is our habit rather to look forward than to look back. Ever since the close of our almost forgotten civil war we have been so accustomed to the knowledge of our prestige and importance, that we think with some surprise of what very little consequence we were at a period easily within the memory of living men. For the first thirty years after the Revolution we were a halcyon little dominion, nestling along the rim of the great unknown continent beyond us—a cool pastoral spot upon which the eyes of tired Europeans sometimes found it pleasant to rest. From a Utopia and a theme for the poets, as we grew, we became the aversion of Europe, which knew us as hard, ugly, bald, and commonplace, but still as insignificant. Forty years have gone, and we are as great physically, and morally as influential, as any country in the world, with the prestige of a future absolutely dazzling. These Atlantic States, in Jackson's time, were nearly all there was of America; they are now, as some one has said, but the "hem on the garment of the West." As we double in extent and numbers, we multiply infinitely the requirements of civilization and our demands upon the thought and attention of our rulers. Forty years ago, the office-seekers had to take a week to get to Washington; a deputation of them can now go and return in twenty-four hours. The country is cut up with innumerable railways and telegraph lines; men all over the land are in hourly communication with each other and with the capital, and in hourly communication with all parts of the world. Our Minister at St. Petersburg, in a cipher telegram, asks for instructions in his interview with Gortchakoff on the following day. Now, to a certain extent, we have it in our power to keep pace with these enormous advances. We may multiply departments, and departments may multiply bureaus. We may make the Commissioner of Patents or the Commissioner of Internal Revenue a cabinet minister. But during all this time, in the great changes which have become necessary, and the still greater ones that will be necessary, we can have only one President, and he can be no older, no stronger, no taller, and in all likelihood no wiser than the simple potentate who ruled the little pristine republic of fifty years ago. According to Lincoln's estimate, we are to have in 1900 a population of 100,000,000. There will be more railways, more telegraphs, more cipher despatches from ministers abroad, more offices, more claims, more complaints, and in place of the fourteen investigating committees now in progress, say twice that number. During all this time we shall continue to have but one President. Of course, nobody can be altogether adequate to the position, and we must put up with the best man we can get.

While the President has much less time than formerly to spare from his imperative duties, the accidental demands upon him are infinitely greater. The day begins at the White House by his explaining to a deputation with whom he has an appointment, that it is the intention of our Government to co-operate with that of Great Britain for the suppression of piracy in the Chinese seas, and the protection of the Christian converts in Japan against the persecutions of the Mikado. A few Sioux warriors are introduced by some members of the Society of Friends. Several New York whiskey-dealers desire an interview, but yield to a deputation of gentlemen who call with reference to the insertion in the Constitution of some recognition of the existence of the Deity. Permission is asked for leave of absence for our Minister at Madrid in order that he may effect the overthrow of the Gould influence in the Erie Railway, in which worthy object it is right that the President shall be interested. The English Minister calls to announce the birth of a princess, and is succeeded by some gentlemen who urge that the Government shall demand the release of the Fenian prisoners from "British dungeons." The President must then excuse himself to confer with the Secretary of the Treasury about the abolition of the duties on tea and coffee, and to indite a message recommending better provisions for education at the South.

We have long been familiar with the fact that, in this country, any man of respectable position is supposed to be able to do anything. It would be a delicate matter to insinuate to one of our able Sanskrit or Syriac scholars that he was not the fittest person in the Union to command an expedition for the recovery of the remains of Sir John Franklin. We have applied this notion to no position in the country more constantly than to that of the Presidency. Of course, a President cannot be politician, soldier, diplomatist, and financier; but it is plain that he should, if possible, be a man of affairs. It is the experience of every man that at every stage of his existence he has always done something which he would not do had he that time to live over. A man who undertakes any task of importance, and whose previous training has not been in the same line, is apt to do a great many such things. Mr. Kramer, the Minister at Copenhagen, will not again venture to read a letter from the State Department reflecting upon a servant of another country, at a dinner-table where a minister of that country is present. Mr. Kramer's extraordiary blunder, however harmless it may prove to be, was a very bad one for an envoy to make; but it was not so bad for Mr. Kramer when we consider that that gentleman had never learned his trade, and had not been trained in any calling the habits of which would help him in such a career as diplomacy. Everybody will make mistakes, but they should be made and corrected when men are young and in unimportant positions. To a man who has been long in any line of occupation, its traditions and habits come by-and-by to be instincts. In such a man there is a professional conscience quite apart from his personal conscience. There is a doctor's conscience and a lawyer's conscience. Clerks under government get to have an official conscience, the depth of which no man unaccustomed to their habits can understand. We have known men who could comfortably break the Decalogue in half a dozen places, and yet would cover themselves with sackcloth over an error in indexing or over a red line drawn in the wrong place. And this professional conscience is of great use; other men have to think and consider, while the possessor of this faculty goes straight to the point as by instinct. It is within the power of any one of our forty million people to have a claim against the Government, and to present his claim if he can pay his way to Washington. A man trained to affairs, the moment such a question is mooted, will bring to bear upon it the conscience bred of habit, and will go straight to the truth; while another, equally able, who is possessed of no such advantage, will be compelled to grope painfully about for an *a priori* solution of a matter upon which custom alone is competent to decide. Men, as we have said, must make mistakes, but they should be made at thirty rather than at fifty. No government can afford to furnish people with practical educations as ministers or judges or generals.

The Presidency is not the proper school in which to teach a man how to transact business. No man who has not acquired a knowledge of affairs before he reaches the age at which the Presidency is usually attainable is ever likely to acquire it afterwards. A knowledge of the tricks of electioneering he may acquire, just as any man may acquire a knowledge of battalion drill; but that familiarity with the principles and machinery of government and with the vast and complex interests of a great commercial society which a President needs, can hardly be acquired in less than a lifetime. To say this is to say that there is something absurd in the plea that if a President is honest he is all right. His personal honesty is comparatively a small matter, and it daily becomes smaller if his habits, pursuits, and experience do not give him an all but intuitive knowledge of the various ways in which frauds may be perpetrated, and do not enable him to see at a glance what it is a rogue is driving at. We have got to a pass in our history at which the most honest of Presidents, if he be honest only, may be every day made the pliable and unconscious tool of knaves. Let us add, too, that no man who is not a man of affairs and of education, can retain very long in the Presidential chair in our time, let him be never so honest, a very hearty horror of knavery. The means by which knavery is disguised, the dexterity of knaves in obscuring the line at which a transaction passes from the doubtful into the thieving phase, are matters which only practical eyes can discover, and no man can ever war stoutly and persistently against what he does not see clearly, and *for* what he does not hold tenaciously. No President will ever be a real friend of civil-service reform whose resolution a Murphy or a Forney has wit enough to "sickly o'er" with doubt or hesitation.

TROCHU'S LIBEL SUIT.

PARIS, March 29, 1872.

GENERAL TROCHU, the governor of Paris during the siege, has instituted an action for libel against a daily paper called the *Figaro*. The trial began on the 27th of March, and it has assumed quite an historical character. It is held in the court of assizes of the Palais de Justice. The court is made up of five *conseillers*, as they are called, one of whom presides. Even in a case of libel there is a public prosecutor, which seems rather useless, as the counsel of General Trochu would have been sufficient, and the general interests of society are not in question. But the public prosecutor is all-powerful in the French courts. The defendants have three advocates, Lachaud, Grandperret, and Mathieu. MM. de Villemessant and Vitu, the defendants, sit on a bench before their advocates, and Trochu, with his advocate and his *avoué* (a sort of solicitor), is placed before the court. Trochu has been allowed to bring with him four stenographers. When the court has appeared, and twelve jurors have been drawn and instructed in their duties by the president, the writ of the court of the *mises en accusation* is read. This act calls Villemessant and Vitu before the court of assizes on a charge of libel, and it contains all the passages of the *Figaro* which have been found libellous. The passages are too long to be extracted in full; the general impression which the writer of the articles wished to convey was this, that Trochu, having promised to defend the Empress and her government against any revolutionary movement, entered into a plot with the radical Left of the Corps Législatif, and abandoned and betrayed the Empress on the 4th of September. You will see how far this impression is corroborated or weakened by the evidence.

The defendants were first examined. Villemessant is the editor of the *Figaro*, which is perhaps the most popular paper in Paris. It is not the most respectable, and is decidedly sensational, satirical, anecdotic, and this very often at the expense of the truth. He was, he said, at Nice when the articles against Trochu were published under the name of "The Accounts of the 4th September." He never was a Bonapartist, and was even several times prosecuted under the Empire; but he confesses that he was disgusted with the conduct of Trochu towards the Empress simply as a woman, and when he read the articles against him he drank milk (*j'ai bu du lait*)—a popular expression for the sensation of a great pleasure. There was nothing worth mentioning in the depositions of Vitu, the author of the articles, a writer in the official press of the Empire, or of Trochu. General de Palikao was the last Minister of War of the Empire. He told how he had given the command of the twelfth corps to Trochu, though he knew him to be unfriendly to the Empire. This twelfth corps was at the camp of Châlons. Trochu soon returned from Châlons with an order from the Emperor naming him Governor of Paris. Chevreau, the Minister of the Interior, asked him, in the name of the Empress, to sign the decree of the Emperor. The relations of Trochu and Palikao were bad. Trochu had brought back to Paris 12,000 Mobiles of Paris, who had a very revolutionary spirit, and who had insulted Marshal Canrobert in the camp; he had not notified the Minister of War of their return. Trochu sometimes assisted at the Cabinet Council. He once made a proclamation to the Parisians, in which he spoke much of moral force. Rouher said that moral force was good, but armed force was sometimes necessary. "What would you do, general, if there was an *émeute?*" "I would die," said Trochu, "to keep the government whole." We all thanked him, says Palikao. On the 4th of September Palikao went out, the last of the Corps Législatif. When he arrived at the Tuileries the Empress was gone. He went home, and was very much overcome, as he had just heard the news of his only son's death at Sedan. Trochu entered his room at five, and told him: "I come to take your place." Palikao did not know what was going on outside; he only understood that Trochu was at the head of a new government; and it seemed to him "more than extraordinary" that the head of this government was the man who, in the morning, was Imperial Commander of Paris.

Henri Chevreau, the last Minister of the Interior of the Empress, is still a young-looking man of forty-eight years. He received Trochu in the evening of the 17th August, who handed him the decree of the Emperor naming him Governor of Paris. Trochu insisted that the decree should appear in the next morning's *Moniteur Officiel*, without waiting for a Cabinet Council. Chevreau went with Trochu to the Tuileries at one in the morning; the Empress got up, and there was a long conversation. The Empress finally gave her consent, and the decree appeared in the morning. In the interview, Trochu had protested his devotion to the cause of the Empress. On the day of the capitulation of Sedan, Chevreau first received the news, and communicated it to the Empress, who asked him at once to convoke the council. He then went after Trochu, whom he found just alighting from his horse. I announced to him the disaster. He seemed not surprised. I added that I had left the Empress in a great agitation; that she had been wounded as a sovereign, as a wife, and as a mother. "General, go and see her." Trochu said that he was tired; he was just from the fortifications; he had not dined; he would call perhaps in the evening. He never came that evening. On the 4th of September, in the morning, the Empress and Trochu were alone together for half an hour, at eight o'clock. One of the counsel asked Chevreau if he never asked the Empress what was said in this interview. "When her Majesty came to the council," answered he, "I bent over her chair, and said simply the words: 'Eh bien, Madame?' Her Majesty lifted her eyes towards me, and made me a sign, which gave me to understand that she had little confidence in the protestations which had been made to her."

M. Magne, the Minister of Finance of the Palikao Cabinet, says he once heard the Empress say, at the council, after Trochu had expressed very gloomy views on the situation: "I will go myself to the ramparts, and I will show the Prussians how a woman can brave danger for the country." The General answered: "I have only one way to prove my devotion; it is to die for the salvation of your Majesty and of her dynasty." Trochu did not die, however, and the Empress never went to the ramparts; but such conversations give one a singular idea of the last cabinet councils of the Empire. Phraseology had taken the place of business. Trochu seems to have said many times that he was ready to die: "Je me ferai tuer" was his answer to all questions.

The deposition of M. Rouher was curious; he had evidently never much confidence in Trochu, though he had heard him express very loyal sentiments. "There had been numerous gatherings about the Corps Législatif; we asked him to take precautions in order to protect the representatives of the nation. He answered by glittering generalities. I became more pressing, and he then turned toward the Empress and said to her: 'Since an explanation is asked from a French general, I answer that *je me ferai tuer* for the Empress Regent and for her dynasty.'" Rouher also says that the Empress, at Chiselhurst, said to him, in speaking of Trochu: "I counted on him, as a few days before the 4th of September, he came to the Tuileries and told me privately: 'Madame, if your police is efficient, you must know that I am in relation with the members of the opposition. It is my duty to know the state of opinion, to feel its pulse; but your Majesty cannot doubt of my devotion. My devotion belongs to her on a triple ground. I am a soldier, a Catholic, and a Breton.' This is what her Majesty has told me in exile."

From all the evidence, it appears that Trochu accepted the command of Paris when he had no hope of defending it, the defence of the Empress when he had no sympathy for her and no belief in the continuation of the Empire. M. de Cossé-Brissac, a chamberlain of the Empress, reports that on the 7th of August he had a conversation with Trochu on the war, and with Jurien La Gravière, the admiral. Trochu was very gloomy: "I have reserved myself before posterity. I do not know what is in waiting for me. I see before me the sad images of Marshal Marmont and of General Dupont. I have recorded my predictions in my will, which is deposited with M. Ducloux, the notary. I have not made this will for my fortune, as I have only one hundred francs of revenue and eleven children." Trochu, during the siege, in one of his numerous proclamations once referred to this will. There seems to be something of illuminism in Trochu's character; he certainly, from the first day of the war, anticipated nothing but disaster; he spoke of capitulations when the idea of capitulation had not entered any French mind. But if at the very beginning of the siege he knew that there was no hope, why did he say pompously, "The Governor of Paris will never capitulate"? If he had felt nothing but enmity for the Empress, why did he always speak of dying for her?

Marshal MacMahon made a deposition which has historical importance; he completely exonerates the Emperor from any participation in the management of the war after the 16th of August, at eleven o'clock in the morning. "From that hour," said he, "I take all the responsibility on myself; and I give for this assertion my word as a gentleman and a marshal of France." Why MacMahon is so anxious to exonerate the Emperor from the responsibility of the operations which led the army from Châlons to Sedan, it is difficult to say. The responsibility of the Marshal ceased, however, at Sedan, when he was wounded and obliged to abandon the command, and the capitulation of Sedan was the work of the Emperor himself. MacMahon is not a politician; as his wife is a Castries, he has Legitimist affinities, and passes for a Legitimist; but he has certainly shown in his depositions in the Trochu trial and in the parliamentary inquest a curious anxiety to screen Napoleon III. and to make him appear as innocent as possible of the unfortunate results of the war.

General Changarnier, who is now seventy-eight years old, and who remained at Metz as a volunteer during the siege of Metz, also appeared in the Trochu trial. The *Figaro* had attributed to Changarnier this judgment of Trochu, "He is Tartufe with the helmet of Mangin" (Mangin was a famous charlatan in Paris, who used to sell pencils in the streets, attired as a Roman warrior). Changarnier, of course, refused to answer the questions of Villemessant's counsel on this point. The only deposition worthy of note after his is that of Admiral Jurien La Gravière, which proves that on the 17th of August the Empress thought of recalling the Princes of Orleans and of giving them commands in the army. The ministers all opposed the scheme. The case is not yet concluded; but, so far, the Empress is perhaps the person who comes best out of it; she seems to have been more patriotic than the men about her. The ministers were all incompetent, Palikao like the others; they lost their presence of mind; they were all in mortal fear of Trochu. As for Trochu, he did nothing; he did not plot with the Left, though he saw many members of it, especially Picard; after Sedan, the revolution, as it were, made itself; Trochu simply went to the Hôtel de Ville "pour faire le Lamartine," as he said himself, and in order to maintain the tricolor flag in the face of the enemy.

NOTES FROM BERLIN.

BERLIN, March 28, 1872.

WE have taken another step forward in the adoption of the *Kreis-Ordnung* by a vote of 257 to 61 in the House of Deputies. This was a logical sequence of the new school-law, and belongs to the system of administrative reform upon which Prince Bismarck has entered, and which will give to Prussia that moral preponderance in the affairs of Germany without which her military ascendancy would be of little avail. This new order is a blow at bureaucracy in the country districts, the stronghold of the aristocracy; and as the liberal leader, Herr Lasker, said, it will test the question whether there exists in Prussia a genuine and practical aristocracy which shall attain to power through merit and not merely by position. The strength of the majority for the bill, and the union of Liberals, Conservatives, and even some of the Centre, upon this measure, give more than the point of wit to the now current song:

"O Bismarck, wenn es dir gefällt,
So muss ja doch die ganze Welt
Nach deiner Pfeife tanzen!"

Political society in Prussia is built first of all upon the *Gemeinde*, which is a group of neighboring families associated both territorially and ecclesiastically as a parish. In the country districts, the Gemeinde commonly has a *Dorf* or village as its centre, though the two are not strictly to be identified. Above the Gemeinde is the *Kreis*, a district or county embracing several contiguous parishes, and having its capital city. Above this again is the *Bezirk*, or now, more exactly, Regierungs-Bezirk, which comprehends within its circuit several *Kreise*, and has its higher magistracy and court of appeals; and then over all—Gemeinde, Kreis, Bezirk—is the *Provinz*, with its Ober-President, who derives his authority from the crown.

Like everything in Prussia, the constitution and government of the Kreis has been so set round with local usages and traditions, or hedged about with hereditary prerogatives, that uniformity of administration was impossible; and to comprehend the laws and customs of a single Kreis, much more of a Bezirk, was a task as severe as that of codifying the acts of the New York Legislature. The Kreis has important powers and duties, both civil and military: it appoints a police, collects taxes, oversees the roads, tillage, drainage, etc., looks after the schools, and enforces the recruiting of the army. Hence its executive officers require to be men of intelligence, diligence, patriotism, and integrity. Hitherto the Landrath or Executive Council has been selected by the Government from candidates chosen by a limited number of property-owners in the district; and the tendency has been to throw this great local power into the hands of the nobility and the large landed proprietors, to the prejudice alike of the peasantry and of the small owners in the towns. The Landrath had come to be what is here called a "green-table" government, answering somewhat to an American Ring in its political exclusiveness and self-interest, though not chargeable with the financial rapacity of that peculiar republican institution.

The complications growing out of this system are so many and so serious, that a reform must be gradual in order that it may be at once safe and successful. The new bill is too long and too minute to be given here even in the form of an analysis; but its general drift is to enlarge greatly the basis of representation for the Kreistag, or district assembly, and to equalize the government more fairly between town and country and large and small owners. In a word, it will tend to develop the principle and to form the habit of local self-government, which is at once the foundation of liberty and the conservation of order in the state. The new law also makes the Kreis administration uniform in the provinces of Preussen, Brandenburg, Pommern, Posen, Schlesien, and Sachsen.

The Liberals would gladly have gone much further in the line of self-government; but they were obliged to compromise with vested interests and with the prejudices of usage and tradition. Three points, however, have been gained in the direction of popular liberty. First, by a fairer basis of representation the rights of city and country are more evenly balanced; next, by reducing the money-standard of the voter not only property-owners, but a considerable class of small traders and artisans, are admitted to the suffrage, at a low figure of rent and taxes; and thirdly, a wider selection is allowed in nominees for the high and mighty Landrath itself—the once omnipotent bureaucracy of nobles and lords of the soil. But more than all these, the workingman, the villager, the cottager, the peasant, will now feel that he is not merely a subject, but a citizen; that the state is not a power above him and foreign to him, to which he pays taxes and renders military service, but a body to which he too belongs, and to which as a member he owes a portion of his time and his personal attention, labor, and influence; and this education of the people in practical liberty will develop in Prussia a new element of political strength.

In view of these two great reforms of the session, the school-law and the

Kreis-Ordnung, I recall what a leading Liberal of Southern Germany said to me after the battle of Sadowa: "Southern Germany must gravitate to the North. As a Liberal, I rejoice in the success of Prussia. Bismarck is right—the first condition of liberty is unity, and the first condition of unity is strength." And he added with an emphasis that then surprised me, "Bismarck is at heart a Liberal; but to accomplish anything he must humor the king in his notions of divine prerogative; and so he keeps a finger over the king's eyes, and talks of making him emperor by the grace of God, while with the other hand he is opening to us the door to liberty through national unity." Already, in six years, how large a part of this prophecy has been fulfilled. The king is emperor, but Germany is one, and Prussia is setting the example of a steady and enlightened progress in popular liberty.

THE APPOINTMENT OF JUDGES STRONG AND BRADLEY.

TO THE EDITOR OF THE NATION:

SIR: I was glad to see in the *Nation* of last week the contradiction of the charge against President Grant, made by the Missouri Convention, that he had "packed the Supreme Court in the interest of wealthy corporations." Will you permit me to state the facts more particularly?

When a vacancy in the Court occurred in Johnson's Administration, a law was passed to prevent his filling it. But the Southern Circuit was left unsupplied, and by the act of April 10, 1869, by which the new provision for Circuit Judges was made, the full number of judges was restored to the Supreme Court. In December, 1869, a nomination for this vacancy was made by President Grant, which was not confirmed by the Senate. The resignation of Judge Grier in December made a second vacancy, which the President was required by law to fill. Mr. Stanton was selected and confirmed to fill this vacancy, but died on the 24th of December, 1869. Judge Strong, a man of the highest professional and personal character, who had recently left the Supreme Court of Pennsylvania with a brilliant judicial reputation, was soon selected in Mr. Stanton's place, and his nomination was only withheld because the Senate had not acted upon the other nomination before them. Judge Strong had, it is true, given an able opinion sustaining the constitutionality of the legal-tender act; but the constitutionality of that act had been upheld by the highest court of every State in the Union which had passed upon it, except Kentucky; and it would hardly be expected that the President's range of choice should be excluded from the highest courts of all the loyal States.

The Senate disposed of the nomination previously before them on the 3d of February, 1870, which was Thursday. On Monday, Feb. 10, the nominations of Judge Strong and Mr. Bradley were sent in. They had been determined on the preceding week, and actually prepared for transmission either on Saturday or early on Monday morning. The decision of the Supreme Court on the legal-tender act in Hepburn *vs.* Griswold was announced on the same day. I do not believe that the President had any knowledge of what the decision was to be. Some of the newspaper correspondents were asserting in the press up to that very morning that it was to be a decision the other way. I do know, however, that Mr. Bradley was selected on the ground of professional fitness for the position, as an eminent, sound, and able lawyer. I knew he was a Republican, and supposed, though I did not know, that he thought the legal-tender act constitutional. But I had no more reason to suppose that he was of that opinion than that Chief-Justice Chase was; or that he was any less likely to change his opinions upon the strength of new arguments. I had been told that he had advised clients to pay their old debts in specie, without regard to legal compulsion, which agreed precisely with my notions of honesty.

This is perhaps all that need be said upon the specific charge against the President. But I think justice requires something more to be said on the subject.

These judges of President Grant's selection have been long enough upon the bench to afford some opportunity for a judgment on their fitness for the office. They have been quietly, assiduously, honorably devoting themselves to the discharge of their great duties. I have not heard it suggested that either of them has been engaged in political intrigues. Is not such a charge as the Missouri meeting made an outrage and a wrong to them?

You may not value my testimony highly, but I have no hesitation in saying that, so far as I have known them, the selections for judicial office by President Grant have been made with the purpose of securing the best attainable judicial service for the people, and with the full understanding of their great and far-reaching importance. I think, as a whole, they will compare favorably with those of any of his predecessors, and that, if any mistakes have been made, he has been misled by men in whom he had the right to trust.

You still adhere to the opinion that to reopen the legal-tender question was a heavy blow at judicial independence. So it does not seem to me. I lived many years in the hope of seeing the Fugitive-Slave Law declared unconstitutional, and the Dred Scott decision reversed by the peaceful method of natural and successive changes in the composition of the Supreme Court. Questions of constitutional construction must from their nature always be open questions, and the propriety of reopening them must depend upon the amount, continuance, and weight of authority in favor of the earlier construction.

My own belief in specie payments is such that I hope the right of making anything else a legal tender will soon become and for ever continue a question of mere constitutional theory and not of practice. You may perhaps find occasion to do President Grant the further justice of calling to mind that he has steadily and persistently urged upon Congress the duty of providing for a speedy return to specie payments, and so redeeming the broken promises of the nation.

E. R. HOAR.

CONCORD, MASS., April 15, 1872.

THE TRUTH ABOUT THE REDUCTION OF THE NATIONAL DEBT.

TO THE EDITOR OF THE NATION:

SIR: The continued and large reductions of the national indebtedness constitute, as is well known, one of the main arguments on which the Administration of General Grant relies for obtaining the present as well as future support of the people; and how adroitly, moreover, the facts of such reduction are being used for the purpose of creating political capital, the following recent extract from one of the leading organs of the Administration strikingly illustrates:

> "The amount of the principal of the public debt paid from the 4th of March, 1789, to the 31st December, 1843, was $299,910,528 32. The amount paid from March 1, 1869, to March 1, 1872, according to the report of Mr. Boutwell, of the principal of the public debt is $299,649,762 03, only $269,758 29 *less* than was paid by the Government, of the principal of the public debt, in *fifty-four* years after its organization. Where, in all history, is there such another fact? And with what conscious pride can any American point to this fact in the Administration of President Grant! About three hundred million dollars of debt paid in three years!"

Now, as the above statement is founded on an entire misconception of the facts of our recent financial history, and is therefore being used—in a majority of instances doubtless unintentionally—as a means of deceiving the people, we think the time has come when the real truth should be plainly stated, and a clear, straightforward answer given to the question above propounded, namely, Where, in all history, is there another such a fact as "the payment of three hundred millions of dollars of indebtedness in three years"?

To do this, it is necessary to go back in time for a period of about four years, and recall to mind that the circumstance, above all others, out of which the Democratic party attempted to make capital against the Republicans in the Presidential campaign of 1868, was the enormous expenditures of the three years immediately succeeding the termination of the war. The fact that such expenditures had been made could not be denied. The evidence stood forth in bold relief in every report emanating from the Treasury; but the charge that they were reckless, unnecessary, and discreditable was fully met and answered by Mr. Boutwell, in a speech delivered in the House of Representatives, July 21, 1868; by Edward Atkinson, Esq., in a speech before the Republican State Convention of Massachusetts, September 9, 1868; and by the then Special Commissioner of the Revenue, in a number of documents published and extensively circulated by the National Republican Committee. In all of these the proof, obtained by analyzing a large mass of Treasury statistics, though necessarily somewhat circumstantial, was nevertheless entirely conclusive, that the expenditures in question were legitimate and necessary, that the money had not been wasted, and that the debts and liabilities of the Government at the close of the war were very greatly in excess of the figures which actually appeared upon the books of the Treasury. The speech of Mr. Boutwell above referred to is so remarkable, and, owing to the present position of its author, so significant in its bearing upon what is now sought to be made a political issue, that we quote entire its most important passage—remarking at the same time, for the benefit of those interested, that the speech in full may be found in the *Congressional Globe*, 1867–8, Part V., pp. 4296–4299. He says:

> "I wish to call the attention of the House to a fact deduced by careful examination of statistics obtained from the Assistant-Secretary of the Treasury Department, showing that during the last three years we have, with our

> resources and the revenue of this country, secured a large diminution of the public debt. I confess that, after the careful examination I had made, I felt compelled to review it, and see whether there was not some mistake in the premises, or in the calculation, so astonishing is the evidence thus furnished of the ability of the people of the country to liquidate the public debt. From the 1st day of April, 1865, to the 1st of January, 1868, two years and nine months, we have paid out of the public Treasury $1,552,000,000 of money. Upon a careful analysis of the expenditures of the Government during these two years and nine months, I find that the expenses of a peace establishment, excluding interest, pensions, and bounties, upon the basis of the year 1866 and 1867, when the expenses of the Government were $70,000,000 more than they are to be the present year, amounted to $485,000,000; showing that we paid over and above those expenses $1,066,000,000. On the 1st day of April, 1865, the public debt, liquidated and ascertained, was $2,366,000,000, and the $1,066,000,000 which we paid between the 1st of April, 1865, and the 1st of January, 1868, would have been added to the public debt as proper expenses of the war, if we had not, out of the public revenue from day to day, liquidated it. In the face of this great fact, that in two years and nine months, by extraordinary taxation and extraordinary efforts to be sure, we paid $1,066,000,000 of the public debt, are we to assume that hereafter the people of this country are not annually to make considerable payments of the public debt of the country? *Almost one-third of the entire public debt of the country has been paid in two years and nine months*, and I am not willing to stand on the assumption that we shall not make large payments in each year hereafter."

But the record of this financial experience of the Government from 1865 to 1868 does not stop here. The evidence adduced by Mr. Boutwell, Mr. Atkinson, and the Special Commissioner of the Revenue was, as has been already stated, in some degree circumstantial and indirect. It was made up from an examination and comparison of the general reports and statistics of the Treasury, and lacked that full faith and credit which could only be imparted by the official certificate of the department itself, through its chief representative, the Secretary. Accordingly, in November, 1868, after the issue of the Presidential election had been established, and the matter under consideration had ceased to form a topic of political debate or popular interest, Secretary McCulloch, with a view of ascertaining the exact facts, and of leaving a true historical record of the transactions of his fiscal administration, ordered a most careful and official investigation; and in December, 1868, in connection with his annual report, presented the following statement, which no one ever has contravened, or ever can pretend to contravene. His figures were as follows:

On the 1st of April, 1865, when the war had practically terminated, the acknowledged debt was $2,336,995,077.

From April 1, 1865, to June 1, 1868, the total receipts of the Treasury from all sources of revenue were $1,662,476,062 20.

For the purpose of ascertaining how much of these receipts—mainly from taxes—were applied to the payment of debts—exclusive of interest and pensions—created by the war, the Secretary officially applied to the War and Navy Departments, and asked: "How much of your respective disbursements since the close of the war has been in payment of debts properly chargeable to the expenses of the war?" and received the following answers: By the War Department, $595,431,125; by the Navy Department, $35,000,000. "These figures show that the money expended by the War and Navy Departments, between the 1st day of April, 1865, and the 1st day of November, 1868, on claims justly chargeable to the expenses of the war, amounted to $630,431,125. To which should be added amount advanced to Pacific roads, $42,199,000; amount paid for Alaska, $7,200,000; total, $679,825,125." After giving these figures, the Secretary continues:

> "It is thus shown that, within a period of three years and seven months, $630,431,125 were paid on debts which were actually due at the close of the war and for bounties, which, like the pay of the army, were a part of the expenses of the war. Adding the amount thus paid to the debt as exhibited by the books of the Treasury on the 1st day of April, 1868, it appears that the debt of the United States at that time was $2,997,386,203, and that the actual reduction [since] has been $470,256,650; and but for the advances to the Pacific roads, and the amount paid for Alaska, would have been $519,650,650."—*Report Secretary of the Treasury, Dec.* 1868, *pp.* 19, 21.

It is simply fair to say that the discrepancy between the conclusions of Mr. Boutwell in his speech of July 21, 1868, and the exact figures of Secretary McCulloch, finds an explanation in great part in the circumstance that the former (Mr. Boutwell) included interest and pensions in his estimate of the aggregate of payments, and the latter (Secretary McCulloch) did not. If we add the aggregate of these two items, from April 1, 1865, to Nov. 1, 1868, about $550,000,000, to the aggregate of the war debt paid ($630,431,125), the total expenditure for the period of three years and seven months specified was $1,185,431,125. In view of these facts, what becomes of the claim so continually put forth in the public press, and so ostentatiously embodied in the resolutions of political conventions, that the Administration of Gen. Grant is especially entitled to the confidence and support of the country for its course in reference to the reduction of the public debt; and that its experience in respect to this matter is without a parallel in history? The figures and testimony above given demonstrate beyond a question that all such claims and averments are simply untrue; and it would further seem to stand to reason, that if the fact of having paid $299,649,762 of debt in the three years from March 1, 1869, to March 1, 1872, constitute a special debt of gratitude from the people to the existing Administration, the measure of gratitude due to Andrew Johnson's Administration, which actually reduced the national debt in three years and seven months by the sum of at least $470,236,000, ought to be on the same principle at least double.

If, however, it be said that the Johnson Administration had more to pay with than the Grant Administration, and therefore was able for such reason to make a better showing, the answer simply is, that both Administrations have had exactly what Congress permitted them to have, and each of them has used its surplus in paying the debt in the same manner. Or if it be said that taxation has been reduced to a greater extent under the Grant Administration than under that of Johnson, the averment is simply untrue; inasmuch as by far the greater proportion of the reductions of the war taxes made since 1865 was the result of legislation before Grant assumed office.

But this whole record of paying the public debt, regarded as a standard whereby the merits or demerits of any Administration are to be measured or estimated, is a mere piece of political chicanery, which, if subjected to the most superficial analysis, will fail to deceive any one. Congress, which enacts the laws regulating and fixing the taxes, is the impelling or determining power; the revenue assessors and collectors are the machinery by which the power is applied; the taxes are the "grist" or product of such force and machinery, and the Secretary of the Treasury is the chief miller or recipient. Of the whole amount of "grist," Congress first determines what part shall be used to keep the mill in motion—*i. e.*, run the Government; and over the application (disbursement) of this, the powers of every Administration are exceedingly guarded and limited. Of the disposition of the surplus product, if there be any, three courses, and three only, are left open for any Executive, or its fiscal representative, the Secretary of the Treasury: he may steal it, or allow others to do so; he may hoard it in the vaults of the Treasury; or he may use it in the liquidation of the state's indebtedness. To compliment a President or a Secretary of the Treasury for adopting any other course than the latter is, therefore, simply equivalent to saying that they are neither fools nor knaves, and that they have adopted the only method consistent with the possession of common honesty and common sense. In short, the enormous and historically unparalleled reductions of the national debt which took place during the period embraced from April, 1865, to March, 1869, and the smaller but continuous payments that have since been effected, have, when analyzed, but this one meaning and significance: *they measure and prove the enormous taxes to which the people have been willing to be subjected.*—Yours truly,

DAVID A. WELLS.

APRIL 15, 1872.

Notes.

G. P. PUTNAM & SONS have in preparation the following additions to their "Handy-Book Series": "Hints to Housekeepers"; "How to Make a Living"; "Hints on Dress for Decent Poor Folks"; and "Social Economy," by Prof. J. E. Thorold Rogers.——"A Seven Months' Run, Up, and Down, and Around the World," by the Hon. James Brooks, M.C., consisting of his letters to the New York *Express*; "A Woman's Experiences in Europe," including England, France, Germany, and Italy, by Mrs. E. D. Wallace; "How the World was Peopled," by Rev. Edward Fontaine; and a supplement to Mr. Alex. H. Stephens's "War Between the States," called "The Reviewers Reviewed," are among the announcements of D. Appleton & Co.——Scribner, Welford & Armstrong will republish the late F. D. Maurice's "Moral and Metaphysical Philosophy," and Agnes Strickland's "Lives of the Last Four Princesses of the Royal House of Stuart."——M. Taine's "Notes on England" and his work "On Intelligence"; a new novel, "My Little Lady"; and Turgeneff's masterly fiction, "Smoke," will be published by Holt & Williams.

—The Council of the National Academy of Design has decided to throw open the Academy on Sundays, charging for admission the nominal fee of fifteen cents. Last Sunday the experiment was tried for the first time, and, though it had been but little, and only hastily, advertised, the attendance is said to have been quite equal to the usual attendance on week-days. Hereafter, we have no doubt, it will more than equal the week-day attendance, as there are so many mechanics, clerks, and business men who find it next to impossible to get an afternoon away from their work. If the authorities of the Mercantile Library and those of the Museum of Art would now follow the lead of Mr. Page, Mr. Ward, Mr. La Farge, Mr. Shattuck, and their associates, the cause of Sabbath-breaking in this city would receive a severe blow. But we believe the authorities of the Museum of Art have seen fit to tie their hands by accepting a gift from two gentlemen of this city, who stipulated that their money should be taken only on condition that the gallery should be kept shut on Sunday. The people's day, as the Sunday of free galleries is called in Europe, may not seem a very nice day to the few who are most capable of enjoying pictures, but it is a very nice day for the people, nevertheless, and we hope the Museum gallery may, before long, be open all days even at the cost of returning to the benefactors the conditional three thousand. The proceeds of a small fee taken at the door would soon amount to that sum, and we dare say a part of it could very readily be had from persons who think the wickedness of making Sunday into a Sabbath is quite as great as that of allowing people who otherwise would have no opportunity, to look on that day at pictures, religious and secular. Artists, considered as commercial persons even, might profitably contribute to such a refunding fund, as being men acutely interested in the elevation of the general taste of the community—a taste eminently teachable.

—Mr. Charles Astor Bristed, who when resident in New York was one of the most vigorous and effective guerillas the press of this city has ever been able to boast, is now doing battle with legions of foemen in Washington, and is sending many souls of warriors to Hades, over the copyright question. His last encounter has been with a correspondent of the *Chronicle*, who has had the audacity to sign himself "Justice," on the same principle, Mr. Bristed says, as Sheridan acted on, who, when picked up drunk in the gutter, gave his name as "Wilberforce." In this discussion, Mr. Bristed makes a happy addition to the weapons of newspaper warfare by a quotation from a sporting novel, in which the hero, Jack Spraggon, having been killed, his patron, Lord Scamperdale, lamenting over him eulogistically, winds up with the remark "that he was *such* a fine natural blackguard!"

—Another translation fund is on the carpet, this time in the field of theology. Dr. John Tulloch, Prof. Jowett, James Martineau, and seventeen more or less distinguished associates, are of opinion that it is desirable to render accessible to English readers "a foreign theological literature of a more independent character and less biassed by dogmatical prepossessions" than that heretofore reproduced (*e. g.*, in the works of Hengstenberg, Delitzsch, Keil, etc.); a literature, namely, "which is represented by such works as those of Ewald, Hupfeld, F. C. Baur, Zeller, Rothe, Keim, Schrader, Hausrath, Nöldeke, Pfleiderer, etc., in Germany, and by those of Kunen, Scholten, and others, in Holland." To this end, they solicit subscriptions and donations towards a fund which shall enable the publishers (Messrs. Williams & Norgate, London and Edinburgh) to bring out three 8vo volumes of about 400 pages annually. Each subscriber of one guinea will be entitled to the publications of the year without charge. Communications should be made to the above firm, but, for the present, remittances are not desired, as the scheme will not go forward without a guarantee of support.

—Among new English books that will interest religious readers we note these: "An Explanation of the Thirty-nine Articles" is the work of Dr. Forbes, Bishop of Brechin in the Scotch Episcopacy. Dr. Forbes is a pronounced Anglo-Catholic or Ritualist, and nowise in sympathy with those clerical doctors who would explain the Thirty-nine Articles by explaining the substance of some of them into thin air and out of sight. It is reported of his book that its author began it with some fears and misgivings, but that as he went on he found the Articles much sounder, more Scriptural, more fully in accord with the universally received opinions of the Church catholic, than he anticipated, and that in the end they received his hearty assent. The popular preacher, Stopford Brooke, whose sermons perhaps read as well as anybody's popular sermons, publishes another volume of them with the title "Christ in Modern Life." Another Episcopal clergyman, but one whose views are not at all Mr. Brooke's, has written a book entitled "Notitia Eucharistica," being moved thereto by the recent judgment of the Privy Council. Mr. W. E. Scudamore is the author in question, and his "Notitia" is an endeavor to show how the Lord's Supper should be administered, and that when rightly administered the administration would not be approved by the Privy Council. The volume is nine hundred pages long, and summarizes Eastern and Western service books and other authorities—which the Privy Council might probably regard as embodying the traditions of rather ignorant churches now happily reformed. "Reasons for Rejecting Mr. Ffoulkes's Theory as to the Age and Author of the Athanasian Creed" is the title of a work of which we know only the title, and that Mr. C. A. Heurtley is its author, while of Dr. Irons's "Athanasius contra Mundum" we may be sure that it is an acute and learned, whether or not wise, defence of the creed. This same creed is a topic which is getting a good deal of discussion just now in English religious circles, because everybody suspects everybody else of greatly doubting about some important parts of it, as, for example, the part which says that without any doubt, unless a man believes in the other parts of it, he shall be eternally damned; but a topic which will be of more interest to readers in America, where, outside of the British Possessions, Protestants have no Athanasian Creed, is the one discussed by "A Graduate" in "An Enquiry into the Times and the Gospel of the Apostle to the Gentiles." Widely interesting, too, may very likely be Mr. Matthew Arnold's newest volume, not yet out, but announced as "A Bible Reading for Schools." On this side of the Atlantic the quarrel about Bible-reading in schools is between Protestants and Roman Catholics on the one hand, and Infidels on the other, and it appears to be irreconcilable; but probably in England this particular part of the educational quarrel may be more easily handled. Mr. Arnold is a practical teacher, and perhaps he may have found out a path in which the Secularist and the advocate of public Bible-reading by the children may walk together amicably, though such an event is to be wished for rather than expected with sanguine hope. The quarrel is everywhere a very bitter one, though the matter may be said to be so very small; in our experience, at all events, we have found that practically no one need object greatly to the reading except those persons who reverence the Bible too much to see it carelessly used, as it often is when its words are heedlessly gabbled by pupils whose heads are at the moment full of nonsense or of sums in arithmetic. We must not forget to mention the Duke of Somerset's "Christian Theology and Modern Scepticism." Disraeli's "Lothair" was called "a very duchessy book" on account of the number of exalted creatures who figure in it, and something in the same way this may be called a very ducal or duky book, some of its views indicating an assured social position quite as well as they show fitness for religious controversy. "Why am I a Presbyterian?" is the title of a lecture by Mr. D. Ross. Dr. Döllinger's "Lectures on the Reunion of Christendom" are to be published in English by the Rivingtons. Macmillan & Co. will publish still another essay on the authorship and historical character of St. John's Gospel. The fallacies of Darwinism are to be attacked by C. R. Bree, M.D.; and Blackwood and Mr. John Murray respectively announce two works which will belong partly to history and partly to religion—namely, Mr. John Tulloch's "Rise of a Rational Theology and Christian Philosophy in England in the Seventeenth Century," and Mr. W. H. Jervis's "History of the Church of France."

—Those who think that it is on the whole a dark day for a man of imagination when the German professor gets at him with his spectacles, will be glad that one great Turner at least is safely removed from the influence of Dr. Liebreich. We refer to the picture of the "Slaver," bought of Mr. Ruskin by Mr. Blodgett, of this city, and transferred to the gallery of Mr. John Taylor Johnston. It was painted in 1840, a good ten years after the optical change which yields Dr. Liebreich his triumph is said to have occurred. It is dishevelled enough to lift the hair of an imperfectly initiated disciple. As a diapason of color, it has the fulness of the artist's "Fighting Téméraire," or of the hues in a pearl-shell. As a work of fiction holding any kind of *rapport* with natural appearances, its place is hard to fix. The aqueous part has a distinct endeavor at and recognition of quality; it is transparent, penetrable, and profound, with passages of absolutely inspired color; but the firmamental part is one of Turner's frank confessions that sky-quality is a matter that escapes him; he confines himself in it to his admirable diagram-sketching of clouds in agitation and columns of driving mist ("Typhoon coming on," as his title had it), and completely releases his attention from the properties of depth and atmosphere which are the crucial endeavor of all other landscapists. The upper part of the painting therefore assaults the eye with the crude frankness of a map—is, in fact, very similar to one of the modelled maps prepared for the blind—while the lower part has another class of excellences, as a veritable picture. On the whole, we believe the spectator will gain more from it by trying to admire it than by delivering himself up to his analytical mood. As an "astigmatized" Turner, we exult in its having got three thousand miles away from Liebreich.

—A private letter from Paris thus speaks of the exhibition at Goupil's Rooms, Rue Chaptal, of the pictures painted and given by French artists for the relief of the sufferers by the Chicago fire: "The exhibition, I am happy to say, is a complete success. There is only one voice on the subject. Americans, Englishmen, and Frenchmen unite in their praises. The truth is that the *ensemble* is most attractive, giving a really interesting idea of the French school. It would be difficult to form such a complete collection again. Everybody goes to see the exhibition. Among the late visitors may be mentioned the Count and Countess of Paris, who came to the gallery in company with the Duc de Montpensier and his sister the Princess Clementine." A great many have suggested that this collection should not be dispersed, but should be kept together. If Chicago had a public gallery, the city might buy it, or somebody might buy it for her; or, some of our rich merchants might buy the whole and place it in a special room as a remembrance of the good feeling between the two countries. This idea of keeping the collection together for one purpose or another is, however, a mere suggestion. The committee have the whole matter in their hands, and they will no doubt act in the way best calculated to carry out the object in view. As a testimonial of their sympathy with the Chicago sufferers, Messrs. Goupil have added to the collection a picture by Horace Vernet, "Walter Scott and Allan McAulay." It was painted for the Duke of Orleans in 1823, and was placed in the Duke's collection at that time; but King Louis Philippe liked it so much that after the Duke's death he had it hung in his own study at Neuilly, where it was in 1848. The palace at Neuilly was burned down during the Revolution, and that part which was saved contained the picture in question. It is supposed that some Communist of the time *saved* it; at any rate, it was considered lost, till about twenty-three years later it turned up in a public sale at the Hôtel Drouot, where Goupil & Co. bought it, not knowing its origin or its history. When, a few days ago, the Orleans princes, as above stated, came to see the Chicago collection, the Duc de Montpensier exclaimed: "Why, here is our dear father's own picture!" The surprise may be imagined. M. Goupil at once offered to return the picture to the princes as their property, but after a short consultation they decided to leave it in the collection, adding that, not only had they no right to it, but they were most happy to let the Americans have a picture which their father, the King, had so much affection for. The collection is now on its way to this country, having been shipped from Havre on the 28th of March. From what we hear, and from the photographs of many of the pictures which have been shown us, we cannot doubt that the gift made by the French artists to the sufferers by the great fire has seldom been equalled in delicacy and generosity. It is perhaps unjust, where all have done excellently, to mention one name more than another, and if we speak of Meissonnier's contribution, it is only because we are able to judge better of it than of some of the others by the photograph which has been shown us. It is a water-color drawing, and in the artist's best manner. It would no doubt fetch a large sum if offered for sale in Paris. But, indeed, there seems to have been an honorable competition among these gentlemen to see which should be foremost in good-will. Many of the pictures have written on them, in English that comes rather from the heart than from the grammar, quaint little messages—mute hand-shakes and embraces from over-seas.

—*L'Année Géographique*, we are glad to say, was not extinguished by the war, but merely retarded. The ninth volume may now be had of Mr. Christern, embracing the two years 1870–71. It would be well if this invaluable series were found among the books of reference of every school of the higher grade in this country. Two works on the late war will command attention: Gen. Vinoy's "Campagne de 1870–71, Siége de Paris," giving an account of the operations of the Thirteenth Corps and Third Army; and Vice-Admiral De la Roncière's "La Marine au Siége de Paris." M. Littré's "Médecine et Médecins" is a Positivist potpourri relating for the most part to works published by physicians, and treating such topics as great epidemics, table-tipping, Socrates and Pascal (mental pathology), hygiene, gunshot wounds, the nervous system, inheritance, political suicide, toxicology in history and the death of Alexander, Gil Blas and the Archbishop of Granada. Champfleury's "Histoire de la Caricature au Moyen Age" is the middle term between his histories of caricature in ancient and modern times already published. Notwithstanding a common opinion that drunkenness scarcely exists in wine-growing countries, M. Charles Muteau implies its existence by asking whether it ought to be punished ("L'Ivresse doit-elle être punie?"), and decides in the affirmative. Eugène Rendu, Inspector-General of Public Instruction, advocates compulsory education in a pamphlet, "L'Obligation légale de l'Enseignement," while M. Charles Clair takes the other side, which is the more agreeable to the clerical party ("Six mois d'Instruction obligatoire en France"). M. J. Rambosson attempts to glean something in the field which Rousseau planted, reaped, and garnered more than a century ago: "L'Education Maternelle, d'après les Indications de la Nature."

—R. von Decker, Berlin, will publish in the course of the spring a work which will serve the Döllinger party as a thesaurus against the doctrine of Papal infallibility. It is a digest of Papal bulls, rescripts, etc., during the Middle Ages, by Dr. Augustus Potthast, a scholar who is distinguished for his critical learning in that period of history, and whose "Bibliotheca Historica Medii Ævi"—a guide to the sources of mediæval European history from 375–1500—has just passed to a second edition. The title of this new work is "Regesta Pontificum Romanorum ab Innocentio III. (1198) ad Benedictum XI. (1304)." It contains an abstract of more than 25,000 official Papal utterances, arranged in chronological order, and so thoroughly and skilfully has the author accomplished this great task that the Berlin Academy of Science has awarded him the double-prize of 200 ducats. It should be brought within easy reach of American students through the public libraries. It brings the Popes into court as witnesses to their own contradictions and errors.

THE NORTH AMERICAN FOR APRIL.

THE *North American's* own select circle of subscribers will be more pleased than the public at large with this solid April number, which is made up of three very good articles, and one good and very long article, together with a dozen or so of book-notices. These latter, without being extraordinarily excellent for the *North American*, would be extraordinarily excellent for almost any other of our publications, and though it is still the *North American's* own loyal subscriber whom the book-reviewers keep in mind, the general reader will find in the critical notices some food grateful to his variety-craving appetite. To be attracted to the main body of the *Review* he should be a general reader who enjoys the vivisection of philologists by Professor W. D. Whitney; or the explication of Communist theories by a commentator who has full knowledge of the International Association; or *résumés* of the diplomatic career of Count Benedetti; or a discussion of the law of maritime warfare as it affects belligerents. Yet we do not know why this last-mentioned essay should not interest and instruct a good many thousands of us. All editors, surely, all prospective Congressmen, all future Presidents, and all Secretaries of State, prospective or present, may thankfully study it, and clear their minds of cant and inform them with knowledge. It is by Professor John Norton Pomeroy, a writer of admirable clear-headedness and hard-headedness, refreshingly intolerant of nonsense, and capable of a degree of plain speaking and exact statement which it will do everybody good to find. Just at present, too, there ought to be a singular number of readers for Mr. Pomeroy, all of us being fresh from the agreeable discovery that for want of a little juristic learning and a little sound judgment in our Department of State, and in consequence of an exaggerated sentimentalism, we have been made ridiculous in the eyes of all the world.

"Down to the year 1861," says Mr. Pomeroy, "it was our traditional policy to uphold and maintain neutral rights; all the world looked to us as the champions of these rights; and ere long, when the Government falls once more into the hands of statesmen, this policy will be revived." But it was only so long ago as the beginning of the Franco-Prussian war that Secretary Fish wrote to the Prussian Chancellor congratulating him on the humane policy of his royal master in exempting from capture all French property afloat, except contraband of war, and reminding him that Prussia and America first of all states committed themselves to this philanthropic measure. So they did, but not the less must the Herr von Bismarck have been amused by this despatch. We did commit ourselves to this measure in a treaty negotiated with Frederic the Great, in 1785, by our doctrinaire and philosophe envoy, Benjamin Franklin, who, however, at the same time, negotiated treaties with other powers with whom there was some likelihood of our coming in contact, in which he made no mention of any such pleasant doctrine. And this because, for one reason, he was a man of sense, and knew that a treaty of the kind between two countries, one of which would never fight on sea and the other of which would never fight on European soil, was a different thing from a treaty with France or Great Britain; and for another reason, because he was the envoy of a nation which has sense, and which, when it really had to go to war, went in Sherman's and Sheridan's fashion, and not in Dr. Lieber's or Doctor Bluntschli's, and levied, burnt, and confiscated right and left, seizing or destroying impartially and thoroughly whenever and wherever necessary. Mr. Pomeroy exposes very effectually the assumption that there is a rule of international law which prohibits the destruction of the private property of the belligerent's citizens on land, and by equitable extension of which such property should be spared when it is found at sea. "There is in fact," he declares, "no such rule, no such principle, no such doctrine, no such practice." Philosophers, in mistaken humanitarianism, have elaborated such a proposed rule, but nations struggling with each other have never regarded it—have always disregarded it, except now and again on paper, and then for the most part in cases where they might assert it with all the safety in the world, knowing it could never affect them in action. Incidentally, he has some remarks to make about the New York Chamber of Commerce which will not gratify that body of gentlemen, and he also pays his respects briefly, but in an engaging manner, to Napoleon I., Mr. Buchanan, Mr. Monroe, Doctor Bluntschli, M. Chateaubriand, Signor Galiani, Mr. Fish, and other publicists and public men. As a specimen of the way in which he expresses his sentiments, the following passage may serve. It relates to the above-mentioned despatch from Mr. Fish to Count Bismarck: "This spectacle provokes at once derision and disgust—contempt for the thin, make-believe character of the transaction, disgust for its glaring hypocrisy. Our public acts belie our public professions, while our professions cast a slur upon our acts." It is right to say that this passage is immediately preceded by the cited opinion of Mr. Justice Strong, of the Supreme Court, in which, without the least limiting clause, that judge affirmed the validity of our severe and thorough confiscation policy during the war. But, even so, a milder term than hypocrisy might perhaps fit the facts rather better.

Professor Whitney's subject of discourse is the philological cloud-blowing of Professor Steinthal, a man who seems to us as here presented about as reasonable, essentially considered, as the judicious Stephen Pearl Andrews. We speak of his theory of the genesis of language, his scholarship of course being another matter. "In our view," Mr. Whitney remarks at the close of his essay in speaking of Steinthal and men of like views, "their profundity is merely subjective, and their whole system is destined to be swept away and succeeded by the scientific, the inductive. This alone is in unison with the best tendency of modern thought; this alone can bring the science of language into harmony with the other branches of knowledge respecting man, his endowments and history." It will be seen that this is very decidedly the strictly scientific view as opposed to views which Mr. Whitney christens *aprioristic*—a dreadful word, to our mind, or ear rather, and one for which Mr. Whitney owes his readers at least one more essay as good as this one. Mr. Pomeroy, too, we notice, indulges himself in the use of a term needlessly uncouth, making the substantive "enemy" do duty for an adjective—as "enemy ship," "enemy goods."

Professor C. K. Adams, writing *apropos* of Count Benedetti's recent attempt at vindicating his diplomatic character and career, takes occasion to investigate the conduct of the French and Prussian cabinets during the four years between Sadowa and Sedan, and arrives at the conclusion that Benedetti shows the French Emperor to have been both as knavish and as imbecile as his severest critics have asserted. We should say that Professor Adams is speaking, we do not say without book, but without anything like sufficiently plain proof, when he takes it for true that in 1866 France could by a single word have prevented the Prusso-Italian alliance. The wisdom of that alliance would seem to have been fully justified by the event, and it will hardly do to assume that General Govone and Victor Emanuel's other counsellors were not the men to see exactly where their country's interest lay. Otherwise, the essay seems to us satisfactory, and no doubt it will be found useful as an aid to the understanding of this remarkable period, full as it was of transactions which, taken together with our own war, and the Italian struggle in state and in church, have made this decade which we have just lived through a period of immense historical interest. It is for other generations to pass the final verdict and perceive clearly, looking back at us and our doings, what were our really significant and pregnant achievements; but as history has been written by our ancestors and ourselves, the decade of the American Rebellion, the Italian unity, the Austrian downfall and recovery, the Germanic supremacy in Europe, the Papal infallibility, the advent of the Commune, will long seem to our posterity a tremendous epoch.

In Mr. Gryzanowski's very long article, which, fortunately, it is for Europeans rather than Americans to study with anxiety, there is a very full account of the rise and progress and aims of the "International"—a word of fear to the Parisian and the Londoner, but in New York associated most closely with Woodhull and Claflin, who, we believe, are members of a chapter. The book-notices are of some popular books, and a larger number of books more substantial than popular. Mr. Clarence King's recent work, Holland's "Recollections," Forster's "Dickens," and Howells's "Wedding Journey," represent the former; and Professor Jevons's "Political Economy," Seeley's "Livy," and Thomas's "Biographical Dictionary," the latter class. The reviewer of Sir Henry Holland's "Recollections" will have done his other readers an appreciable service if he sends them all as he sent us to an article in the last London *Quarterly*, which agreeably supplements Sir Henry's tantalizing book by giving us some of that gossip about people in society which is one of the disowned delights of the immortal mind, and of which Sir Henry, though he knows so much, tells us nothing. He will be inordinately regretted when he dies. The *Quarterly* writer has probably been for half a century constantly hearing and telling little stories about the great, and in his desultory, rambling essay he gives to the public some anecdotes which probably he has many times told and heard told in clubs and in country-house breakfast-rooms. Some of his chat is new and some of it is ancient, but he makes a readable essay with a pleasant old-time flavor; and if any of the *North American's* readers discover in themselves just the least inclination in the world to feel somewhat fatigued when they have got through the "International Association" and on towards the end of Mr. St. George Mivart's reply to Mr. Chauncey Wright, which closes the *Review* for this quarter, they might do worse than turn to the *Quarterly*. Mr. Mivart's letter, by the bye, is very like typical polemics; the writer is trembling and aching with courtesy and with desires to be civil to his opponent, and obviously does not thirst for that gentleman's heart's blood. One of the *Quarterly's* anecdotes is of Sir Charles Napier, who travelled, the story goes, by way of Egypt from London to Calcutta, and on arriving at the latter city was informed by his host, Lord Dalhousie, that there would be time for a bath before dinner. To this Sir Charles replied that he had washed himself at Alexandria. Another is of Rogers, and is characteristically sweet-tempered: Lady Davy complained to him that he had been abusing her; to this he responded kindly, denying the charge: "Lady Davy, I pass my life in defending you." Lady Davy was unwilling to marry Sir Humphrey, our author informs us, because he was plain Mr. Davy, and some of her friends procured for him, without his knowledge, the honor of knighthood, Sir Humphrey having the impression that George the Fourth was distinguishing science in his person when the honor was conferred. Thus the chronicler runs on, seeming to have an old bachelor's dislike for various ladies and his liking for various others. Lady Holland, wife of Lord Holland, is one of his aversions; but he is most nearly malicious when he suggests that Sir Henry Holland refused his baronetcy and remained plain Dr. Holland till after Lady Holland's death, because that imperious personage declared that if the doctor, by accepting it, brought another Lady Holland into the field, he should never cross the threshold of Holland House again.

CHARACTER.*

"CHARACTER is one of the greatest motive powers in the world. In its noblest embodiments it exemplifies human nature in its highest forms, for it exhibits man at his best. Men of genuine excellence in every station of life—men of industry, of integrity, of high principle, of sterling honesty of purpose—command the spontaneous homage of mankind. It is natural to believe in such men, to have confidence in them, and to imitate them. All that is good in the world is upheld by them, and without their presence in it the world would not be worth living in. Although genius always commands admiration, character most secures respect. The former is now the product of brain power, the latter of heart power, and in the long run it is the heart that rules in life. Men of genius stand to society in the relation of its intellect as men of character of its conscience; and while the former are admired, the latter are followed."

These opening sentences of Mr. Smiles's book naturally raise in the mind of the critic the oft-mooted but still unsettled question as to how much of a book it is his duty to read before writing about it. The first chapter of the volume reveals the character of the whole, and shows that the work consists of a series of didactic reflections such as we have just quoted, interspersed with illustrative anecdotes. It is a book which might be reconstructed from the initial chapter, by a critic of no very extraordinary powers. Under these circumstances, is it the duty of the critic to read the whole? It may be said, in answer to the argument we have just hinted, that, although the general nature of a book may be sometimes easily inferred from the opening pages, it is still unfair to the author to act upon this supposition, because no one can tell beforehand that somewhere in the eleventh chapter he may not have tucked away a really original and valuable remark which the world has been waiting for for eighteen hundred years; but, on the other hand, the affairs of this world are very much governed by presumptions, and we act in a majority of cases not according to what may possibly be the case, but according to what, from antecedent probabilities, we presume will be the case. And this must always be so where the opposite course would involve a too great sacrifice of time. Whenever we take a step, we do not consider it necessary to calculate the mechanical resultant of the forces we set in motion because there is a bare possibility of our losing our balance and falling. There is undoubtedly such a possibility, but there is also a very ancient and settled presumption the other way. And so of books, it may be said that, when passages selected at random from a book raise a strong presumption as to its character, that presumption may fairly be acted on.

Nevertheless, giving Mr. Smiles the benefit of the doubt which he probably entertains on this point, we have carefully and conscientiously read every line of his work on character, and it is only fair to say that, although our opinion of the book has not been changed at all—it is in every respect essentially commonplace—our feelings about it have been decidedly modified. It is impossible not to feel considerable gratitude for a man who brings together within the compass of a book such a number of interesting, encouraging, and inspiriting stories of people, some of them new, some of them old, almost all of them good.†

Mr. Smiles's moral reflections, as we have said, are very commonplace. Indeed, some of them are worse than commonplace. To tell the young, or for that matter the old, that "men of genuine excellence command the spontaneous homage of mankind," that it is "natural to imitate" such men; that "in the long run it is the heart that rules in life," and that "while men of genius are admired, men of character are followed," is, in the first place, to say what is, as a matter of fact, often glaringly untrue; and is in the second place to set up as a test of morality the unworthy and immoral criterion of success. It seems singular that we should find the biographer of the Stephensons, whose reading must have made him familiar with the sad lives of at least one class of men of character, repeating the stale and selfish maxims of a morality invented by priests in an age of darkness and superstition. The great men of the world have not kept alive the sacred flame with such wretched fuel as this. This view of the subject ignores, too, one of the most perplexing problems which beset men of character, and indeed all the world. There are always two moral codes in existence—one, the customary code, adopted by common consent as the standard of right and wrong—another, the ideal one, not recognized by the world at large, but adopted here and there by a single individual, and followed by him through doubt, danger, distress; it may be to success and honor, it may be to obscurity, disgrace, or death. The relation between these two codes always remains the same; the performance of the duties prescribed by one secures what is commonly known as respectability. The rewards of the other are of a different kind. The great men of character—at any rate, those whose lives the world knows anything about—have always spurned the customary code, and adopted the higher rule of life, and it is mainly by the example of their lofty morality that their weak and erring successors on the earth are kept from the servitude of appetite and passion. The two codes often come into direct conflict, and, when they do, the question has always to be settled for each individual whether the higher or the lower good should be preferred; and, indeed, which is, in his case, the higher and which the lower good. He finds two standards of right and wrong, the worldly and the unworldly, before him, and he must choose between them. This truth is so patent that examples are almost superfluous, but, if any are needed, the recent history of this country can easily furnish them. How many slaveholders before the war there were whose minds were tortured with the conflicting claims of the social code which permitted and encouraged slavery, and the claims of the code of principle. And those slaveholders' ancestors had gone through the same struggle between the traditional duty of loyalty and that of patriotism. Every one knows the touching story of the young man who was told by Christ to abandon all and follow him. The conflict is revived in every generation, and will last as long as the conscience of man. Those who undertake to teach the world about its great men cannot ignore it.

---

* "Character." By Samuel Smiles, author of "Self-Help," "Life of the Stephensons," "The Huguenots," etc., and editor of "Round the World." New York: Harper & Bros. 1872. 12mo.

† In gratitude for the pleasure of these anecdotes, rather than any from doubt of Mr

But these objections we make rather to isolated passages in Mr. Smiles's book than to its general tone, and it should, no doubt, be regarded rather as a collection of inspiring anecdotes than as an original work.

Les Merveilles de l'Exposition Universelle de 1867. Par Jules Mesnard. Texte par F. Aubert. (New York: F. W. Christern.)—This work, of some value in the history of the art-manufacture of the present day, has been brought to a close by the publication of the last number. It makes two large quarto volumes, which, however, can be conveniently bound in one, and it contains a great number of excellent woodcuts, from which, without the aid of the text, we are enabled to get a sufficiently clear idea of the present condition of the art-manufacture of France, and some notion of what is being done in certain fields of art-manufacture in England and Austria. In the matters of furniture, jewellery and silverware, and porcelain, this record of the picked work of the best workmen of our time in these countries—of France, we might more justly say, because the illustrations are for the most part of French subjects—is far from encouraging. Copying is done to perfection. Imitation is carried to the point of deception Borrowing is the rule. Originality, on the other hand, is rare, or else those who strive for it have either so small or so restricted a clientage that it has not been thought worth while, either in this publication or others like it, to take any note of them or their productions. There are a few firms and single manufacturers in England and France—Morris, Marshall & Co., in London, Henri Deck, the designer and manufacturer of *faïence*, in Paris, to name only two—who belong to this category; but either their productions are too high-priced, or the excellence and beauty of them make them caviare to the general, for they are seldom heard of in the market-place. Still, we do not complain that a work like this of M. Mesnard passes by the exceptional art-manufactures of the day, and dwells at length on the popular productions. We get from these two volumes the knowledge that there exists an immense activity in this sort of manufacture, a great deal of technical skill, considerable taste in selecting what to copy, and much ingenuity in adapting old forms to new uses. And we get also the knowledge that there is very little popular demand for anything that calls for other faculties than these for its creation. Still, it is evident that the excellence of many of the forms and decorative features chosen to be copied, and the refusal of a few men of talent and artistic feeling to work to suit the market, have brought it about that the furniture, and porcelain, and textile fabrics, and wall-papers that are popular to-day, are, on the whole, very much better than such things were fifty years ago; though, within a hundred years, the decline, not only in excellence of design, but in thoroughness of execution, is very marked. The author of the text of this work is a thorough Frenchman in bragging about his native country and talking contemptuously of other people's; or, if others happen to do anything good, in attributing it to the fact that they have had France at hand to show them how. If, however, the engravings of the things sent to the Exhibition by Englishmen could be fairly thought to represent the state of art-manufacture in England, the claim of French superiority in this field would need no bragging to support it. The English original work, as shown in these volumes, is heavy in general design and clumsy in detail, and looks as if it were coarse in execution. We cannot, however, accept these specimens as representing the condition of art-manufacture in England as a whole. In some things—in textile fabrics and carpets, for instance—the English are quite equal to their neighbors. Very likely M. Aubert would resent our saying—what, nevertheless, we believe to be true—that the English arts have been as much marred as made by the French influence that has so long controlled them. English work is almost as devoid of a healthy nationality as it is of originality and taste.

One of the most useful services rendered by this work is the notion it gives us of the condition of wood-engraving in France, by means of examples drawn from many important publications of the day, by Mame of Tours, and by Hachette, Renouard, Morel, Germer-Baillière, and Didot, of Paris. There are also many cuts from Charles Blanc's "Histoire des Peintres," the *Magazin Pittoresque*, the *Gazette des Beaux-Arts*, and other serial publications, in which France surpasses all the rest of the world. But the superiority of the French in the art of wood-engraving is too evident to need proving, and M. Mesnard might have been content for that matter to refer doubters to the woodcuts with which he has illustrated his attractive volumes.

The Subterranean World. By Dr. George Hartwig, author of "The Sea and its Living Wonders, etc., etc." (New York: Scribner, Welford & Co. 1871.)—This is one of the most recent and attractive of the long series of illustrated scientific works which have been within the last few years issued from the French and German press; such as the various books compiled by Figuier; "Subterranean Life," by Simonin; "The Earth," by Elisée Reclus; "The Heavens," by Guillemin; "The Sea and its Living Wonders," "The Tropical World," "The Polar World," "The Harmonies of Nature," etc., by George Hartwig. This catalogue might be much extended, as some of the most luxuriously embellished books of the series have not been mentioned. The number, indeed, is so great as to form a conspicuous element in modern literature, and cannot be regarded otherwise than as one of the results of the great fermentation which has for some years been taking place in public sentiment with respect to educational matters. We everywhere see evidences that the great material progress of modern times has given us a new world, in which the inhabitants require a totally different education from that which sufficed for the wants of society a hundred years ago; when the old monkish cloud still shrouded the world of intellect; and when a severe and dogmatic theology, metaphysics, and classics gave the discipline and furnished the acquirements which went to make up a liberal education. With the progressive development of the material world as practice, and the growth and multiplication of the physical sciences as theory, the industries, formerly the scorn of the humanities, gradually grew in importance until they have now come to occupy the larger share of the thought and respect of men, and are crowding their aristocratic neighbors to the wall.

In the catalogue of illustrated books on science to which reference has been made, we have manifestations of a strong but still undisciplined public taste—strong because it is willing to pay large prices for numerous beautifully illustrated and expensive books; crude, for most of these books are filled with wonders, and convey little accurate and systematic knowledge. They are, however, unquestionably doing a good work, and deserve better treatment than they have received at the hands of critics. They are gradually improving, too, and each succeeding decade and even year shows a marked change for the better in their scientific character. Some of the more

---

Smiles's general accuracy, we are tempted to call his attention to a curious mistake in the quotation from Lovelace's lines to Lucasta (on p. 197). The lines, as given here, are:

"I could love thee, dear, so much,
Loved I not honor more"

—a version which might do very well, if sung with the proper expression, for the refrain of a comic military song, but as it stands hardly illustrates the old English idea of the sacrifice of love to duty, as Mr. Smiles would have it do.

recent of the series are very admirable, teaching only true science, seizing its bold and salient points of interest, captivating and really educating without misleading. In this list we must include "Subterranean Life," "The Heavens," "The Earth," and the book before us. None of these are perfect, however, even of their kind—and, indeed, what is? They are written rather by bookmakers than scientific investigators, and so want thoroughness, symmetry, and accuracy. When in every department of science we shall have men who, like Tyndall, are thorough masters of their subjects, and peculiarly gifted as teachers and writers, we shall have science popularized as it ought to be.

Hartwig's "Subterranean World" covers a great deal of scientific ground, and must necessarily be somewhat superficial; still, on the whole, it covers it well. The first half of the book is devoted to a description of the wonders of geology, under the captions of geological revolutions, fossils, subterranean heat, subterranean upheavals and depressions, artesian wells, volcanoes, gas springs, earthquakes, land-slips, caves, including rock temples, ice caves, catacombs, bone caves, cave dwellings, and tunnels. The last half is devoted to economic geology, in chapters on mines in general, mineral veins, gold, silver, copper, tin, iron, coal, petroleum, salt, sulphur, amber, gems, etc. In these different chapters is contained a large amount of useful and interesting material, and while this cannot be accepted as an altogether satisfactory treatise on either structural or economic geology, there are few geologists who will not find in it new and striking facts, which are *real* facts and not fallacies; and if they complain that they are heterogeneous in their gathering and presentation, they can rearrange them to suit themselves.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*	
Curtius (Dr. E.), History of Greece, Vol. III	(Scribner, Armstrong & Co.)	$2 50

A DICTIONARY OF ENGLISH ETYMOLOGY.

BY HENSLEIGH WEDGWOOD.

Second Edition, thoroughly revised and corrected by the Author, and extended to the Classical Roots of the Language (with the assistance of the Rev. J. C. ATKINSON, Author of the Glossary of the Cleveland Dialect).

With an Introduction on the Formation of Language.

In preparing this Edition the Author has had the benefit of the learned and very judicious annotations of Mr. George P. Marsh in the American Edition of the First Volume of the Dictionary, which have in many cases led to the adoption of his views. Attention has also been given to the criticisms in the Etymological Dictionary of G. Müller (Köthen, 1865-7), and to the scattered suggestions on the derivations of words which occur in various periodicals. Wherever the etymology of the First Edition has been materially altered, the word is marked with an asterisk. In deference to the judgment of respected friends, the etymology of words of classic derivation, which in general were omitted in the First Edition, has been concisely inserted in the present work.

PUBLISHED BY J. B. LIPPINCOTT & CO., PHILADELPHIA,

TWO INVALUABLE WORKS FOR EVERY LIBRARY AND FAMILY.

I.

LIPPINCOTT'S PRONOUNCING DICTIONARY OF

BIOGRAPHY AND MYTHOLOGY,

CONTAINING:

Memoirs of the Eminent Persons of all Ages and Countries, and Accounts of the various subjects of the Norse, Hindoo, and Classic Mythologies, with the Pronunciation of their Names in the Different Languages in which they occur.

BY J. THOMAS, A.M., M.D.

Complete in One Vol. Imp. 8vo, 2345 pages, Sheep, $15; Half-Turkey, $17; Half-calf, $18.

Complete in Two Vols. Imp. 8vo, Toned Paper, price per Vol.: Fine Cloth, $11; Sheep, $12; Half-Turkey, $13 50; Half-calf, $15.

This invaluable work embraces the following peculiar features in an eminent degree:

I. GREAT COMPLETENESS AND CONCISENESS IN THE BIOGRAPHICAL SKETCHES. II. SUCCINCT BUT COMPREHENSIVE ACCOUNTS OF ALL THE MORE INTERESTING SUBJECTS OF MYTHOLOGY. III. A LOGICAL SYSTEM OF ORTHOGRAPHY. IV. THE ACCURATE PRONUNCIATION OF THE NAMES. V. FULL BIBLIOGRAPHICAL REFERENCES.

"Lippincott's Biographical Dictionary, according to the unanimous opinion of distinguished scholars, is the best work of the kind ever published."—Phila. Ledger.

"The most comprehensive and valuable work of the kind that has ever been attempted. . . . An invaluable convenience."—Boston Ev. Traveller.

"The most valuable contribution to lexicography in the English tongue."—Cincinnati Chronicle.

"No other work of the kind will compare with it."—Chicago Advance.

"Its plan is admirable."—New York Tribune.

"The most satisfactory work of reference ever issued from the press."—Phila. Ev. Telegraph.

"This work presents a very wide range of treatment, great compactness and perspicuity, wonderful accuracy, and a typographical execution that is absolutely perfect."—N. Y. Ev. Post.

"An admirable work."—New York Independent.

"Nothing of the kind is extant so peculiarly adapted to the wants of the student, scholar, and general reader."—St. Louis Times.

II.

A MAGNIFICENT WORK.

A CRITICAL DICTIONARY OF ENGLISH LITERATURE

AND

BRITISH AND AMERICAN AUTHORS.

LIVING AND DECEASED,

From the Earliest Accounts to the Latter Half of the Nineteenth Century. Containing over Forty-six Thousand Articles (Authors), with Forty Indexes of Subjects.

BY S. AUSTIN ALLIBONE.

Complete in Three Volumes Imperial 8vo, 3140 pages. Price per Vol.: Extra Cloth, $7 50; Library Sheep, $8 50; Half-Turkey, $9 50.

"All things considered, the most remarkable literary work ever executed by one man."—American Literary Gazette.

"It may be safely said that it is the most valuable and comprehensive manual of English literature yet compiled."—New York Evening Post.

"As a bibliographical work it is simply priceless."—N. Y. Independent.

"There is nothing to compare with it in any language."—N. Y. Observer.

"We recommend every reader, student, and teacher, and we had almost said every patriotic citizen, to secure a copy of Allibone's Dictionary of Authors."—Boston Ev. Transcript.

"As the work of a single man, it is one of the wonders of literary industry. Every man who ever owned an English book, or ever means to own one, will find something here to his purpose."—Atlantic Monthly.

"They are treasuries of English literature, without which no collection of books in our mother tongue can be considered in any way satisfactory."—Phila. Ledger.

"For convenience and trustworthiness this work is probably not surpassed by any similar production in the whole range of modern literature."—New York Tribune.

"The most complete bibliography in the world."—Phila. Ev. Bulletin.

☞ For sale by all Booksellers, or will be sent, free of expense, upon receipt of the price by the Publishers. Special Circulars, containing a full description of the above works, with specimen pages, will be sent on application.

38 Bleecker Street, New York.

CRITICAL AND SOCIAL ESSAYS. Reprinted from THE NATION, and in some measure supplying the place of the first two volumes of the paper, now somewhat scarce. Price $1 50. Address, Publisher of THE NATION, Box 6732, N. Y.

THE POPULAR SCIENCE MONTHLY.

EDITED BY E. L. YOUMANS.

No. 1, FOR THE MONTH OF MAY.

Price 10 cents; or, $5 per annum.

PROSPECTUS.

The growing importance of scientific knowledge to all classes of the community calls for more efficient means of diffusing it.

THE POPULAR SCIENCE MONTHLY

has been started to promote this object, and will supply a want met by no other periodical in the United States.

It will contain instructive and attractive articles, and abstracts of articles, original, selected, and illustrated, from the leading scientific men of different countries, giving the latest interpretations of natural phenomena, explaining the applications of science to the practical arts and to the operations of domestic life.

It is designed to give especial prominence to those branches of science which help to a better understanding of the nature of man; to present the claims of scientific education, and the bearings of science upon questions of society and government. How the various subjects of current opinion are affected by the advance of scientific enquiry will also be considered.

In its literary character, this periodical will aim to be popular without being superficial, and will appeal to the intelligent reading classes of the community. It will seek to procure authentic statements from men who know their subjects, and who will address the non-scientific public for purposes of exposition and explanation.

It is intended to make an instructive and valuable monthly, which will be continued if sustained; and, under any circumstances, it will be published for a year. Those interested in its objects are asked to assist in promoting its circulation.

THE POPULAR SCIENCE MONTHLY will be published in a large octavo, handsomely printed on clear type. Terms, Five Dollars per annum; or, Fifty Cents per copy. A specimen copy will be sent on receipt of Twenty-five cents.

CLUB TERMS.

Any person remitting Twenty Dollars for four yearly subscriptions will receive an extra copy gratis, or five yearly subscriptions for $20.

THE POPULAR SCIENCE MONTHLY and APPLETONS' JOURNAL, for one year, $8.

The Nation.

NEW YORK, THURSDAY, APRIL 25, 1872.

The Week.

THE Presidential canvass promises to be one of extraordinary bitterness, and of all but unprecedented "personality." Indeed, we doubt whether so fair a prospect has ever in the history of the press opened itself before the newspaper ruffians. A column or two of vituperation, spiced with inuendoes, "charges," and bad names will probably bring them more in dollars and cents, and procure them more caresses at the hands of heroes and statesmen during the next six months than ever before. There is nothing more comical about these ruffians than the pretence they occasionally make that they do not like their business, and the wishes they ejaculate that somebody had not begun "the personalities" and that they were not necessary—the fact being that abuse is the sole intellectual effort of which they are capable, and that there is nothing they enjoy so much. Mr. Whitelaw Reid, of the *Tribune*, has propounded recently, in a lecture on "Journalism," the theory that the New York press is better now than it was last year or the year before, and goes on improving. We wish we could agree with him. We shall probably see nothing in the coming canvass so foolishly brutal as Brick Pomeroy's *Democrat* was in 1868; but we are pretty sure we shall see far worse behavior on the part of papers making what the *Democrat* never made, pretensions to respectability. One curious enquiry the ruffians occasionally set on foot with an air of interest is, "who began the personalities?" The answer to this is, that the first ruffian began them, and a catena of ruffians has been keeping them up "down the ages" ever since. The "personalities" of our time, however, differ from those of most preceding ages in that, instead of being preliminaries to physical encounters on the part of excited and earnest combatants, they are supplied to order by mercenaries who care little or nothing about the quarrel, or are only interested in it as they are interested in the price of mutton, and who, if you showed them their compositions in a private room among respectable men, would look quite sheepish and ashamed, and show no disposition in the world to stand by their epithets.

The Cincinnati movement has gathered headway with such great rapidity that the notion of making it an advisory or protesting body, a mass-meeting subsidiary to the convention at Philadelphia, has now wholly disappeared, and for a week past its probable candidates have been the subject of most of the talk. One of its probable candidates has also been the subject of a great deal of silence—in certain quarters. It is a rather significant fact that the Administration Organ in this city has never heard that there is such a person in the field as Mr. Charles Francis Adams, and is quite dumb as to the dangers in which that gentleman's election to the Presidency would involve the country. It knows the disasters which would fall upon Mr. D. A. Wells if Mr. Greeley is nominated; it knows whether it was in Memphis or Arkansas that Mr. Greeley "shook hands with Jefferson Davis"; it knows in what year it was that the *Tribune* "called Mr. Fessenden a traitor," and who it was that called Mr. Schurz "a Dutch viper," and when it was that "Schurz struck for higher wages." But these weighty and intrinsically important matters have occupied so much of its valuable time that to the political possibility most threatening to its faction it has been blind with the blindness of the ostrich. So far as we can judge from the newspapers, Democratic, Republican, and Independent, Mr. Adams is a very popular candidate before the people. Whether his popularity with the managers of the new movement is equal to the popular belief in his availability and fitness for the office is a question which time must answer. The West will be strong in the convention; and so far as anything like "organization" has shown itself, Governor Brown's friends and Senator Trumbull's have made more show of it than any other Republicans. We see that a formidable ticket bearing the names of Mr. Adams and Governor Cox is going the rounds of the papers. If neither the Democracy nor the rabble rout of the Republicans capture the Convention, and these gentlemen are indeed its nominees, whoever beats them has his work cut out for him.

The friends of the Administration held their meeting on Wednesday of last week, in reply to the demonstration of the Liberal Republicans on the previous Friday. Great efforts were made to herald it abroad, and they were successful in producing a very large attendance, the room being crowded in every part, in addition to a small and rather unsuccessful gathering around a stand outside The audience was apparently of a composite character. It was decidedly enthusiastic, but enthusiastic for very different things. The catholicity of its admiration may be inferred from the fact that James Gordon Bennett, George Jones, Horace Greeley, and Daniel E. Sickles were all loudly cheered. The proceedings, however, hardly fulfilled, in a moral point of view, the promise of the highly respectable call. The principal speaker was General Sickles, whose appointment to the Spanish mission called down, on account of the badness of his character, the severest censures of the Administration by so good a friend of the President as *Harper's Weekly*. The General's reappearance as an "endorser" of Grant, and, above all, as a "reviewer" of the career of Carl Schurz, was, under the circumstances, perhaps one of the most curious incidents of the crisis. We believe it was part of the original programme that Senator Harlan should appear as an "endorser" too, and he was very eager to do so; but it was felt at Washington that this would be more than even the New York public could stand, so he was judiciously held back. It must be admitted, however, that Sickles is an almost unrivalled stump speaker. He upholds worthily the traditions of the early days of the art, before the newspapers had taken the life. out of it. His speech, as he delivered it, was much better than the essay he had printed in the *Times*. It is worthy of note that the meeting was got up by Mr. Henry Clews, of the firm of Clews & Habicht, to which the foreign banking business of the Government was given when it was taken away from the Barings last year, and that twenty of his clerks appeared at the head of the list of fifty-nine secretaries

The other two speakers were Senators Wilson and Morton. As Mr. Morton has within the last seven years both opposed negro suffrage and supported it, proposed the payment of the national debt in greenbacks and afterwards demanded its payment in coin and denounced the greenback theory, and now maintains that "we have the best civil service in the world" and is the enemy of all reform in it, it is hardly worth while to discuss his efforts as an "endorser." The speech of the evening was that of Senator Wilson, who was the only one of the three who could with a good grace "review" anybody, or whose "endorsement" was worth anything, or, indeed, could be offered to anybody without offence. He urged with great force the sentimental claims of the Republican party upon popular support, made a good deal out of the Ring thefts, and then entered on a detailed defence of the Administration which was not very fortunate. He took Senator Trumbull severely to task for charging the President with employing military officers at the White House in the discharge of civil functions, and said that the President, in having Generals Porter and Babcock detailed for his service, was only doing what several of his predecessors had done, and what was perfectly legal. On both these points Mr. Wilson appears to have been in error. and the errors of a man who is engaged in correcting another are doubly heinous. He cited the case of General Knox, who was sent to Congress with Washington's messages, but Knox was at the time Secretary of War. He also cited the case of Major Donelson, who was Jackson's private secretary, but he had left the army seven years before Jackson appointed him. He also cited the case of Colonel John Hay, "an army officer," who served as Lincoln's private secretary, but it appears that Colonel Hay was not in the army when he received the appointment, though he was when he held it the second time during the last year of the war.

But in saying that the presence of Generals Porter and Babcock at the White House is legal, Mr. Wilson committed a worse kind of mistake than a mistake in history. There was an act passed in 1870, of which Mr. Wilson, as Chairman of the Senate Committee on Military Affairs, should not be ignorant, making it illegal for any military officer to hold any civil office, "or to exercise the functions of any civil office," which of itself, even if other things were the same, makes the precedents cited by Mr. Wilson of no use to General Grant. Let us say frankly that we do not believe that the presence of officers at the White House is proof of a design on the part of General Grant to overthrow the republic and establish a military despotism. Our firm belief is that he entertains no designs hostile to the present form of government, and that he may lawfully smile at all charges of wishing to found an imperial dynasty. He keeps Porter and Babcock about him for the very simple reason that they are old friends and comrades who are personally agreeable to him; but his keeping them about him in defiance of the act above-mentioned, is one more illustration of that easy, good-natured disregard of the law which nearly every member of the Administration is displaying in a greater or less degree, and which, trifling as it seems, *is* dangerous, and ought to be repressed. It does not threaten us with Cæsarism, but it does threaten us with that moral and political confusion and demoralization which has often made a Cæsar welcome.

The only movement thus far made in Philadelphia towards being represented at Cincinnati, though embracing some respectable names, has not the proportion needed to inspire apprehension on the part of the Administration. It is certainly far from being identical with the Citizens' Reform Association, though the report is confirmed that Col. McClure will go to Cincinnati and "burn his bridges" behind him. He has just written a letter to some one who does a small business in small politics, and who has been calling upon him to "redeem his pledge" made last winter. This critic is admonished that the Colonel's pledge was that he would sustain the Republican organization inside and outside the State Senate, except when it opposed municipal or general reform. He has since learned from his own experience that the President is "the foe of every principle of reform."

The case of Watson *agt.* Jenner, which has just been decided in the Supreme Court, for the first time authoritatively settles the relation of the civil to the ecclesiastical tribunals of this country, and is not without its bearing on the Cheney case, in Chicago, two years ago. A Presbyterian church in Louisville (Kentucky) split during the war on the question of slavery and emancipation, the majority adhering to the Government and the proclamation, holding the church, and receiving the approval of the ecclesiastical General Assembly. On a suit brought by the malcontents, the State court set aside the decision of the General Assembly, and put the revolting officers and members in possession. Some of the loyal members residing in Indiana then carried the case into the Federal courts, and have now got judgment in their favor. The Supreme Court decides that where property is given or left in trust for the promotion of any particular doctrine or form of worship, and there is a dispute over it between members of the church or congregation, the Court will take upon itself to decide which of the two rival parties professes the faith for the support of which the money was left; or, in other words, will assume the functions discharged by the Judicial Committee of the Privy Council in England in like cases. But when there is no special trust created by deed or will, and a like dispute arises, the Court will treat the decision of the highest ecclesiastical tribunal of the denomination to which the congregation belongs as final and binding, and will enforce it. In this case, the decision of the General Assembly is adopted by the Court. This would, we apprehend, dispose of Mr. Cheney's attempt to get the civil courts to protect him against his bishop.

The Republican majority of the committee which has been investigating the case of Miller, the Superintendent of Insurance, have made a report, finding him guilty of receiving and appropriating to his own use a fee of one per cent. on the transfer of the securities deposited by the companies; of receiving, and sometimes charging, more for making examinations of the affairs of companies than the committee considers legitimate, without authority of law; of allowing clerks and commissioners in his department to receive illegal and excessive fees for the same work; of so managing the department as to lead companies to believe that it would be for their interest to employ brokers enjoying his favor. They also find that "the testimony tends to show" that he received, through H. C. Southwick, Jr., a commission of 20 per cent. on the printing of the Insurance Report; that $20,000 were raised by seven companies last winter to procure the passage of an act conferring extraordinary powers on him; and that he was cognizant of the use made of the money. The committee accordingly recommend his removal; in which recommendation we think the public will concur, in spite of the loose wording of the findings, because an inspector of monetary institutions has not only to be pure, but above suspicion.

What deprives the result of all these investigations into the conduct of officials in this State of much of its value is, however, the fact that each officer investigated is either a Fentonite, a Conklingite, or a Democrat, and each investigation is hailed as a means by which the Fentonite, Conklingite, or Democratic cause may be glorified or brought to shame. For instance, Cushman, who stole the postage stamps, and Terwilliger, who pocketed 20 per cent. on the State printing, were both Conklingites of the Custom-house variety, and accordingly their case was passed over lightly or treated apologetically by the Organ of the Administration. In like manner, Senator Wood, who was found out in having borrowed money from Tweed last year which it was acknowledged he never expected to pay, and who, if he had been a Fentonite, would have been crucified, was treated tenderly, and the committee refused to recommend his expulsion, which he certainly deserved if ever man did. Now, on the other hand, Miller, being a Democrat with Fentonite "affiliations," as the politicians say, is pursued with the greatest ferocity—the Conklingite press throwing aside all regard for decency and common prudence in its anxiety to run him down; but the *Tribune* treats him somewhat tenderly. We ought to add that as between the *Times* and *Tribune*, in the matter of "exposures," the *Tribune* is still two rascals ahead.

"Our Case" has been in a bad way all through the week, and it grows worse. The press has been approaching unanimity in recommending the abandonment of the now celebrated claim for the expenses of the war after Gettysburg. Even the Springfield *Republican*, which was at first hostile to the very mention of any change, now advises this course, and the Organ in this city admits in a vague way that it may be a good thing to do. Mr. Banks, too, the Chairman of the House Committee on Foreign Affairs, who is very cautious about seeming to yield anything to a foreign despot, is said to have concluded that the indirect claims are a little too weak for action, and has had an interview with Secretary Fish on the subject; and, though last not least, President Woolsey, of New Haven, writes to the *Independent* declaring that he thinks the British Commissioners and the country at large here honestly believed them to have been abandoned under the Treaty, and he conjures our Government, in the interest of peace and good-will, to give them up. The Administration is, however, said to be, as we feared it would be, firm in its refusal to recede. Mr. Fish is reported to have said to Mr. Banks, what it is very natural he should say, that a great government like the United States "could not solemnly put forth an argument one day and take it back the next." This is very true, and furnishes the very reason why a great government should never, in a great controversy, put forth any argument which its ablest men have not maturely considered, and why it should never allow the pleadings of a whole people at the bar of civilized opinion to be drafted by one inexperienced and comparatively unknown officer. No man in the United States, if he had been asked last fall whether he would agree to stand by anything Mr. Bancroft Davis chose to say in a controversy with Great Britain or any other foreign power, would have consented. Nevertheless, the Irish witness who, having sworn the horse was sixteen feet high, and having been told that he must mean sixteen hands, declared that "whatever he said he'd stick to," is a poor model for a diplomatist engaged in a great controversy.

The British and American Counter-Cases have both been submitted to the Geneva Commission, and the latter has been transmitted to Congress by the President. The British Counter-Case takes no notice of the indirect claims, and somewhat scornfully declines to reply to the insinuations of bad faith and insincerity which Mr. Davis, inadvisedly and against all usage in an "amicable settlement" of an international difficulty, thought proper to introduce into the American Case. This also was an offence against the principle of arbitration, for governments will never agree to go before Boards as criminals, and submit to have their leading men tried for lying, and cheating, and using false pretences. The British Case having been composed in ignorance of the contents of the American Case, the Counter-Case is in the main an answer to the main points of law and fact presented by the American Case.

The American Counter-Case, which has just been laid before Congress, is a great improvement in temper and rhetoric on the Case. It deals seriatim with what it terms "the errors of the British Case": (1) errors of sense; (2) errors as to the rights and duties of neutrals; (3) historical errors. As to the "errors of sense," it denies the correctness of the British view of the status of the insurgents, alleging that the recognition of their belligerency did not clothe them with "undefined political attributes," but left them simply a body of rebels who might be recognized as clothed with belligerent rights at the discretion of neutral powers. It denies also the propriety of confining the term "Alabama Claims" to claims growing out of the acts of the *Florida*, *Alabama*, *Georgia*, and *Shenandoah* only, and includes under this head all claims raised by the acts of all Confederate cruisers; and, finally, it denies the propriety of applying the term "American citizens" to the persons engaged in the war on American commerce in the service of the Confederacy. As regards "the rights and duties of neutrals," the Counter-Case denies that the fact that a belligerent cruiser, after escaping from a neutral port, has been commissioned or armed outside the neutral jurisdiction, exempts the neutral from responsibility for the escape; or that Great Britain was bound by any neutral obligation to admit Confederate cruisers which had been thus armed and commissioned to her ports afterwards; or that the term "due diligence" is to be interpreted by the reference to "the care or diligence any particular government uses in its domestic concerns," as this would be a fluctuating and uncertain standard. It half apologizes for the offensive charges of the Case by alleging that the American representatives understood that the British Government would not, under this rule, acknowledge anything to be negligence which could not be shown to be culpable negligence; that this was the view taken by an "eminent and learned publicist" (Mr. Vernon Harcourt, doubtless), under whose direction they understood the Case was to be prepared; and that therefore they felt compelled to submit evidence of what they considered unfriendly feeling towards the United States on the part of individual members of the British Government. The Counter-Case, therefore, denies that municipal laws or usages furnish the measure of neutral obligation.

As regards "historical errors," the Counter-Case denies that the war terminated in 1865, "with the complete reconquest of the eleven Confederate States"; also that any insurgent vessels escaped from insurgent ports were preying on American commerce when the *Alabama* and *Florida* escaped from Liverpool; calls attention to the fact that all maritime powers which recognized the Confederates as belligerents did so only after Great Britain had set the example; and denies that the acts complained of by the United States belong to a class "not commonly made objects of prohibitory legislation" except by Great Britain and the United States. The remainder of the Counter-Case is taken up with a recriminatory discussion of the manner in which the United States have in times past fulfilled their neutral obligations and of the comparative merits of the British and American Neutrality Laws, and cannot be summarized.

The last news from England seems to indicate the approach of a ministerial crisis, brought about, as our correspondent half predicted a fortnight ago that it would be, by Mr. Fawcett's bill providing for the full and complete opening of Trinity College, Dublin, to persons of all creeds. It is the aim of Mr. Fawcett and the Radicals to commit the Goverment permanently to the policy of secular education, and to put an end to all schemes for the endowment of sectarian colleges. Mr. Gladstone is, however, believed to be strongly inclined to give way on this point to the Catholics, and set up a Catholic university, which not only excites the suspicion and hostility of the political Radicals, but of the Dissenters, who under no circumstances will consent to vote money for the support of "Popery." The Fawcett bill is undoubtedly a blow at one of the outposts of the English Church Establishment, and that it must be so regarded in the Conservative ranks there is hardly a doubt. Should Gladstone now go out on this question and the Conservatives come in, it would be another of those singular upturnings in English politics of which the appearance in power of Disraeli as a reformer was the beginning.

The Commission of the French Assembly has made its report on the reorganization of the army, and offers a plan which will put an enormous force under arms. It recommends the abolition of bounties and substitution, and liability to military service on the part of the whole male population between the ages of twenty and forty, except the sons of widows or blind parents, or the eldest of orphans, or men who are the sole support of families. Even one-eyed men, lame men, and hunchbacks must be swept into the service, as long as there is any duty of any kind for which they are qualified. Five years are to be passed in "the active army," and five in the reserve; five in "the territorial army," corresponding to the German landwehr, and five in the reserve or landsturm. Of the 302,000 men who attain the age of twenty every year in France, it is calculated 65,000 will be exempted for physical infirmities; 76,300 will be exempted for various other reasons, leaving about 157,500 disposable, of whom 8,000 go to the navy. The army will thus receive about 150,000 in all each year, and it is calculated that if once the system were fairly at work, and the reserves became available, France could put 1,185,000 men in the field. It is curious to see that the commission talks of the army as a possible school of morality, though it still proposes to prohibit marriage during the whole period of a young man's service in the active force—that is, between the ages of twenty and twenty-five.

THE WORK BEFORE THE CINCINNATI CONVENTION.

THE Cincinnati movement has made considerable progress during the last fortnight both in the number and character of the adhesions to it, and it has received no small stimulus from the continued and apparently increasing folly of the friends of the Administration. The bolters could hardly have desired anything more auspicious at this juncture than the course of the majority in the House with regard to the Civil-Service Commission, and the continued non-appearance of the report of the New Orleans Investigating Committee, combined with the continued retention of Casey in office. If to these things we add the performances of the Cameronians in Pennsylvania, which have proved even more than Mr. Forney can stand, we have reason enough for the recent rapid multiplication of "calls" to Cincinnati all over the country. It will hardly do, however, for the supporters of the new movement to place too much reliance on the faults of their opponents. There is a large amount—how large one can hardly judge from public manifestations—of discontent with the existing régime in the Republican ranks. Those who dislike the men who surround the President and "run the machine" for him are probably five times as numerous as they seem, and their number increases every day. But it does not follow that because they are discontented they are ready for *any* change. A very large proportion of them are unwilling to make any open declaration of hostility to the Administration, for the simple reason that they see no chance at present of putting anything better in its place. "Things," they say, "are by no means satisfactory, but they might be worse, and we know of nothing at present within our reach which would improve them. Grant *may* be all you say, and his friends *are* all you say, but we know pretty nearly the exact extent and nature of their badness; and, until we are offered a reasonable probability of something better, we shall put up with them."

Now, we make bold to say that it is in this feeling that the new movement finds its greatest obstacle. It is far easier to deal with declared enemies who dispute your passage than with men who are very willing to travel in the same road and in the same direction with you, but refuse to go at your pace or in your company. It derives additional strength from the fact to which we alluded last week, that it is not possible, in our day and under existing circumstances, to start a reform movement into which men who are notoriously anything but reformers shall not force themselves. The Cincinnati Convention will undoubtedly have a large attendance of men whose opposition to the Administration rests on anything but creditable grounds, and of men whose advent to power and whose influence in the Government the most determined opponents of Grant would witness with unmixed apprehension. If the choice of the country is to be between the Toms, Dicks, and Harrys, the country will prefer the Toms with whose tricks it is already familiar, to either the Dicks or the Harrys whose tricks would probably be new and certainly would be no better. If the Convention, therefore, should allow itself to suppose that the cry of "anybody but Grant," or "anybody but Murphy, or Cameron, or Morton," has any magic in it, we venture to predict it would find itself egregiously mistaken. In order to clothe our assertion with circumstance, we will say that if, for instance, anybody supposes the deep disgust which has been caused in the Republican ranks in this State by the performances of the Conklingites has prepared people to look for relief and purification to the Fentonites, he labors under a great delusion. Anybody, therefore, who goes out to Cincinnati for no better reason than that he has been cheated by his brother politicians of his fair share of "the plums," might as well stay at home as far as the good of the cause is concerned, and the Convention will do well to keep a strict watch on him after he arrives.

For somewhat similar reasons, it is safe to say that the Convention can gain nothing by too great sacrifices to "harmony." Harmony is a very good thing, as far as it goes, but it is by no means the principal thing; indeed, it is only a means to an end. The first thing for a new party or a reform party to provide itself with is a body of doctrine; a party without this is a simple absurdity. It will not do to pass over revenue reform, or civil-service reform, or the condition of the South, or the encroachments of the central Government, or any other great question of the day, in order simply to organize an opposition to Grant. We are not going to engage in any wretched game for "a new deal." Amusement of that kind can be found inside the Republican ranks. Nor is it worth while to collect a great body of men at Cincinnati for the mere purpose of drawing up a string of unmeaning or vague resolutions. If we want to declare ourselves in favor of the payment of the pensions of the soldiers and sailors; in favor of a tariff for revenue which shall at the same time protect native industry from the pauper labor of Europe; in favor of a reform of the civil service which shall never go beyond preparation for reform; in favor of high wages and large profits, of scarcity and abundance, light and darkness, Ahriman and Ormuzd, we can do it at home. There are gentlemen in the Custom-house who can any day draw up a platform of this kind which might defy competition. If the Cincinnati Convention is to speak at all on the questions of the day, it must speak in English and with no faltering voice. It must ask, not for "civil-service reform" in the abstract, but for "a particular measure," of which it must specify the main features; for a tariff for revenue—that is, for a tariff levied solely on such articles and at such rates as experience has shown or shall show to be productive of the largest revenue. This is a question of naked fact, which accountants can any day settle; a tariff which shall raise revenue, and at the same time protect native industry, is a thing on which no general agreement can ever be reached. No general consensus as to what constitutes "protection for native industry" ever has been reached, or probably ever will be reached, in this stage of existence. For every man you protect, there is always another somewhere accusing you of ruining him. The one way out of the difficulty is to stop the attempt, with such regard for vested interests as justice prescribes.

The Convention must also say what it thinks about the condition of the South, which at present threatens half the Union with a return to barbarism. On this point it will have to take one of two courses: it must either declare for more interference or for none—that is, it must boldly say that the Federal Government must either govern the South more, or cease to govern it. We must either leave life and property to the protection of the local laws, or we must protect the Southern people against swindling legislators as well as against armed marauders. We have no right to assume one responsibility and decline the other. To the question, "What are you to do when the local government is in a league with the Ku-klux?" we reply by asking, "What *ought* you to do when the local government is made up of swindlers and is in a league with the Devil?" We can, if we please, do nothing in either case; but, if we send one United States marshal after the midnight assassin in Spartanburg, we ought to send another after the thieving official in Charleston. The subject is one of tremendous moment. It cannot and it ought not to be shirked.

The Convention must, too, deal with the question of the suspension of the habeas corpus with perfect clearness. Congress has lodged the power of suspending the writ, where it was never lodged before since the writ was invented, in the discretion of a single man, who may at any time expose the population of a whole State to arbitrary imprisonment by his own proclamation, without giving any reason, or for reasons furnished him secretly and orally. That General Grant has not abused this power is an argument in its favor which M. Rouher or Marshal Lebœuf might urge, but which no American can seriously be expected to answer. If the Cincinnati party is going into office, it ought to go in on a platform which shall settle finally and solemnly and clearly the question, whether Congress can either in peace or war transfer to anybody for any purpose the right of deciding when it is proper or necessary to create a dictatorship. No other legislative body has ever parted with such a prerogative before. The matter does not concern the South alone. It concerns the whole country.

As regards candidates, the resource of taking an obscure or unobjectionable or second-rate man is not open to the Convention. It would be ludicrous, after all the denunciation we have heard of General Grant and his followers, to put in office another man either as inexperienced as he, or as ignorant of law and politics as he, or as easily influenced by worthless men as he has frequently shown himself to be. The spectacle of the tag-rag and bob-tail of the political world following a reform President into the White House as "his friends" and "confidential advisers," "to make up slates" for him, or show him how to "run the machine," is something for which the country is not prepared, and something the mere thought of which would make the country "laugh consumedly." Moreover, there is no such dissatisfaction with Grant as to make the selection of an obscure candidate feasible. The condition of affairs is such—there are so many things on which any violent or sudden change of policy would be in the highest degree mischievous—that the country will not and ought not to entrust the executive power to anybody about whose character it knows little or nothing, whose qualities have undergone no conspicuous test, and whose career has afforded no means of judging how he is likely to act under any given set of circumstances. In short, the new candidate for the Presidency must be a first-rate man, a distinguished man, a man versed in affairs, and who has filled places of trust and difficulty with ability and fidelity, and who is as well known for the soundness of his judgment and the good repute of his associates as for the purity of his own character. If any attempt is made to palm off on reformers a second-rate man of any class—a makeshift or blatherskite; or a faithful, harmless body, of whom nothing bad is known; or a feather-headed body, who gets a new set of opinions with every new almanac; or a reliable gentleman, who "takes care of his friends," we trust they will let him fight his battle in his own way. If it should prove that this was what the new movement led to, the sooner everybody who was interested in good government left it, the better; for nothing would do more to postpone reform indefinitely, to make the very name a laughing-stock, and to fasten the yoke of the Toms and Rufes and Hanks on our necks more firmly than ever, than a spectacle of this kind. Under a man worthy of the position, there will be no disgrace and no discouragement in defeat. The fight will be, under the circumstances, at least a warning and protest, which will bear fruit, if not immediately, before long.

THE CIVIL-SERVICE REGULATIONS.

THE relation which the new civil-service regulations bear to those issued in December last is supplementary. The new rules do not replace the old ones or even amend them; they rather fortify them and lay down provisions for carrying them into effect. The grouping of offices originally contemplated has been completed. From an examination of both sets of regulations, there now seem to be four classes of offices in the civil service, for admission to which different methods are provided. (The classification is not expressed in the rules; we make it for our own convenience.) 1. Those offices applicants for which must undergo competitive examination before appointment, such as clerks in the departments at Washington, etc. 2. Those offices to which an appointment is made by inspection and comparison of certificates, but before entering upon which the person appointed must first pass a satisfactory examination, such as consuls receiving between $1,000 and $3,000. 3. Those offices to which an appointment is, if possible, to be made from subordinate grades in the same department, but for which the person appointed is not examined at all, such as collectors of customs, etc. 4. Those offices to which appointments are made just as they have been made hitherto, such as foreign ministers, heads of departments, etc.

In the first class are clerks in the various departments at Washington or elsewhere, who will be chosen by competitive examination for promotion in the service or for admission to its lowest grades. The manner of appointment will be as follows: The Advisory Board, which an act of Congress has empowered the President to appoint, will have under its supervision other boards to conduct the examinations. A vacancy in the lowest grade of an office is to be publicly announced, and due notice given of the examination which is to fill it. A list of the most successful applicants, in their order of merit, not exceeding three, will then be prepared and submitted to the nominating power, and from these the appointment shall be made. For a vacancy in a grade above the lowest, officers in the lower grades shall be first examined, from whom, if possible, the appointment shall be made. The manner of promotion will be precisely the same as the manner of appointment to the lowest grade. Examinations for vacancies outside of Washington will be held at the offices where the vacancies occur. Examinations for clerkships at Washington will be held not only at Washington but at such other places as the Advisory Board shall direct. When the number of applicants is so great as to make the examination of all out of the question, the examiners shall select a number of those apparently best qualified, and notify them to attend. This modification is necessary, for in any large city there might be an altogether impracticable number of young men with good public-school educations, who would be happy to try their luck for places that would lighten their work and treble their pay. But it certainly offers a loop-hole for some of the old influences to effect an entrance. The examiners are not restricted to the papers of the applicants. Endorsements of character must be in writing, but the hearing of verbal recommendations is not expressly prohibited. At any rate, the character of the endorsers should, and their position must, have weight with the examiners. Moreover, it will be to the interest of the examiners to cut down the number of applicants as far as possible, and save themselves the labor of overlooking a multitude of papers. We are not finding fault; we do not see that anything else can be done; but we think it quite plain that unadulterated competitive examination will exist much more in theory than in practice.

For the second class, examination is necessary to appointment, but there is no competitive examination. This class includes consuls receiving in salary or fees a sum between $1,000 and $3,000. Here a vacancy may be filled by the transfer of some other person already in the consular service, who need not undergo examination. But if no transfer is made, the place will be thrown open to applicants from outside. Applications must be accompanied by certificates, on inspection and comparison of which the Secretary of State will name the person apparently best qualified. The "inspection of certificates" will mean just what the authorities propose it shall mean. We should judge that verbal pressure—*i. e.*, the interviews with members of Congress—is meant to be precluded, and that the choice is to be made altogether from the certificates. But the prohibition is not expressly stated. There are two things which enter into a good certificate—what is said, and who says it. All recommendations, we imagine, very much resemble each other. Public men, even if they know something of the persons they recommend, are not sufficiently accustomed to definite expression, of themselves, to draw the traits of the applicants with very much accuracy. They fall into such phrases as "gentleman of high character and great intelligence," "capable and honest," "fine abilities and excellent address," etc. So that, as a matter of fact, the Secretary will be compelled to decide, not so much upon the merits of the applicants as upon the merits of the endorsers. Then, whose opinion is to be preferred—the most influential politician's, or that of the most competent authority? If President Woolsey recommends one man and Senator Morton another, whose recommendation will be taken? It is plain that it will depend altogether upon the character and courage of the person who has the appointment, whether he selects the applicant who seems to be most competent or that candidate who has the strongest political backing. The person named must undergo examination before he receives his appointment.

In the third class of appointments, no examination at all is required, but the new regulations lay down some restrictions and limitations. Under this head come the customs collectors, surveyors, etc. The regulations provide that when a vacancy occurs, the proper authorities shall first ascertain if any subordinates of the office are qualified to fill it. If any such persons are found, their names will be presented to the President, who will select one of them for appointment. If, however, there is no competent subordinate, the appointment will be made at the President's discretion. It would hardly happen that any great office could be carried on under the many changes and in the long interregnums without one or more subordinates who would be as efficient chiefs as they are indispensable assistants; and the President will, no doubt, have that immediate opportunity to practise his intentions which all persons turning over a new leaf so ardently desire. To the class in question belong the heads of bureaus at Washington, postmasters and collectors, surveyors, appraisers, and naval officers of the custom-houses. For vacancies in the offices of Receiver and Register of the Land Office, Pension Agent, and Marshal, no precedence is given to subordinates, because there are none to speak of. In all cases, however, the applicants must reside in the district in which the vacancy occurs. Applications for these positions must be made in writing, and the rules promise, as in the other cases, that the person apparently best qualified shall be appointed. Vacancies in the United States offices in any Territory, except those of Judge and Indian Agent, shall be filled by persons domiciled in that Territory. The fourth class includes all those offices to which appointments shall be made as they have been made hitherto.

The proclamation accompanying the new regulations informs the employees of the Government that henceforward "honesty and efficiency, not political activity, will determine the tenure of office"—a strange thing, surely, to be said in a state document, and one which the future student of our history will not skip as dull reading. On the score of frankness it leaves nothing to be desired, and though we do not think confession atones for the fault confessed, we yet approve of calling a spade a spade. It will do no good to cover up our imperfections by formal state-talk and grand indefinite phrases. We wish, however, that the proclamation had stated explicitly that the character of an officer's political opinions should have nothing to do with the tenure of office. "Political activity shall not determine the tenure of office." That must mean activity on the side of the Government; and it seems to imply that a leaning towards the Adminstration will not only be acceptable, but quite necessary. There is an ominous undertone in that paragraph which should cause an opponent of the party in power, should any such chance to be in office, to be careful how he trusts too far the enlightened and liberal opinions of the Administration.

SECRETARY ROBESON AND THE SECOR CLAIM.

SINCE we made, last week, the charge against Secretary Robeson of having illegally paid $93,000 on the Secor claim, Senator Wilson has appeared at the Cooper Institute, and asserted that this charge was unfounded, and that Mr. Trumbull's acount of it, in his speech at the Liberal Republican meeting, was inaccurate. Mr. Wilson, at the same time, read a written statement of the case, doubtless prepared at Washington, as the true version. We shall now show that Senator Wilson's own story is a misrepresentation, and that the written statement which he read was another; it is charitable but difficult to suppose that both he and the writer of the statement were ignorant of the facts.

During the war, in 1862, the Secors contracted to build for the Government three iron-clad monitors—the *Mahopac, Tecumseh,* and *Manhattan*—for $1,380,000. The vessels were completed in 1864. All bills and claims of the contractors were presented, while the vessels were being built and after their completion, to a board of which Admiral Gregory, and afterward Admiral Ringgold, was the head. On the report of these boards the contractors were paid the contract price, and, for extra work over and above the contract price, $521,195 15; and, in 1867, the whole matter was settled so far as the Navy Department was concerned. The contractors had other claims which the Department refused to allow. They then appealed to Congress, which passed the following law:

"CHAP. CXLVII.—An Act for the Relief of certain Contractors for the Construction of Vessels-of-War and Steam Machinery.

"*Be it enacted, by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Secretary of the Navy is hereby authorized and directed to *investigate the claims of all contractors for building vessels-of-war* and steam machinery for the same under contracts made after the first day of May, eighteen hundred and sixty-one, and prior to the first day of January, eighteen hundred and sixty-four, and said investigation to be made upon the following basis: he shall ascertain the additional cost which was necessarily incurred by each contractor in the completion of his work by reason of any changes or alterations in the plans or specifications required, and delays in the prosecution of the work occasioned by the Government, which were not provided for in the original contract; but no allowance for any advance in the price of labor or material shall be considered, unless such advance occurred during the prolonged time for completing the work rendered necessary by the delay resulting from the action of the Government aforesaid, and then only when such advance could not have been avoided by the exercise of ordinary prudence and diligence on the part of the contractor; and from such additional cost, to be ascertained as aforesaid, there shall be deducted such sum as may have been paid each contractor for any reason heretofore over and above the contract price; and shall report to Congress a tabular statement of each case, which shall contain the name of the contractor, a description of the work, the contract price, the whole increased cost of the work over the contract price, and the amount of such increased cost caused by the delay and action of the Government as aforesaid, and the amount already paid the contractor over and above the contract price.

"Approved March 2, 1867."

The concluding section, which we omit, related solely to the *Dunderberg.*

Under the above act a Board was organized to examine the claims of Secor & Co., Perine, Secor & Co., and other contractors, and on their report the Secretary of the Navy reported to Congress that there was due Secor & Co. and Perine, Secor & Co. $115,539 01, and thereupon Congress in 1868 passed the following act:

"[PRIVATE—No. 76.]

"An Act for the Relief of certain Government Contractors.

"*Be it enacted, by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to Secor and Company and Perine, Secor and Company, the sum of one hundred and fifteen thousand five hundred and thirty-nine dollars and one cent; to Harrison Loring, thirty-eight thousand five hundred and thirteen dollars; to the Atlantic Iron Works, of Boston, Massachusetts, four thousand eight hundred and fifty-two dollars and fifty-eight cents; to Aquilla Adams, the sum of four thousand eight hundred and fifty-two dollars and fifty-eight cents; to M. F. Merritt, the sum of four thousand eight hundred and fifty-two dollars and fifty-eight cents; to Tomlinson, Harteepee and Company, fifteen thousand one hundred and seventy-one dollars; to Harlan and Hollingsworth, the sum of thirty-eight thousand five hundred and thirteen dollars; and to Poole and Hunt, the sum of three thousand six hundred and ninety-four dollars and eighty-one cents, being the amount found to be due to each of the parties herein respectively named by the Secretary of the Navy under an act of Congress entitled 'An act for the relief of certain contractors for the construction of vessels-of-war and steam machinery,' approved March two, eighteen hundred and sixty-seven, *which shall be in full discharge of all claims against the United States on account of the vessels upon which the Board made the allowance, as per their report,* under the act of March two, eighteen hundred and sixty-seven.

"Approved July 13, 1868."

The $115,539 01 was paid to the Secors and their receipt given in 1868.

This, according to the act of Congress, was "in full discharge of all claims against the United States on account of the vessels upon which the Board made the allowance." Notwithstanding the payment of the contract price, $1,380,000, and $521,195 15 for extra work, and afterwards of $115,539 01 in full of all claims on account of the vessels constructed by Secor & Co. and Perine, Secor & Co., the present Secretary of the Navy, Mr. Robeson, in 1869, directed a reinvestigation of the claims of these contractors by a Board of Officers in his Department, and on their report paid the contractors, in 1870, $93,000 more. In doing this Mr. Robeson, we repeat, violated (1) the settled rule of the Department not to open accounts settled by a previous Administration, except possibly in the case of newly discovered evidence; (2) a positive act of Congress, which directed that the $115,539 01 should be in full discharge of all claims against the United States *on account of the vessels upon which* it was paid; and (3) another statute by taking money appropriated for the fiscal year ending June 30, 1870, to pay a claim which arose six years before.

Mr. Wilson, in his New York speech, in replying to Mr. Trumbull, who had charged Mr. Robeson with paying money out of the Treasury illegally, and on a claim that had once been settled, said: "A Board was appointed under the law of 1867, to examine into *damages,* not into work done, not into material furnished." The law directed the Secretary of the Navy "to investigate the claims [not damages] of all contractors for building vessels-of-war," etc.

This, we see, was a plain misstatement on the part of Mr. Wilson; but he made another, for he further said this claim of $93,000 "was never referred to a Board at all," and in the written statement he furnished, the source of which cannot be mistaken, it is said to be "for work actually done"—"a debt"; but the fact is, the whole contract price, and more than half a million besides for extra work, had been paid by Mr. Welles, the former Secretary of the Navy, on the report of Boards who passed on the bills of the contractors at the time, and refused to allow the $93,000.

Mr. Wilson's written statement further alleges that the act of 1868 did not provide that the sum of $115,539 01 should be "in full for all claims on account of the vessels," etc., but of the claims "upon which the Board made their allowance as per report." Why, then, were the words "on account of the vessels" inserted in the law? The language of the law is, "all claims *on account of the vessels* upon which the Board made their report," etc., and to say that it did not embrace all claims on account of those vessels is a plain perversion of the very letter, as well as the whole spirit, of the act. Worse remains to be told, however. The Senate Committee on Naval Affairs made, May 12, 1870 (Report No. 163), a report in the case of various contractors who had been paid under the law of 1867, and after enumerating them, including Secor, and mentioning the amount paid to each of them, including the $115,539 01 to Secor, it says:

> "On the 13th of July, 1868, an act was passed directing the payment of these amounts to these parties, by which act it was declared that these payments should be 'in full discharge of all claims against the United States on account of the vessels upon which the Board made the allowance, as per their report, under the act of March 2, 1867.'
>
> "Under the stress of an overpowering necessity, as they allege, these parties received those amounts. *That in law such receipt is a complete bar to all further recourse, cannot be denied*; but still the question recurs, is it just for the Government to plead the bar? After deliberate consideration, the committee are of opinion that it is not. In their judgment, the Government ought not, upon grounds of technical law, to deny equitable relief. It cannot afford to be unjust; it ought never to refuse to be just."

Thus we see that this Committee pronounced the act a complete prohibition of any further payments, and that in defiance of this declaration Mr. Robeson did make further payment, as we said last week, "without any warrant of law." It may have been just in morals to make a further payment, but in that matter Congress, and not Mr. Robeson, was the judge. We do not accuse him of corruption, but we do accuse him of flagrant disregard of the law of the land, which we should condemn more severely if it had not become almost a habit among Government officers, and one which we wish to see stopped somehow and at all hazards—none the less because Mr. Robeson can doubtless still get his conduct condoned, as Mr. Boutwell did, by "a strict party vote."

THE ENGLISH FARM LABORERS.

LONDON, April 5, 1872.

An event has recently taken place of far more importance than all the struggles between the ins and the outs which generally absorb the attention of politicians. The English agricultural laborer has given signs of independence—nay, more, he has already given proofs that he is capable of adopting the mode of warfare which has been brought to perfection in the war between labor and capital. Nothing could have been less expected a short time ago. The utter inertness and indifference of the country poor has been hitherto accepted as amongst the primary data in the calculations of all parties. When, for example, it was proposed to extend the suffrage, nobody ever thought of giving a vote to poor Hodge, the ploughman. Conservatives would have regarded such a measure much as an American Democrat regarded the concession of the ballot to the blacks; Radicals, on the other hand, fancied that Hodge was so degraded that to give him a vote would simply be to give a vote to his master. Any revolt against the established order of things was as little expected from him as from the horses that he drove and the cattle that he tended. The lowest social stratum in the country districts was regarded as a dead, hopeless mass, one degree removed from serfdom, and scarcely elevated above actual slavery. The utmost that was hoped was that by slow degrees some sort of ambition might slowly filter down to them in the course of generations. Well, it appears that the process has already taken place to a far greater extent than had been hoped or feared. The mass has been infiltrated with new ideas. *Bos locutus est*; or, in other words, the agricultural laborer has taken to forming trades-unions and striking. Though at present only a small part of the country has joined in the movement, there are abundant signs of widely-spread sympathy; and it is impossible for any man to say what explosions may follow when the train has once been laid.

The movement which has hitherto attracted most attention has begun in Warwickshire. The rate of wages in that part of the country has been higher than in the Southern and Western districts, owing to the neighborhood of great manufacturing centres such as Birmingham. If the comfort of the laborer has been somewhat greater, the ambition has been stimulated in a still higher degree; and the laborers there have learnt from their neighbors to give voice to their discontent. It seems that a man named Arch, an agricultural laborer by birth, was seized by a desire to better himself. He left his native village in search of higher pay, and, being a man of evident ability, he succeeded in raising himself materially, and bringing up a large family decently. At one period he became a preacher in a small dissenting sect, and acquired facility in addressing his own class. Arch appears to be the mainspring of the present movement; he is the chief missionary of the new propaganda; he has been for the last few weeks addressing numerous and enthusiastic meetings, forming unions which take root and spread with amazing rapidity, and encouraging the laborers to make demands against which the farmers have at present held out, and which have led to a very serious strike. For some time the movement attracted comparatively small attention elsewhere. The press, however, has become alive to its importance in the Easter vacation; reporters have been swarming in the district; and Mr. Auberon Herbert, Mr. Jenkins—the author of "Ginx's Baby"—and other philanthropical agitators have been addressing crowded meetings and generally encouraging the movement.

It is not easy for any one not actually on the spot and familiar with the details of the question to form any trustworthy opinion as to the policy of the particular demands now put forward. It is easy, indeed, to see that the agricultural laborer is undeniably right in seeking to better his position. It is a standing puzzle to persons in a different class how he can manage to keep soul and body together on the miserable pittance which he receives; it is questionable whether, as prices have risen without a corresponding rise of wages, the physical condition of the population is not actually degenerating. One of the correspondents of the *Daily News* tried the experiment of living for a day or two as a member of a peasant family. He appears to have broken down under the hardships. There is something miserably pathetic about his account of the discolored water which did duty for tea, and of the wretched scraps of bacon which were all that his hosts ever saw in the shape of meat. One does not wonder that a man accustomed to the rather profuse style of eating and drinking customary in our upper classes should have declared that directly after dinner he felt himself as "hollow as a drum." Indeed, it is urged with great apparent force that the farmers' policy in paying low wages is a bad one from a pecuniary point of view, inasmuch as a well-fed animal—be it horse or man—can work more effectually than an ill-fed one; and the agricultural laborer shows a marked deficiency in vital power owing to his being kept at starvation wages. When transported to the North, and receiving wages enough to buy sufficient food, it is said that the poor, half-fed shadows of men fill out and do twice as much work as they could before. The family in which this correspondent lived contained seven persons, and depended on the earnings of the father, who received 12s. a week, and of the eldest boy, who received 3s. When asked to explain how this sum was made to provide for rent, bread, schooling, clothing, and firing on the most modest scale, to say nothing of beer or of laying up a trifle for rainy days, the poor wife was utterly incapable of giving an explanation. Yet, in some way or other, the problem was practically solved by her, as it is by thousands of other families, which often receive even a lower rate of wages. The children were in this case at school; the family were all respectably and neatly clothed; and, except for the wretched bill of fare, it would scarcely have been seen that they were in a state of grinding poverty. Indeed, I think it must strike any traveller in our agricultural districts that, inadequate as the wages notoriously are, the external aspect of the population is, in certain respects, better than one would expect. Comparing them, for example, with a poor district in France or Germany, the English poor have perhaps a more stolid and depressed look, but they seem generally to be better clothed and fed. Meat, one must remember after all, enters into the regular diet of but a small minority of the agricultural population in any part of Europe. Still, if your readers like to try a little calculation as to how the barest necessaries for a family of seven can be provided for a sum of 15s. a week, or £39 a year, I think they will be puzzled; and there are many districts where wages are lower. One or two explanations may be given. In the first place, the wages do not represent the whole earnings of a man by any means. There are seasons at which he receives more. Here, for example, is an account of the amount received in a year by a laborer whose wages were nominally 12s. a week:

Turnip hoeing, . . .	3 weeks at	16s.,	£2 8s.
Mowing, ...	3 "	30s.,	4 10
Harvest, ...	14 "	24s.,	16 16
Turnip clearing, . . .	1 "	18s,	0 18
Remainder of year, .	31 "	12s.,	18 12
			£43 4s.

which, though still small enough, is a considerable advance on £31 4s., which would be the result of the simple 12s. In the next place, there is a good deal of charity—sometimes a good deal too much—distributed in parishes where the clergyman or the squire is rich and liberal. And, finally, the farmer is frequently in friendly relations with the men he employs and gives them occasional assistance in a variety of small ways. By such means it is possible to account for the fact that human beings do contrive to live and grow up and keep out of the workhouse, on wages the nominal amount of which is preposterously small. But, though many such facts go to explain the non-starvation of the population, they do not prove that it is in a prosperous or even in a tolerable condition.

Be that as it may, they clearly do not intend to tolerate their condition any longer. The movement seems not unlikely to spread through England. In Lincolnshire, there is already a determined struggle between men and masters, which has lasted for a month. Probably you will wonder how the men can save, from such a wretched pittance as they receive, enough to support them on strike. How is it that a man on the brink of starvation can carry on the dangerous warfare in which well-paid artisans have so frequently been beaten? The answer explains the real strength of the movement. A certain amount of external assistance has been given; but the laborers have a much more formidable weapon at hand. The demand for labor in the manufacturing districts is so great that they only have to migrate to another part of England to find higher wages and a ready welcome. Many offers have also been made from various colonial agencies, and the stream of English emigration across the Atlantic seems to be setting in with unusual vigor. For some time past, an excellent clergyman, Canon Girdlestone, has been exciting the indignation of the Devonshire farmers by encouraging a migration from the South to the North of England; and the current thus started will doubtless flow with increased rapidity and regularity. In short, the laborers have the unanswerable argument, that the farmers have no longer a monopoly of the demand. Till recently a country lout supposed that the boundaries of the parish were identical with those of the world, and would as soon have thought of migrating even to Manchester as of taking a trip to the moon. Now that he has discovered that he is not actually rooted in the soil, it is not impossible that a movement may take place of the same kind as that which has diminished the population of Ireland. I have never thought much of emigration as a social panacea; and a state emigration in particular is likely to stimulate the evils it is expected to redress. The shiftless pauperized part of the population has a wonderful power of expanding so as to fill any artificial void. But the case is different in a voluntary emigration of agricultural laborers. A very small diminution of their numbers would be enough to raise the rate of wages, and the mere threat of emigration is one which at once places them in a comparatively independent position.

In conclusion, I may observe that the present demand in Warwickshire is that the rate of wages should be raised from 12s. to 16s. a week; the farmers have consented to raise it to 15s.; but the men, whether wisely or not, have declined to accept the compromise. The issue of this particular struggle is still doubtful; but its success or failure is comparatively unimportant. When a new spirit has entered the agricultural poor, it is fully clear that the old order is doomed, though it may not expire till after many struggles and, it is to be feared, much suffering.

I have no space left to speak of the topic upon which the newspapers are just now most occupied, namely, Mr. Disraeli's speech at Manchester. There is no danger at present that speech-making will be a lost art amongst us, and I shall have abundant opportunities for commenting upon the policy which Mr. Disraeli announces. I would rather end this letter by noticing the loss of a man whose influence as the leader of a religious party has long been on the decline, but who has done good work in his day, and has always been regarded with singular personal affection—I mean Mr. Maurice. In this, as in general elevation of character, he somewhat resembled Mazzini, whose death has recently caused, as it of course deserved to do, a much wider sensation of regret. But few men, however conspicuous, have excited warmer feelings in those with whom they came personally in contact than Mr. Maurice. His nature was of the kindliest and sweetest that I have ever known, and many who could never share his spirit will deeply regret him. Intellectually, he was a pupil of Coleridge, and, like his teacher, burdened his own mind and injured the value of his teaching in the hopeless attempt to represent the Thirty-nine Articles as the highest incarnation of pure reason. As honest a man as ever lived, he succeeded in offending both parties, the heterodox by using the old dogmatic language, and the orthodox by using it in some new transcendental sense; but he won also the far rarer success of being beloved by all good men on the two opposite sides. The world is rapidly drifting away from his point of view; but he will be remembered as one who did his best to preserve the true spirit of religion as the form in which it was clothed became obsolete. One only wishes that he had hit upon a better scheme of doing it.

THE OVERGROWTH OF BERLIN.

BERLIN, April 2, 1872.

IN No. 347 of the *Nation* (Feb. 22) the sudden over-populating of Berlin was referred to under its financial and social aspects. The sanitary and moral bearings of this condition of things are now attracting the attention of men of science and of philanthropy. The evil goes on continually from bad to worse. It is no sign either of poverty or humility that, in this capital of the Germanic Empire, one "has not where to lay his head." Many of the country gentry who came here to celebrate the King's birthday, after "roughing it" for a night upon the floor of a restaurant, were glad to betake themselves to the second-rate hotels at Potsdam for the accommodation of a bed—the resource of "furnished rooms" in Berlin having quite failed them in these times. For days before the moving crisis of April 1, the advertisement of a dwelling to let was sure to block the street in the neighborhood with a crowd of homeless contestants for the last chance. The city is turned quite topsy-turvy with the multitude of removals, and many a load of furniture may be seen wending its way toward Charlottenburg, the very tread of the horses expressing the despondency with which unhappy housekeepers forsake the city for the suburbs.

I am almost afraid of suggesting to New York landlords some new devices of oppression by reporting those of their brethren of the craft in Berlin; but from specimens of leases which have fallen under my notice, it would appear that a tenant has no rights which a landlord is bound to respect. These leases are for first-class dwellings; yet the tenant must oblige himself to pay his rent in advance; to give six months' notice of his intention to quit; to surrender his furniture in the event of not promptly prepaying his quarterly dues; to keep the dwelling in thorough repair at his own charges, even for damages by fire, hail, or other calamity; and if he shall make any improvements—such as double-windows, bath-room, gas, etc.—to leave such fixtures to the landlord without compensation, or pay the landlord for restoring things as they were! It is further stipulated in such contracts, that should the house prove unhealthy, by reason of water in the cellar or dampness in the walls, the tenant shall have no redress against the landlord, but he himself must provide against the insalubrity of the house by keeping his own apartments well aired in summer, and thoroughly warmed in winter. From such contracts, it would appear that the Berlin landlord is master of the situation, and fully equal to the occasion; the extraordinary demand for dwellings enables him to dictate terms which, in ordinary circumstances, a gentleman would reject as insulting.

When a tenant has submitted to become the victim of such a contract, he finds entrenched behind the rent a reserved fire of taxes. Certain of these he must pay to the landlord, under the name of Gebäudesteuer; others, to the ubiquitous and inexorable Prussian tax-gatherer. And here is put in practice the one objectionable recommendation of Mr. Wells's theory of taxation, viz.: that the assessment shall be in the ratio of rent. To salaried men and persons of a narrow fixed income this is a serious injustice, since with such tenants rent, instead of being a measure of ability to pay, is the most positive and weighty drawback upon the means of living. The Berlin landlord this year extorts a hundred dollars more rent from a twelve-hundred dollar professor; "So, ho," says the tax-gatherer, "you are paying four hundred dollars rent instead of three hundred, and I must raise your tax accordingly." This test is applied to local and general taxes, and there is an income tax besides. This financial prelude brings personal sanitary and moral sequences; but it is the public aspects of rent in relation to health and morals with which I am now concerned.

Given a population of 800,000 to be housed in 25,000 buildings, the average of 32 persons to a house may not seem excessive, when it is considered that these houses are subdivided into about 160,000 dwellings upon their several flats. But a closer analysis has developed the fact that there are to-day in Berlin full 300,000 persons living in dwellings that have but a single room that can be warmed; over 180,000 in dwellings of two such rooms; and nearly 90,000 in suites of but three rooms each; showing that at least 60 per cent. of the population live in a degree of physical discomfort unfavorable to health.

Dr. Schwabe, Director of the City Bureau of Statistics, has prepared a tabular view of the relative density of population to house-accommodation in the five principal cities of Europe. In London, the average number to a house is 8 persons; in Berlin, 32; in Paris, 35; in Petersburg, 52; and in Vienna, 55. This comparison is fair, with the exception of London, where the size and style of houses differ essentially from the Continental system of flats. In London, rent absorbs from one-tenth to one-eighth of income; in Berlin, one-fifth to one-fourth; in Paris, over one-fourth; and in Vienna, one-third. The rate of mortality seems to follow an arithmetical progression in analogy with the ratio of tenants; thus, for every 1,000 the yearly deaths are, in London 24, in Berlin 25, in Paris 28, in Petersburg 41, and in Vienna

47. The same curious analogy runs through the ratio of illegitimate births; there are in London 4 per cent., in Berlin 16, in Paris 20, in Petersburg 26, and in Vienna 51.

So many causes influence both mortality and illegitimacy—especially the latter—that only the crudest philosophy would generalize from these data an argument for or against a particular mode of house-building, yet the relations of the figures are too striking to be dismissed as accidental. In two ways the overcrowding of cities tends to immorality; first, among the poor, through the huddling together of the sexes in confined apartments, and, next, among the well-to-do, by making rent so formidable an item in family living that many seek an easy substitute for marriage, facilities for which are also created by the hotel-and-lodging system which overcrowding favors or necessitates.

The last volume of the "Transactions of the Social Science Association" (British) contains two or three valuable papers upon this subject; one by Dr. Henry W. Rumsey, especially, embodies the testimony of eminent physicians that the overcrowding of cities, and the overpeopling of dwellings and streets, are in themselves fruitful causes of epidemic disease and of physical and moral degradation. Indeed, men of the highest scientific authority do not hesitate to say that such overcrowding, the aggregation of such masses in small spaces, tends to the physical deterioration of the human race. Mr. George Godwin, F.R.S., brands it as "a deadly evil." With an Englishman, of course, the first remedy is an act of Parliament: "That, as for the overcrowding of persons in a house, so also for the overcrowding of houses in a given area, there should be a limit to density of population fixed by law." Certainly, the evil is so vast and so portentous that it calls for all the wisdom of the statesman, all the research of the scientist, and all the zeal of the philanthropist to cope with it in the interest of humanity.

AUSWANDERER.

Correspondence.

THE ATLANTIC MONTHLY AND THE LATE MR. STEARNS.

TO THE EDITOR OF THE NATION:

SIR: Upon reading your notice of an article on "John Brown in Massachusetts" that appeared in the *Atlantic Monthly* for April, I observe you have been misled by a statement therein made, that the two hundred rifles held by Captain Brown in the month of March, 1858, did not belong to, and were not under the control of, the Massachusetts State Kansas Aid Committee, but were the personal property of the late Mr. George L. Stearns. In order to correct this statement, I beg leave to say that I have in my possession the report of the Secretary of the Committee referred to, made in the month of September, 1858, or six months later than the time mentioned by the writer in the *Atlantic*. This report is signed "F. B. Sanborn, Secy." It embraces the assets of the Committee at that date. The first item reads thus: "190 rifles in the hands of our agent, $3,800."

Directly following the enumeration of assets, I find this paragraph: "By a recent vote of the Executive Committee these are to be converted into cash by the chairman, and held in trust for two years to meet any liabilities against us, or any exigencies hereafter occurring, at the end of which time the balance is to be paid over to the authorities of Kansas, for the benefit of common schools."

This evidence is conclusive as to the real ownership of the arms in question. They belonged to the Committee; they were not the property of Mr. Stearns, and he had no control over them except as a member and the chairman of the Committee.

R. P. HALLOWELL.

BOSTON, April 19, 1872.

PROFESSOR MORSE'S FATHER AND THE UNITARIANS.

TO THE EDITOR OF THE NATION:

SIR: In your issue of April 11, page 242, you say, in speaking of the late Professor Morse, "His father, by the way, was a great polemic, settled over a church at Charlestown, Massachusetts, whose life was made miserable by the spectacle of the Unitarian success in the controversy among the Congregational Churches. It was literally and seriously made miserable, for he was an ardent champion of all the extreme Calvinistic doctrines, and was compelled to look on while the Unitarians turned the tables on their former fellow-worshippers, and *got the churches into their own hands*." We have italicized the words that contain a very common opinion, indeed, but which look strange in a journal so generally accurate as yours. The Unitarians never "got the churches," but only some of them, "into their own hands." In Clark's "Historical Sketch of the Congregational Churches in Massachusetts" (pp. 270-275), you will find the results of that controversy as follows: "At the opening of this controversy, which, for the sake of a precise date, we may assign to 1810, the whole number of Congregational Churches in Massachusetts was three hundred and sixty-one, all of them founded on the old Puritan faith—at least, all professedly Trinitarian. In the course of this controversy, ninety-six of these same churches passed over to Unitarianism, besides thirty parishes." Eighty-one churches were "exiled," *i.e.*, driven from their meeting-houses by an unfriendly parish, because they continued to hold to the faith of their fathers. "When the division was completed, there were one hundred and thirty-five Unitarian and four hundred and nine Orthodox Congregational Churches in the State"—*forty-eight more* than at the beginning of the separation.

These historic facts do not warrant the assertion that the Unitarians "got the churches into their own hands." A word more; in 1867 the Unitarians had one hundred and seventy societies in Massachusetts, a gain of thirty-five; the Orthodox, four hundred and ninety-three, a gain of eighty-four. Unitarian societies in the United States, in 1871, were three hundred and forty-seven; Orthodox Congregational Churches were, at the same time, three thousand one hundred and one. So, neither in the State of Massachusetts, nor in the United States, have the Unitarians ever got the churches of the Congregational order into their hands.

While, then, Professor Morse's father "was literally and seriously made miserable" by the controversy, the results show that his misery was relieved by many cheering hopes. Had he lived to see the end of the controversy, his joy would have been great that the churches of his fathers suffered so little from the wave that swept so many Lutheran churches in Germany, and two hundred and thirty-five of the two hundred and fifty-eight Presbyterian churches in England, from their moorings.

A. H. R.

SPRINGFIELD, OHIO, April 15, 1872.

[Our language was rather careless, as we were thinking rather of the Boston region in which Mr. Jedediah Morse's work lay than of the State at large or the country. We assure "A. H. R." that we are aware that there were some of the Orthodox left after the Unitarians had had their best success, and that there are plenty of them still extant. But Mr. Morse had the unhappiness to see in 1808 only one Orthodox church in Boston, all the others having been got away by the Unitarians; and as a biographer of his says, "his persevering opposition to the so-called 'liberal' views brought on him a persecution which affected deeply his naturally delicate health."—ED. NATION.]

Notes.

THE Journal of the Berlin Geographical Society, No. 36, contains Dr. W. Koner's annual list of geographical publications, embracing not only separate works, but the titles of articles in periodicals, and also maps and plans ("Uebersicht der vom December, 1870, bis Ende November, 1871, auf dem Gebiete der Geographie erschienenen Werke, Aufsätze, Karten und Pläne"). The fulness and accuracy of this record are beyond all praise. It is carefully classified, and covers 176 pages of fine type. The term "Geography" is used in its most comprehensive sense, and we find, for example, such entries as these: "Report of the Commissioners appointed to enquire into the Treatment of Immigrants in British Guiana"; "Jahresbericht des Konsulats zu Puerto Cabello"; "Statistica forestale del regno d'Italia"; "Das Lager des Attila in den catalaunischen Gefilden"; "Bevölkerung und Viehstand in Dalmatien"; Tylor's "Primitive Culture"; Björnsen's "Love and Life in Norway"; Baedeker's Guide-books; "Etudes sur les Glaciers actuels et anciens du Caucase," etc., etc. (New York: L. W. Schmidt.)—Books and papers too good to be thrown away, but no longer desired on account of want of room, or for whatever other reason, may usefully be sent to the U. S. Military Post Library Association, whose headquarters are at No. 58 Broadway. When one considers that there are 279 army posts spread over our great territory, and that the larger proportion of these are distant from all the conveniences and resources of civilization, infrequently reached by mails, amid savage and dispiriting surroundings, and without excitement or diversion of any kind except card-playing, one sees not only what a welcome thing it must be to obtain plenty of wholesome reading, but how plain a duty it is to supply this reading, if merely to keep out the flood of nasty literature which finds its way thither, and to which the unnatural solitariness of the soldier only too naturally predisposes him. The association above named seems to be sufficiently regardful of the religious welfare of our soldiers and officers; and the special encouragement they need, apart from pecuniary contributions, is towards building up post-libraries and reading-rooms. For this purpose, good secular works and papers rather than tracts would seem to be the proper sort of gifts to make. To any one desiring to be informed of the character and aims of the association, we presume the corresponding secretary will be glad to send a copy of its last annual report.——"Studies in Poetry and Philosophy," by J. C. Shairp; and "On the Lord's Prayer," by the late J. F. D. Maurice, are announced by Hurd & Houghton.——Dean Stanley's "Lectures on the Church of Scotland"; the "First and Second Kings" of Lange's Commentary; George Macdonald's "Hidden Life, and other Poems"; and Erckmann-Chatrian's "Plébiscite," will be published by Scribner, Armstrong & Co.——F. J. Huntington & Co. will publish next month "The Hymnal with Music," by the Rev. Dr. Tucker, of Troy.

—Dr. W. D. Wilson, author of "Lectures on the Psychology of Thought and Action," reviewed in the *Nation* of April 11, has pointed out to us that we misrepresented him in saying that he thinks instinct and clairvoyance to be due to a direct action of the spinal cord. On the contrary, he thinks them due to the possession of "senses" other than the familiar five. We much regret the error, though we think the opinion we attributed to Dr. Wilson is not more at variance with first principles than that which he really holds.

—To teach Englishmen the geography of foreign parts, it has been said that a war was necessary. The people of Leicester, in England, have, however, lately learned that the town has a namesake in Massachusetts, and one, too, with a century and a half of history; and the discovery has been made the occasion of an interchange of courtesies of the most peaceful and friendly character. The medium of communication, in this case, was a Boston gentleman, Mr. Abraham Firth, who had the singular fortune to have been born in the old Leicester and bred in the new. A visit to his native place interested him so much that he collected books, photographs, etc., illustrative of its history and antiquities, and presented them, on his return, to the public library at Leicester, Mass. But besides this, he made up a collection of documents of the same nature in regard to the latter town, and sent them as a gift to the Literary and Philosophical Society's library in Leicester, England. This elicited a pleasant letter of acknowledgment, with the frank confession: "So imperfectly is the topography of America known in this country that, to most of us, the fact that a second Leicester existed in New England was a revelation." The Society also forwarded several additional volumes, pamphlets, and photographs relating to their town, to be deposited in the public library, the directors of which have in turn responded with maps of Worcester County, Washburn's "History of Leicester," "Lectures on the Early History of Massachusetts," and with "cordial good-will and hearty desires to see England and the United States of America joined, on the basis of mutual justice, in all good efforts for the pacification of the world and the good of mankind."

—If Dean Alford were alive now, he would like to read the *Kansas Magazine*, whose English we borrow in describing a variety of the human species which is christened the Catfish Aristocrat. First, for his habitat: a Kansas river is an anomaly in nature, being too shallow for navigation, too dense for a constant beverage, and too fluid for culture, though, if the catfish could be permanently expelled, and proper attention given to irrigation in summer, these streams might be made the garden of the world. A snag or some other obstacle to their flow, having stuck fast, affords a lodgment for the detritus of the bluffs, and, if these accretions can be held for a short time, there is soon an anonymous growth of feculent herbage and festering, crawling weeds; then malarious bushes and jungles exhale from the black soil, in whose loathsome recesses the pools of pure rain are changed by some horrible alchemy into green ooze and bubbly slime, breeding reptiles and vermin which infect earth and air with their venom, while deadly vapors and sickly odors born of decay for ever brood in the perpetual gloom. This foul alluvion with its basis of quaking quicksand by-and-by becomes subject to local government, and, under the delusion that it is a component part of the earth, is surveyed, and soon thereafter a zigzag pen of rotten rails surrounds the filthy hovel of the Catfish Aristocrat, which rises from the swamp like a congenial exhalation. The Catfish Aristocrat is pre-eminently the saloon-builder. He builds no school-house, he builds no church; he constructs the log saloon with mud-daubed interstices. There with his companions he gathers round a rusty stove choked with soggy driftwood, drinks sodcorn from a tin cup, plays old sledge on the head of an empty keg, and at night reels home yelling to his squalid cabin. Arrived there he is met by a score of lean, hungry curs that pour in a canine cataract over the worm-fence, and, driving them back with imprecations, he gets to bed under a heap of vile gray blankets. In the morning he crawls into his muddy jeans and broken shoes, whence his great toes peer out like snake-heads of forbidding hue, and greets the day by drawing out the corn-cob stopper of a flat-back bottle, from which he takes raw a gurgling drink of infamous whiskey; after this draught he picks up a dull axe and slabs off an armful of chips from a green cottonwood log and prepares his breakfast—hog meat and corn-dodger, washed down by a decoction of coffee burned to charcoal. Another pull at the bottle, a few grains of quinine if it is "ager-day" (ague), a chaw of Navy, and the repast is finished, and the Catfish Aristocrat is ready for the labors of the day. These, if it is war-time, consist in joining Price, or Anderson, or Quantrell, and bushwhacking, poisoning wells, murdering captive women and children, sacking defenceless towns, house-burning, horse-thieving, perpetrating atrocities that would make the blood of Sepoys recoil. In peace he votes the Democratic ticket. His parentage no man knows; it is supposed that he was born of the inner consciousness of his own squalor, but this must always remain a matter of conjecture. To the most minute observer his age is a question of the gravest doubt. He is perhaps a hundred years old; perhaps he is thirty. No one can tell the number of his years by inspecting the sandy sorrel of that hair, in color like a Rembrandt interior, which strays round his freckled scalp, those eyes—we must spare the reader the eyes—that lipless mouth, which never opens but to let whiskey and tobacco in and let oaths and saliva out. Lucky is it for Kansas that the Puritan came and made her a child of Plymouth Rock. Had he not, a few hundred mush-eating chawbacons, her only population, would still have been chasing their razor-backed hogs through her thickets of black-jack, and jugging for catfish in the chutes of the Missouri and the Kaw. Thus far the writer in the *Kansas Magazine*. His style is not the style which will be cultivated in Kansas when his Puritan idea, and some other ideas, shall have gone on to the fruition which he predicts for the ideas of Plymouth Rock; but as for the matter of his article, nothing is more certain than that he describes with substantial accuracy the Southern and Southwestern "poor white." Such, really, were the worst and ignoblest of the poor wretches whom, ten years ago, we bred in plenty on our wild frontiers; and some such still we breed, though their foster-mother and best employer, slavery, they have lost. The Anglo-Saxon race in its degradation can sink to low levels; but perhaps nowhere and never has it been at once more degraded and more actively noxious than in this country and this century.

—A correspondent asks us to beg some publisher to undertake a continuation of Poole's "Index of Periodical Literature," a useful work which it would be exceedingly convenient for librarians, book-makers, and magazine writers to have brought down to a later date. To have it continued would be convenient for other writers as well as the classes just mentioned, for some of the really learned and sound and in every way good literature of the periodical publications gets into no book, and must be sought in the place of its first appearance. Moreover, to the exhaustive treatment of many subjects it is necessary or advisable to have read everything that everybody has written upon it, the good and the bad alike, and for these and other reasons we wish there were a prospect of profit sufficient to tempt one of our publishers to continue for money Mr. Poole's labor of love—love which must, we fear, have been but lightly rewarded. We must, however, advise our correspondent that while we shall be glad if he can have his wishes in the matter gratified, we must deprecate his wrath against the authorities of the Smithsonian Institute. He is in a fine hearty state of indignation with those gentlemen because they are "busy preparing a new orbit for the planet Neptune" when they might go at "Poole's" and get it finished up. But "Poole" and the periodical articles we can make shift to get on without; while the new orbit the planet must have, or it will be obliged to go on in the old one. We admit that it was so good a man as Mr. Garfield who the other day made some highly popular objections to the operations of the surveyors of the Fortieth Parallel, and thought their work not worth pursuing at much expense; but such things are nevertheless not to be said. Mr. Garfield or our correspondent might to-day have been a hind in a leather jerkin with his owner's collar round his neck if a thousand years ago certain non-producers in cells and other idling places had not been trifling with astronomy, the magnet, explosive powders, and other rubbish instead of eating their honest blood-puddings, like sensible men, and herding pigs or owning them. Our correspondent must restrain wicked feelings towards the savans, and recollect that he can send a message to London and get a reply in ten minutes instead of twenty days, because some time since a few idle people, who should have been making indexes and so on, employed themselves in finding out how many different things would attract bits of paper, lint, and the like. In a sense, we "hitch our wagon to a star" fully as often as the transcendentalist could desire.

—The salvation of modern art by means of "real washtubs and a real pump" is not yet completed. Yet we notice the new "Life of Maclise" going over with a busy murmur of admiration the actual pulleys, actual ropes, tompions, and marlinespikes collected by that painter for his fresco of "Nelson." Could not the biographer, after enumerating these and after quoting the artist's Prussian correspondence over the cap worn by Blücher at Waterloo, have proceeded more at large to tell what he thinks of those grand Maclises for their sentiment, action, and drama? Possibly the foreordained issue for this disease of minuteness is in American art, with its tendency to panoramas. Realism, at any rate the realism that holds modern painting to the wall, is not the trouble with our representative national pictures, the Trumbull historicals at Washington, about which a Montana correspondent has asked us some questions. Colonel Trumbull, a decidedly meritorious disciple of the Fuseli and Haydon period, was apt to utter history with the latitude of parable. That, however, was not the reason why his floods of paint, totally unrestrained by real washtubs, were a bad bargain for Congress. The Representatives, in fact, reasoning upon probabilities, could hardly have done better with the order. It was adjudged to a man with very genuine claims, both for artistic and patriotic worth, and Congress has never since had a repetition of that felicity. The disturbing element was nothing but old age. The four Trumbulls in the Rotunda of the Capitol were begun at the age of sixty and finished at sixty-eight. Their melancholy inferiority to his early, live work may be measured by referring to his pictures owned by Yale College, among which are the originals, having a long priority, of the large "Declaration of Independence" and "Surrender of Cornwallis." These first conceptions show high merit, and the miniature heads they contain are of delicate value as portraits. When the artist came to exaggerate them for the Rotunda, he failed abjectly. His faults, which can be most readily explained in writing, however, are faults of verity. His "Declaration" shows the faces of Congressmen who did not sit in Independence Hall till long after the date. His "Cornwallis" introduces the portrait of that officer, who was not personally at the scene of the surrender. This having been complained of, Trumbull was forced to give the figure another name. His "Washington" resigns his commission in the presence of ladies, who would be thought to have intruded for purposes of ornament were they not so prominent in deformity. "Let not foreigners, or men of after days," says Dunlap, "take these pictures, because of their situation, as a standard by which to measure the arts of design in our country at the time they were painted." The four blazons by Trumbull are not frescoes, but canvas pictures. They are each eighteen feet by twelve, and Congress paid $8,000 dollars apiece for them. As an additional perquisite—we may remind the minute moralists who have grudged to Rothermel the exhibition of his "Gettysburg"—the Colonel took his pictures without reproach over the country as they were severally completed, getting thousands of dollars for the first so displayed, while the last did not pay expenses.

—It has been a much controverted point whether the ministry of Christ was one year, or two, or more. The Gospel of John appears to vouch distinctly for three Passovers, which would be at least two years and some months. On the other hand, the death of Christ is fixed for A.D. 29, the consulship of the two Gemini, by the concurrent tradition of the church, while Luke (iii. 1) gives the fifteenth year of Tiberius for the date of his baptism, and Tiberius came to the throne in 14. It has therefore been generally assumed that his ministry was one year only. An article in the January number of the *Quarterly Review* discusses this subject, and shows that Zumpt (and before him an English scholar, Dr. Mann) has removed this apparent inconsistency by pointing out that, although Tiberius did not become sole emperor until 14, he was associated with Augustus three years earlier, and it is probably from this first actual assumption by him of imperial rank that the Evangelist dates. This event was in the last part of the year 11; the year 26, therefore, would be the fifteenth year of Tiberius, and as the birth of Christ is well ascertained (by comparison with the dates of Herod's life) to have been four or possibly five years before the common era, we come to Luke's statement that he was then about thirty. This view is further confirmed by the expression (John ii. 20): "Forty and six years was this temple in building." It is shown from Josephus that the temple was commenced B.C. 20 or at latest 19; and, as it was not finished until A.D. 63, it is clear that this expression meant that it was forty-six years since its commencement. This would bring us to 26 or 27, or at latest 28, as the date for the conversation in the second chapter of John. Putting these facts together, we may conclude that the baptism of Jesus was in the last part of the year 26, and his first Passover (John ii.) in the spring of 27.

—In the last of the six discourses which Döllinger has been delivering in Munich on the divisions of Christendom and the way to reunion, he paid some attention to the Jesuits, whose achievements he sketched in a very forcible manner. The history of the last three centuries, he said, had shown that the Jesuits blighted whatever they touched, and that none of their works were prosperous. Their traces are marked with ruins, and so utterly barren has their husbandry been that the proverb, "No grass grows where the Turk sets foot," is fully applicable to them. Where now, asked Döllinger, are the Jesuits' missions to Japan, Paraguay, and the savage tribes of North America? In 1625 they might have been called the rulers of Abyssinia—nine years later not a vestige of them was to be found there. And what is left of their labors in the Grecian islands, in Persia, the Crimea, in Egypt? Scarcely so much as the recollection of them survives. By endeavoring to establish the universal monarchy of Spain in Europe, they brought about the depopulation and bankruptcy of Spain itself and the loss of its possessions in other parts of the world. More than this: aided by the Inquisition they impressed their own spirit so completely upon Spain that they made it one grand monastery, where neither science nor the highest culture could thrive; with the result that to-day Spain produces nothing in literature, and, with the exception of Turkey, is the most retrograde country in Europe. Döllinger also charges them with having destroyed the old German Empire and introduced the system of state-absolutism. In Bohemia they annihilated the ancient Czechic literature, broke up the old Bohemian nobility, expelled thirty thousand families, and sowed the seeds of discord between the Bohemian and German elements of the population. The influence of the Jesuits at Rome and the mortal hatred they inspired in England determined for more than a century the fate of the Catholics of that country, bringing upon them unspeakable misfortunes and oppression. Sigismund of Sweden owed them the loss of his crown, but their own expulsion followed it. In Russia, they pinned their destinies to the false Demetrius, and shared his overthrow. In Poland, their control of kings, nobles, and the higher clergy has brought that country to its present condition. After plunging Portugal into misery by inciting King Sebastian in the sixteenth century to his African crusade, they favored the Spanish domination, and, when that failed, their influence on the monarchy introduced the deplorable misgovernment of which we still see the effects. They prepared the way for the French Revolution by fostering the corruption of morals from king to peasant, and, taking the soul out of the Gallican Church, left it powerless against Voltairianism and an easy prey to the violence which soon overwhelmed it.

EASTLAKE'S "GOTHIC REVIVAL."*

THE architecture called Gothic first appeared in England during the last few years of the twelfth century. The style had originated in France, not more than twenty-five years before, and in purely constructional necessities, but first appeared in England rather as a system of ornamental design than as a new way of building. This distinction soon disappeared, and after the year 1200 the French Gothic and the English Gothic grew and flourished and passed through rapid changes, side by side, with less influence over one another than might be looked for. Under the Angevine kings of England, French architecture would naturally be a controlling influence, one is ready to say. It is probably to the English monasteries and monastic architects that the characteristic and independent development of English architecture is mainly due, at least during the earliest years—the years that gave it character and independence. In France the art flourished for three hundred years, and passed away finally with the fifteenth century. In England it struggled on longer, the influence of the revived classic taste of Italy being much less strong in England than among the nobles of Louis XII. and Francis I., fresh from Italian campaigns. But in the reign of James I., of England, classical architecture is held, in common opinion, to have gained complete mastery throughout his kingdom, and Gothic art to have been definitively abandoned. Here, however, Mr. Eastlake has a word to say. It is the chief object of the first part of his book to show that the Gothic style was never wholly abandoned in England. He speaks of repairs and additions carried out with tolerable faithfulness in the style of the original buildings, of new buildings also, which, however misshapen their designs, are Gothic in intention, and especially of the never-ceasing antiquarian interest in the old buildings as historical monuments, which did much towards their preservation during times when they were not the fashion. The account of the struggles of Inigo Jones and Sir Christopher Wren with the Gothic churches over which they had authority, and of the mingled respect and contempt with which these and other able men looked on the old work, is very interesting, and only too short.

Our author's third chapter begins the history of "The Gothic Revival." Horace Walpole is considered the first, the unconscious, the childlike and stammering prophet of the new dispensation. Chapter IV., after too brief a mention of a most interesting matter—the Gothic work done at Hampton Court during the reign of George II.—goes on to discuss the followers of Walpole, a list of noblemen and architects who dabbled in mediæval antiqui-

---

* "A History of the Gothic Revival: An attempt to show how the taste for Mediæval Architecture, which lingered in England during the last two centuries, has since been encouraged and developed. By Charles L. Eastlake, F.R.I.B.A., Architect; author of 'Hints on Household Taste.'" London: Longmans; New York: Scribner, Welford & Co. 1872.

ties and restorations and imitations, and, finally, Beckford, the author of "Vathek" (which "wild Oriental romance," Mr. Eastlake tells us, "has been long forgotten"), and his rather absurd palace of Fonthill. And here begins in earnest the discussion of that which has been the weakness as well as the strength of the "Gothic Revival," the immense multiplication of books of description and criticism, containing pictures both of effect and construction, and addressing both the enquiring student and the imitative modern architect. We meet with Dugdale, Gross, Bentham, and Willis; next we have Britton, and then, the first caterer to the architects who like their designs ready-made to their hand, the elder Pugin, with his "Specimens of Gothic Architecture." In this book, first published in 1820, "the graceful mouldings of York and Lincoln were accurately profiled on a large and intelligent scale. Instead of the vague and frequently inaccurate sketches of ancient tracery and groining which had previously been published, we find in this work plans and sections of stone vaultings and elevations of windows, drawn out with the utmost care, the radius and centre of every segmental curve ascertained, and the 'mitreing' of every junction clearly shown." And Mr. Eastlake adds, "An age of ignorance was succeeded by an age of plagiarism."

The weakness of the Gothic revival has been, of course, its imitative character. Direct copying was not to be avoided at first; without it nothing could be done—nothing learned; but the age of direct copying ought to have been very short. Unhappily, the possibility of reviving Gothic architecture was proposed as a patriotic, a religious, or an antiquarian and historical study to a generation which knew almost nothing of decorative art of any kind, and to which architecture was not a fine art at all. The flat insignificance of London in 1840, the frightful ugliness of the gentlemen's seats built for a century before that time, the desecrated and dishonored decay of the noblest churches in England, were paralleled by the almost total absence of beauty in the interior, in the household, in the objects of daily life. But for the porcelain works scattered about England, there would have been a nearly total abandonment of decorative design applied to industry; and the low ebb which decorative design had reached may be judged by any one who considers the objects turned out by these porcelain manufactories themselves. Mr. Chaffers' "Keramic Gallery," just completed, will suffice. Let the reader look up Chelsea, Lowestoft, Derby, Bow, and the rest, and study the photographs of articles carefully selected from among those manufactured at those famous works, almost the only homes of decorative art in the England of their day. To this generation, which knew not of art except as a costly and superb way of displaying wealth and liberality, the study of Gothic art was proposed: 1st, Because it was an *English* style, not imported from Italy, and referring every day to Roman, Greek, and cinquecento Italian models; 2d, Because it was a *Christian* style, and not based upon the study of heathen temples; 3d, Because it was associated with glorious and romantic times—with knighthood and chivalry. Each of these reasons for the revival was sufficiently answered by careful copying. Moreover, criticism from the antiquarian standpoint became easy to those who would "cram" a little upon mouldings, and originality of design became proportionally difficult to architects, who were told that their designs were not "correct"—that they had used thirteenth-century mouldings with fourteenth-century tracery, and the like. The "Tractarian" reformers, too, were supposed to approve especially the revival; and the Low-church and Dissenting enemies of the Tractarians felt it incumbent upon themselves to stigmatize new Gothic churches as sectarian or schismatic. All these evils might have been overcome had the architects and workmen been stronger and more accomplished. The problem for the revivalists was, of course, to find out what point in English Gothic work was the best to start from, to agree, one and all, to build only in the style so selected, to study modern materials and the way to use them in accordance with the style, and then to let the art develop itself gradually, as art has done in all the great times. But the difficulties in the way were many, and have proved themselves insuperable. Gothic architecture has not yet been revived in any complete sense. The works of a few men only show what might have been done—what may yet be done if their example is followed.

The chief defect in Mr. Eastlake's book we take to be the one he could hardly avoid—its absence of discriminating criticism. Mr. Eastlake is, we take it, a practising architect settled in London. It is almost impossible for him to speak with freedom of the works of his contemporaries and competitors. He does what he can, and points out what are generally admitted to be the peculiar merits of each of the better known architects; but he can hardly say so if, with us, he thinks that Butterfield, among the elders, and Nesfield and Norman Shaw, among the younger men, are on the right track; that William Burges is one of the ablest designers living, but too resolutely antiquarian, saving himself by his fine draughtsmanship and power of wielding sculpture and painting, even of the human figure, as accessories of architectural design; that the vast majority of the "Goths," including men of as severe and refined taste as Street, of such boundless energy and power of getting through work as Scott, and of such varied ability as Waterhouse, are rather examples of the inferiority and artificiality of modern design than architects of the kind that the times and the circumstances call for.

It is not made very clear in the book before us how much distinction is to be made between the mere substitution of Gothic for so-called classic forms and ornaments, on the one hand, and any resolute carrying out of Gothic principles of design, with modern materials, to serve modern needs. This our author might have done without bearing too forcibly upon the difference between the work of different men. This task of general criticism of modern English work Mr. Eastlake may yet set himself. The book before us gives us reason to hope that he may succeed in the more arduous labor. It is certainly a vast improvement upon the rather unfortunate "Hints on Household Taste," which, for our sins, is everywhere to be seen, causing curiously ugly sideboards to be made for our best dining-rooms, and retarding, we think, the progress of interior decoration.

It should be added that the illustrations to the "Gothic Revival" are numerous, entirely in wood engraving, and on the whole spirited and expressive. A great many more might be added with advantage, for it is vexatious to know nothing about the look of a building which is described and discussed at length, and it is to be remembered that nobody has photographs of these modern buildings, and that the books in our architectural libraries are ignorant of contemporary work. If this book succeeds, we hope that a second edition will be yet richer in illustrations. Moreover, an index should be added.

SCIENCE AND NATURAL SCIENCE.*

THE term science, when used absolutely, applies properly to the system of rules which govern the art of investigating truth. It is so fundamental and comprehensive that it can hardly be defined save by an identical sentence: science is the science of thinking or using the human reason. Moreover, on this fundamental stage it is hardly possible to distinguish science and art; the science of thinking and the art of investigating truth become coincident. Science is opposed to tradition as the source and guarantee of human knowledge. It is as wide in its proper application as the entire realm which in former times was subject to tradition; it is as wide as human knowledge, as catholic as humanity, and it comprehends all human interests. However, it is rarely understood in this sense in its popular use, and even in the use of men of learning "science" is often used as identical with *natural* science. Hence arises a mischievous confusion, which robs pure science of its due prerogatives, and produces in natural science an undeniable arrogance, and a disposition to disparage the historical and speculative sciences. Whether, when this ambiguity is recognized as an evil, and the attempt is made to do away with it, some other name may be given to what we have above defined as science; whether the name philosophy may be revived for it, or, as has been well suggested, we may come to call it "wisdom," is not now an important question. We are concerned with the effort to distinguish this system of rules from its subordinate applications. Therefore, in this paper, science means what is above defined; natural science means the application of these laws of human thought to the investigation of truth in the domain of physics.

We desire to consider an especial case in which this *qui pro quo* seems to us to have produced an error in the discussion and solution of a most important problem.

On the 22d of September, 1871, Professor Virchow, the justly celebrated physiologist of Berlin, delivered an address before the "Association of German Nature Students," on "The Part which the Natural Sciences have to Play in the Formation of the New National Life of Germany." He declares that the problem to be solved, in order to found a homogeneous nationality, is this: to give to the people a fund of common convictions, and to educate them to the use of a uniform method of thought. The task to be performed by any force which aims to fashion and organize a sound and healthy nationality is here stated with absolute correctness, and the importance of that task it would be impossible to exaggerate. All the more necessary is it to scrutinize closely all the discussion of this problem, and every solution proposed for it.

Professor Virchow's solution is that the natural sciences are the power to produce unity of conviction and uniformity of method of thought. Hence they ought to be placed by the state in control of the state schools, when the problem would be both theoretically and practically solved.

It is worth while to review the process by which this conclusion is reached. It is asserted, in the first place, that natural science has conferred two important benefits on mankind. In the first place, it has taught us the genetic theory of knowledge. By “knowing,” we of to-day do not understand holding in memory the tradition in regard to a thing (things being regarded as single, simple, and not subject to change); by “knowing,” we now understand being familiar with the number, order, and connection of phenomena (things being regarded as ever subject to change, modification, and development). In the second place, natural science has taught us the supreme importance of method.

---

* "Die Aufgabe der Naturwissenschaften in dem neuen nationalen Leben Deutschlands." Von Rudolf Virchow. New York: L. W. Schmidt.

Here, however, we meet at once with the ambiguity we have mentioned. It most assuredly is not natural science that conferred these two benefits upon the human race. They are two great canons of science. They were won on the field of philosophy at the close of the last century. Philosophy is indeed slow and clumsy. It travels over a wide circuit to gain a little advance, but every step which it gains is felt over the whole expanse of human interests. It was so in this case. When these canons of thought were established, science was born. It had only to go on and conquer all the fields of human knowledge, rescuing the old ones from tradition and dogmatism, and creating a host of new ones. In physics it has won grand and rapid triumphs, and the natural sciences have furnished us with the most precise and satisfactory illustrations of the application and value of these scientific principles, but it is both an historical and a scientific error to say that natural science conferred these principles on the race; an historical error because it puts a subsequent event in the place of an antecedent, and a scientific error because it puts a part for the whole.

Next it is argued, on the ground of these services of natural science, that *it* is the proper authority to guide education. It will give unity of conviction and uniformity of method of thought. The inference is good, as we shall see in the end, that the force to which these two principles belong has an indisputable claim to preside over all education. At present we follow the train of thought of the author. The error which we have detected will manifest itself still more clearly by the error and confusion which it will produce in the result. Professor Virchow, then, proposes that natural science shall descend into the arena in which the sects and the philosophies are fighting for the control of primary education, shall single out especially the Romish Church, which now holds legal possession of many of the state schools, and holds them fettered in tradition and dogmatism, and shall enter into a conflict similar in character and method with that which the other parties are carrying on. Then the state shall judge that, among the contestants, natural science is *the* one which ought to carry off the prize, and so, finally, it shall enter into control of the state schools, protected and guaranteed by legal sanctions. It would thus supplant the church, and occupy its present position.

Numerous considerations at once present themselves to throw doubt on this solution of the problem proposed. Has the force to which (as we are told) we owe the genetic theory of knowledge, and method, no wider or nobler policy in the solution of this problem than to borrow intolerance, violence, and exclusiveness, the worst principles of its worst adversary? Can it only add another element of discord and confusion to a strife already full of shame and mischief? Can a solution be true which would have no application to the schools of England or America? Would not the answer of the priests be valid when they say: “If unity of conviction and uniformity of thought are what you want, leave the children to us. We will guarantee these sooner and more surely than these gentlemen can do it”? No solution is correct which leaves room for such grave misgivings.

But if we turn back to the true source of the great scientific principles—that is, pure science—we may properly say of that that it is the true mistress of all study, investigation, and education. It, and it only, can give unity of conviction and uniformity of method of thought. It is attainable through different disciplines, as the taste of various persons may lead them to choose. The principles are permanent and universal. They may be reached through many channels, and, when won, they may be applied to all objects of human knowledge. They serve to dispel illusions, to tear away falsehoods, to expose errors, and therefore, so far as they are faithfully used, to lead to the truth. They thus produce unity of conviction. They also inculcate strict, methodical, and sharply-defined methods of thought, and thus preserve investigation from dissipating itself on subordinate and unessential issues. These principles, in their sum, make up science. It may be reached as well through philology, history, interpretation, criticism, political science, etc., as through the sciences of nature. Hence it is catholic enough to be enthroned above all education as its spirit, its life, and its aim. It will not limit and narrow education, but continually expand it, continually open new channels by which we may find our way to the truth, to unity of conviction, to uniformity of thought, to harmonious and organic national life. As the presiding spirit of primary education, it will fix the end to be aimed at, viz., training in the scientific use of the mental powers. Nothing deserves the name of education, whether it be technical or ecclesiastical instruction, which sets itself any other end than this.

No one who appreciates what this science is, and what its true prerogatives and authority are, will ever propose to bring it to its rights by a legislative enactment or an executive decree. It has the right to rule, and sooner or later it must rule, over all thought and education. In the meantime, we must suffer for the need of it in every interest we have. But its triumph can never be secured by pitting it against Jesuits in a fight on their own principles. It must extend its leaven through the whole lump by its intrinsic value and power.

ANCIENT CLASSICS FOR ENGLISH READERS.*

THIS is an excellent series for four classes of readers: for women; for college-bred men who want some short and handy way of reviewing their old studies; for unlettered scientific men; and for self-educated men of active mind, curious to know what manner of men those old Greeks and Romans were. Pliny the Younger, too, is just the man for a popular series like this. He was a born reporter; if he had not been a rich man, he would have been that ancient specimen of the Bohemian, a *scurra.* Hardly any old writer gives us such welcome glimpses into Roman interiors, or flashes the cheerful bull's-eye of history so effectively along those obscure bits of life that bring the old world home to men's business and bosoms; little supper scenes and homely bills of fare; ghosts; haunted houses; cases of *hari-kari;* incidents in the theatre and the courts; gossip about literary people, cliques, and spites; the romantic couple that tied themselves together and jumped from their chamber-window into Lake Larius; villas, baths, gardens, fountains, and terraces; not to mention graver matters, such as the haling of Christians and the terrible convulsion of Vesuvius that overwhelmed Herculaneum and Pompeii, of which he is the only surviving witness. In himself considered, Pliny was a commonplace and insignificant man. It is an injustice to the Pliny family to call him a Pliny at all, although for centuries the “nephew of his uncle” has prospered with his uncle's trade-mark and the well-grounded name of the house. His mother, it is true, was a Pliny, the sister of the Naturalist, though strangely called by the authors of this little volume the “sister-in-law”; but the son was a Pliny only by adoption. The regular Plinies, if we may generalize from the description given of two of them, appear to have been a strong breed, portly and masculine. The slender, sickly, red-eyed boy—for he never was anything more than a red-eyed boy—overeducated, ambitious with an ambition that far outran his mediocre abilities, perpetually fidgeting about his mind, was evidently all father, all Cæcilius—at any rate no Pliny. Dr. Holmes says somewhere that he never knew an instance of infant piety that was not clearly a case of scrofulous diathesis. Pliny—poor little pagan—had no chance to bud out into one of Mark Twain's good little boys. But the malignant humor burst out, nevertheless, in another and most virulent form; he wrote a tragedy in Greek when he was fourteen years old. Perhaps it may seem a little uncharitable to rake up in the year 1872 what was done in the year 76. Many wiser men than Pliny have done such things when they were boys and managed to live it down. But when Pliny plumes himself on it after he was man-grown, we feel bound to testify that he was one of those precocious, scrofulous organizations that are soon ripe, soon rotten. This explains why he fades out so completely in the last part of his life.

Messrs. Church and Brodribb's translations are quite good, and their biographical sketches, combined with extracts from the letters, give on the whole a tolerably fair idea of Pliny, though with some natural exaggeration. In a popular work such little blemishes may be overlooked as “the hoarse Codrus” (p. 85) for “Cordus,” or “Maculonus will lend you his house” (p. 83), or “he tells us that he wrote a Greek tragedy in his fourteenth year, and that he began to practise as an advocate at nineteen” (p. 3), for “his fifteenth year” and “at eighteen.” The author's name is given in the outset “Caius Plinius Cæcilius Secundus” (p. 2), instead of “Gajus” or, at any rate, “Gaius.” In matters of textual criticism and higher philology the translators are rather at sea, evidently belonging to the old-fashioned clerical school, not to the new or German school of English philology so ably represented by Munro and Ellis. A droll enough illustration of this may be found in their version of one of the famous letters to Tacitus, describing the great eruption of Vesuvius (p. 14):

> “A letter was put into his hands from Rectina, the wife of Cæsius Bassus, a poet of some eminence, who had a villa on the shore of the Bay. This lady

---

* “Ancient Classics for English Readers, edited by the Rev. W. Lucas Collins, M.A.—‘Pliny's Letters,’ by the Rev. Alfred Church, M.A., Head-Master of the Royal Grammar School, Henley-on-Thames, and the Rev. W. J. Brodribb, M.A., late Fellow of St. John's College, Cambridge.” Pp. 170. Philadelphia: J. B. Lippincott & Co. 1872.

was terrified at the danger in which she found herself—not without reason, if it be true, as we are told, that her husband actually perished in the eruption."

Now we may be quite as loath to break up this pretty Campanian bower—the poet and his bride, Cæsius Bassus and his Rectina—as ever Mr. Puff was to have all that part about Queen Elizabeth and her horse cut out: "Cut it out? And the description of her horse and side-saddle?" And yet it must be cut out, for there is not a word of truth in it. The manuscripts read (with some variants): *accipit codicillos rectine tasci imminenti periculo exterrite:* that is, *accipit codicillos Rectinæ Tasci imminenti periculo exteritæ.* There is something rotten in the word *Tasci;* and as it is known from the scholiast on Persius that Cæsius Bassus lost his life by the eruption, it occurred to the Venetian scholar, Hermolaus Barbarus, with the loose notions of his age about criticism—his book was published the year America was discovered—to shove the two very improbable words, "*Cæsi Bassi,*" into the text, in place of the one word "*Tasci.*" The whole argument set forth at length in Messrs. Church and Brodribb's Latin Pliny may be thus briefly condensed into the General Choke style:

Cæsius Bassus, a poet of some eminence, had a villa on the shore of the Bay.

Rectina, having also a villa on the shore of the Bay, naturally suggests herself as a fit person to be the wife of Cæsius Bassus.

Consequently, Rectina was the wife of Cæsius Bassus.

"Your Tower of London, sir," says General Choke, "is nat'rally your royal residence. Being located in the immediate neighborhood of your Parks, your Drives, your Triumphant Arches, your Opera and your Royal Almacks, it nat'rally suggests itself as the place for holding a luxurious and thoughtless court. And consequently," said the General—"consequently the court is held there." Nothing has worked more mischief in literary history than this determination to bring all contemporaries together by hook or by crook. It always reminds us of an atrocious print entitled "Washington Irving and his Literary Friends at Sunnyside," in which the author of the "History of New York" is represented in a chair, surrounded by a number of mezzotint gentlemen, each apparently unconscious of any other human being's presence, and aimlessly gazing into infinite void, like the pink-checked dummies in a barber's window. The names discreetly put by the artist under the figures enable us to say that some of the "literary friends" never were at Sunnyside and never saw Mr. Irving in his life.

To return to our subject—the Lady Rectina—we must positively forbid the banns, at least with Cæsius Bassus. Mommsen queries the name Tascus, probably because it is not found elsewhere. Keil thinks the *tasci* is a corruption of a part of the woman's name. We cannot quite agree with him. The usage of Pliny, as "Verania Pisonis," "Piso's Verania" (II. 20, 2), taken in connection with the obvious genitive, leads us to think it quite probable that the husband was mentioned. If it is necessary to find a *parti* for Rectina at all hazards, we suggest *Fuscus* as an easy change to fill up the gap, "Fuscus's Rectina" (i. e., *rectine fusci* for *rectine tasci*). As the name Rectina, by the way, is not quoted in any dictionary or onomasticon as occurring elsewhere, we may as well add that it is also found in a votive inscription discovered at Larinum ('Henzen,' 5770, *a*), OB REDIT*um* RECTINAE.

To conclude—if we have seemed a little hard with Pliny, that early specimen of "Every Man his own Boswell"; if we have thought this weak boy, on whom "Affluent Fortune emptied all her horn," has been rather overrated; if we decline to believe, as some people seem to, that the eruption of Vesuvius was got up primarily to show his weazen figure in the foreground, we will apologize to his admirers by quoting of him what Joanna Baillie says of Anna Gurney:

"Learned, and loving learning well,
For college hall or cloistered cell
A student meet, yet all the while
As meet, with repartee or smile.
'Mid easy converse, polished, blithe, and boon,
To join the circles of a gay saloon;
From childhood reared in wealth and ease,
The daily care himself to please—
For selfish nature here below,
A dangerous state, I trow."

Stones of the Temple; or, Lessons from the Rubric and Furniture of the Church. By Walter Field, M.A., F.S.A. (London: Rivingtons.)—What sort of lessons stones may teach is, we imagine, purely a matter of choice with the preacher—like many another text, they serve all purposes and suit all classes. Those in "Stones of the Temple" seem to be mainly accommodated to the cloistered horizon of ritualistic speculation. The author, fellow of the Society of Antiquaries, is capable of giving, and does give, a great deal of interesting information as to the antique uses and significance of church and ceremonial furniture, and to those who still retain a faith in the value of ceremonial forms and observances, he conveys pabulum suited to their spiritual digestion, weak and medicated, in the form of a story woven in with moral reflections and ritualistic allusions. Mr. Ambrose Vicar, of —— Parish, meets one of his unlettered sheep, Old Hutchinson, in the lich-gate of St. Catherine's church-yard, where, after discussing lich-stones, he takes him by slow marches to the grave-yard for the grave-stones, the porch, the pavement, the walls, the windows, loose stones, the font, the pulpit, the nave, the aisles, transepts, etc., ending with the tower and "the house not made with hands." The story succeeds, as do most of those which are made with a purpose; it may answer its didactic purpose with those who did not need any story to teach the lesson, but *qua* story it is, as might be supposed, a weak invention. Some passages, however, it would be impossible not to commend to the attention of English readers, and may be, by-and-by, of American. "Then let the bearers be men of good and sober character. How revolting to one's sense of decency is the spectacle, so common in London, of hired attendants, wearing funeral robes and hat-bands, drinking at gin-palaces whilst the hearse and mourning-coaches are drawn up outside." The demand for meaning in grave-stones, as well as fitness, is an application of the moral law as little to be hoped for as it is desirable.

The Statesman's Year-Book: Statistical and Historical Annual of the States of the Civilized World. Hand-book for Politicians and Merchants for the year 1872. By Frederick Martin. Ninth annual publication, revised after official returns. (London and New York: Macmillan & Co. 1872.)—The character of this annual having undergone scarcely any essential change since last year's issue, we must refer our readers, for our full opinion concerning its value, to our review of its "eighth annual publication," given in No. 298 of the *Nation.* Briefly, however, we may state here that we still readily recommend it as a very useful compilation; and still find it defective in many respects. We are gratified, doubly gratified in fact, to find that many of our corrections have been turned to advantage in this new edition; but are sorry to discover that others, the adoption of which would have caused a more considerable expenditure of literary exertion, have been left unprofited by. Thus the reign of Ferdinand I. over Austria (not over Germany) has been made to begin in 1521, instead of 1556; the Grand-Duke Constantine has been struck out from among the Czars of Russia; the contradictions in the statements in regard to the population of Bucharest and Belgrade have been removed by omissions; Arad and Castelnuovo have been substituted for "Arrat" and "Canove," and Cattaro added in the list of the Austrian fortresses; one name has been made to replace "Kharkof," "Kharkoff," and "Charkow," and the list of Russian towns which showed "consistency in bad spelling" has been corrected—all this closely in accordance with our remarks. On the other hand, we find the lists of German emperors uncorrected, and the false statement concerning the extinction of Albrecht's line in Prussia in connection with the great Elector still stands; we still find notices of Liberia, Natal, and Costa Rica, but none of Hayti, San Domingo, Guatemala, Nicaragua, and San Salvador; and the yearly "chronicle" is by no means improved, whether we consider completeness or chronological accuracy.

CURTIUS'S HISTORY OF GREECE.

By Dr. ERNST CURTIUS.

COMPLETING THE PELOPONNESIAN WAR.

With a complete Index, revised after the latest German edition, by W. A. Packard, Professor of Latin in Princeton College. Three vols. cr. 8vo, in a neat box, for $7 50.

CRITICAL ESTIMATES.

[From the Philadelphia Daily Inquirer.]

"This history is generally acknowledged to be the best extant, and to do for Greece what Mommsen's does for Rome, being at once accurate, profound, and masterly in style."

[From the Springfield Republican.]

"A very comprehensive and useful history, especially to scholars."

[From the N. Y. Evening Mail.]

"A model of its sort, clear, flowing, and brilliant in style, philosophical in scope, embodying the latest results of Hellenic scholarship, and in every way admirably adapted for a popular advanced history of Greece."

The above volume sent free of charge on receipt of the price by the publishers,

SCRIBNER, ARMSTRONG & CO.,

No. 654 Broadway, New York.

JUST PUBLISHED.

A CHURCH HISTORY OF THE FIRST Seven Centuries to the Close of the Sixth General Council. By the late Rev. Milo Mahan, D.D. Edited by the Rev. J. H. Hopkins, Jr. 8vo, cloth, $4; half-calf, gilt top, $6.

THE THEORY AND USE OF THE CHURCH Calendar. Being an account of the origin and growth of the Calendar, of its reformation from the old style to the new, and of its adaptation to the use of the English Church, by the British Parliament under George II. By the Rev. Samuel Seabury, D.D. 8vo, cloth, $2 50.

THE RITUAL LAW OF THE CHURCH. With its application to the Communion and Baptismal Service, to which is added Notes upon Orders and the Articles. By the Hon. Murray Hoffman, author of "Law of the Church." 8vo, cloth, $4; law sheep, $4 50.

THE TWO ESTATES; That of the Wedded in the Lord, and that of the Single for the Kingdom of Heaven's Sake. By the Rev. Morgan Dix, S.T.D. 12mo, cloth, $1 25.

LETTERS TO AN OLD-FASHIONED LAYMAN. By the Rt. Rev. H. C. Lay, D.D., Bishop of Easton. 16mo, cloth, bevelled boards, $1 50.

THE LIFE AND TIMES OF ST. CHRYSOSTOM. A Sketch of the Church and the Empire in the Fourth Century. By Rev. W. R. W. Stephens, M.A., Balliol College, Oxon., Vicar of Mid Lavant, Sussex. 8vo, cloth, $7 50.

PASTOR IN PAROCHIA. By the Rev. W. Walsham How, M.A., author of "Plain Words." Adapted to Conform with the Prayer-Book of the Protestant Episcopal Church. $1 50.

"This is one of the best manuals for a clergyman in his parochial work we have ever seen. The prayers and offices for special occasions, and the selections of religious reading, both prose and hymns, for the sick and afflicted, are taken from the best and richest sources, and arranged with more than ordinary regard to fitness. Clergymen and parish visitors will find it of great service."—Churchman.

Any book free by mail on receipt of advertised price.

Publish this day:

I.

A NEW SERIES OF

SCIENCE PRIMERS

For the purpose of facilitating the Introduction of Science Teaching into Elementary Schools, are now preparing under the joint editorship of Professor Huxley, Professor Roscoe, and Professor Balfour Stewart.

The object of these Primers is to convey information in such a manner as to make it both intelligible and interesting to pupils in the most elementary classes. They will be clearly printed on good paper, and illustrations will be given wherever they are necessary to the proper understanding of the text. The following volumes will be published shortly; others will follow:

CHEMISTRY. By Professor Roscoe. 18mo, 50 cents.

PHYSICS. By Professor Balfour Stewart. 18mo, 50 cents.

II.

ASTRONOMY AND GEOLOGY COMPARED.

BY LORD ORMATHWAITE.

CONTENTS:

ASTRONOMY AND GEOLOGY.

MR. DARWIN AND MR. BUCKLE.

PROGRESS AND CIVILIZATION.

1 vol. 12mo, cloth, price $1.

"These Essays would invite attention by their inherent interest, but they have an additional claim to notice from the circumstances under which they were composed. They are the meditations of a matured and active mind, led by a physical deprivation to seek relaxation in reviewing the bearings of some of its former studies. Lord Ormathwaite prefaces his pages with the explanation that the decay of his eyesight has, within the last year, incapacitated him from reading or writing. There is nothing, either in the form or substance of the book, from beginning to end, which would betray the heavy disadvantage under which it was composed. Some of the arguments, of course, may be open to dispute; but the Essays are throughout marked by a clearness of expression and a grace of style which alone would render their perusal a pleasure."—Times.

III.

ADELE.

BY JULIA KAVANAGH.

1 vol. 12mo, price $1 25. Forming the third volume of the new edition of Julia Kavanagh's Novels. Volumes already published: "Nathalie," "Daisy Burns." Price $1 25 each.

"There is a quiet power in the writing of this gifted author, which is as far removed from the sensational school as any of the modern novels can be."

IV.

APPLETONS' JOURNAL.

THE FEBRUARY MONTHLY PART. Price, 40 cents.

"The full merit of 'Appletons' Journal' can only properly be recognized in the monthly parts. The admirable illustrations, the high literary tone, the never-failing variety of the work, are more effectively displayed when the issues of the month are bound up together, and the result is surprising even to the regular subscriber."—New York Evening Post.

Either of the above sent free by mail to any address in the United States on receipt of the price.

HURD & HOUGHTON,

NEW YORK,

THE RIVERSIDE PRESS, CAMBRIDGE,

Will publish immediately:

I.

SHAIRP'S STUDIES IN POETRY AND PHILOSOPHY.

STUDIES IN POETRY AND PHILOSOPHY. By J. C. Shairp, Principal of the United College of St. Salvator and St. Leonard, St. Andrew's, author of "Culture and Religion in some of their Relations." From the second Edinburgh edition. In 1 volume, 16mo, cloth, $1 50.

The favor with which "Culture and Religion" was received leads the publishers to anticipate a cordial reception for this volume, which discusses, in most attractive manner, the place in literature of Wordsworth, Coleridge, and Keats.

II.

MAURICE ON THE LORD'S PRAYER.

THE LORD'S PRAYER. Nine sermons preached in the chapel of Lincoln's Inn. By Frederic Denison Maurice, late Professor of Casuistry and Moral Philosophy in the University of Cambridge. In one volume 16mo.

The recent death of this eminent man has made it proper that the volume should be introduced by a biographical sketch and estimate of Mr. Maurice's power.

III.

MULFORD'S THE NATION.

THE NATION: The Foundations of Civil Order and Political Life in the United States. By E. Mulford. Student's edition. In one volume crown 8vo, cloth, $2.

The political questions now under discussion find nowhere in American literature so thorough a reference to principles as in this work, which has been characterized by President Angell as "the most valuable contribution to political philosophy which has been written in the English language in this generation."

In a few days:

JOSEPH MAZZINI: His Life, Writings, and Political Principles, chiefly from autobiographic sources. With a portrait. In one volume crown 8vo.

A SATCHEL GUIDE FOR VACATION TOURISTS IN EUROPE. In one volume 16mo.

THE ART OF GRAINING.

HOW ACQUIRED AND HOW PRODUCED.

Containing a full line of beautifully Lithographed samples of all the various kinds of Wood used in the interior furnishing of houses and other buildings, together with a minute and detailed description of what colors, how, and with what applied, in order to produce the best imitation of nature itself.

Drawn and Designed by

HISTORICAL ESSAYS. By Edward A. Freeman, M.A., D.C.L. 8vo, $4.

LEGENDS OF OLD TESTAMENT CHARACTERS, from the Talmud and other Sources. By the Rev. S. Baring-Gould, M.A., author of "Curious Myths of the Middle Ages." Crown 8vo, $2.

"As a collection of wonder-tales, these legends are not surpassed by the imagination of more modern inventors, while as illustrations of the curious excrescences which the interpreters of the Jewish religion fastened upon the original narrative, and of the transformations which they received in passing into other beliefs, they possess a substantial interest."—Boston Post.

THE ELEMENTS of DEDUCTIVE LOGIC. Designed mainly for the use of Junior Students in the Universities. By T. Fowler, M.A. With a Collection of Examples. Fourth Edition, extra fcap. 8vo, $1.

"The best logic for instruction in colleges."—The Nation, April 4.

THE ELEMENTS of INDUCTIVE LOGIC. Designed mainly for the use of Students in the Universities. By Thomas Fowler, M.A. With Notes and Index. Extra fcap. 8vo, $1 50.

MACMILLAN & CO., Publishers,

38 Bleecker Street, New York.

MADAME MONDAN advertises her purpose of opening, on May 1, 1872, a Family Boarding School for a very small number of American young ladies at her house, No. 292 Rue Rogier, Bruxelles (Belgium). Madame Mondan is an American lady, for many years a student in Germany. Full particulars of the school will be found in circulars which are with Messrs. E. P. Dutton & Co., 713 Broadway, and Messrs. Holt & Williams, 25 Bond Street. Special information may be gotten by addressing P. O. Box 3819, New York, and reference is made to the gentlemen whose names follow: The Hon. Wm. A. Buckingham, U. S. Senate. Hiram Orcutt, A.M., Principal Tilden Ladies' Seminary, West Lebanon, N. H. The Rev. D. F. Banks, Yonkers, N. Y. The Rev. D. C. Roberts, Lowell, Mass. Gen. S. G. Griffin, Keene, N. H. James E. Larned, Esq., 209 Pearl Street, New York.

The Nation.

NEW YORK, THURSDAY, MAY 2, 1872.

The Week.

THE absorbing topic of the week has been the Cincinnati Convention, a gathering which most probably will have spoken for itself before any comment of ours upon its action will reach our readers. We ourselves have been expecting a great deal from the movement, and at the same time have not been blind to the fact that the risk of disaster has not been small. The work proposed was nothing less than to relegate to oblivion two time-honored platforms, or a large part of them; to displace two national parties by uniting in a third the best elements of both; to give to honest men the control of the Government. This is a work which merely to attempt was highly honorable, but which was of a difficulty nearly proportionate to the honor. While the movement was weak in the popular estimation, it was perfectly pure; since it was seen to be strong, it has been in danger; it has attracted to itself a set of political managers for whom the country cares nothing—for whom no one cares except themselves, their immediate followers, and people of like mind with these, of all of whom the country is sick. Such accessions have latterly given the movement a factitious strength which has smitten admiration into the newspaper reporters and fear into the most purblind of the Administration supporters—men not of a character, intellectually or morally, to perceive and feel wherein lay the true strength which made and will continue to make the Reform Liberals dangerous and formidable, and wherein has lain their immediate danger. But if there are some corrupt and some foolish men in council at Cincinnati, there are also many wise, sagacious, and honest men, from whom it is reasonable to expect much, who as we believe will put before the country a declaration of principles on which good citizens may cheerfully go to victory or to defeat in this coming campaign, and who, as we trust, may not only make a thoroughly satisfactory platform, but may nominate candidates worthy of it and sure to lead the new party to immediate success.

Our latest advices from Cincinnati make it clear that a good deal of very noisy work is being done for Justice David Davis, whose friends, Democratic and Republican, have so intensified the hostility aroused against him when he, a judge of the Supreme Court, suffered himself to be nominated by the so-called Labor Reformers, that he certainly can in no case, either before nomination or after nomination, have the support of the original, independent promoters of the movement. It is not necessary to charge him with collusion in all the acts of his friends, Democratic and Republican; but his nomination is one not fit to be made. We believe there is little real danger of it. The tariff difficulty seems to be on the point of disappearing in a manner creditable to all concerned. So far no mistake appears to have been made, and there is good ground for hope and confidence.

Mr. Adams's letter to Mr. D. A. Wells, in reference to the Cincinnati nomination, has of course provoked a good deal of comment. Of this most has consisted in eulogy of its courageousness; or in disapproval of what is called its too great independence of tone; or in applause of its dignity; or in incredulity that so undignified a letter could have been written by Mr. Adams; or in pointing out that Mr. Adams, as was to have been expected of so far-seeing a man, scorns the Cincinnati movement and sneers at it; or, on the other hand, in pointing out that Mr. Adams evidently believes in the new movement. The reader will, no doubt, have read the letter, and will perceive from what quarter these various comments come. They leave us—as the letter itself left us—convinced that Mr. Adams perfectly understands the situation in all its aspects; that independence and a belief in it have become very rare among American public men; that Mr. Adams's name frightens Administration organs this week more than any other name heard in Cincinnati; and that Mr. Adams is a shrewd politician who will not condescend to any arts of the politician which are below the level where the politician is the practical statesman. The Presidency honors any man, but Mr. Adams would bring as much honor to it, so far as this country now knows its public men, as any American citizen could bring, and more of a statesman's experience.

It is the fashion among certain sets of people to say that "the public is tired of these investigations." It well enough might be if the number of them were all. There is not a State in the Union which has not had several, and Washington has had them by the dozen; but while they result as every one of them without exception has resulted, we think the public, tired as it is, will endure as many more as may be necessary. We, for one, promise that we will read faithfully all the evidence in an investigation which is darkly hinted by the editor of the Washington *Chronicle.* That paper, whose editor was, to his great credit, editor of the Charleston *Republican,* thus addresses the Columbia *Union:* "Will the *Union* explain the action of the South Carolina Legislature in electing Mr. T. J. Robertson United States Senator, when we know that he paid forty thousand dollars for such election?" We doubt if the *Union* explains. We have looked everywhere for an explanation of the fact that Mr. S. C. Pomeroy (bribery and corruption) and Mr. Alexander Caldwell (bribery) are not investigated by their fellow-senators, but we find none anywhere. We expect but little fatigue in Senator Clayton's case either (corruption in office), although the House has felt compelled to turn out one of its members to whom Clayton, as Governor of Arkansas, fraudulently gave a certificate of election. The fact is that Mr. Robertson, Mr. Clayton, Mr. Caldwell, and Mr. Pomeroy may be useful to the party both in June and in November next, and "the party" means Mr. Cameron, Mr. Morton, Mr. Conkling, and their friends. We are tired of investigations, no doubt, still we should like to see if these gentlemen from Arkansas, South Carolina, and Kansas would, when investigated, look something like Mr. Casey, Mr. George Butler, Mr. Murphy, the Syndicate, Mr. Reed of Florida, the Scott Government, Mr. Leet, Mr. Evans of the Harrisburg Ring, Messrs. Tweed and friends, Mr. Robeson and the Secors, Mr. Cushman, Mr. Terwilliger, Mr. Wood, and numerous other persons—we confess it is a tiresome list, tiresome in all ways—whose record of misconduct or worse has been before the public during the last twelve months.

We would suggest to the Civil-Service Commission as a proper revenge for its shabby treatment by Congress, that it call the President's attention to the incompleteness of his reform so long as the salaries now paid to the Government employees remain at their present low figure. As false parsimony is better exposed at home than abroad, it might be well to begin with the diplomatic and consular service of the United States; and a hint from the Commission to the President would doubtless produce a circular from the State Department to our representatives in foreign countries, embracing enquiries, say, on the following points: amount of salary and fees, cost of living at the place in question, style of living required or desirable, amount of savings per annum—comparisons in the foregoing particulars with other legations or consulates. We should thus get a little light on the problem whether, after all our machinery for rewarding the highest competitor, he will be such a representative as we should care to employ on any terms; whether, in other words, the places we have to offer are such as not only capable but even fairly honest men can accept. That is but a narrow view of civil-service reform which looks merely to determining the best among a given number of applicants, and not to improving the class who present themselves. We need hardly say what we would have the President do with the information thus collected, and what we expect Congress would not do with his recommendations. It could easily be made to appear, however, that the raising of salaries might be effected without extravagance, if the numerous perfectly useless consulates were abolished, and the duties of the remaining consuls abridged, as would often be possible. In like manner, the simplification of our revenue system, by cutting off a large number of superfluous clerks and officials, would permit the salaries of the rest to be sensibly increased, with a corresponding increase in the inducement to first-rate men to strive for such positions.

Our Missouri correspondent who wrote to us a fortnight ago that we were mistaken in supposing the framework of society in his county to be in rather a shaky condition, closed his letter with a half prediction that although he and his neighbors would "outgrow this state of things" before long, we must not be surprised to hear of a vigilance committee or two and some lynch law. "This state of things," it will be recollected, was the corruption of the county judges, and our correspondent's prophecy has had a speedy fulfilment. Cass County is on the western border of Missouri, and within the "dark and bloody ground" which formed a base of operations against the Kansans in 1855. The famous town of Ossawattomie, which gave a sobriquet to Captain John Brown, is hardly fifty miles away. The people are not distinguished as being of the law-abiding order, for they have among them a leaven of the inhuman ferocity and ignorance which made the name of "Border Ruffian" synonymous with that of cowardly and brutal murderer. Some of these people, always ready for wild justice and wild injustice, have latterly been excitedly indignant at a Ring composed of merchants, lawyers, and the county judges, who out there are the financial officers of the counties, which not long since effected a fraudulent issue of railroad bonds. Two of these were horribly murdered and disfigured last Wednesday week by a mob which took possession of the train in which they were travelling and killed them, and together with them an innocent person, a man named Dutro, who was mistaken for another of the conspirators. The civil authorities were of course paralyzed. The victims were warned by the mayor of the county town that they would be killed further up the track, but they continued their journey, and when attacked made some resistance, all being armed, but were soon riddled. Had they submitted they would have been hanged, as ropes were ready for them. Some of the mob were masked, others not, and some were in "consequence recognized, but the coroner's jury returned a verdict of death at the hands of persons unknown." Within a few years we shall be seeing newspaper items to the effect that "So-and-so, a desperado who had long been the terror of the whole section, was shot and killed yesterday at Harrisonville. He was known to have been one of the leaders in lynching the county judges some years since"; or "So-and-so, a respectable citizen, died here yesterday. He is suspected to have been concerned in the execution of the Ring judges in the spring of 1872." The murdered judge and attorney were at the time under heavy bonds to undergo trial for their offence, but the mob could not wait. We are more patient here, and we pride ourselves upon it; but it is true, too, that our great sweetness and our height of civilization in letting Mr. Hall and Mr. Tweed reside so far down the river, and our self-discipline in keeping Mr. Tom Fields as member for Harlem, may well enough have made us accessary to these Missouri murders of thieves. We have done about as much to encourage lynching as if we had taken Tweed to the lamp-post instead of letting him keep his seat in the Senate.

The new charter for this city has been vetoed by the Governor—and we may add that it would not have been passed by the Assembly had there not been a general belief that he would veto it—on the grounds that its cumulative-voting clause is unconstitutional, and that its distribution of executive responsibility among so many boards, each containing so many members, is open to serious objection. We do not see why any one should dissent from this latter opinion. Nothing could well be clumsier than the composition of the various Commissions; half-a-dozen men of the ordinary human stock are not going to look carefully to the right performance of duties which are the business of them all, but not the business of any one. And there will always be at work more or less of the "ca' me and I'll ca' thee" principle, which makes every executive board as liable to jobbery as the irresponsibility of the members makes it liable to inefficiency. As to the cumulative-voting clause, its constitutionality is a question for the lawyers which, if settled in the negative, will in time, no doubt, lead to an amendment of the constitution, should the scheme be found to work well in other States where it is on trial.

The veto from Governor Hoffman, which, as we say, had been foreseen, brings up with new pertinence the question of how much of good we have got from this "Reform" Legislature. The answer certainly is that we have got next to nothing. And we have got next to nothing because the Legislature has not been primarily a Reform Legislature; nor has it been primarily a Republican Legislature, so far as that adjective has now a meaning; but first, last, and all the time it has been an assemblage of "Fentonites" and "Conklingites"—the latter in the majority. The Reform uprising of last autumn was a very genuine movement. The average head of a family in New York State does not wish to steal himself, nor to let anybody else. But he does not know all about politics, and, well as he meant last fall, he could not prevent himself from being cheated by the politicians. Of these, Fentonites and Conklingites, a good percentage are not only Fentonites and Conklingites first, and Republicans and Reformers afterwards, but they are also for sale. Nothing is harder to prove than a legislator's corruption; but to see the corruption of a given legislative body is easy. A Senate must be purchasable which, after hearing the testimony in the Wood case, did not expel Wood; there must be purchasable members in a House which, knowing what has been shown before its Judiciary Committee, fights long and hard against the impeachment of Cardozo, Barnard, and McCunn. A motion looking towards the impeachment of these men has at last been carried through after a prolonged struggle, both Speaker Smith, the Conklingite leader, and Alvord, the Fentonite leader, doing all they could to prevent its passage. The Bar Association, and especially its committee at Albany, are to be congratulated on this result; but we shall wait a good while yet before we congratulate them for success. Their persistency and courage deserve respect and admiration, but we admire also their faith in their cause, overwhelmingly good as it is. Common report represents some of the senators who will have to try the judges as unwilling to expel Wood, because there are stories which he in turn, if he were expelled, might tell about them. And of the House, one of its members says that the inhabitants of a State prison are respectable in comparison with a majority of the members. Such remarks "created a feeling against him," we are told, and the other day, in a sudden fit of disgust, he resigned his seat and came home. How well worth preserving, for purposes of State politics, is the Republican party of New York—"the party which can point with just pride," etc., etc.?

The Apportionment Bill, which, next after the charter and the resolution to begin impeachment, is the Assembly's most important work, is of course a thoroughly unjust bill. It is not expected of our State legislatures that they will regard equity when the business in hand is to mark out the Congressional districts, so as to secure more of them for the party in power than of right belongs to it. Democrats and Republicans alike disgrace themselves in this way whenever they get an opportunity to benefit themselves by the manœuvre. The peculiar feature of this particular piece of injustice, and the one which perhaps alone makes it worth remark, is that it is done for the benefit not of the dominant party but of a faction within it. Apart from this matter, however, and in view of the other acts of this Legislature, we find it difficult to understand why some of our contemporaries, zealous for the right, should be so sharp with Colonel Hawkins, the resigning member. He has apparently not that control of his feelings and of his tongue which should be among an honest legislator's qualities, as assuredly it will be found among the qualities of the gentlemen who move him to wrath. Nor is he a very judicious person in any respect; and no doubt he is technically in the wrong when, in his indignation at the roguery around him, he deserts the legislative place which was given him that he might resist roguery and defend his constituents. But the severity with which he has been shent for his impatience a little surprises us—or would if we did not know certain things. A corrupt legislature confesses its own corruption by condoning bribery and dealing tenderly with other gross villanies, and it goes on to the commission of further acts of the same nature. To expose individual members is all but impossible, and when, by good luck, exposure is made, it brings no punishment to the offender as offender, but as Fentonite. It strikes us that the member who sees all this, and says so without being heeded, and even "creates a feeling" against himself, does not do so wholly bad a thing when he resigns, and thus calls pointed attention to his assertion—made very roundly—that this Legislature registers decrees for Vanderbilt in just the same way and for just the same reasons as the last Legislature registered decrees for Tweed.

There is a great deal of rumor current as to the withdrawal of our indirect claims before the Geneva Commissioners, but there is nothing certain. We have little doubt that the Administration is expecting to patch up some sort of an arrangement, if it has not already, by which we shall practically abandon them, and confess ourselves in error, but we suppose this will not be frankly done with a dignity which might redeem the false step. Perhaps this is no more than was to be expected, considering how much each Cabinet has had reason to believe that the other found the deadlock embarrassing to its prospects, and that neither would seriously criticise the other's method of getting out of what each saw to be a bad mess for itself as well as for its fellow-negotiator. At a dinner recently given by the Saint George Society, a body representing the Englishmen resident in this city, Sir Edward Thornton, in his after-dinner speech, spoke as follows: "No one, I believe, supposes that the British Commissioners had any idea—the slightest idea—that indirect damages were included in that Treaty. A subsequent and thorough examination of the Treaty and its wording has not now persuaded them to the contrary." We wonder if our American Commissoners, did they not conceive themselves bound by Mr. Fish's and Mr. Bancroft Davis's uncontemporary construction of the instrument, would not themselves say precisely what Sir Edward Thornton has said, and agree with his interpretation?

The eruption of Vesuvius has assumed proportions which rank it, in point of spectacular grandeur at least, among the most notable on record. It took a decided increase on Thursday of last week, and every day up to Monday developed new craters with ever-widening devastation. The lava stream that partly destroyed San Sebastiano was sixteen feet deep. On Saturday, the view of the mountain from Naples was entirely cut off by the smoke, and on Monday ashes fell like snow in the streets, so that umbrellas were spread against them. Sand followed the discharge of ashes, amid incessant thunder and lightning, but, though the volcano continued its rumbling and quaking, no new craters were formed, and the flow of lava had ceased. The force of the eruption appears from the accounts to have been as usual chiefly on the southern and western slopes of Vesuvius, from Bosco Tre-Case round to San Sebastiano and Massa di Somma. The latter village was wholly destroyed. The intermediate towns, like Torre del Greco and Resina (near Herculaneum), were abandoned by their inhabitants, and in general the loss of life seems to have been small, while the loss of property in houses, goods, farms, and vineyards has been sufficient to deprive thousands of their homes and means of support, and to lead the Government, with the king in person, to bring succor and military protection to the unfortunates. The event is one which the mind naturally associates with the contemporaneous earthquakes in Syria and in California, by which Antioch has been ruined for the dozenth time, and California rocked almost from one end to the other, and which have cost a significant number of lives.

In spite of the many contradictions and obvious exaggerations in the despatches from Spain, it is clear that the Carlist rising is a much more serious affair than the two similar attempts made by the adherents of Don Carlos in 1869 and 1870. Whether this young prince, the great-grandson of the first pretender of the same name, and grandson of the Count de Montemolin—who respectively assumed the names of Charles V. and Charles VI.—has really appeared in person south of the Pyrenees, and staked his life on the poor chance of entering Madrid as Charles VII., through the aid of peasants and priests, Republicans and Internationals—allies in the late elections—may still be doubted, though the fact is announced in a public proclamation circulated in the capital. Nor is it certain that his younger brother, Don Alfonso, has succeeded in crossing the frontier, which is watched both by Spanish and French cordons—the French Government being quite zealous in its manifestations of friendship towards the throne of King Amadeo. But fighting, of a more or less desultory character, has undoubtedly taken place in various districts of the Basque provinces, Navarre, and Catalonia, and even Gallicia, Aragon, Castile, and Andalusia have not remained entirely undisturbed; and it is a rather significant fact that Marshal Serrano himself had to assume command in Navarre. The insurgents generally keep to the mountains, the adjoining regions of Navarre, Guipuzcoa, and Alava, as usual in Carlist risings, being their main fastnesses, and the Basque peasantry their best material. Wherever they appear in the lower districts they are easily dispersed or compelled to surrender.

That Don Carlos has calculated, or still calculates, on simultaneous risings in the large towns, still convulsed by the wild coalition agitations of the last months, is quite natural; nor is it impossible that the more reckless portion of the Internationals and Republicans are, on their part, still watching the opportunity which the distractions of the Government may offer them for the overthrow of the new dynasty for their own benefit. It is, however, very probable that both these parties will find themselves wofully mistaken, and that the throne of Amadeo and the Sagasta Administration will come out of this crisis unexpectedly strengthened. The Radicals proper, the leaders in the late coalition movement against Sagasta, have already, with Zorrilla at their head, actively joined the Unionist and Progressist defenders of the constitution against the rebellion, and their chief is even reported to have assumed the command of a column of Government troops in Navarre. The bulk of the Republicans is said to follow their example, and the influence of the turbulent Internationals, who are suspected of plotting a movement which is to spread from Spain all over the Continent, will, in all probability, prove more potent in driving wavering Isabellinos and Republicans into the ranks of the supporters of the Government than in promoting the cause of the Carlists. The Carlist representatives have left the Cortes, the insurrection has broken the unnatural coalition of opposite extreme parties, and the Sagasta Administration, whose triumph in the elections was not overwhelming, will not be slow in turning patriotism, fear, and other good and evil impulses to the best advantage in the cause of order, the throne, and the constitutional Government.

WHAT HAS BEEN DONE TO PUNISH THE RING.

For nearly a year the papers have been full of nothing but reform. At the hotel, on the railway, and in the parlor we have been hearing continually of the doings and probable punishment of the latest rogue. We have started up a new one pretty much every week, and most of them have escaped us because the popular comprehension was not spacious enough to provide for them all. We wisely thought, too, that if a sharp punishment were visited upon a few of the worst, we should have no reason to complain of our year's work. What have we accomplished? is now the natural question to ask. Has any rascal been punished? Have any of those whom, five months ago, in the plenitude of our strength, we thought we could almost afford to pity, received the felon's stigma we decreed them? One of the Ring, Keyser, has paid into the city treasury a few hundred thousands; we have indicted a number of the conspirators, and have attempted one man's trial; Connolly has seen the inside of a jail, and Tweed has been badly frightened. Both Tweed and Connolly have been deprived of their municipal offices; but one of them has got out of the way, and the other retains his seat in the Senate. Mr. T. C. Fields, who has been also indicted, not only retains but occupies his place in the Legislature; indeed, he is admitted to be one of the most influential men in that body. An unappreciative public has not done full justice to the merits of Fields, and it may be well to recall his transactions with some detail. We hardly know of a case so characteristic. The good-nature, the impudence, the self-satisfaction, the contempt of the helpless public, the unbelief in any Nemesis during this life at least for an Albany politician—these qualities make the character and career of this worthy man most interesting and typical.

It was Mr. Michael J. Quigg, a fireman of Harlem, who, meeting Mr. Fields in the street, first suggested to him that the volunteer firemen of Harlem should be paid for their services. Mr. Fields said: "It will cost something, but I see there is money in it." The member for Harlem is in his way a successful student of human nature and an expert in the manipulation of senators; he knew his ground at once. The "unrecompensed and deserving fireman" will constitute a good cause. Of course, his appeals will not draw tears from the eyes of legislators; they understand as well as himself just how deserving the case is; but people will never object to their voting money to recompense anybody, and besides it would be churlish to refuse to oblige a "good fellow like Fields." Pretexts for lobbyists are the desirable things; the money is not so hard to get as an excuse on which to pocket it in a decorous or semi-decorous manner, and a politician who knows his business is as constantly in quest of a plea as a clergyman of a text. This incident suggests an unpleasant reflection. It was in the winter of 1868 that Quigg and Fields had the conversation which resulted in the loss to the State of a half a million of dollars. On that day, all New York went about its business quite unconscious of Quigg or Fields. Our reflection is that now, while we write, another Quigg is no doubt meeting another Fields, and making suggestions for the robbery of yet another half-million. The Harlem firemen were to be paid for services which they pretended had been rendered from 1865 to 1868, at which latter date they disbanded. It was perfectly well known that many of them had served but a few months. Those who had given their services for the full time had no idea of receiving any pay for it. When one evening they were got together in a hall and the "object of the meeting" was announced, great was their natural joy. They pounded upon the benches, they screamed, they whistled; "the boys" indeed used all those varieties of expression with which the innocent and healthful give vent to gratification and delight. Before the meeting adjourned, all the firemen present had signed papers making over to Fields 33 per cent. of what should be voted by the Legislature. An appropriation of $50,000 was secured, and Comptroller Connolly paid to Fields $49,277 34. This Fields distributed among the firemen, retaining his 33 per cent. Their first venture was so successful that they resolved to try for more; they held another meeting, but this time Fields demanded 50 per cent. The firemen became angry, and swore that Fields was a most exacting person. Here we see how people's consciousness of desert keeps pace with their good fortune. The notion that they were to be supported at the public expense had ceased to be an agreeable novelty, and now appeared quite the natural and becoming thing. But the extortioner could make his own terms, and they gave him his 50 per cent. Fields then got a bill through the Legislature authorizing the Comptroller to pay the "balance of the claims which had been found due." This balance in the mind of the Legislature referred to the $722 66 which remained of the first $50,000. But Fields construed it to mean any claim which might be brought forward for services rendered. He paid to the firemen $459,977 97, half of which sum he kept to himself. From Quigg, the original interlocutor, and from some others he did not exact his commission of 50 per cent. Fields, as we have said, is now at Albany, as strong and as impudent as ever.

Wood's case is a particularly simple and likewise a significant one. In his case alone do we know precisely where to put the blame of escape. The Senate had it open to them to expel him, and they refused to do it. He received $10,000 from Tweed, and $5,000 from Jay Gould, and about the same time he voted for some of their measures. Tweed and Gould assert in Wood's behalf that the money was "lent," but they admit that they would not have lent it had he voted against them. Upon this the Senate decide that Wood has not violated the privileges of their body! We have heard a great deal about the impossibility of fixing a definite portion of the general rascality at Albany upon anybody. Here was an excellent chance; a better one can never offer. The punishment, by prosecution at law, of Tweed and Connolly was no doubt a very much more difficult thing to accomplish. These men have had control of the legislation of the State for the last ten years, and have framed the laws in their interest and for their protection, and it may be that there were especial legal obstacles to the immediate trial of Tweed and Connolly. It was certainly unwise to begin with the trial of Hall. It put the public in an unpleasant dilemma. He was technically much the whitest of the lot with whom he was classed, and there was moreover a good deal of popular sympathy with him. On the other hand, his acquittal would have made it more difficult to convict the others, and have interrupted the momentum with which the public retribution approached Tweed and Connolly; the trial was sure to be a long one, and it was most important that the law's delay should not induce a return of our old languor and apathy before the punishment of the worst of the robbers had been consummated. It seems to us therefore greatly to be regretted that the prosecution should have begun with the trial of Mayor Hall.

Our great difficulty seems to be the legal obstructions with which the thieves have hedged themselves in, and the control their confederates still maintain in the Legislature. We are too apt to think of these men as of late entertaining a small idea of themselves. Some months ago the worst of them were badly frightened, but with the opening spring, and the Presidential election, and the apparently oblivious public, they are beginning to put on a more cheerful and confident exterior. At Albany, so far from suffering stigma or ostracism, they are influential and popular. They possess, of course, great experience in the details of legislation; they help the young members to get through their bills, and in many ways make themselves useful and agreeable. They are said to have a very genuine fund of good-nature, and to be the most agreeable men and best fellows at the capital. Indeed, from some of the talk we should imagine that a man at Albany who had never stolen anything would be continually oppressed with an uncomfortable sense of inferiority. The state of public feeling has been such that persons naturally well disposed and glad to stand well with their neighbors could be guilty of corruption with but a slight loss of their own self-esteem. The crime a man may confess does not deprive him of his own good opinion, does not commit him to meanness. These men, indeed, could not confess to corruption in so many words. But Tweed and his friends had a definite understanding with each other, and they maintained a general understanding with the rest of the world, that they had their own way of doing business. Tweed was strong and therefore respectable. What men may do with impunity they are not apt to think they sin greatly in doing, and of course it is just here that we see the need of some ignominious punishment for these people. Their chariots and fine houses have made them almost respectable in the eyes of the multitude; it is necessary that some symbols as easily appreciated shall make them utterly disrespectable. We need to call to the aid of man's moral sense that contempt there always remains in human nature for the vanquished and the humiliated. To a philosopher a rogue may be the same everywhere and under all conditions; but to ordinary men, and to philosophers too, the senator lolling in the curule chair at Albany is a very different being from the wretch who looks out from behind the bars of a window at Auburn. We have not failed altogether; we have gained in the confidence of our ability to punish rogues—a great step forward; we have had some pleasurable feelings of indignation, which have greatly raised us in our own good opinion; we have been at times quite austere and inflexible. But the object of all the gravities and emotions is to punish somebody. The thing to do now is to inflict on the worst of the offenders some stigma against which their good-nature, their impudence, their semi-decorum, cannot stand for an hour; when that has been accomplished, we may rest for awhile. Is there any hope of inflicting it?

THE PROSPECT OF ANOTHER EUROPEAN WAR.

THERE has been a vague dread of a renewal of the war between France and Germany diffused through Europe during the last two or three weeks by a threat made, with a semi-official air, in the London *Daily Telegraph*, of all places in the world. That Bismarck should select any English paper as a medium for making known his ferocious intentions with regard to France seemed surprising enough, but that he should select among English papers the *Daily Telegraph*, seemed more surprising still. Indeed, it has seemed so surprising that the rest of the English press has apparently come to the conclusion that there is nothing whatever in the story. But the undeniable facts of the case are of too serious a nature to make it possible to treat it as a mere "newspaper sensation." We may not know what Bismarck has in his mind, or what Thiers has in his mind; but the world does know that the reorganization of the French army is proceeding on a truly formidable scale, and that there is nothing which M. Thiers has so much at heart, and perhaps nothing on which he counts so strongly for the restoration of French self-respect. The army on its present footing is now over 400,000 strong, and M. Thiers boasted in his speech at the adjournment of the Assembly the other day that it had not for many a day been in so good condition. Special attention has been devoted to the artillery, which the outbreak of the war found in such woful plight, and about which the Emperor, as the Duc de Gramont confesses in his recent book, was so terribly deceived. The number of field-guns is being raised from 1,800 to 2,700, and the model adopted is said to excel the Prussian gun in nearly all respects. The new bill which has just been reported to the Assembly, and will probably be passed, and of which we gave a summary last week, will raise the French force available for defence to 1,200,000 men, and will give a force available for offensive operations little if any short of 700,000. It is impossible that the Germans can look on these preparations with indifference or without serious apprehensions, and it is not denied that they are fortifying the strongholds on the French frontier with extraordinary care and diligence, and that the training of the troops was never carried on with closer attention to every detail of organization. Even a balloon corps is undergoing thorough drill, the German attempts in this field during the late war having been of the most melancholy description; and the controversy which has been raging over the performances of the artillery is not unlikely to end in the adoption of a new gun.

At first glance, it appears as if it was folly for the French to hope for anything in the shape of "revenge" within any period worth thinking about. But it is well known that French politicians have given up all design, if they ever entertained any, of attacking Germany single-handed. Their foreign policy now is directed to the single object of forming an alliance with some one of the powers with which the growth of Germany, and the arrogance which is an ordinary concomitant of growth, may bring her into collision, and of raising the army to a point of strength and perfection which will make their alliance worth courting. It is no secret that the dissolution of Austria is looked for by Continental diplomatists as the next great European convulsion. When or how this is to come nobody pretends to know, but that it is not very far off few doubt, in spite of the fact that the finances of the empire have been undergoing of late something like a revival, which is ordinarily a healthy sign, but in this case really is a sign of disease—for the very increase of material prosperity brings with it an increase of the race hatreds and ambitions on which Austria so long lived, but which are now tearing her to pieces. Whenever this catastrophe occurs, it will leave Eastern Europe strewed with political débris, over which Russia and Germany, it is believed, can hardly fail to quarrel. Germany is not in the least likely to permit the control of the mouth of the Danube to pass into Russian hands, or Russia to give up her secular desire for a free outlet to the Mediterranean—so that even if the disposition of the Slavic provinces of Austria were easy to settle, there are in what used in Lord Palmerston's day to be called the "Eastern question" the materials for a fierce conflict, and a conflict of which it would be difficult to foretell the issue, supposing the two combatants to have it to themselves. In such a contingency, the French flatter themselves that they would be able to turn the scale, and would almost certainly be asked to do it by Russia.

They have, however, another string to their bow. France has paid as much of the indemnity as she is able to pay out of her own resources. The remaining three milliards she must borrow, and she will try to borrow it, and will probably succeed, in England. To get into debt to England to this amount would give England a powerful reason for backing France up, though it would give her no control over the French Government. The plan of having the whole of the national debt held by the people itself which owes the money, as carried out by the Empire, has a good many fascinations of a sentimental kind, and some solid advantages; but it has the serious disadvantage of depriving the debtor in the hour of distress of the benefit of that interest in his fortunes which a creditor always feels.

If foreigners had had a powerful stake in French finances, many Frenchmen now believe that M. Thiers' wanderings in search of an ally in 1870 would not have been so unfruitful, and they propose to make friends by getting into the debt of those for whom the help of their army has no attractions. In what particular "collision" they fancy that England could be got to play a part it is difficult to say, but probably one caused by German designs on Belgium, which they think Bismarck will some day seize to round off his frontier on the left bank of the Rhine. But with regard to Bismarck they think all things are possible. They look on him as an ambitious conqueror, whose head has been turned by success, and who cannot long refrain from new enterprises, and whose theory that the Empire needs a glacis and outposts would constantly tempt him into "rectifications" of the frontier on one side or the other. The "principle of nationality," too, they think must some day lead him to lay hands on German Switzerland and to listen to the prayers of the Germans of the Baltic provinces of Russia.

All these hopes, we do not need to point out, are hopes which, as must be felt by those who cherish them most fondly, will need a long time for their fulfilment, and are hopes which might be entertained for half a century before beginning to look wild or unreasonable. When we consider, therefore, that as long as they last they will keep France and Germany armed to their utmost capacity, will lead to the devotion every year of an enormous amount of the wealth and industry of the two countries to the preparation and maintenance of military and naval armaments, and will continue—and this is the worst result of all—year after year to turn a very large part of the very highest intellect of both countries to the science of destruction pure and simple, it is difficult to paint in colors too dark the prospect which the war of 1870-1 has opened up before Continental Europe.

If France had had the good luck at the close of the war to light on a young statesman, dominated by modern ideas, and capable of convincing her of the enormous capacity of revenge even in its coarsest form which is to be attained by steady devotion to the arts of peace, we might have seen the military phase of progress, as it has been called, closed in our own day. As it is, we are apparently in for another hundred years of it.

PARISIAN JOURNALISM.

Paris, April 10, 1872.

THE complete stagnation of the political world leaves me room for some general considerations on the subject of the French press and the French periodicals. It must often have astonished you that France should have had for many years but one successful review. The *Revue des Deux Mondes* enjoys a complete monopoly. Many rival reviews have tried in vain to thrive by its side—the *Modern*, the *Germanic*, the *Contemporary*, etc.; after a vain struggle, they invariably disappear. The *Revue des Deux Mondes* itself had great difficulty in establishing an independent existence. I know from good authority that till 1848—that is, twenty years after its foundation —it had an annual deficit. Success, in a financial point of view, only came after the golden days of Alfred de Musset, of Madame Sand, and of Mérimée. The Empire consecrated this success, as the liberty of the press was completely extinguished after the *coup d'état*. The Liberals still found, however, in the historical, the æsthetic, the religious, the diplomatic articles of the *Revue* a feeble and half-concealed expression of their regrets and of their hopes. The *Revue* owes no doubt much of its importance to the character of its editor. Buloz was born in Savoy, and he has all the stubbornness of a mountainous race. He knows but one object in life, the *Revue*. He began life as a printer, and he has all the professional pride of a good compositor in the material perfection of every number; there is not even a single proof which he does not see and correct with his own hand. He has seen all the great names of literature and politics grow, as it were, under his patronage. He treats rank, talent, and even genius on a footing of equality. He is the President of the Republic of Letters, and ministers, ambassadors, diplomats, *immortels* of the Academy must call in person upon him, and often wait in his bureaux. It is only just to say that he is prompt at discerning talent; that to be unknown and young is almost a title in his eyes; and that he is not more severe, more critical, more harsh with the novices than with the oldest and most illustrious writers. During the two or three days which precede the appearance of a number, no human or divine power could drive Buloz away. He works day and night, and is never satisfied. Forcade, who for many years under the Empire wrote the political "Chronique," told me that he had found but one way to calm Buloz during this periodical crisis. When he became too censorious, Forcade quietly took his hat as if to go away, leaving the "Chronique" unfinished. Then Buloz was obliged to retire to his own room grumbling, and Forcade had a few hours to himself. I do not think that Buloz ever paid a compliment to any author—he is afraid of spoiling them; even when he knows that he has in his hand an admirable article he scolds. His silence is worth more than the applause of thousands. His terrible earnestness, his untiring devotion to his work, his utter disregard of friendship, of old acquaintances, of what the French call *camaraderie*, have no doubt helped him to build up a review with which nobody dares now to compete. It would seem that by his character Buloz must have made enemies enough to start a new review; but the fact is that he has no real enemies; he has no personal hatreds; the day after he has given offence to a writer by refusing an article, he would gladly accept another if he thought it good. Even those who belong to the *genus irritabile vatum* always return to him after a while, when he does not himself return to them.

The *Revue*, before the war broke out, had above 20,000 subscribers. The number fell off during the war, but is rising again. We must not accept it as a fact that there are in France only 15,000 persons (for there are 5,000 foreign subscribers) who have a general culture, as the *Revue* is seen in every club, in every *cabinet de lecture*, and even in the great *cafés*. But it cannot be denied that the reading public cannot be very large in a community which is contented with only *one* review, and which, curiously enough, has not a single magazine. When I think of the vast number of magazines which are prospering in England, I have often wondered that this familiar sort of a periodical did not exist in France. I think that the reason is this: though the magazines in England and in America have often important articles on politics and literature, their special attraction is in their novels. How people can read at the same time four or five novels in different magazines at broken intervals, and keep the run of all the engagements entered into, of all the deaths and marriages, is a problem which has often puzzled me, but which seems to be solved with the greatest ease by many a country girl. In France, the novels do not appear in periodicals—they appear in the daily paper, in the *feuilleton*. The gravest papers, the *Journal des Débats*, the *Moniteur*, are obliged to have other heroes than those of the army, other personages than the actors of the political drama. In the upper part of the paper, we are informed of all the movements of the foreign potentates, of M. and Madame Thiers. In the *feuilleton* we enter a fantastic world, which is to many readers of the daily papers the most interesting. This revolution, for it was a revolution, of introducing the *feuilleton* into the press began in the second part of Louis Philippe's reign. It produced that particular kind of a novel which is called sensational, for it cannot be expected that fine analysis of character, that long descriptions, that minute psychological details, could be well appreciated in a *feuilleton*. The reader must be left every day under some strong impression; *la suite au prochain numéro* must always mark a crisis. Paul Féval, one of the most popular of our sensational novelists, used to write three or four novels at the same time for various papers. In order to find his way in the labyrinth of his own imagination, he had a number of small dolls for each story, strung together in the dress of their rôle—monks, mousquetaires, kings, duchesses, soldiers, etc. His valet brought him the string of the novel he was working at, and each time one of the personages was killed or died, the corresponding doll was taken off. One day the valet forgot to take away the doll of a personage who had come to grief and had fallen in a duel. The editor of the paper in which the novel appeared was surprised to receive a number of astonished or angry letters: "How is it that ——, who was killed a month ago, has come to life again?" The editor consulted Féval, who consulted his own story and his own string, and perceived the omission of his valet.

Eugène Sue was one of the first "exploiters" of the *feuilleton*. The "Mysteries of Paris" and the "Wandering Jew" were great events and great scandals in their day. But the sensitive fibre has in the long run been made insensible by repeated sensations, and our present feuilletonists are at their wit's ends to keep up the excitement. There is a large class of smaller papers that sprang up under the Empire, which give hardly any place to politics, and must have stories—the *Petite Presse*, the *Petit Journal*, the *Petit Moniteur*. They have thousands of subscribers in the small towns and even in villages; and they have a staff of writers who are very clever in their way, but obliged to work always in the same direction. Ponson du Terrail and Gaboriau are the last stars in this provincial circle of French literature. They are the novelists of crime and secret police; they drag their readers through all the vices imaginable; they are the inventors of horrors and of monsters. Anything more disgusting, more unreal, more absurd than "Rocambole," the "great" story of Ponson du Terrail, it would be impossible to imagine.

But, after all, it has been found impossible to amuse the public only with novels; and in the latter part of the Empire journalism entered upon a new phase. The *Figaro* is the type of a journal which is unknown in America and in England. There is still a *feuilleton* in it; but the upper part of the paper, instead of consisting of editorials, of letters from correspondents, and so on, is cut up into various chapters of what I must call daily gossip. I take a number just before me. On the first page there is an account of a first representation in a small theatre of a new piece called the "Timbale d'Argent." Instead of a review of the play, and a judgment passed on the acting, it contains an enumeration of all the swells and the *femmes à la mode* who were in the boxes. Their names are given in full—Comte d'Hoilly, Comte de Gouy, de la Rochefoucauld, de Chebrillon, etc.—more than twenty of them; and with these Mademoiselle Cora Pearl, a celebrated horse-breaker, Mademoiselle Moïsset, and many others, whose names ought never to be pronounced. Some fragments of conversation are reported—of the conversation which took place in the boxes, in the orchestra, and in the *couloirs* between the acts. Pleasant witticisms, more or less authentic, are placed in the mouths of various gentlemen and ladies. The whole article is, in fact, a succession of *bons mots*, so arranged that you need not read the whole, but can content yourself with a fragment, which is a whole in itself. At the end are three lines on the new piece. Some one of our young swells says to another at the door, "At last the theatre of the Choiseul Passage has got hold of an amusing piece, which will not be a passing one." And on this last joke ends the article. Then comes a new series under the title "Universal Echo." There is the Echo of Marseilles, of Nice, of Lyons. The

Echo of London tells us the story of the murder of a French lady by her cook. Article third, a dissertation on Courbet, the painter. Was the jury of painters right in refusing his two pictures—a picture of rotten apples, and another of a Communist lady undressed? Was the jury to refuse these pictures because they were bad and indecent, or because Courbet was a Communist and upset the Colonne Vendôme? These questions are not at all discussed in a grave and pedantic manner; they are treated in the jocular style, and you see at once that the writer could very well argue on every side. After a Political Chronicle, which has some pretensions to seriousness, comes a new series of Echoes, this time all from Versailles; and there is not much exaggeration in saying that each one of these Echoes is a lie. Casimir Périer is again to be Minister; a portfolio has been offered to him; he refused it; M. de Larcy has given in his resignation, etc. Then comes a series, "Paris au jour le jour." You can imagine what this may be. Every young writer of the *Figaro* can put anything he likes into this *caput mortuum*—the last story he heard at the races, at the café, at the restaurant—always with the proper names. Nothing is too strong, too sensational, too personal. I will cite an extract, to give you an idea of the style: "Painful reflection of a man of the 4th of September, who has just learnt astronomy: How happy the planets! they can make a revolution at least once a year." It is all in this vein.

There are now four papers of this stamp—*Figaro*, the *Paris Journal*, *l'Evénement*, *l'Eclair*, and they are slowly absorbing all the attention of the public and diverting their minds from the more serious papers. They are frivolous even when they are strong partisans. The suppressed *Gaulois* was Bonapartist, the *Figaro* is Royalist; but there is no deep conviction in the minds of the journalists who simply write to amuse the public. The Empire has created a new class of men, who are not at all the poor journalists of old times, living in their dark offices. Any young fellow, without the faintest idea of law, of history, of literature, can enter the staff of the Figaresque papers, providing he is well dressed, knows how to fence, bets at the races, and shows himself in the fashionable restaurants. He must have no opinions, for opinions are a dead weight; he must be very racy, very impudent, and as bold as a young lion. There were once journalists in France, called Chateaubriand, Royer-Collard, Guizot; they were stern, serious men. But "nous avons changé tout cela."

OPENING OF THE IMPERIAL PARLIAMENT.

BERLIN, April 8, 1872.

SINCE the retirement of Queen Victoria from the spectacular functions of her station, the displacement of Louis Napoleon from the Tuileries, and the "moral" imprisonment of the Pope in the Vatican, the occasions for royal pageantry in Europe have been sensibly reduced, greatly to the disappointment of travellers and sight-seers, to the annoyance of tradesmen who used to profit by such displays, and to the prejudice of courts themselves, which, in order to retain the veneration of the people, must keep up appearances. But while state spectacles are declining in other countries, the erection of Germany into an empire has served to connect the most progressive nation of Continental Europe with the traditions and ceremonies of the past; and the opening of the Imperial Parliament is made an occasion of exceptional interest. This ceremony took place to-day in the "White Hall" of the old Schloss; and as I had the good fortune to be one of the two hundred privileged spectators, I will briefly reproduce it for the readers of the *Nation*.

The indisposition of the Emperor, and the consequent non-attendance of the court, deprived the spectacle of that imposing effect which last year revived the pomp of mediæval pageants; yet this very circumstance gave to the scene a dignified simplicity, which crowned it with a certain moral grandeur. Long before the hour, the great inner court of the palace was lined on either side with the mounted guard in fine array; then came the long line of carriages with rich trappings and liveries, with officials and officers in brilliant accoutrements, and ladies dressed as for a morning reception. The White Hall is a spacious saloon of vast height, adorned with pillars and carvings of silver, and resplendent with mirrors and chandeliers. It has no furniture except the throne upon one side, on a daïs of purple velvet, and on either hand of this a row of cushioned chairs for the court. At an elevation of forty feet upon opposite sides are balconies, of which one is divided into loges for noble and distinguished guests, and the other is the tribune for spectators. The floor is of fine wood, inlaid in various forms and colors, and the walls and ceiling are richly decorated. A little before the opening, two liveried servants appeared with censers, and perfumed the air with incense. Then one by one, or in groups of two and three, the officers and members of the Reichstag entered the hall; the foreign ambassadors occupied a loge, all others stood upon the floor. All were in full dress—the civilians displaying their orders, and the military officers presenting that rich variety of uniform for which the German army is conspicuous. There was much friendly greeting and animated conversation, and the effect of these highly ornamented figures moving and gesticulating, as seen from the lofty tribune through the glittering pendants of the chandeliers and against the background of silvered mirrors, was like a fairy spectacle.

Suddenly there was a hush throughout the hall, and precisely at two o'clock Prince Bismarck entered, followed by the members of the Imperial Council. The Prince wore a brilliant uniform—blue coat, white pantaloons, high-topped cavalry boots with silver spurs, an orange-colored sash over one shoulder descending to the waist, his breast glittering with decorations. Holding his helmet in his hand, he took his station by the side of the throne, and, bowing to the assembly, he announced his commission from the Emperor to open the Parliament, and then as Chancellor of the Empire read the Imperial speech. At the close of the reading, which did not occupy ten minutes, in the name of the Emperor he declared the Reichstag open. In the name of the Parliament, President Simson then proposed cheers for the Emperor, "Long may he live," and raising his hat led the company in a hearty *hoch*, which was three times repeated. Prince Bismarck then greeted the members personally, and the ceremony was over.

The speech was extremely businesslike and matter-of-fact. In brief paragraphs, it disposed of financial, military, postal, and other internal economies of the Empire for the year, and of the question of taxation, with special reference to malt and beer. It alluded favorably to commercial and postal conventions with other countries, especially with Portugal and the United States. The pregnant passages of the speech were these three: first, congratulation upon the development of German nationality as promising a stable and peaceful future to the newly-founded Empire. Secondly, the assurance that the pacification and reconstruction of the annexed provinces of Elsass-Lothringen were going forward in a most satisfactory manner. Prominence was given to the Strassburg University as an agency of Germanic culture. Thirdly, the announcement that it would be the policy of the Emperor to make the power which Germany had gained through her unification as an empire not only the defence of Germany herself, but the guardian of the peace of Europe.

Having worked laboriously for months in carrying his great measures of reform through the Prussian Legislature, Bismarck must now take in hand other progressive measures in the Imperial Parliament. It is as though one mind should lead both the New York Legislature and the National Congress, and at the same time be the confidential adviser of the President in all weighty matters of internal policy and foreign diplomacy. Bismarck has well earned his honors and renown.

Honorable mention was made of Professor Morse at the monthly meeting of the Geographical Society on the 6th instant, and several journals here have paid brief tributes to his memory.

AUSWANDERER.

Correspondence.

"A BOOK OF NO ORDINARY CHARACTER."

TO THE EDITOR OF THE NATION:

SIR: In your issue of March 23, in that style which is peculiarly your own—indeed, for which you "may be said to have a genius"—you attack Dr. Elder's "Questions of the Day" generally, but more especially the position therein taken regarding the economic policy of Belgium since its separation from the Netherlands in 1830. However, notwithstanding the fact that Dr. Elder has the misfortune thus to find himself at issue with so high an authority as the *Nation*, he is right, and the *Nation* is wrong. By reference to "Questions of the Day," pp. 239 and 240, it will be seen that the author says:

> "Our whole case might be safely rested upon the facts of the industrial and commercial history of the little kingdom of Belgium alone"; and further, "Her customs system shows how wisely she has guarded all these interests"; and, "She has put herself, through wise and persistent protection, into the list of the nations that no longer need any defences against her industrial and commercial rivals." . . . "I must not detain the reader with a statement of the tariff rates which have secured all these results."

In all of these statements, and in others which might be quoted, it is made clear to every candid mind that he is contemplating *a history* not of one, two, or even three years, but the history of a policy during forty years, and the manner and extent to which that policy has "secured the results" which he claims. [illegible] could hardly have been expected to print all of the tariffs enacted by Belgium during those forty years, and hence he has taken his illustrations from a single one—and that a fair type of the entire class. This one is the tariff of 1850, printed in Newdegate's "Tariff of All Nations," 1855, and was at the latter date—*twenty-five years after the adoption of the protective policy*—the law of the land. The rates given by Dr. Elder are, one and all, strictly correct, even to that of *two cents per ton on raw sugar,* which you consider so absurd that you print it in italics.

But enough of Dr. Elder, his facts and figures—our main purpose being an examination of yours. We would invite your attention to certain items taken from the Belgian tariff of 1865, as published by the United States Bureau of Statistics in 1869-70, and, by that authority, given as "*in force since June,* 1866." The items are as follows:

[Mr. Baird here inserts no small part of the tariff of Belgium, with the expectation that we shall publish it. This we decline to do; but, in order to do him no injustice, we publish sufficient to illustrate his argument.—Ed. Nation.]

Skins, large and small, green, salted, or dry; wool, raw, combed, carded, or dyed; woollen rags and yarns, unfit for manufacture; horse-hair, and all crude animal matter not enumerated; feathers; silk in cocoons; manures; fibrous vegetable materials for spinning, etc.,	Free.
Sugar—Raw,	Free.
" Refined, candy, 100 kilogs. (220 lbs.)	$11 03
" " loaf, "	10 31
" " of No. 19 and above, 100 kilogs.,	10 31
Syrup—For distilleries,	Free.
" Of less than 50 per cent. sugar, 100 kilogs.,	$2 93
Cocoa—Raw, "	2 93
" Prepared, "	5 85
Tobacco—Unmanufactured, not stemmed, "	1 64
" Stemmed, "	2 57
" Manufactured, "	8 10
" Cigars, "	50 31
Salt,	Free.
" Refined, 100 kilogs.,	$7 94
Yarns—	
Cotton Yarns, unbleached and bleached, measuring per half kilogramme.	
20,000 metres or less, 100 kilogs.,	2 93
20,000 to 30,000 metres, "	3 90
30,000 to 40,000 " "	5 85
40,000 to 65,000 " "	7 80
Over 65,000 " "	1 95
Cotton Yarns, dyed or warped, measuring per half kilogramme.	
20,000 metres or less, 100 kilogs.,	4 87
20,000 to 30,000 metres, "	5 85
30,000 to 40,000 " "	7 80
40,000 to 65,000 " "	9 75
Over 65,000 " "	1 95
Woollen Yarns, not twisted or dyed, 100 kilogs.,	3 90
" twisted or dyed, "	5 85
Linen Yarns, of hemp and jute, measuring per kilogramme.	
Not twisted or dyed, 20,000 metres or less, 100 kilogs.,	1 95
Twisted or dyed, 20,000 metres or less, "	2 93
Twisted or dyed, over 20,000 metres, "	5 85
Not twisted or dyed, over 20,000 metres, "	3 90
Silk, spun,	Free.

Will you now, Mr. Editor, kindly inform your readers how a tariff in operation in 1869-70, from which the above items are taken, bears out your very confident assertion, "that so far from the tariff of Belgium being an example of the protective system, the whole policy of protection was practically abandoned as far back as 1855"? We assert, without fear of contradiction, that these provisions, considering the comparative rates of wages, and of the development of the industries here and in Belgium, are more thoroughly protective than a majority of the duties on similar products in our existing tariff. When, too, you say "that with the exception of Great Britain, the tariff of Belgium is now, and for years has been, the most liberal in Europe," we simply point you to that of the Netherlands, not that this latter is by any means the "most liberal" to foreigners, but to prove how utterly without foundation is this other assertion of yours.

Henry Carey Baird.

Philadelphia, 406 Walnut Street, April 17, 1872.

[As it would in general be quite impracticable to admit controversy in regard to facts treated of in our reviews, our giving place to this communication must not be taken as a precedent. It is not clear to our mind that when Dr. Elder stated certain rates of duty as existing in Belgium, using unqualifiedly the present tense in so doing, he was contemplating "a history of a policy of forty years"; and, furthermore, we should like to know what a policy of forty years, or Dr. Elder's private contemplations, have got to do with this sentence, quoted from page 240 of his work, "Questions of the Day": "The differential duties charged upon imports in foreign vessels (into Belgium) are, on the average, quite one hundred per cent.," when the fact is there are no differential duties at all existing in Belgium, and have not been for nearly twenty years. Neither do we think the forty-year policy, even if admitted, will help Mr. Baird or his author out of their difficulty. Thus, from 1814 to 1830—a period of sixteen years—the tariff of Belgium (then a part of Holland) imposed three per cent. duties as a maximum on the import of raw materials, and six per cent. on manufactured articles. From 1830 to 1855—a period of twenty-five years—protective and discriminating duties were imposed; but in 1851 the finance minister, in his place in parliament, declared that if this policy was continued, it would prove the ruin of the whole system of domestic industry; and in 1855 the parliament and the people so fully acquiesced in his opinion that protection was swept away at once and for ever, and the duties on imports arranged purely with a view to revenue. So that when Mr. Baird talks about Dr. Elder's contemplating a policy of forty years, he talks about contemplations which never existed; and when he says he has taken his illustrations from "a single one of the Belgian tariffs, and that a fair type of the entire class," he means that he selected the protective tariffs that prevailed in twenty-five out of the fifty-eight years that have elapsed since 1814, and did not give his readers the faintest hint of the fact that the duties he referred to had not been in existence for a period of seventeen years.

Mr. Baird asks us to publish a large fraction of the Belgian tariff, with a view of showing that where Belgium does impose duties on imports, she grades them, putting most raw materials on the free list, a small duty on the lowest grade of manufactured goods, and higher duties on those of a higher value and elaboration; and then triumphantly asks us if this is not protection. In answer to this we quote again the following extract from the speech of the Belgian finance minister, M. Orban, in presenting the budget of 1867:

> "There is no doubt that very few people could be found who would maintain our customs for the sake of the institution itself. Those who support the necessity of customs do so for the sole reason that it is a means of obtaining revenue. The principal obstacle we meet when we attempt to abolish our customs is the considerable revenue they yield to the State—revenue which we should have to replace by other taxes."

We regard this highest official utterance of Belgium as a sufficient demonstration that the idea of protection has not in any degree entered into the construction of the Belgian tariff. But as Mr. Baird may say that the tariff, as he has quoted it, speaks for itself, and speaks also to the contrary, we will meet him even on this ground.

When a nation decides—as all nations have decided—that it is expedient to collect a part of their revenue from taxes on imports, the imposition of differential duties becomes a matter of necessity and a condition of equality and justice. Thus to illustrate: if Belgium were to impose a given duty on the import of a so-called "raw material," and the same and no higher duty on the articles elaborated from such material, it is clear that the raw material, or the product slightly elaborated, supposing the existence of foreign competition, could not be imported. A system of such duties would, therefore, discriminate against the freedom of trade, and against the industry of her own citizens. It would also violate the fundamental conditions of every system of taxation, namely, equality; for exactly the same tax would be imposed on a small amount of property, or measure of wealth, as was imposed on a larger. Belgium thus simply recognized these conditions in framing her customs system; and the attempt to parade her differential duties in face of the declarations of her finance minister, and in face of the fact that there is hardly a legislator, a newspaper, or an author in all Belgium that is not opposed to protection, is a stale device. As well might Mr. Baird call the Cunard, Inman, or Williams & Guion Companies protectionists because they charge freight on goods transported in their steamers, and discriminate with high rates on goods of high value, and with low rates on goods of low value.

Neither is there the slightest foundation for Mr. Baird's assertion that the discriminating duties of Belgium are as thoroughly protective, when measured by the Belgian rates of wages and her industrial development, as are the duties levied in the United States. Thus, for example, all sugar not above No. 19 is admitted into Belgium free. This exempts from duty nineteen-twentieths of all the sugar used by the people; and imposes a duty only on such of the forms of sugar, including candy, as are pure luxuries. Cocoa and tobacco are also articles of luxury, and the duties levied on them are clearly with reference to revenue; and when we remember that a kilogramme is 220 pounds avoirdupois, it is difficult to see how any less duties than those existing could be imposed and any revenue whatever collected. Cotton yarns being an article of necessity, the illustration can be made more to the point. Yarns of the lowest grade are charged with a duty of seven-tenths of a cent a pound, the cost of the article itself being probably at least 20 cents. The next grade pays 1·7 cents per pound, and the highest 3·5 cents per pound. Now, in the United States, the duties on the import of cotton yarns range from 10 cents per pound and 20 per cent. ad valorem (equivalent to from 15 to 18 cents per pound) to 40 cents per pound and 20 per cent. ad valorem (equivalent to from 56 to 75 cents avoirdupois per pound). We think that neither Mr. Baird nor any one else will have the hardihood to assert that these differences in the customs on the import of cotton yarns to Belgium and the United States represent even approximately the differences existing in the wages and industrial development of the two countries.

In one respect, we will admit that we have committed an error. We said that the existing tariff of Belgium was, with the exception of that of Great Britain, the most liberal in Europe. We should have also excepted Holland, in whose tariff we find no duty, except on spirits, exceeding *five* per cent. ad valorem.—ED. NATION.]

Notes.

WE are to have, it seems, Mr. Seward's account of his roundabout tour in a book, "Travels Around the World," of which the Appletons will be publishers.——De Witt C. Lent & Co. announce "The Ministry of Song," a volume of religious poetry, by Frances Ridley Havergal.——Roberts Bros. publish at once Frederic Mistral's Provençal poem entitled "Mireio," translated by Miss Harriet W. Preston; Laurent Laporte's "Sailing on the Nile," translated by Virginia Vaughan; "Happy Thought Hall," by F. C. Burnand; "Six of One by Half a Dozen of the Other," the composite novel by Mrs. H. B. Stowe, Rev. E. E. Hale, and three others; and "Paul of Tarsus," by a Graduate.——"Influence of the Mind upon the Body," by D. H. Tuke, M.D., is in the press of Lindsay & Blakiston, Phila.——Richard Wagner's "Beethoven," translated by Albert R. Parsons, will be published by Benham Bros., Indianapolis.——S. C. Griggs & Co., Chicago, announce "Getting on in the World," by Prof. William Matthews.——A reprint from the "Vermont Historical Gazetteer" of the "Histories of St. Albans and Sheldon," will be issued by Stephen E. Royce, of the former place.——Mr. L. W. Schmidt has received from Frederick Muller, of Amsterdam, Part I. of his "Catalogue of Books, Maps, Plates on America, and of a Remarkable Collection of Early Voyages," including a large number of books in all languages, with biographical and historical notes, and an essay towards a complete Dutch-American bibliography. This catalogue, while having the usual mercantile character, is designed to be worthy of preservation on its own account, and as such merits the attention of all collectors and librarians. It will doubtless prove as good an illustration as need be desired of the truth of the "firm conviction" which Mr. Muller now entertains, that "the antiquarian bookseller can largely serve science—bibliography or literary history especially—without forgetting his own profit."

—T. O. Weigel, a well-known publisher of Leipzig, and the author, with the co-operation of the late Dr. A. Zistermann, of a valuable work on early printing, "Die Anfänge der Druckerkunst in Bild und Schrift," advertises to be sold at auction at Leipzig, on the 27th of May and on the following days, the whole of his precious stock of materials collected for the illustration of the above-mentioned work. To all persons interested in this branch of learning, Mr. Weigel's announcement ought to be of the first importance. To seekers after the few scattered bits of cloth and paper by which alone we track the beginnings of the art of printing—now so common a possession of the race that the time when it did not exist seems as far away as the years when the mastodon grazed in the meadows of Orange County; to seekers after these Sibylline leaves now sick with hope deferred of ever getting hold of any of them—for the few that have drifted down to us have long been garnered into private collections, or have found safe resting-place for years to come in the public museums of Europe—Mr. Weigel's news gives a new hope, and there are already signs of great excitement in the tribe. The descriptive catalogue, of which only a few copies have reached this country, and for an opportunity of examining which we are indebted to Mr. F. W. Christern, is itself a book of value and no mean addition to the library of a student of such matters. Mr. Weigel describes it as, in fact, an abridgment of his larger work, and as capable of being used as an introduction to the study of it. It contains twelve illustrations, and is drawn up with great precision, every piece being minutely described, and all those of remarkable importance marked with one, two, or three asterisks, according to the rarity or other noteworthy feature of each specimen. There are in all 533 numbers, and they are classified under the following heads: I. Impressions upon stuffs, Nos. 1 to 10. II. Engravings upon metal, Nos. 11 to 69. III. Engravings upon wood, surrounded with impression from metal borders, Nos. 70 to 74. IV. Engravings upon wood, Nos. 75 to 232. V. Block-books, Nos. 233 to 302. VI. Playing-cards, Nos. 303 to 321. VII. Engravings in stipple (*en manière criblée*), Nos. 322 to 400. VIII. Impressions in paste, Nos. 401 to 405. IX. Engravings on copper, Nos. 406 to 508. X. Early printed books, Nos. 509 to 533. Besides a carefully prepared index, there is also at the beginning of the book a useful list of forty-one of the most desirable pieces.

—Literary coincidences are common enough, but perhaps when one considers the barrenness of the human mind, and the fewness of the ideas which make up the sum total of its slowly-gathered wealth, it is strange that they are not commoner still. But they are no doubt of commoner occurrence than discovery. Two or three have lately been going the round of the press. One is the coincidence between the recent story called "Poor Miss Finch" and a story contained in Bulwer's "Pilgrims of the Rhine." We dare say Mr. Collins had almost entirely forgotten the "Pilgrims of the Rhine"—as we are sure we had, though we dimly remembered it as something pleasantly romantic and sentimental and impossible—and that he had out-and-out forgotten the tale of the blind nobleman and the two sisters. One cannot imagine a man of his intelligence as wilfully spoiling the pretty little tale for the sake of making it into so stupid a story as "Poor Miss Finch." Mr. Collins, by the way, and another and still poorer English novelist, Mr. Edmund Yates, are coming to this country to lecture this coming season, and, doubtless, to make a book apiece about us, so we may as well all be prepared with some "tall talk" about the indirect claims and the sure advent of the British republic. Another person accused as a plagiarist is "George Eliot," concerning whose alleged thefts Mr. Charles Reade has just been in one of his tantrums. She is also the subject of a communication to the editor of the *Churchman* of this city, the correspondent having found a typical "plagiarism" of the kind most often discovered by the hunters of this sort of game. The coincidence is between a passage in "Middlemarch" and a passage in William Chambers's memoir of his brother. The latter we give first:

> "'My father took the book (the 'Encyclopædia Britannica') off Sandy's hands. . . . I lighted upon the stored book, and from that time for weeks all my spare time was spent beside the chest [containing the book]. It was a *new world to me*.'—'Memoir of Robert Chambers,' 1872, p. 62."
>
> " . . . he took down a dusty row of volumes with gray paper backs and dingy labels—the volumes of an old cyclopædia which he had never disturbed. . . . the moment of vocation had come, and, before he got down from his chair, the *world was made new* to him by a presentiment of endless processes filling the vast spaces planked out of his sight by that wordy ignorance which he had supposed to be knowledge. . . . From that hour Lydgate felt the growth of an intellectual passion.'—'Middlemarch,' book ii., March, 1872, pp. 255, 256."

We have called this a typical specimen of these things because if it were a plagiarism it would be a plagiarism of not the least consequence, the fact mentioned being one which happens constantly, and the thought being perfectly common. The writer in the *Churchman* does not speak of it as a case of plagiarism, but only as a case of striking coincidence; but it is hardly the latter either, and is rather a case of coincidence which is not striking. Still another resemblance which has seemed to some observers very marked is the resemblance between that scene in "The Newcomes" in which the Colonel says "Adsum" and dies, and the scene in one of Cooper's novels, "The Prairie," in which the old soldier and trapper, as he expires, raises his head from the ground and says "Here," as if answering at roll-call. The resemblance is there undeniably, but it is such as leaves each author in full possession of his death-scene, and entitled to undiminished credit for it. Death-scenes and last dying exclamations are anybody's and everybody's property; the skilfulness of the variations which are played upon the main theme constitute the legitimate field for the efforts of each new author, and Thackeray will be held to have been very skilful in the accessories, albeit the pathos of the scene in general rests under the least suspicion in the world of being overdone.

—The *Saturday Review* in noticing a recent American book rebukes the author because she uses the ridiculous Americanism "conjugial." We do not know whether Swedenborgians are more numerous in the United States than they are in England, but unless they are, the word in question is no oftener used in this country than in England. Swedenborg, writing in Latin about the true love of the sexes, describes it by the poetical adjective *conjugialis*, and his translators, English and American, have seen fit to employ this word "conjugial," which may, for anything we know, have in their peculiar nomenclature a peculiar sense and force. It is not really in the language proper, either as spoken in America or across the water. "Walkist" is another Americanism to which the *Review* objects; but we fear this is now so firmly rooted that it will have to be accepted everywhere; it rests on the authority of the late Artemus Ward, and has received the sanction of Mr. Billings. "Scientist," however, we believe this country must plead guilty of having invented, and we fear there are indications that it may in the end prevail. Another word of which we have recently heard mention, and the existence of which has been brought in question, is the verb "to fault," used transitively as meaning "to find fault with" any one. This we take to be all but obsolete in the written language, and rapidly obsolescent in the spoken. As the *Churchman* says, its written use is perhaps now confined to those who are accustomed to the study of the writers of the early English Church. It would be more accurate, we fancy, to say of its general use, written and spoken, that some persons such as those mentioned keep it alive, and that besides these it is kept up by members of somewhat secluded English and Irish communities. It is not uncommon to hear it from an Irish child, and it is used to some extent in the British Provinces, where, indeed, it may either have come from the studious rector of the parish or, more likely, have been handed down by English and Irish tradition from the days of Elizabeth. It is hardly a word that we should like to see lost.

—We do not know if it is ignorance of the warning, or unbelief in it, which disposes people to reject what the scientific men tell them about the poisonous properties of certain wall papers. Whichever it may be, the warnings have to be repeated once in so often, and each time the wonder becomes the greater that house furnishers and house owners are so careless. Take even the case of people so well off and so well informed as to go to the expense of using the so-called Morris papers on their walls—take, indeed, the case of Mr. Morris himself, who is presumably a well-informed and conscientious person—and one finds a careless ignorance or else a want of faith in science which is remarkable. The Morris papers have been popular in Boston lately—the Boston taste in wall paper being at least as good as its taste in poetry, of equal superficial area, by the same Mr. Morris—and many recently built houses have been adorned by the beautiful designs of his invention which he turns out at his decorative workshop or studio in London. It is now found, we are told, that in the coloring of some few of these papers poisonous materials are used in quantities so great as to be dangerous to health, and this not merely in papers of a green color, which is popularly supposed to be the color most dangerous, but also in some others. For Mr. Morris it should be said, if we are not mistaken, that he has hitherto been responsible for nothing but the coloring and patterns of his papers, and that the more mechanical part of the work has been in the hands of ordinary manufacturers. And for Messrs. Bumstead & Co., of Boston, to whose taste we are chiefly, if not wholly, indebted for the introduction of these beautiful works into this country, at their expense, it should be said that since the discovery of the danger to be apprehended they sell only those colors which have been chemically tested, so that they now give the purchaser about the safest as well as about the most beautiful and satisfactory of wall coverings.

—The reopening of the University of Strassburg under German auspices has been heralded by the usual announcement of lectures to be delivered at the university in the summer term of 1872, from May 1 to August 15. The only references in its seventeen pages to the transition from a French to a German university are put incidentally, as thus: The professors of the former Faculté de Médicine and the Ecole de Pharmacie will complete the courses of lectures already begun in the French language, and the lectures of Professor Bergmann, on the Growth and History of the French Language, will be read in French, if desired. The fact that the Faculty is a new one, brought together from other universities and by other than the ordinary influences, is shown in the addition to the name and title of each professor of the university from which he came to Strassburg. There are seven Professors of Theology, and five of them belong to Strassburg, a relic, no doubt, of the old Protestant element there before the war; but the other Faculty, of the Catholic school, will probably soon have its quota of German professors brought together from Catholic Germany. In the Law Faculty, of nine professors, three only are from Strassburg; in the Faculty of Medicine, with nine professors, one only is a Frenchman, and he comes from Lyons; in the Faculty of Philosophy there are sixteen professors, of which number five are from Strassburg; and in the Scientific School, of ten professors, but one is from Strassburg. The university fraternity of the professors thus brought together by the German Emperor from all parts of his Empire and from German schools outside of it, serves to show how the German universities count in their number all German-speaking countries, no matter under what flag or crown. There are representatives in Strassburg University from its elder sisters of Würzburg, Kiel, Königsberg, Prague, Freiburg, Hamburg, Breslau, Tübingen, Dorpat, Bern, Zürich, Lyons, Carlsruhe, Greifswald, Athens, Bonn, Treves, Berlin, Aix-la-Chapelle, Halle, Gratz, Heidelberg, and Oxford, which promises to lend Max Müller for the summer. It is thus seen that besides those from Prussia and even Germany, in its broadest sense, there are German professors from Russia, Austria, Switzerland, Greece, England—and even from America, in the person of Dr. von Holst, professor extraordinarius—brought together to transfuse German blood and learning and science into the reconquered provinces of Alsace and Lorraine. The fact that a Faculty of 51 professors could thus be collected, of whom only 15 belong to the city in which the university is situated, shows how large a force there must be in Germany proper from which the Government is free to draw its supply of teachers for the new school.

—The twenty-eight German universities, indeed, including in the list those of Germany, Austria, Switzerland, and Dorpat, count nearly 2,500 professors of all grades—that is, the professors proper, who are paid by the Government, and constitute the governing body. The extraordinary, or, as we should say, assistant professors, who sometimes receive a regular salary, but a very small one, and the private tutors, teachers of languages, and other subordinates and their students, count in theology—native Catholics, 1,000; foreigners, 100; native Protestants, 1,400; foreigners, 600. In law, natives, 3,200; foreigners, 875. In medicine, natives, 3,700; Vienna alone has more than 1,300; foreigners, about 1,000. In philosophy and philology, natives, 3,700; Berlin has nearly 1,000; foreigners, over 1,100—in the rough thus:

Catholic Theology	1,100	
Protestant "	2.000	
		3 100
Law		4.075
Medicine		4.700
Philosophy and Philology		4 800
Total Students		16,675

The calendar also notes the fact that Giessen sent 72 students to the army; Jena, 131; Leipzig, 400; and Tübingen, 125—a list that is confessedly imperfect, for Berlin, and Bonn, and Breslau, and Erlangen, and Freiburg, and Göttingen, and Greifswald, and Halle, and Heidelberg, and Kiel, and Königsberg, and Marburg, and Munich, and Münster, and Rostock, and Würzburg, must have their roll of honor too. Besides all these, there are long lists of technical schools in Germany for architects, engineers, business men, soldiers, farmers, musicians, sailors, surgeons, gymnasts, and for mechanics, designers, telegraphers, beer-brewers, book-keepers, chemists, weavers, stenographers, artists, wood-cutters, builders, pharmaceutists, printers, sewing-women, glass-makers, and for women in various useful branches of arts and sciences, mechanical trades and pursuits. It is not wonderful, therefore, that the census of the literary productions in Germany should count over 10,000 works in 1870—1,400 in theology, 100 in philosophy, 1,000 in "pedagogy" (the art and science of teaching), 700 in history, 1,000 in law, 100 in mathematics, 250 in geography, 250 in war, 400 in medicine, 500 in natural history, 300 in modern languages, 400 in technical education, 200 in architecture, 350 in agriculture, 100 in woods and forests, 275 in literature, 800 novels, 350 in fine arts, 275 in popular works, 275 in young folks' literature, 390 mixed works, and 250 maps. The impulse likely to be given to education by relieving it from the hard pressure of church control is pretty sure to be felt throughout the Empire, and the prospect of a sharp contrast between the "reconquered" provinces of France and their neighbors is likely to attract attention and criticism of the comparative merits of French and German systems of government and education.

—As there is nothing which is not amenable to German curiosity and research, a pamphlet has lately been devoted to tracing out the origin of the famous university song, "Gaudeamus igitur" (Studie von Hoffmann von Fallersleben, Halle, 1872). The attempt, however, is not altogether successful. The song, says Hoffmann, is evidently very old, but the music is perhaps older than the words. In their present shape, the latter cannot be assigned to a period earlier than the second half of the eighteenth century. Their first appearance in print was in a little book of student songs published in 1781 by a Berlin pastor, philanthropist, and littérateur, Christian Wilhelm Kindleben. The song is given on pp. 56–58, with the remark, "altered by Kindleben," and a note in which he styles it an "old Burschenlied," and says he felt obliged to recast it "because the poetry, as in most songs of this description, was very bad." However, he kept its antique form, and only omitted some verses which injured the rest, and the singing of which would not have been permitted by academic regulations. Whether this is a true account of Kindleben's relation to the song is not clear. The original, if there was one, has fallen entirely out of sight, and Kindleben's version has held its own in the Commersbücher against all variants. A German translation which he issued at the same time fell perfectly flat, nor will its reproduction now in Hoffmann's brochure revive it.

CHADBOURNE ON INSTINCT.*

WHEN this volume was announced, we looked forward to its perusal with a high degree of expectation. This interest was awakened by the subject, for which we confess a partiality, and by the scholarly attainments of the author, of which we had some knowledge. Having now read the work somewhat attentively, we will endeavor briefly to indicate its principal points.

Premising that metaphysicians have been the nearly exclusive essayists upon the endowments of animals, whilst naturalists, whose studies and means of knowledge would add weight to their conclusions, have rarely discussed the question, we find this work a reproduction of the views of the metaphysicians, with additional explanations and a fuller and more systematic treatment. It displays research, logical acuteness, and a genial spirit in active sympathy with the subject. We commend it, without hesitation, as a readable and instructive volume, however much we may differ with the learned author in his principal positions, and however much we may regret to find what we cannot but regard as a fallacious basis under his entire structure. It was, however, desirable to possess, in a complete form, the views of the metaphysicians upon instinct, considered as the governing power over the lives and conduct of animals; and we think this the most lucid, candid, and ingeniously-sustained treatise which has yet appeared upon this interesting theme. Dr. Chadbourne adopts the "*instinct hypothesis*" to explain the phenomena of animal intelligence, and regards it as adequate to embrace and account for all the facts. Having adopted this hypothesis in the title of his work (which hypothesis it would be pleasant to ascribe to human laziness, if it could properly be done), he was substantially released from the necessity of collecting and discussing the vast and complicated array of facts revealed by the lives of the inferior animals. It thus became his chief object to develop a definition, or a series of definitions, of instinct which would satisfy his impressions of its functions, with illustrations of their interpretation; and after that to explain the office of instinct in the animal kingdom. This, in substance, is the work accomplished in the volume under consideration.

If Dr. Chadbourne had collected a body of facts sufficiently comprehensive to illustrate the phenomena of animal intelligence, as far as the facts are accurately known, and, after enquiring whether they revealed in animals the possession of a mental principle, had succeeded in demonstrating a negative, he might have been justified, at least in the present state of our knowledge, in resorting to the convenient term "instinct" to explain the phenomena, although it would even then drag upon the mind as an unnecessary bestowment upon animals of supernatural powers. After acknowledging the impossibility of making a definition of instinct all would accept, he introduces three which have enjoyed some celebrity, as follows (p. 26):

> *Paley*—"Instinct is a propensity prior to experience and independent of instruction."
>
> *Whately*—"Instinct is a blind tendency to some mode of action, independent of any consideration on the part of the agent of the end to which the action tends."
>
> *Hamilton*—"Instinct is an agent which performs blindly and ignorantly a work of intelligence and knowledge."

If compelled to choose one of these definitions, we prefer the last. It is bold, original, and concise. Whilst Paley conceives of instinct as a *propensity*, and Whately as a *blind tendency*, both excluding the existence of a mental principle from which the "propensity" or the "blind tendency" emanates, Sir William Hamilton conceives of it as an *agent*, and inferentially as a mental principle, although it is not easily perceived how a mental principle, a propensity, or even an agent can "perform blindly and ignorantly a work of intelligence and knowledge." This seems to be the fundamental difficulty with all definitions of instinct. They lead directly to the Cartesian theory that every animal below man is a mere machine—a living machine, it is true—actuated by a power analogous to the mainspring of a watch, over which the animal has no control. Remarks and illustrations scattered through the volume seem to commit our author to this opinion of Des Cartes, although he would probably disclaim such an inference.

Dr. Chadbourne's position upon the material questions can be shown substantially by a few brief quotations, which we will insert together. In several places (pp. 173, 207, 226, 255, 258, 286) definitions are given, one of which (p. 185) is as follows:

> "An instinct is simply an impulse to a particular kind of voluntary action which the being needs to perform as an individual or representative of a species, but which he could not possibly learn to perform before he needs to act. And the general term Instinct includes all the original impulses, excepting the appetites, and that knowledge and skill with which animals are endowed, which experience may call into action, but which it does not give." This definition is not materially different from those of Paley and Whately, and not as far advanced as that of Hamilton, from which Dr. Chadbourne dissents. He takes the precaution, however, elsewhere to state that none of these definitions "cover the whole ground of instinctive action." Our author explains all the phenomena of life among the inferior animals by *structure*, *function*, and *instinct*. He also assigns to them a vegetative life and an animal life, and gives a genesis of instinct in the following language (p. 286): "We find at the basis of all activity in animals and men the *vegetative life* by which the body is sustained and the species continued. Next to this comes the truly *animal nature* as the condition for sensation, reflex action, and sense-perceptions. All these must be common to men and animals, as the condition for instinctive action. In addition to this machinery we want impulse to action. And as the first impulse to instinctive action, or one of the first, we have the appetites which arise from the functional activity of the organs. They belong to the vegetative life, but involve sensations and have no direct dependence upon the will. Next in order we have certain instincts which *minister* to these appetites, or, in other words, the animal has, as an original gift, the knowledge and skill needed to enable him to properly satisfy his appetites, and this original knowledge and skill constitute animal instinct—instinct in its lowest plane of action. . . . Above these instincts is intellect, by which the being comprehends relations and the results of its own acts. In the animal this is so low, or rather so weak, as to be subordinate to the instincts of the body. . . . *Will* in the animal seems to be merely the obedient executive, carrying out the suggestions of the instinctive powers." And elsewhere he remarks (p. 190): "That animals perform acts which seem to imply thought, no one will deny—purely instinctive acts; and even the movements of plants seem to imply thought when there is no sensation even. If we detect intellect in animals at all, then, it will not be because they perform certain acts, but it will be because they perform these acts under the same conditions and by the same means or methods as men perform them." He admits that the higher animals possess intelligence, but without entering into any discussion concerning its nature, extent, or deep significance; thus ignoring substantially, with a stroke of the pen, the entire body of authenticated facts in the lives of the higher animals which must form the basis of any proper discussion of their endowments. Whatever *intelligence* they exhibit is made subordinate to instinct—its *servant* and not its *master*. "In water (p. 208) cohesion is the servant of gravitation; in ice it is the master, though it can never escape wholly from its power. So intelligence in the animal, like cohesion in water, must bend all its energies in obedience to the instinctive principles which control the actions of animals as gravitation does the particles of water."

Even if space would admit further extracts, the foregoing are quite sufficient to indicate the scope of this work and the positions of its author.

Instinctus, from *instinguo*, is a good classical word, signifying *instigation*, *suggestion*, *impulse*. It was originally used in these senses, and in no other sense. When Roman scholars had occasion to refer to the principle of intelligence in animals, they did not use this term, but words of higher import —*sensus*, *mens*, *ratio*, *intellectus*, *memoria*, *cura**—"perception," "mind,' "reason," "understanding," "memory," "care." We are unable to state the precise time when the term instinct, with its present signification injected, was brought into use; but we believe it cannot be traced back much beyond the times of Locke. It is a modern invention of the metaphysicians to dispose of the whole subject of animal psychology by a definition, and to create, by force of a term, a fundamental distinction between the endowments of men and of animals where there is no sufficient reason for supposing that any difference exists except in degree. It is a mere theory or hypothesis, with an object, strange to say, having but a limited relation to the facts.

The term "instinct," as modernized, might serve a useful purpose, up to a given line, to explain certain mental operations, both in men and animals, which are beyond the reach of consciousness. The mind moves with electrical velocity. By means of language or mental symbols it is trained to evolve its processes slowly through the heavy machinery of words or symbols, each of which requires a particle of time in its use. Consciousness is thus enabled to follow and to realize the actuality of these processes, and to know that the mind thinks. But there are many processes of the mind so instantaneous as to elude consciousness, and yet they are followed by acts exhibiting intelligence and knowledge. We are certain that the particular act was preceded by perception, reasoning, and the exercise of the will, although not a trace of either remained to consciousness with the exception of perception. Jumping aside from an object suddenly seen flying toward us through the air is an illustration. Instinct would be a convenient term

---

[*] "Instinct: Its Office in the Animal Kingdom, and its Relation to the Higher Powers in Man. By P. A. Chadbourne, LL.D." New York: G. P. Putnam & Sons. 1872.

[*] Cicero, De Nat. Deo., lib. iii. c. ix.; Pliny, Nat. Hist., lib. viii. c. l.; id., xi., c xxxvi.; id., xxix. cc. vi., xxxiv.

to distinguish unconscious from conscious processes of the mind. Beyond this we believe the term should be totally rejected both in relation to men and to animals.

We know nothing of the ultimate nature of mind; neither is it divisible into parts or faculties or organs. "The utmost ingenuity," Abercrombie remarks, "has not been able to advance a step beyond the fact that the mind remembers, reasons, imagines; and there we must rest contented." All we know of the mental principle is the fact that it manifests certain qualities, as memory, imagination, reason, and that it has the power of acting and of being acted upon. These qualities and powers form the legitimate and exclusive subject of investigation in whatever relates to the principle of intelligence. In like manner we know nothing of the ultimate nature of instinct so-called; and since there is no occasion to enquire concerning its qualities and powers, because the definition of the term undertakes to dispose of the whole subject, we must either accept instinct as a solution of the entire problem of animal intelligence, or, rejecting the term altogether, take up the mental principle in animals and enquire concerning the qualities and powers it manifests. This is the precise issue and point of difference, as we conceive, between the metaphysicians on the one side, and the naturalists on the other. Up to the present time the metaphysicians have held the field with the instinct hypothesis, whilst naturalists, such as Agassiz and Wallace, have contented themselves with recording a vigorous protest,[*] without taking the trouble to refute the hypothesis. It is so entirely unphilosophical to attempt the embodiment of a system of philosophy, in fine, to dispose of a body of facts ample and important enough to create a science, in a mere definition, that naturalists must have felt persuaded that the instinct hypothesis, left to itself, was certain to break down from the weight of its own incongruities.

Observations upon the habits and mode of life of the inferior animals have, for many years, been accumulating in number, increasing in thoroughness, and widening in their range. The time is not far distant when these facts concerning the endowments of animals will be subjected to scientific treatment upon the basis of the facts themselves. It may be doubtful whether this knowledge is now sufficiently thorough and minute to establish a science of animal psychology. Very little is known of the habits, artificial works, internal economy, and mode of life of entire masses of the species; and even with respect to those species which have been most carefully studied, the knowledge gained is admitted, by the observers themselves, to be very superficial. Whilst they catch the prominent characteristics of a particular animal, they discover and acknowledge that the volume of facts, with respect to its intelligent inner home-life, elude their grasp. The sphere of existence and of activity to which each is confined by structural organization is so far removed from the sphere of man that it is extremely difficult to study their acts, and to give to them a satisfactory interpretation. Many of these difficulties, however, are being overcome by patient industry and perseverance, thus encouraging the belief that our knowledge will in time be made ample and complete.

We think our information exhaustive with respect to the much-studied honey-bee; but, after all, we know very little about the inner actual life of the insect. It belongs to a different and widely separated branch of the animal kingdom from our own; and when we attempt to penetrate its contracted sphere of action, the coarseness and obtuseness of our powers of observation become apparent. It is much the same with the habits of birds, the nests of which, with the cell of the honey-bee, have so long furnished the staple arguments for expounding instinct. The lives of birds constitute one of the marvels of creation. We are almost tempted to select certain species of birds as the highest type on earth of sensitive, spiritual, imaginative life, and to look precisely here for the most exquisite sensibilities in the entire range of the animal kingdom. As we rise in the scale of mental power, the principle loses in the delicacy of its sensibility; and as we descend there is some evidence that it increases. Birds make nests which are seen and dissected, even the process of construction is witnessed; but how much do these inform us, taken alone, of the processes of the principle of intelligence at work behind the scene? When the building of a bird's nest is explained as the result of a propensity in the animal nature of the bird working blindly and ignorantly, we are offered, as it seems to us, the smallest conceivable amount of information upon the subject. The language itself is the armature of a false logic. In the present state of our knowledge, the attempt to sustain the instinct hypothesis, or to explain the endowments of animals, by arguments and illustrations drawn from the habits of insects or of birds, or even of immense numbers of species of the lower grades of animals, will necessarily be futile, for the want of comprehensive and accurate knowledge of the facts. We take this exception to Dr. Chadbourne's treatise, that its arguments and illustrations are drawn almost exclusively from the lower ranges of animal life.

On the other hand, our knowledge of the higher animals, and especially of such as have been domesticated, is much more ample, accurate, and reliable. Here we can stand on solid ground. By means of thorough and long-continued observation, a large body of facts have been collected and authenticated. More than this, the sphere of activity of the higher animals approaches, and even enters, the sphere of man's activity, so that the human mind has come into intelligent contact with the animal mind, both acting and reacting upon each other. There is a sufficient number of authenticated facts of this class displaying intelligence and reason upon which, as to the higher animals at least, it can, we think, be demonstrated that they possess a mental principle which performs for them the same office in governing their conduct that the human mind does for man. With this proposition first established, the qualities and powers of the animal mind should be investigated in the same manner precisely as we investigate the qualities and powers of the human mind. It will then be seen whether the difference in the principles is one of kind or simply one of degree. We take the further exception to Dr. Chadbourne's work that he did not find it within his plan to present and discuss this class of facts, and show, if it could be done, that they were without significance. His reference to them is incidental, and, for aught that appears, they are mere fictions of the imagination. What should have been made, as we think, the most conspicuous element in his volume is as practically ignored as though no such facts were known or even possible.

Several different positions of the author might be tested by practical illustrations; but the unexpected length of this article must exclude them. A single exception may be made. Instinct is said to be an impulse arising, not from a mental principle, the existence of which Dr. Chadbourne does not admit, but from the animal nature, which, by the bye, it is difficult to understand as the fountain of an impulse able to perform an intelligent, rational act through the physical organs. When an animal act rises to actual intelligence, this intelligence is then said (p. 208) to be exercised in subordination to instinct, and not independently of its control. In other words, intelligence in animals is the servant of instinct, and not its master. The raccoon (*Procyon Lotor,* De Kay) is called the *Washer* (*Lotor*), because he washes his food before eating it. Here the animal would be said, through an impulse over which he had no control, to perform blindly and ignorantly a work of intelligence and knowledge. A raccoon in the Garden of Plants, at Paris, was given a lump of sugar by his keeper, the first the animal had seen. Although white and clean, in obedience to a practice he had found salutary through his whole life, he washed the sugar before attempting to eat it. As a necessary consequence, it dissolved in his paws, and the greater portion was lost. The next time the experiment was tried the instinctive impulse failed to arise, and he ate the sugar unwashed with entire faith in its cleanliness. Are we informed that experience corrected instinct? Such an admission would seem to be fatal to instinct itself, since the act of eating in a particular case without a previous washing reveals the presence of a mental principle before which the so-called instinctive impulse was silent, which principle performed openly and independently a work of intelligence and knowledge. One other slightly similar illustration may be added. A keeper of monkeys in a menagerie was accustomed to give them lumps of sugar tightly enclosed in paper wrappers. The monkeys tore off the ends of the wrappers and ate the sugar. On one occasion the keeper managed to enclose a live wasp with the sugar, which was handed to an unsuspecting monkey. When the latter had torn off the end of the wrapper, the wasp came out with a buzz and stung him. After that, when papers of sugar were given, not only this monkey but every other one in the cage held the paper to his ear to find whether the hum of a wasp could be heard within before he ventured to tear the wrapper. It would seem that this monkey had thrown off the harness of instinct when he came to deal with treacherous man, and gave evidence of the possession of a mental principle which not only manifested the quality of memory, but was also capable of devising an experiment to discover a truth, as well as to draw an inference after the experiment was made.

THE MAGAZINES FOR MAY.

THE May *Atlantic* is appropriately fertile in pretty verses infused with poetry, and it is fertile, too, in poetical weeds, the delightful "Gannet," and "Galahad," and "Ancient," and "Zoilus," giving us their charming travesties of such poets as Mrs. Stoddard and the late Mr. Henry T. Tuckerman. The article in which these performances appear becomes quite comical when it is Mr. Howells's turn to be parodied and criticised. He remarks in a foot-note that "all contributors to the *Atlantic Monthly* are aware that the text of accepted articles is never changed, nor is even a sentence omitted without the author's permission. The editor regrets that he is now obliged to violate this rule." The result of the violation is to give us a passage such as the following:

---

[*] "Nat. Hist. U. S.," p. 64; "On Natural Selection," p. 201.

> "Galahad. Howells, at least, has escaped some of the troubles through which the older authors have been obliged to pass. His four years in Venice made a fortunate separation between his youthful period and his true sphere of activity. He did not change front, as the rest of us must do, in the press of battle. I was very much puzzled what to select as specially distinctive, and allowed myself at last to be guided by two or three short poems." (Reads his parody, which he calls "Prevarication.")
>
> "The Ancient. 'I think I know what you had in your mind, but I was expecting to hear something in hexameter: you know his— . . . *
>
> "Zoilus. Yes, but— . . . †
>
> "Galahad. It is true to some extent. Still, on the other hand, he— . . . ‡"

The asterisk points the reader to the footnote which states the magazine's rule above cited; the dagger points him to the remark that "this would have given a clue to the preceding passage" (omitted); and the double dagger refers him to a characteristic piece of jocoseness: "The intelligent reader will readily guess why this is omitted." It is a skilful and amusing extrication; but we half believe we should have let Zoilus and Galahad and our dear old Ancient go on to make their perspicacious remarks; they are a wonderful company.

Mr. T. B. Aldrich, Mr. Bret Harte, "Grace Greenwood," Miss Louisa Bushnell, Mr. C. P. Cranch, Mr. G. P. Lathrop, Doctor Holmes, and the anonymous writer of a few rhymed elegiacs, are the poets of this month's *Atlantic*, and all make pleasing enough verses. Doctor Holmes does not shine in blank verse, however; and we, for our part, are not delighted with hexameters and pentameters that rhyme. Why should it be sought to give the added charm of rhyme to the rhythmical charm of this fine variety of English verse—fine, at all events, when written by a poet with a natural ear for music, and not by a precisian? The thought of these lines "In Earliest Spring" is poetical and true. "Grace Greenwood" pays a very nice compliment to some favorite poet of hers, and in so doing puts into diffuse rhymes a touching and beautiful story, which missed its luck in life in not coming under Mr. Longfellow's notice a dozen years ago. It is of an Italian artisan—rather call him artist—who cast in his foundry a wonderful chime of bells, the sweet tones of which ringing in the convent belfry enchanted him with their music, so that he came almost to worship them. A marauding descent upon the coast is made, by English ships apparently, and the convent is sacked, the bells even being carried away. The founder, bereaved of his bells, seeks them everywhere—in Flanders, in Normandy, in Amsterdam, in England, and at last is told that beside the Shannon, in Limerick, there is a chime of bells

> "Fit to ring in the coming of the Lord."

Finding his way there, he dies in hearing once more their beloved voices. Like these to him is the voice of her poet to Grace Greenwood. We hope he will pardon her punning title; the joke is decrepit with age and natural infirmity, but women are not expected to know about jokes.

Mr. Bret Harte, too, is fortunate in point of subject, but his treatment of it is not very meritorious. Rather more than this might be said in commendation if it were not for such lines as these:

> "And the citadel was lighted, and the hall was gaily dressed,
> All to honor Sir George Simpson, famous traveller and guest."

Mr. Harte should change this gentleman into Lord Bateman—say, "Viscount Bateman" for the sake of the metre. Bateman also was a famous traveller; and a "guest" after a fashion; though perhaps not famous in that capacity. The change would necessitate the excision of the next couplet, to be sure:

> "Far and near the people gathered to the costly banquet set,
> And exchanged congratulations with the English baronet."

This is very ludicrous. Yet the poem thus unaccountably disfigured is a good poem, as poems go, and fairly well written. As for the *Atlantic's* other poetry, Mr. Aldrich's and Miss Bushnell's is pretty. So is Mr. Lathrop's; but he will write better, we dare say, when he has forgotten all about Mr. Tennyson, except that Mr. Tennyson has educated his talent with assiduous industry, and, so far at least, is a poet worth heeding. We do not know what to say about Mr. Cranch's poem; we believe it always begets in us a partly unreasonable impatience when a man goes to church as some of our illuminati are apt to do, and comes away condemning the clergyman because his sermon was not lit up with the central truths with which the church architecture and the painted glass window have inspired the worshipper's soul. Herbert is a poet nearer right, we imagine, when he advises the hearer who knows a great deal of central truth and is disappointed in the sermon, to listen to the preacher nevertheless, for, under such circumstances, "God takes a text and preaches patience." Clergymen also, as well as the rest of us, should be allowed occasional lapses into stupidity, ignorance, and spiritual blindness. Mr. Cranch's poem has a fine pictorial image of the sight spread before the vision of Ganymede when the eagle bears him aloft.

Mr. Parton's "Jefferson" goes on; "From Shore to Shore"—a very good article, with "opinions," as all Mr. W. J. Stillman's articles have—describes the last voyage to Europe which that artist made, and compares it with his first; in "French Democracy," Mr. Herbert Tuttle fights well for the republic as the only feasible form of government for France; "Who Won the Pretty Widow?" is the beginning of a story which gives good promise of excellence, and which will tell of the experiences of a Southern lady during the rebellion; "New York Dogs" is by Mr. C. D. Shanly, who is a social observer of some merit and familiar with many of the more superficial phases of life in this city. The departments of criticism are all good so far as we can judge, though we think that entitled "Politics" is somewhat too serenely remote from the earnest work of current politics. It is strongly for reform, however. We observe in the article called "An Opportunity for Aristophanes" what seems to us an error, and one which it is rather curious that the writer should have made. Mr. Thomas Nast last summer made a cartoon entitled "The Tammany Tiger Loose," in which Tweed was represented sitting as imperator with Sweeny and the rest of the gang beside him, and all gazing down on an arena where Liberty lay helpless under the fangs of a monstrous beast. This cartoon should never have been drawn, the writer remarks; it said, as plainly as drawing could, that there was absolutely no help for New York; that the city was to the Tammany gang in the relation of slave to master—indeed, of murdered slave to an irresistible master; but this was not at all the true state of the case, for there certainly was hope for the city, and, but for the caricatured faces, Mr. Nast's picture might almost better have been published for private circulation among the members of the Ring themselves. The point overlooked in this criticism is that, however it may be in Boston, the average Christian *in partibus* no sooner looks at a picture of a Roman amphitheatre than he instantly feels a burning desire to draw the sword and devote to indiscriminate and bloody slaughter the entire audience—imperator, consules, Roman knights, vestal virgins, stage boxes, pit, gallery, lobbies, and all. Mr. Nast had previously worked upon this feeling when, at the time of the New Orleans massacre, he made a cartoon representing President Johnson, as imperator, witnessing the slaughter of negroes, who appeared as unarmed Christians beneath the swords of gladiators.

As usual, the most agreeable reading in *Scribner's* is Mr. Warner's article, which this month is as good as usual and perhaps better. Another article worth a little attention is that by Mr. W. C. Wilkinson, who makes an elaborate attack on Mr. Lowell's prose, and points out some of its faults of matter and manner. Mr. Wilkinson's article is rather ambitious, and now and again it puts on a pedagogic air which would befit a teacher instructing boys in the art of composition and the right spelling of intricate words better than it befits a critic; still he says some things that are true and worth attention. But he should recollect that however it may be with dead languages, there is no one who writes with absolute perfectness a living language vital in the mouths of men, women, and children, high and low, rich and poor. An Addison will have his Hurd, a Gibbon or a Johnson will make correctness intolerable, an angel from heaven would suffer at the hands of a Moon or a Gould. Mr. Wilkinson seems to be hardly awake to this truth that we indicate. When he addresses himself to exemplifying inner faults of style by exposing a diction and syntax indicative of careless thinking or defective art, he is doing something worthy of his theme; but he should consider that to worry a sentence in order to make manifest the fact that one of its relative words has an antecedent unexpressed is very little to any good purpose. This it is worth while to say to Mr. Wilkinson, for he is to return to his theme; and, as we have said, something of what he writes is useful. Had this country, thirty years ago, had either a dozen of exacting and intelligent critics, or four hundred millions of inhabitants, Mr. Lowell, Mr. Emerson, Mr. Longfellow, and all our other men of letters would no doubt have been more finished artists in prose and verse. But, as it happened, they were born into a society so glad to get their good things, and which got good things from so few competitors for its favor, that they were all able to be much lazier and much more self-indulgent than contemporary Frenchmen or Englishmen of genius, and it is largely due to the native superabundance of their endowments which has given them their high rank the world over. Mr. Wilkinson, in the essay before us, expressly devotes himself to criticism of the Aristarchian kind, and we do not know whether he is a writer capable of appreciating at their full value Mr. Lowell's good qualities as a critic. Hardly, we suspect. The essay often betrays a narrowness of critical view which has an inauspicious look; as, for instance, when it labors to defend Milton against the charge of being a poet who must take a place below Shakespeare. It will not do to say in the discussion of a question of this kind that Shakespeare and Milton are simply "two incommensurable magnitudes," the one being the greatest of dramatic poets, the other the greatest of epic poets, and that when this is said it is the end of the comparison between them, because anything further becomes at once "a discrimination and contrast of the epos and the drama." Charles Wesley, let us say, was the greatest of British hymn writers, and Burns of British song-writers; is there, then, no question as to whether Burns is a better poet than Wesley? The truth is, that in the poet's true business—in the endeavor to perceive and to express in audible, articulate, beautiful speech something of the wonderful mystery and the wonderful spectacle which is the life of man in this universe of the visible and the invisible, Shakespeare succeeded more fully than Milton, and Milton, grand as he is, great as was his art, epical as his imagination may have been, must defer to the poet who has somehow succeeded in at once seeing more and saying more of what he has seen than any of the rest of us. We hold that the true way to esteem Shakespeare is Ben Jonson's way, and to esteem him "this side idolatry" rather than to the verge of idolatry and beyond it, which is the way in vogue with some of the devotees. To pretend, as some do, that he was endowed with every gift in larger measure than any of his fellow-creatures; that outside Shakespeare there is nothing; that inside him there are not all manner of faults and mistakes which justify nearly all the bad that has been said about him—to pretend belief in these articles of the true faith is something which we, for our own part, would not ask Mr. Wilkinson or any one to do. And we confess to a great and increasing admiration for Milton; but we confess, too, that to find a man seriously thinking of Milton as the equal of Shakespeare once more recalls for us ancient days, in a distant land, in meeting-houses, where Milton and Mr. Robert Pollok used to be cited as examples of Christian genius applied to the production of "religious poetry," and where the undevout astronomer was shown to be mad on the authority of the great Newton and the admirable author of "Night Thoughts."

So much for the essayist's mode of looking at the higher poetry. As to Mr. Lowell's treatment of Milton considered relatively to Dryden, Mr. Wilkinson appears to be in a confused state of mind, a state for which Mr. Lowell is perhaps responsible, though, if we recollect the Dryden essay and the Shakespeare essay, Mr. Wilkinson has stumbled without much need of stumbling. When Milton is compared to Shakespeare it is necessary to call him a poet of the second class; he is then under trial by a standard which is applied to him in company with Homer, Æschylus, Sophocles, Virgil, Dante, Shakespeare, and Goethe; which even to some of these is applied with an effect fatal to their claims, and which in all the ages only some half a dozen poets have undergone with success. But when Mr. Lowell is dealing with Dryden the standard is British, and the trial is to ascertain who is to be held to have come nearest not to Shakespeare and poets of the first class, but what man of signal ability and of poetic performance has come nearest to being a poet of the true strain and yet has not quite established himself among that glorious company. Mr. Lowell has perhaps not made this clear and put it in so many words; but a reader is not a good reader who can so little make it clear to himself that he spends labor and pains in arguing as if its contrary had been asserted. However, as we say, the article if worth little as truly good criticism is worth something as fairly good criticism, and *Scribner's* in printing it sets an example which some other magazines might follow with profit.

Other articles in *Scribner's* are "Draxy Miller's Dowry"; a translated poem of Mistral's; a plea for national control of the school system; an account of travel from Baltimore northward aboard one of those special trains in which only royalty and Americans can indulge, and which have taken many a square mile of the public lands from yielding Congressmen and newspaper writers. Unusual care is still taken with the woodcuts of this magazine, which grows increasingly attractive to the readers for whom it is intended. To all heads of families which eat dinner in the middle of the day, and to all other heads of families, we commend the new department of "Relishes for Tea."

"The Story of Tammany" is concluded in the May *Harper's*, and though it is but a slight affair as related by this author, the reader will be apt to wish that it had kept on and through several more papers. The author had a great subject about which we wonder some of our publishers do not print a volume or two. Perhaps too much of it is secret history; but if it could be brought out it would explain much of our political history that for want of such memoirs will hardly ever be understood. For example, many a living sachem could tell many details of the great fight between Buchanan and Douglas which contributed not a little to the rise of Lincoln. Another article of local interest to New Yorkers is that entitled the Manhattan well murder, which occurred in the Lispenard meadows near Spring Street, seventy-three years ago this December, which was tried before Chief-Justice Lansing, by Aaron Burr, Brockholst Livingstone, and Alexander Hamilton, and which was a legal farce about as bad as if it had been tried last December before one of our Ring judges. The writer of it shows, as more than one reasonably careful writer has recently had occasion to show, the untrustworthiness of much of Mr. James Parton's so-called history-writing. In this number of *Harper's* Miss Thackeray begins her pretty story of "Old Kensington"; Mr. J. W. De Forest has a tale which is neither wise nor witty, and to which we call the attention of the *Catholic World;* Mr. Curtis writes about the libellous character of the American editor and about the Japanese morning reception in March last; the University of Virginia comes in for a description, and there is a small volume of other matter mostly so good in its perfectly well-known way that we need say nothing about it except when there is occasion to point out occasional though rare lapses from propriety. Such an exception "Father Higgins's Preferment" surely is.

Lippincott's Magazine is quite as good as usual. Mr. Black's "Strange Adventures of a Phaeton" is a good story told with an easy grace which alone would make it very pleasant to read; the "Sketches of Philadelphia" (illustrated) will please Philadelphians; there is a love story about a French *pétroleuse* who was betrothed to an American youth, and afterwards burnt his house and was tried for it; there is a second notice of the private art galleries of Philadelphia, Mr. Henry C. Gibson's pictures being the topic this time; and there is a well-informed article about "Sisterhoods in England." We have more faith than Mrs. S. B. Wister, the writer of the article last-mentioned, in the practical character of the English, and less than she seems to have in that turn of mind which seems to us a sort of spiritual indulgence which in its extreme form, at any rate, is as much opposed to the divine wish and will as any grosser form of it. The sisterhoods will, we imagine, be found useful aids to the poor and criminal classes according as the sisters care less about saving their own souls while engaged in the business before them, and more about saving the minds and bodies of their patients, and doing this for as long a term of years as they may be able to live in sound health and strength.

The *Galaxy* has for its principal article Mr. Welles's attempt to show that Mr. Lincoln's plan of reconstruction was the same as that which Mr. Johnson afterwards wished to carry out and was blamed for adopting. Mr. Welles appears to forget that Mr. Lincoln was neither a despotic ruler nor a man of unchanging opinions, and, furthermore, that Mr. Johnson, by his incapacity, coupled with his obstinacy, succeeded in playing directly into the hands of the Winter Davis and Thaddeus Stevens extremists. This article is a contribution to history; but, certainly, it is not history. Many a thousand and many a million of Southerners have rued bitterly the day when, at Mr. Johnson's instigation, they rejected the Congressional overtures for peace, and would hear of nothing but that the South should keep her full representation in Congress. With the negro to-day at the ballot-box, in Congress representing himself, managing Southern States, the Toombses and Vances must curse the day when they forgot Appomattox and kicked the Blaine proposition out of court. They have since had about as hard measure as often falls to the lot of a conquered people; but not till after they had rejected about the easiest.

The *Overland* talks about wine-making in California, and informs us that California alone is nine-tenths as large as France, and has a much greater area of soil adapted for the grape culture; there is the last half of a very good account of the second Bull Run, written by a private of a regular regiment; there is an instalment of a readable description of California Indians; and there are several other articles, making a good magazine.

Sing-Song. A Nursery Rhyme Book. By Christina G. Rossetti. (London and New York: George Routledge & Sons.)—To write four lines which shall have in them the measure of a child's brain, the rhythm of a child's temperament, and hold the child's ear by the needful but imprescriptible jingle of rhyme, is possibly a more difficult thing than to write a sonnet as great as Milton's. It is at all events a thing which few have done, though nowadays many people are trying very hard to do it. To folk who are bent on moralizing, and distilling good tenets with doubtful verses, or mere excellent verses and superlative morality, there is no language of discouragement too strong—no bitterness of criticism unlikely to be merited; for sermons in the mouth of the arch-enemy are hardly likely to be less effective, and, therefore, less repugnant to good taste, than in verses for children.

To add one strain to that anthology of the babes, "Mother Goose," would be to some minds as high a claim to deathless memory as to have written the "Star-Spangled Banner," the "Marseillaise," or even the best of the hymns in Dr. Watts's collection.

"Jack and Gill
Went up the hill"

will outlive scores of eminent poets, and we could cite many names bound in russia and profusely gilded, either of which would make a profitable exchange with immortality if they would swap their whole stock in trade for the accredited authorship of those lines, or others which might be quoted, from the immemorial volume which all children who have any intellectual future in them rejoice in.

One of the rarest and truest, and perhaps the tenderest, poetesses of our time has set herself, undismayed by the long list of failures, to write a book of verses for children, and, with her best powers and at their prime, has said some things which we believe child-criticism when codified will permit to pass muster, and will not forget. That all the verses of "Sing-Song" are of this character, no one will believe. Many are too wise and sad for any but those whom life has taught its bitterer lessons, but there are some among the artful-artless rhymes which neither the gravest nor the gayest of little ones to come will lose from their repertory.

Judging, with a limited little jury, of the pages of "Sing-Song," we find some that stay in court, mostly of babies. For instance:

" Love me—I love you—
Love me, my baby;
Sing it high, sing it low,
Sing it as it may be."

" Mother's arms under you,
Her eyes above you;
Sing it high, sing it low;
Love me—I love you."

and another:

" Baby cry,
Oh! fie,
At the physic in the cup;
Gulp it twice,
Gulp it thrice,
Baby, gulp it up."

It needs an English baby to appreciate the following, which has the genuine "Mother Goose" stamp:

" Eight o'clock,
The postman's knock;
Five letters for papa,
One for Lou,
And none for you,
And three for dear mamma."

This next has a touch of hidden wisdom which the babies will find when they come to talk over the woman's-rights question:

" If I were a queen,
What would I do?
I'd make you king,
And I'd wait on you."

" If I were a king,
What would I do?
I'd make you queen,
For I'd marry you."

That beginning "If a pig wore a wig" is quite as good for children who can comprehend the pun in it, and is funny for those who can't, as well as being satirical for their elders. And Miss Rossetti, with all her devotion to the children, cannot refrain from opening now and then the sluices of pathos and wider meanings, to flood the merry rill of "Sing-Song" for babes. In another she touches a minor key:

"If hope grew on a bush,
And joy grew on a tree,
What a nosegay for the plucking
There would be.

" But, oh! in windy autumn,
When frail flowers wither,
What should we do for hope and joy,
Fading together?"

Still sadder is this:

" I have but one rose in the world,
And my one rose stands a-drooping;
Oh! when my single rose is dead
There'll be but thorns for stooping."

It is not easy or necessary, in fact, to say whether or no Miss Rossetti would have done more for the children if she had done less for us, but certainly she has at times forgotten apparently that our children were the objects of her song, and wandered into the more wonted strains; and some of the brief outbursts of pathos—involuntary complaint—will rank amongst the best of her poetry. Her children, perhaps, are angelic, and of all ages at once. We are very sincerely thankful to her for this as for her other poems, and invite our readers to a true pleasure when we ask those of them who do not know her to make her aquaintance in "Sing-Song," and those of them who already have the "Goblin Market," and are aware how sweetly passionate and how musical its poetry is, to get these rhymes in which she often so happily speaks to and for the children.

GERMAN AND FRENCH.

HOLT & WILLIAMS,
25 BOND STREET, NEW YORK,
Publish most of the
TEXT-BOOKS
used at YALE, HARVARD, and many other prominent American Institutions. Correspondence is invited from educators and students.

BRANDE & COX'S DICTIONARY
OF
SCIENCE, LITERATURE, AND ART.
Comprising the Definitions and Derivations of the Scientific Terms in General Use, together with the History and Descriptions of the Scientific Principles of nearly every branch of Human Knowledge.
New Edition, Greatly Improved and Enlarged.
By W. T. BRANDE and the Rev. GEO. W. COX.
3 vols. 8vo, cloth, $20; half russia, $30.
J. VAN NOSTRAND,
Publisher and Importer, 23 Murray St. and 27 Warren St.

MADAME MONDAN advertises her purpose of opening, on May 1, 1872, a Family Boarding School for a very small number of American young ladies at her house, No. 292 Rue Rogier, Bruxelles (Belgium). Madame Mondan is an American lady, for many years a student in Germany. Full particulars of the school will be found in circulars which are with Messrs. E. P. Dutton & Co., 713 Broadway, and Messrs. Holt & Williams, 25 Bond Street. Special information may be gotten by addressing P. O. Box 3819, New York, and reference is made to the gentlemen whose names follow: The Hon. Wm. A. Buckingham, U. S. Senate. Hiram Orcutt, A.M., Principal Tilden Ladies' Seminary, West Lebanon, N. H. The Rev. D. F. Banks, Yonkers, N. Y. The Rev. D. C. Roberts, Lowell, Mass. Gen. S. G. Griffin, Keene, N. H. James E. Learned, Esq., 209 Pearl Street, New York.

Handsomely Printed on superior paper, and limited to 150 copies, for Subscribers only.

THE ROYAL MUSEUM OF NAPLES.
Being some account of the Erotic Paintings, Bronzes, and Statues contained in that famous "Cabinet Secret."
BY COLONEL FANIN.
With sixty full-page illustrations, mostly colored.

". . . These relics, in which science takes so lively an interest, have survived the lapse of centuries. They have been preserved in the womb of the earth to transmit to future generations the lessons of history. Those which we have chosen to form the subject of this book were discovered in some of those towns situated on the side of Vesuvius, which had been buried under its volcanic ashes—we allude to Herculaneum, Pompeii, and Stabia.

". . . During more than sixteen hundred years even the sites of these destroyed cities were unknown; learned men were still at controversy on the subject at the beginning of the eighteenth century, when chance led to the discovery in a country-seat of the Duke of Lorraine, at Portoci, of a fruitful mine of objects of Art and Antiquities of all kinds. The king of the Two Sicilies caused excavations to be made, and in the month of December, 1738, the Theatre of Herculaneum was found. The excavations made at this period, and continued down to our days, have furnished the Neapolitan government with the richest, most instructive, and most interesting collection of antiquities.

"The use of obscene representations was frequent in antiquity. There were few houses without some of these lascivious paintings, which the Greeks called grylli, and the Latins libidines. Two painters, Polignotes and Parrhasius, are often referred to by Pausanias and Pliny as having excelled in this kind of composition.

"Several paintings on marble have been discovered; but those which form the subject of this book are frescoes which decorated the walls of houses in Pompeii and Herculaneum."—Extract from Preface.

One vol. medium 4to, half polished morocco, gilt top, $40.

J. W. BOUTON, 706 Broadway, New York.

JUST ISSUED.
THE SCIENCE OF WEALTH:
A MANUAL OF POLITICAL ECONOMY,
Embracing the Laws of
TRADE, CURRENCY, AND FINANCE.
Condensed and Arranged for Popular Reading and Use as a Text-Book. By Amasa Walker, LL.D., late Lecturer on Public Economy, Amherst College. Student's Edition. Complete in one 12mo vol., extra cloth, $1 50.
"Our country has produced no work on the subject that is better worth reading."—The Nation.

"IT IS THE FASHION."
A NOVEL.
FROM THE GERMAN OF ADELHEID VON AUER.
By the translator of "Over Yonder," "Magdalena," "The Old Countess," etc. 12mo, fine cloth, $1 50.

MACMILLAN & CO.'S

LIST OF

NEW AND RECENT PUBLICATIONS.

THE GROWTH OF THE ENGLISH CONSTITUTION from the Earliest Times. By Edward A. Freeman, D.C.L., author of "The History of the Norman Conquest of England," etc., etc. One volume crown 8vo, cloth. Now ready.

THE NATIONAL THANKSGIVING. Sermons preached in Westminster Abbey by the Very Rev. Arthur P. Stanley, D.D. Crown 8vo, cloth, limp. Now ready.

CIVILIZATION BEFORE AND AFTER Christianity. Two Lectures delivered in St. Paul's Cathedral by the Very Rev. R. W. March, M.A., Dean of St. Paul's. Crown 8vo, swd. Now ready.

EDWIN WILKINS FIELD. A Memorial Sketch by Dr. Sadler. With an Address by Sir Roundell Palmer. Crown 8vo, cloth. Now ready.

EARLY ROMAN LAW. The Royal Period. By E. C. Clark, M.A., of Lincoln's Inn, Barrister-at-Law. Crown 8vo, cloth, $2.

DIARY REMINISCENCES AND CORRESPONDENCE of Henry Crabb Robinson. Selected and Edited by Thomas Sadler, Ph.D. 2 volumes. Third edition, with Corrections and Editions. Crown 8vo, cloth, $6.

HISTORICAL OUTLINES OF ENGLISH Assistance. Comprising Chapters on the History and Development of the Language, and on Word-Formation. By Rev. Richard Morris, LL.D. 12mo, cloth, $1 75.

AN INTRODUCTION TO THE STUDY OF the Gospels. By Brooke Foss Westcott, D.D. Fourth edition. Crown 8vo, cloth, $3 50.

WORKS. By the late Rev. Frederick Denison Maurice, M.A., Prof. of Moral Philosophy in the University of Cambridge.

THE CONSCIENCE. Lectures on Casuistry, delivered in the University of Cambridge. 2d edition. Crown 8vo, cloth, $2.

THEOLOGICAL ESSAYS. 3d Edition, Crown 8vo, cloth, $3.

THE PROPHETS AND KINGS OF THE OLD Testament. A series of Sermons. 3d edition. Crown 8vo, cloth, $3.

THE PATRIARCHS AND LAWGIVERS OF the Old Testament. 3d edition. 12mo, cloth, $2.

MACMILLAN & CO.'S NEW THEOLOGICAL Catalogue sent free, by mail, on application.

MACMILLAN & CO.,
38 Bleecker Street, New York.

Second and thoroughly Revised Edition of Mr. Hensleigh Wedgwood's Etymological Dictionary.

A DICTIONARY OF ENGLISH ETYMOLOGY.

BY HENSLEIGH WEDGWOOD.

One vol. imperial 8vo, 800 pages, double columns, handsomely bound in cloth, $8.

MACMILLAN & CO.,
38 Bleecker Street, New York.

DODD & MEAD'S NEW BOOKS.

Now ready and for sale by the Publishers and all Booksellers.

PROF. DANA'S NEW WORK.

CORALS AND CORAL ISLANDS. By James D. Dana, Professor of Geology in Yale College, author of a System of Mineralogy, etc. One vol. royal 8vo, 400 pages. With 100 Woodcuts, 3 Steel Engravings, 3 Maps, and a full page illustration in color, beautifully printed and bound in extra cloth, bevelled boards, $6.

The high position of the author, the interest of the subject, and the number and beauty of the illustrations combine to make this one of the most important and valuable of recent American publications. The illustrations have been drawn and engraved under Prof. Dana's own supervision, and the publishers have spared no effort to render it in all particulars a perfect specimen of book-making. The object in view has been to present a popular account of Corals and Coral Islands without sacrifice of scientific precision, or on the main topic of fulness. Dry technicalities have been avoided as far as compatible with this restriction. The result is a book of rare popular interest and scientific value.

II.

LYMAN ABBOTT'S NEW BOOK.

LAICUS; or, The Experiences of a Layman in a Country Parish. By Lyman Abbott. One handsome vol. 12mo, $1 75.

"The chapter on 'Church Finances,' 'The Field is the World,' 'The Committee on Supply,' 'We are Jilted,' 'Ministerial Salaries,' 'Mr. Hardcap,' etc., are especially shrewd, sensible, liberal, and bright. Who that has belonged to a country parish has failed to meet Mr. Hardcap?"—E. P. Whipple, in the Boston Globe.

III.

THE PASTOR OF THE DESERT—Jean Jarrosseau. Translated from the French of "Eugene Pellatan." 12mo, tinted paper, cloth, $1 25.

"It is a vivid presentation of the life of a Protestant pastor in the France of the Eighteenth Century—a man under the ban of the law compelled to preach in the woods and secret places, and always liable to arrest, imprisonment, and outrage. The simplicity, humility, and intrepidity of his character are well brought out."—Boston Globe.

DODD & MEAD, Publishers,
762 Broadway, New York.

JUST PUBLISHED.

A CHURCH HISTORY OF THE FIRST Seven Centuries to the Close of the Sixth General Council. By the late Rev. Milo Mahan, D.D. Edited by the Rev. J. H. Hopkins, Jr. 8vo, cloth, $4; half-calf, gilt top, $6.

THE THEORY AND USE OF THE CHURCH Calendar. Being an account of the origin and growth of the Calendar, of its reformation from the old style to the new, and of its adaptation to the use of the English Church, by the British Parliament under George II. By the Rev. Samuel Seabury, D.D. 8vo, cloth, $2 50.

THE RITUAL LAW OF THE CHURCH. With its application to the Communion and Baptismal Service, to which is added Notes upon Orders and the Articles. By the Hon. Murray Hoffman, author of "Law of the Church." 8vo, cloth, $4; law sheep, $4 50.

THE TWO ESTATES; That of the Wedded in the Lord, and that of the Single for the Kingdom of Heaven's Sake. By the Rev. Morgan Dix, S.T.D. 12mo, cloth, $1 25.

LETTERS TO AN OLD-FASHIONED LAYMAN. By the Rt. Rev. H. C. Lay, D.D., Bishop of Easton. 16mo, cloth, bevelled boards, $1 50.

THE LIFE AND TIMES OF ST. CHRYSOSTOM. A Sketch of the Church and the Empire in the Fourth Century. By Rev. W. R. W. Stephens, M.A., Balliol College, Oxon., Vicar of Mid Lavant, Sussex. 8vo, cloth, $7 50.

PASTOR IN PAROCHIA. By the Rev. W. Walsham How, M.A., author of "Plain Words." Adapted to Conform with the Prayer-Book of the Protestant Episcopal Church. $1 50.

"This is one of the best manuals for a clergyman in his parochial work we have ever seen. The prayers and offices for special occasions, and the selections of religious reading, both prose and hymns, for the sick and afflicted, are taken from the best and richest sources, and arranged with more than ordinary regard to fitness. Clergymen and parish visitors will find it of great service."—Churchman.

Any book free by mail on receipt of advertised price.

POTT, YOUNG & CO.,
Cooper Union, New York.

UNION COLLEGE, SCHENECTADY, N. Y.—Alumni Day, Tuesday, June 25th. Commencement, Wednesday, June 26th. For Catalogues or Circulars, address E. M. Jenkins, Registrar. For information respecting the Civil Engineering School, address Prof. Cady Staley.

E. N. POTTER, President.

JAMES R. OSGOOD & CO.'S APRIL BOOKS.

THE MASQUE OF THE GODS. By Bayard Taylor. $1 25.

A majestic Miracle Play "to illustrate the problem of Primeval Being, to explore the secrets of the Infinite and Absolute, to sound the fathomless depths of the universe and of God."

SAUNTERINGS. By C. D. Warner, author of "My Summer in a Garden." $1 50.

A charming series of travel-sketches in France, Switzerland, Germany, and Italy; full of common sense and humor like that which made "My Summer in a Garden" so delightful and popular.

☞ SECOND, THIRD, AND FOURTH EDITIONS. ☜

DRAKE'S DICTIONARY OF AMERICAN BIOGRAPHY. 1019 pages. Cloth, $6; sheep, $7; half-calf, $8 50; calf, $10; morocco, $12.

A work for every library, large or small.

FIELDS'S YESTERDAYS WITH AUTHORS. Large 12mo, $2 50.

Delightful anecdotes, letters, and reminiscences of Dickens, Thackeray, Hawthorne, Wordsworth, and Miss Mitford.

KING'S MOUNTAINEERING IN THE SIERRA NEVADA. Large 12mo, $2 50.

A rare combination of travel, science, adventure, and character-painting.

H. H.'S BITS OF TRAVEL. $1 50.

"As fresh as though they were Eve's Journal in the Garden of Eden."—N. Y. Evening Mail.

HOWELL'S THEIR WEDDING JOURNEY. Illustrated by Hoppin.

"We advise all unmarried people who have not made that journey, but mean to, and all married people who have made it and did not know what it all meant, to get Mr. Howell's book; and if they begin it we are quite sure they will not want to stop until the journey is ended."—Presbyterian Quarterly.

For sale by all Booksellers. Sent, post-paid, on receipt of price by the Publishers.

JAMES R. OSGOOD & CO., Boston.

In imperial 8vo, double columns, price $8, handsomely printed in a new, clear, old-faced type,

A DICTIONARY OF ENGLISH ETYMOLOGY.

BY HENSLEIGH WEDGWOOD.

Second Edition, thoroughly revised and corrected by the Author, and extended to the Classical Roots of the Language (with the assistance of the Rev. J. C. Atkinson, Author of the Glossary of the Cleveland Dialect).

With an Introduction on the Formation of Language.

In preparing this Edition the Author has had the benefit of the learned and very judicious annotations of Mr. George P. Marsh in the American Edition of the First Volume of the Dictionary, which have in many cases led to the adoption of his views. Attention has also been given to the criticisms in the Etymological Dictionary of G. Müller (Köthen, 1865-7), and to the scattered suggestions on the derivations of words which occur in various periodicals. Wherever the etymology of the First Edition has been materially altered, the word is marked with an asterisk. In deference to the judgment of respected friends, the etymology of words of classic derivation, which in general were omitted in the First Edition, has been concisely inserted in the present work.

Copies will be sent to any address, on receipt of the price ($8), by

MACMILLAN & CO., Publishers,
38 Bleecker Street, New York.

FAMILIES OR YOUNG PERSONS Wishing to Study Abroad, and obtain the Purest German or Hanoverian Accent, can find the comforts of a home in an officer's family in Hanover.

Distinguished resident Professors of Languages and Music. Terms, $38 per Month, Gold.

References given and required. Address,
Mrs. C. Giesecke, Königstrasse, 13, Hanover, Prussia.

The Nation.

NEW YORK, THURSDAY, MAY 9, 1872.

The Week.

WE suppose that a greater degree of incredulity and disappointment than was caused by the nominations at Cincinnati has not been felt in this country since the news of the first battle of Bull Run. The country had been led to apprehend that the candidate most dangerous to Mr. Adams, Mr. Trumbull, and the good men of the Convention, was Judge Davis, and almost no one outside the hall of the Convention was fearing that it was to Mr. Greeley and Mr. Gratz Brown that the Convention was to fall a prey. Just that, however, was what had happened to it, and whatever became of the disappointment and the mortification with which the news was received, the incredulity had to vanish. We imagine that the men most severely and permanently disappointed were the circle of politicians immediately surrounding General Grant and attached to his personal and political fortunes. Those who were earnest for Adams found consolation in sources not remote. They had accomplished a great deal, and in a cause of which they were not ashamed. A few weeks of direct appeal to the intelligence and conscience of the country had made it manifest that the candidate most acceptable to the American people is a man of the character and ability of Mr. Adams. And Democrats who had been confidently believing that their party was to be lifted to a higher level by the action taken at Cincinnati, had at least the means of hope which lay in the fact that the party convention does not meet for some time yet, and that meanwhile much may happen. But the friends of General Grant who know how bad the outlook is in Mr. McClure's State and here in Fenton's; who are aware that though Greeley and Brown were to get not a single electoral vote, they will prevent Mr. Cameron's and Mr. Conkling's candidate from getting many—these men the news must very speedily have filled with unrelieved anxiety.

This upshot of the movement in favor of a return to constitutional methods, of good sense and justice in the management of the debt and the tariff, of dignity and statesmanship in the conduct of our foreign relations, of honesty in administration, of relief from hack politicians, is a result which will certainly to most human minds seem, to say the least, curious. The nominations which may be made by the Democrats if they shall nominate, the Reunion and Reform men if they shall nominate, the Philadelphia Republicans when they nominate, will in our judgment have to be very extraordinary nominations if Greeley and Brown are to secure and keep the united support of the best friends of the movement which Mr. Brown represented so much better a month ago than he does to-day. As to the way in which the Convention's ticket has been received by the newspapers, it is early yet to speak. There was at first some of the inevitable semi-contemptuous laughter which Mr. Greeley's name always excites, and there has been some of that rather amusing editorial felicitation of Mr. Greeley, of the editor himself, and of all mankind generally, on the fact that an eminent journalist has been put up for office, and the power of the press recognized once more, and in a way peculiarly gratifying to the editorial mind. The Democratic papers are many of them well pleased at the unexpected prospect of making a fight with a candidate of their own instead of with Liberal Republican leaders. These, however, from the highest to the lowest, take orders from the chiefs of the party, and in general we may say, that the issues to be presented in the coming contest and the men to embody them are not yet fully before the people, and that this fact the press of the country seems on the whole to recognize fully. The sober and deliberate determination is to come later. Of the newspapers which were strongest for the true Liberal Reform movement, some are indicating their intention to support the Greeley and Brown ticket, and a good many of them are on the fence. All such journals have reprobated the abandoned trickery which secured the Convention for these two candidates.

That the nomination, much as it surprised people in general, was, nevertheless, carefully prepared, will no doubt become more and more apparent. Mr. "Rocky" Moore and Mr. Waldo Hutchins did not go out to Cincinnati to look after Judge Selden without having a clear conception of what it was the Judge wanted, and what it was, on the other hand, which they wanted. Nor do we suppose that, a month or so ago, the organization of "Pioneer Greeley Clubs" in numerous wards of this city where our fellow-citizens of Irish descent are active in politics was done vaguely and without consideration. Irish activity in American politics has not, as a rule, been purposeless, whatever may have been the character of undirected Irish politics in general. We see that Mr. Ben. Wood, the owner of the *Daily News* of this city, on Tuesday last organized a very successful Democratic ratification meeting in this city, and patriotically demanded a State convention of the Democracy to urge on the National Democratic Convention the adoption of the Cincinnati ticket. This we learn from the *Tribune*, as also that there is great fear in the minds of the anti-Cincinnati men that this coming campaign will be turned into a shouting and singing and dancing campaign. Going further in pursuit of this song and dance idea, we learn from the same journal that a club in St. Louis has ordered a large number of white hats, and is strong for Gratz Brown and Greeley, while from Louisiana it is telegraphed, we see, the telegram being sent to Governor Warmoth, that white hats are all the rage in that city. We should say, on the whole, as regards the attitude of the press of which we a moment since said something, that one thing about it seems pretty clear, and that is that Presidential candidates at the close of the campaign will have the question to consider whether or not it is better or worse for them not only to own an "organ," but to own it and to edit it.

Since our Cincinnati correspondence was received, word comes from that city that the Reunion and Reform men—who, had they been admitted to the other convention by the leaders of it, would have prevented it from being swamped—have held a meeting, which was an indignation meeting in part, but in greater part was something far different, and have adopted a platform of very great excellence, earnestness of conviction speaking in every line of it, and the principles enunciated in it being the platform of the future, whether they become the platform of to-day or not. The convention, furthermore, resolved to establish a national committee, and go into correspondence with a view to securing as committee-men good names of tried reformers. Judge Stallo and Judge Ranney appear to be its leading spirits.

There was one plank in the Cincinnati platform which we cannot praise as we could most of the remainder, and that is the One-Term resolution, which the *Tribune* affirms to be a principle, and the *Evening Post* declares to be a political fetch, and which we take leave to consider a bit of *ad captandum* that will not meet with much consideration; though we dare say we shall hear a good deal about it for some time to come. It has never seemed to us worth while to argue this question at all seriously, because the country has quite recently had one of the strongest illustrations imaginable of the danger that might attend a change of President at certain crises, and because there is something childish in demanding that a great people shall bind itself not to employ its servants and directors just as long as it finds them useful. To certain eminent offices there is a natural limitation which will rarely be exceeded, and it is not probable that we shall ever see a President of such transcendent merits as to challenge general support for a period of more than eight years. Nevertheless, if the exception arises, it is absurd to say that the country ought not to be allowed to profit by it. Be this as it may, we predict a great deal of discussion before this so-called principle is embodied in the Constitution, and we advise people who meditate discussing it intelligently to study the *Federalist*, and to remember that the Constitution was not adopted until after some years of hard argument from the ablest men in a country whose people had for still more years been obliged to consider what their form of government should be. Mr. Sumner has, we observe, provided a new preamble to his proposed amendment embodying Mr. Greeley's momentary pet principle, but we can see no improvement in it. For our own part, we believe that Mr. Greeley's second term we may perhaps advocate strenuously.

The organ of the Administration has been, within a day or two, giving the Senate and House some very sound advice. What the *Times* would have now is that Congress should compel Mr. Boutwell to cease his obstinate hoarding of gold and paying of debts not yet due; should make an immediate reduction of the burden of taxation to the extent of drawing from the people fifty millions less of money; should include the income-tax and the more oppressive taxes on raw materials and on manufactured articles in the list of taxes to be dropped; should commit itself to the instant reform of the civil-service. Good advice all this is; but it comes late; and we fear the *Times* will find that it falls on dull ears. Congressmen are no longer intent on saving a Presidential candidate whose intimate friends, by their persistency for him and the disgraceful motives for their persistency, have split the party. It was only by a happy accident, which Mr. Dawes had the sharp-wittedness to improve, that the House on Tuesday put itself in a fair way to agree with the Senate on modifications of the tariff which will reduce the duties on pig-iron, and iron and woollen manufactures, by 10 per cent. Mr. Dawes was able to head off the high protectionists, led by Mr. Kelley, who achieved a temporary triumph, and to nullify the recent action of his colleagues of the Committee of Ways and Means in overriding his leadership both in the Committee and in the House. The composition of the majority which effected these reductions was such as to prevent anybody in particular, unless Senator Sherman and Mr. Dawes, from claiming the credit of them; and it is not at Philadelphia that they are likely to be made prominent in the list of the Administration's services to the country.

When the Administration first conceived the notion of attempting a settlement of the *Alabama* claims, General Grant's popularity among the thinking men of the party had disappeared; he had done little or nothing that was hoped for at his hands, and contempt for his capacity in civil life was current. His apparent policy in relation to this quarrel to a great extent rehabilitated his reputation, and he did himself further good when he appointed our negotiators, and again when the Treaty was read by the country and ratified. The negotiation was regarded as the one considerable success of his Administration, and kept him formidable as a candidate for re-election. He may not have been allowed to learn these facts, and to know that the welfare of Mr. Murphy was as the small dust of the balance compared with the real weight of the *Alabama* negotiations, but the fact remains. His conduct of the affair since the preparation of our case was begun has not been such (he should not need to be told) as to re-establish his title to the credit of accomplishing an honorable connection with so great an achievement, and his latest acts in reference to it are not impressing either his friends or his enemies with an opinion of his firmness. Firmness it is which he is said to wish to show, but the late shuffling semi-official document trying to prepare the public mind for a virtual withdrawal and a nominal insistance, and his private consultations with the Republican section of the House Foreign Affairs Committee, have a look the reverse of firm.

The recent remarkable semi-official utterances of Mr. Fish concerning the Treaty are stated to be necessary because the President thinks we cannot withdraw after having formally presented our claim, but must stand by it, while upon Mr. Fish is devolved the task of seeming to insist, and at the same time of seeming to withdraw or really withdrawing, and of doing this before the eyes of an English ministry who dare do but the one thing, namely, insist on a withdrawal that shall be at once a real withdrawal—which we credit Mr. Fish, now at least, with really intending—and one that can by no possibility be mistaken for anything else. It is not surprising that in his endeavors at accomplishing this feat Mr. Fish displays more agility and perseverance than is good for our national reputation, and that he fails. His last attempt is in substance this: "You just go on with the arbitration without making us withdraw from our untenable position, and if you will we will pretend that we put in the indirect claims, not because we wanted anything under them in the way of money, but because we must get such claims pronounced ridiculous and foolish, otherwise America would be ruined in the next war." It is not astonishing that the English say No to a proposal of this description, more especially as they half-believe this is another Yankee trick to get the money, for there in the case is a demand not for "enlightened propositions in international law wanted by the United States," but on the contrary "A Gross Sum of Money." Is not this beginning to look a little shameless?

The Methodist Conference now in session in Brooklyn does not afford to the general public an improving spectacle, and we shall be surprised if it does not by-and-by awake to that fact and come to a proper conclusion in reference to the Book Concern frauds. Certain Methodists would seem to hold the belief that a man may be so very good a Methodist that he may be permitted to be a thief—which doctrine we do not see how any church can, with any safety or any prospect of usefulness, long act upon in a wicked world looking to the church for salvation. The gentlemen who are of this way of thinking have for nearly two years succeeded in persuading their honester brethren to refrain from pronouncing judgment condemnatory of the people whose conduct, since charges were brought against them, has been a confession of guilt. Motions to adjourn, efforts for the appointment of large investigating committees necessarily ignorant of book-keeping and easily misled, artful appeals to the denominational spirit, these are not the tactics which should satisfy the Conference that the Methodists have not been defrauded by their agents, and certainly they will not satisfy intelligent people outside of the Methodist Church, but desirous of its real prosperity. So far as we can see, Judge Reynolds of East New York pointed the Conference to its best and wisest action when he requested it to refer the matter to a committee of business men in whom it has confidence, and to abide by their decision. The decision will hurt somebody, no doubt; but we can assure the Conference that more people are hurt by its failure to take the right course. It is possible, we should recollect, for Christ to be wounded in the house of his well-meaning friends.

In thinking of the monstrosity of our New York frauds, of the little that has been done in punishing them, of the impudence of some of the gang and their apparent impunity, it is sometimes hard to recollect that the uprising has accomplished something, though little of what has been done has been done with heartiness, and that, of the good which really has been done, it may be said that it has in almost no case escaped being accompanied by some additional and concomitant act of infamy. Let it be confessed, however, that Cardozo is off the bench. But let it not be forgotten that this atrocious judge is allowed to resign, is not impeached, goes and unpunished, while one paper says that if he is not disqualified by impeachment "he expects to be re-elected by the Hebrew vote." This must be fabling, but it is a fable adapted to the place in which it arose. As it has been resolved not to impeach Cardozo, so it is "regretted that

Judge Barnard was impeached instead of being removed," and this judge may yet escape. He will deserve it better than the other, for if he was the ruffian on the bench, the other was the robber. The Legislature is making some effort at good work in its last days. The new charter will pass, and will not be vetoed, and there is good prospect that the more insolent projects of Vanderbilt may fail by vote or by veto. Governor Hoffman, so far, preserves his reputation for being good at vetoes, and by some that he prepares he partly atones for some notable occasions when he has failed to perform them.

If a crisis is not approaching in South Carolina, there is no value in signs. The Scott-Parker Ring, as our readers are aware, have saddled the State with a debt from which her honestest citizens see no escape but in repudiation. Since the Legislature adjourned, the public institutions dependent on annual appropriations have found their drafts on the Treasury dishonored, and the alternative forced upon them either to appeal to private benevolence or to succumb at once. Nearly all the free schools were suspended on the first of May. The Deaf and Dumb Asylum is on the point of being closed. The State Lunatic Asylum, with two hundred and ninety-five patients, has latterly been enabled to feed them only by private charity. And finally, even the State Penitentiary is in want, and has been compelled to bring the State Treasurer into court for withholding a large part of the appropriations due to it. All this is symptomatic of a society tumbling to pieces, and good observers predict that the wreck is not far off. The Ring, whose members have a thorough contempt for each other which they scarcely attempt to conceal, will fall as Tweed's fell, when any one of them is fairly cornered. That Mr. Niles G. Parker's turn will come first is not unlikely. Should the superintendent of the Penitentiary be successful in his suit against him, it is understood that the superintendent of the Lunatic Asylum will enter a like complaint, with the schools looming up in the background. What renders the situation all the more intolerable is that the people of South Carolina are almost model taxpayers, and have promptly met every year the burdens thus imposed upon them; and that on January 15 they paid into the now exhausted treasury over a million of dollars, besides what has accrued from the operation of the license law.

Iowa has agreed to abolish capital punishment, and puts in the act the clause diminutory of the Governor's power of pardon, and forbidding the release of convicts except with the concurrence of the Legislature. We have not seen that the arguments were other than is usual in such cases, and we suppose them to be the same, a well-known Humanitarian who is itinerant on this particular subject having been busily engaged in that region for some time back. Usually, these arguments have for their basis the principle of "the sacredness of human life" and the value of the murderer's soul, and some statistical support is usually sought in figures showing that murders decrease when imprisonment for life is substituted for the death penalty. The real statistical question we take to be not this very vague question of whether or not there are "fewer murders," but whether or not in a given place murderers imprisoned for life are after a long term of years found to be in jail, or, if not, to have died in jail, and we imagine Mr. M. H. Bovee himself would not undertake to maintain that they are so found. Imprisonment "for life" in our American prisons has in the average proved to be but short imprisonment, such is the good nature of our governors and legislatures, and their willingness to exercise power, and so true is it that in our newer communities men have counted for more than those rules and laws, stern but not cruel, without which society when close packed must go to pieces. We are still left at liberty, we suppose, to assume that a wilful murderer, if not effectually removed from society in one way, shall be in another, and, that assumption admitted, we should like to have it shown that the statistics are in favor of the Iowa doctrine. The ancient Jews, whatever else may be said or denied about them, certainly had a pretty keen perception of the laws governing the great relations of men in society; and the law which says that God "set the solitary together in families," and that the woman's desire shall be unto her husband, and that right doing exalts men and nations, appointed the solemn deprivation of life as the just punishment of murder.

The Old Catholic movement has made a beginning in France at Bordeaux, where the Abbé Mouls and his colleague the Abbé Jonqua were recently excommunicated for refusing their assent to the infallibility dogma. The former has gone to Brussels to institute worship in accordance with the old faith, while the Abbé Jonqua remains at Bordeaux holding private services for the present. He had continued to wear his priest's costume in spite of the prohibition of his bishop, who had him brought up for it in police court, where in spite of his protestations that he had not departed from Catholicism, but that the Pope and his followers had, with their new doctrines, he was convicted of illegality, and has had to appeal to the Council of State. This verdict is said to be in violation of the provisions of the concordat relative to the official promulgation of Papal decrees in France, those whose promulgation is not authorized being without force in law; and this is the case with the infallibility decree. In other respects, too, the Government has shown itself sufficiently tenacious of its prerogatives with regard to Rome. Lately, it nominated M. Nouvel to the vacant bishopric of Quimper, and, when looking over the Pope's confirmatory bull, discovered a dangerous usurpation in the words italicized in the following sentence: "Cum . . . ipse dilectus filius noster Adolphus [meaning M. Thiers] te *nobis* ad hoc per suas patentes litteras *præsentaverit* . . . ." The French ambassador was at once instructed to enquire at the Vatican if the word "present" was designedly substituted for the word "nominate"; and on Cardinal Antonelli's replying that it was obviously a mistake in the Latin, and promising to give official notification to that effect, the bull was received and the matter smoothed over.

As required by law, Bismarck has made a report to the Reichstag on the progress of the work of reconstruction in Alsace and Lorraine, and the achievements are such as Germany may justly be proud of, considering that they have occurred within the compass of a short year. Such another task, if ever attempted, was never more promptly or intelligently taken in hand, or in more delicate or difficult circumstances. The boundaries between the new provinces and France have been in good measure determined, the religious connection completely severed so far as Jews and Protestants are concerned, the judiciary reorganized and put in satisfactory working order, the schools remodelled and graded and compulsory education enforced, the damages caused by the war ascertained and partially reimbursed, and the savings-banks redeemed from the bankruptcy in which the occupation found them, and set in operation again. The Strassburg University has been created out of the superabundance of German learning, and the restored library already numbers 200,000 volumes. The administrative activity which all this implies is nothing else than prodigious. The difference in language has caused less embarrassment, even in litigation, than was to have been expected. The race difference is still far from being settled, and the determination has not been abandoned on the part of the discontented to make Elsass-Lothringen a German Venice. An ingenious effort has been put forth to construe the article of the treaty permitting a transfer of home and allegiance to France up to a certain date (Oct. 1, 1872) in such a way as to make a plébiscite necessary; and at all events to make the mere option of France (*élire son domicile en France*) equivalent to actual removal (*transporter son domicile en France et s'y fixer*). The French themselves do not quite endorse this view, not only because the language of the treaty is unequivocal and in accordance with common sense, but because they have no desire to assist the Alsatians in absolving themselves from all military duty by living in one country and pretending to be subjects of another.

THE RECENT NOMINATIONS.

THE Cincinnati Convention must, as far as the general aims and objects of those who called it are concerned, be pronounced a failure. They all acknowledge this privately; some of them admit it openly. Those of them who are supporting Mr. Greeley's nomination are doing so simply by way of making the best of a bad job. Not one of them considers him a desirable candidate, or looks forward to his election without grave apprehensions. There are but few of them, if any, who do not feel that, although he may prove an improvement, and a great one, on General Grant, he will not be by any means the kind of President which the Cincinnati Convention promised to present to the country; that his election, however desirable it may be as a remedy for some of the evils which now afflict us, will not work that revolution in politics which we were led to hope from the Cincinnati nominations; that the Convention, so far from taking the Presidency out of the hands of professional politicians, has simply committed it to the hands of a new set of professional politicians; that the nominations were, indeed, whatever their value, effected by a trick of a more than usually barefaced kind, perpetrated by managers of the old type, or of a worse one.

Of the completeness with which the movement had passed out of the control of the original promoters of it by the last day of the proceedings, no better proof could be desired than is furnished by the platform. The greater part of it is excellent, both in matter and manner, but the original promoters were nothing if not "revenue reformers." The Missouri Call, under which the Convention met, contained a downright free-trade resolution. Nevertheless, the Cincinnati platform expressly relegates the whole question of the tariff to the decision of "the people in Congressional districts," in terms dictated by the greatest protectionist in the United States, to whom the delegates thereupon gave the first place on the ticket.

If there was anything the Liberal Republicans promised more solemnly than another, it was the selection of a candidate who should be free from entangling alliances with politicians, and who should enter the White House free from all pledges, traditions, or associations likely to make him an instrument in the hands of the class which has brought the Government to its present low estate. We were to have had a man offered us of whom, whatever else was said, we should not hear the well-worn and dismal tale that "though personally honest, he was surrounded by bad men who imposed on him." Nevertheless, the Convention has offered us a candidate of undoubted personal honesty, who is and has long been associated intimately with the worst set of politicians the State contains—excepting the Tammany Ring—whose supporters at the Convention included some of the worst political trash to be found anywhere, who would in all probability be followed by them to Washington, and who, if left in their hands there, would set up the most corrupt administration ever seen, and that from which least might be expected in the way of administrative reform; who is not more remarkable for his generosity and kind-heartedness than for the facility with which he is duped, and not more remarkable for his hatred of knavery than for the difficulty he has in telling whether a man is a knave or not.

We were promised, moreover, a candidate on whose sound and steady judgment, in sharp and sudden crises, as well as in the strain and labor of everyday life, the country might lean as on a rock. "Three o'clock in the morning courage," Napoleon said, was the only courage he thought much of; that is, the only really brave man is he who, roused from deep sleep, goes swiftly into the fight with nerves unshaken and every faculty on the alert. And in a President, the only sound judgment is that which, based on wide experience of men and affairs, and on the still deeper foundation of an honest, loyal, and self-contained character, finds no sight or sound too novel or too terrible for calm and vigorous action. Mr. Greeley's fondest admirers will hardly claim for him any such judgment as this. Few men are entitled to so much credit as he for a clear perception of slow tendencies, of remote results, of the general drift of opinion and events. The result is that his career as a journalist has been successful beyond example. But few men filling positions so conspicuous as his have made more lamentable mistakes when brought face to face with sudden, sharp, and inexorable demands for prompt decision. At noon he is pretty sure to appear, and appear to great advantage, but if he is called upon at three A.M., the darkness, the cold, the booming of the guns, and the yells of the advancing foe, make him one of the least reliable of leaders. And we ought to add, in spite of his wide sympathies and his close relations with "the masses," and his interest in their condition and devotion to their interests, deeply rooted prejudices have made his social experience singularly narrow, one-sided, and misleading.

In fact, there is no Liberal Republican who recalls the objects with which the Liberal Republican movement was set on foot who can think of the results without mortification or amusement. And it does not, we think, augur well for its effect on the future of politics that some of its foremost advocates should now be engaged in persuading themselves and their constituents that they are satisfied with what has happened. It is a misfortune to have failed; but why add humbug to calamity? Anybody who saw General John Cochrane figuring in the Convention as a "reformer" and a frantic supporter of Mr. Greeley, had some excuse for despairing of popular government; but do not let us make matters worse by pretending to believe that Cochrane knew better than we what was good for the country, and that he was right when (on another occasion) he declared that he "would support the regular nominee if he were the devil himself."

That there is a good side to the matter, however, we do not deny. We consider it a great misfortune that Mr. Greeley was nominated by a body which met with the aims and intentions set forth by the Cincinnati Convention, because we think it calculated to throw an air of folly and absurdity over the very name of reform. But against Mr. Greeley, considered as a candidate now in the field, opposed to the existing Administration and standing on the Cincinnati platform, if we leave out of view the circumstances under which he was nominated and under which that platform was drawn up, we doubt if there is much to be said. He is not an ideal statesman; but he is a man thoroughly familiar, if anybody is, with the constitution of American government and society. What was said of Comte de Morny may be said, *mutatis mutandis*, of him also—"that he has only to interrogate himself to know how Americans feel." He is not a politician of the highest type, but there are few politicians in the country—if there are any—who can look back with as much honest pride to their political career. He is easily imposed on, but nobody can say of him, as may be said of others, that he has profited or profits by being imposed on. That he is personally honest, nobody doubts whose doubts are worth consideration. That he has gained steadily for twenty years, in spite of many errors and many failings, in the confidence and respect of the great body of the American people, nobody can deny, and this alone goes a great way to fit a man to govern them. What kind of cabinet he would gather round him we do not pretend to be able to predict; possibly, and indeed probably, he will during the next six months have his eyes sufficiently opened to know that it ought not to contain Mr. Fenton or his like, and will dissolve all connection with the band of unmentionables who now constitute his most enthusiastic flatterers and supporters in this city and State. His manners—we refer to them unwillingly, but they must be mentioned in all discussions of a President's qualifications—are, as the *Evening Post* says, "gross"; indeed, they might more correctly be termed brutal; and if they can be spoken of as "manners" at all, this is the correct way of describing them; but, then, in the eyes of many people this is no defect, and they are said to improve as he gets older. Retirement from the editorial office, and from the daily pursuit of "lies" of various dimensions, would probably mend them greatly; and it must be remembered that, if not a polished man, Mr. Greeley is a man of sufficient intellect and education to make him enjoy the society of the cultivated men of the country, to make him a sharer in their best aspirations, and to give him a thorough acquaintance with and an honest pride in the national literature. To get this in a President is a gain for "manners" which is none the less real for not being very conspicuous.

Of the chances of his election it is at this writing impossible to speak, because, for one thing, it is yet doubtful whether the Democrats will make a nomination, or will accept Mr. Greeley as they would have accepted Mr. Adams, or will accept Mr. Adams, or what they will do. To the adhesion of a few Democratic papers to the Cincinnati nominations little importance can be attached as long as there is no Democratic candidate in the field. The leaders of the party are now in active consultation, and we shall probably know their decision in a week or two. But we have reason to believe that the temptation to step in and do what the Liberal Republicans attempted, but failed to do—nominate two men whose character and antecedents and attainments would not only command the confidence and respect of all intelligent and thoughtful men throughout the country, and give a feeling of security to business men which Mr. Greeley's nomination does not give, but would help to magnify the Presidential office, rid it of the degrading associations which have of late years clustered round it, give the White House once more an atmosphere not only of purity but of dignity and refinement, and make it a place in which not only the rudest elements of American society would be made welcome, but which the best and most cultivated would be glad to frequent—this temptation, we say, is very strong. Whether it will prove strong enough we shall soon know. If any such nomination is made, self-preservation will compel the Republican party to unite on one candidate, and it is pretty safe to say that candidate would not be General Grant.

On one result of the Convention the friends of reform may heartily congratulate themselves, for it is certain and substantial. The existing party organizations are broken up. We are about to be delivered from the task of "abolishing slavery and suppressing the rebellion." The "great party" is about to be provided with other and more useful work than the care of its laurels. We shall no longer be condemned to the passive contemplation of Leet and Cramer and Casey, lest "the Democrats should get into power." If Horace Greeley does nothing else during the coming summer, his candidacy will drive a great many faithful drones out in search of an honest living; and it will release the public mind from its position of flabby resignation to flagrant abuses, and give it living problems to work upon. Out of this renewed activity, who knows what valuable fruits for reform may yet and soon come?

THE CASS COUNTY MURDERS.

THERE has been published another account of the recent murders in Cass County, Missouri, which puts a new coloring on the event. But the statement is false on the face of it. It is asserted that Cline, one of the victims, ran out of the train and fired into the crowd. That a man would wantonly fire into an inoffensive assemblage of armed and masked men, who he had been told a few moments before were seeking his life, nobody will believe. The facts, no doubt, are substantially as they were at first stated. Still the later statement is signed by a number of men of apparent position and respectability in the neighborhood, and goes to show what appeared pretty certain from the first, that the population very generally approve the act. Here is a case in which a violation of law gratified the passions of men at the same time that it really advanced their interests and bettered their condition. Fortunately such cases are rare. Men whom passion hurries into wicked violence rarely better themselves even so far as the particular crime reaches. If a desperate man makes away with his enemy, he may suffer more at the hands of the state than from his enemy's persecutions were he living. If the crime really serve him, and he escape the punishment society assigns to his crime, he may incur the frown of the community and the aversion of men. But the Cass County murderers suffer in none of these ways. At anything like punishment from the state they may afford to laugh; the same lax justice which protected the unjust judges will protect their cruel murderers. The frown of the community they are in little danger of, for a few bold men have put the neighborhood under obligations by doing what timider and more scrupulous people were themselves unwilling to do, but are not sorry to have done for them. Even if public sentiment in this particular case were hot on the side of the murderers, a strong, desperate man, especially if he have some position, is a formidable object in the West. People respect him and make room for him. To strong and savage men they yield the right to be cruel. They think of them as they think of the elements and the wild beasts of the forests. Sailors do not discuss the justice of the hurricane, nor does a hunter argue with a grizzly. The newer and ruder society is, the nearer its civilization approaches "the old and simple plan," the more are men given to think in this way. As society establishes and defines itself, law will assert its sway, take the weak under its protection, unite good citizens, and teach them confidence against powerful outlaws. The murderers of Cline and Stevenson, whether or no they have accomplished anything, have at least suffered nothing. Whatever they have done they have done with impunity; and we cannot shut our eyes to the fact that they have to all appearances bettered themselves by their act. It is true that the severest lessons are in time forgotten. New judges will arise in Cass County who will disbelieve in the possibility of any violence to themselves, as Stevenson flouted it when counselled to leave the train before running into Gunn City. Murder is always found to be worse than people imagine it will be while the victims are still insolent and alive; and sympathy with the families of the murdered men may bring about a reaction. The effect will at the most be temporary only, but it cannot be denied that for the next few years Cass County will be apt to possess very upright and correct judges. They will "walk before the people" in such a way as to make New York patriots envy Cass County her judiciary. Stevenson's successor will ask a higher price of the Tebo and Neosha Railroad than that corporation can afford to pay him. We do not believe that adultery is more infrequent because public sentiment permits the wronged husband to kill the adulterer, nor seduction because juries acquit women who shoot their seducers; we doubt if people were any less apt to insult each other in the days when a duel was always supposed to follow a quarrel than now. These things are of little importance, because in their inflammable moments men take small heed of consequences. The passion of avarice, though not less strong, is slower and more patient than those of lust and anger; it gives its subjects time to balance drawbacks and advantages. The murderers may say in their cool, retrospective moments that they have done a good thing for themselves. Had they gone to the legislatures, they might have spent years and a larger sum of money than the judges had robbed them of to get through a measure which, when passed, might have been discovered to be without any value. There are cases, it appears, then, where the influences of passion and interest point men to crime, and where they have only their virtue and humanity to hold them in check.

It is, however, in the power of the Western people to help themselves in a more general and permanent and no less effective way. The prompt action of the Kansas Legislature in arraigning Pomeroy and Caldwell for bribery seems to indicate this. An energetic press, courageous and public-spirited leaders, concerted action—these have accomplished something here, and they should do more in Missouri. New York is so rich, and fraud in this State has been on so general a scale, that nobody has been mulcted enough to be very angry about it. Reform here has always found a stronger enemy even than the Ring in the indifference of the people. Manifestly, men who will commit such acts as the Gunn City murder cannot be said to be indifferent. The mere fact that they were desperate enough to kill the judges, and that public sentiment was sufficiently inflamed to approve of the murder, seems to show there was no need of it. The same energy and rage directed upon the legislatures, or in endeavors to reach the robbers through the courts, would have attained results which, though slower in coming, would have been surer and more permanent. One trouble with such work as that of Gunn City is that it must be done over again, that it induces reaction, and alienates the sympathy of men who are not suffering from the same causes. It seems rather to deepen the public enervation and despair in the efficacy of peaceful reform. At best, its effect is only partial and limited. It is not justice, but simple retaliation and desperate self-defence. People are apt to think of it as a rude approximation to justice. But it is merely the angry revenge of men upon those from whom they have received an injury—the last thing a trial by law is supposed to be. Homicide in such a spirit is none the less murder when perpetrated by a thousand than by one. But we say that the salutary effect of the violence is very limited. The oppressors of townships suffer from the vengeance of men whom they have tangibly injured, but State robbers go scot-free, and senators may buy up whole legislatures with impunity. Sooner or later, lynching must disappear in Western Missouri just as the Indian and the buffalo have disappeared. It would be far better for the people of that country to spend all their energies in seeking civil remedies for their grievances. Their progress may be slow, but a step once gained they will not be obliged to retrace. And a movement in the direction of order and purity will help not only the people immediately interested, but will support and encourage purity elsewhere.

Our object in recurring to this subject is not to apologize for an indefensible atrocity, or merely to preach patience and a better way out of their difficulties to a community in such a condition of mind as prevailed, and doubtless still prevails, in Cass County. It is rather to insist on stripping the outrage of its accidents, and to connect it with the general tendency of society in all parts of the country. The fact that it happened in a sparsely settled and somewhat lawless district only disguises the more important fact that the desperate situation of affairs which led to it already threatens and has overtaken much older communities, and that we may be ourselves on the brink of similar disgraces, by forgetting how necessary it is to prove on every occasion that, for the punishment of great rogues and plunderers, not only extraordinary combinations of good men but the ordinary processes of the law are sufficient, prompt, and, above all, certain. As we said last week, the failure to visit upon Tweed and his accomplices the just and full legal penalty of their crimes has done more to hasten the reign of violence than even their lynching would have done.

POSTMASTERS BY ELECTION.

It is curious to observe how our political ideas run in a circle, and how we dodge from one to another of a series of expedients; when one fails, going back complacently to one that failed before, as if it were some new and admirable discovery. It is because we have lost the practice of looking below the surface, and have reduced our notions of political science to a few commonplaces in the way of theory, and a few habits in the way of administration. Several years ago it was decided that pure Democracy required us to give the election of all possible officials to "the people," and that this would secure us a wise, honest, and genuinely popular administration. It was seen, however, in time that the result was something neither wise, honest, nor popular, and it has seemed well-nigh agreed by all thinking men that one of the first things to be aimed at now was to reduce very much the number of persons to be chosen by popular election. This one principle at least seemed fully established by the experience of the past twenty-five years.

Now comes civil-service reform. We find in appointed as well as in elected officials a lack of capacity and honesty, and we set to work to remedy this, the most crying evil of our politics. But all at once, in the midst of an earnest and hopeful effort, we are surprised by the reappearance of this old principle, tried and discarded in regard to one set of functionaries, and now pushed forward as a new idea which will put an end to all trouble in regard to another set. We have just come to the conclusion that popular election is a bad way to choose certain officers, and a fatal way to choose certain others; that it is much safer and better to leave their selection to a magistrate whom we can trust, and who is distinctly responsible. If this is so, what reason is there to think that popular election would work any better for postmasters than it does now for judges and commissioners?

We know very well what popular election means. It means that a set of politicians, a "ring," or a "regency," or, in the best case, a "committee" pick out the one of their own number whose turn it is, and present his name for the party to vote at the polls. When a long list of names is to be voted, this is inevitably and universally the case with all but one or two. With regard to the leading names—the Governor, the Mayor, the Member of Congress—it is somewhat different; that is, with regard to prominent and responsible places, there is a certain amount of popular sentiment to be considered, a certain feeling of the necessity of presenting honorable names, and a certain, if small, power of control at the polls. But with regard to the great majority of names voted, they are as truly *appointed* as if the Governor selected them and sent them in to the council or the legislature for confirmation. The only difference is that they are appointed by irresponsible, instead of responsible, persons. Now the question is whether the postmaster would come under the first head or the second. His is a purely administrative office, calling merely for good business abilities and habits, not at all for political qualities; why should it be filled by a person selected on political grounds any more than a station-master or express agent? In the next place, the office is a lucrative one, and would inevitably be the subject of even greater scheming and intriguing than is the case now. Anything that should add to the present scramble in politics would be a calamity.

We do not think, therefore, that it would be a movement in the direction of civil-service reform to have postmasters elected by the people. We fear that it would result in an even worse state of things than at present, because the scramble for the office would be in an irregular and irresponsible caucus, instead of before an upright and responsible secretary; and because it would be throwing an attractive and lucrative post into the most open competition of common politicians. We choose too many persons now by popular election. Nobody—but the wire-pullers themselves—knows even the names upon the ticket that he votes. This vote is simply the expression of a desire that a certain party may be in power, and of confidence (if it goes so far as this) in the leaders of the party, who have selected the list of names which he puts into the box. This is all very well; in the highly organized and intense life of the present day, we cannot expect more of the mass of voters than just this. But it shows that the way to turn to account this expression of will and confidence is to place before the community only a very few names, and those of well-known persons, as candidates for important and responsible positions. Then voting would mean something; and one who had received this mark of confidence could be left very well to make subordinate appointments on his individual judgment.

We do not say that the proposed change would work harm in the rural districts where towns are small, and where there is constantly operative the restraints of public opinion, each man knowing every other man, and knowing pretty much all about him. But until there is general acknowledgment of a truth which certainly is not now generally acknowledged; until we all agree that large towns must be governed in a way entirely different from that which we invented in the days when the country was a country of villages; until we admit that the method of government proper for New York when New York was half the size of Harlem is not the proper method for the Cincinnati, Chicago, Boston, New Orleans, Baltimore, San Francisco, St. Louis, and Brooklyn of to-day, each of them with its numerous rings—until we admit this, and act upon the knowledge, it will not be time to give the people any more elective offices to fill. It is already the case in small towns that the postmaster is practically elected by the people among whom he lives. He must, as a rule, be of the dominant party, though that is not necessary, and the rule has frequent exceptions, but the men who unite to recommend him, and who may be said to re-elect him, are of all parties. They choose him because they know him to be capable, honest, and obliging, because ever since he was a boy they have had opportunity for examining into his character, and discovering whether he is a person into whose hands they are willing to confide interests so important to them. And we dare say the records of the Department would show that the class of postmasters thus chosen to manage small post-offices, where the emolument is so slight as to be pretty well out of the scramble for political power, have proved themselves as faithful and efficient as any servants the public has in place. They are like the town-clerks of our smaller towns, many of whom have been in office for a long term of years, whose politics are largely matter of indifference to their fellow-citizens, who are subject to the form of election, but who never have the reality, and who serve the public capably and with fidelity. These two classes of officers, the appointed and the elected, are alike good officers; and they both are good for the same reason. They are picked out by their neighbors who know them thoroughly; they are existing illustrations of that reform in the civil service which would give us public servants intelligently selected instead of public servants who are put in office because they have been the private servants of some one who could get higher offices than they, and would put them into the lower.

But apply the rule of election which really or practically prevails in country towns to the postmastership of a city like New York or Boston, and we shall simply offer one more inducement to the politician by trade to continue in business, and have one more election or one more candidate for whom to vote. The present system is bad enough, we all know. It was, we take it, a very true remark made the other day by one Massachusetts postmaster about another one, master of a much larger place—that they gave him so much to do in Washington keeping his office that he had no time to keep the office at home. But at least the postmaster of a city like Boston, for instance, has, under the present system, to secure the names of a good many business men, who judge him carefully and speak of him intelligently, and usually he must have the personal recommendation and endorsement of some Congressman who can in a way be held to account for his behavior. This is not what we have a right to ask, but it is better than the liability of having some such person as "Jimmy" O'Brien, say, or Colonel "Charley" Spencer, demanding the New York post-office and its emoluments as a reward for services rendered, having his name put on the general ticket by the regular caucus machinery, and having him elected by a strict party vote, thrown by voters not one in ten of whom know whether he is fit to be trusted alone in a post-office or not.

THE CINCINNATI CONVENTION.

CINCINNATI, May 4.

ONE did not need to see very much of what was going on here during the first two days of this week to be satisfied that those who flattered themselves that the Convention was to be an insignificant gathering of "soreheads," unlikely to exert any influence on party politics, were making a serious mistake. Indeed, of the many follies and absurdities of which the friends of the Administration have been guilty during the past twelve months, their taking this view of the new movement has perhaps been the greatest. For those who took an interest in the Convention mainly with regard to its influence on the cause of Administrative reform, and to the probability of its rescuing national politics, even temporarily, from the control of the regular professional hacks, the question of most moment, last Monday and Tuesday, was not whether it was going to be a success as regarded numbers and strength, but whether it was not going to be a too great success for the objects which those reformers who called it had in view. It was quite plain that, in the West at least, it had enough support at its back to give its candidate a fair chance of the Presidency, and it was plain, too, that as regarded the spirit and character of the delegates, it was likely to make a deep impression on the popular mind. I doubt, indeed, whether a more respectable, honest, intelligent, public-spirited body of men has ever got together for a similar purpose. It was not what is technically called a representative body, for the members were not really delegates. They were nearly all volunteers, who came out because they personally were not satisfied with the condition of public affairs, and were willing to give time and money to the task of trying to improve it. When one saw the strength in which they collected, the spirit by which they were animated, and the complete ignorance of the art of political "engineering" in which the great majority of them were plunged, one was driven to the conclusion that if the fears which so many expressed when the Convention was first called that the politicians would descend upon it and "capture" it, were not realized, it would be owing to a special interposition of Providence. The prey was tempting beyond example, and already on Monday afternoon the news began to spread that wolves had been seen in the neighborhood of the fold. In other words, "professionals" began to make their appearance in considerable numbers in the course of the day, and a tremor was sent through the flock on Monday night by the news that Mr. Reuben E. Fenton, of New York, had arrived, and was engaged, in a secluded room at some distance from the hotels, in "fixing things." He was, it was said, making up a "combination" between Illinois and Pennsylvania, by which Davis and Curtin should appear on the ticket, "control" the whole movement, and send the reformers home about their business.

I see that this story is denied in the New York *Tribune*. The principal friends of Judge Davis assure me that neither he nor they were in any way a party to the arrangement. That there *was* such an arrangement on foot, however, everybody here believed. Several of the editors of the independent daily papers which had been most influential in getting up the Convention were so satisfied of its truth that they met on Monday evening, and agreed to denounce the plot, and warn Fenton that it could not be carried out. They did denounce it, and it was thereupon abandoned; and Mr. Fenton, as if satisfied that his usefulness was gone, returned home. But a great many less conspicuous members of his class remained. Several of the delegations, and particularly that of New York, contained "practical men" of no common ability, and fully determined that, if they could help it, all this enthusiasm should not be wasted on "visionary" projects; and co-laborers kept coming on from various quarters. The "managers" rose in importance all through Tuesday and Wednesday, and the work of "manipulation" went on in a way that would have delighted even Tom Murphy himself. Close on the heels of the "managers" came the crack-brained people. George Francis Train was busy from morning till night in the halls of the hotels. The city delegates whom he buttonholed enjoyed the joke, but the country members took him in solemn earnest; and their attempts to refute him, in the teeth of his constant manufacture of facts, were a source of considerable amusement. He held a "nominating convention" in one of the parlors, which ended in an uproarious dispute over the existence of a God. He was followed by Miss Susan B. Anthony and Mrs. Gordon of California, the latter of whom demanded admission to the Cincinnati Convention, and both of whom took great delight in making their way to the platform every day, up the middle aisle, amidst the laughter and catcalls of the audience.

The first and great difficulty of the Convention was the tariff. The original promoters of the movement in the West and Northwest were free-traders. The Missouri platform, on which the Convention was called, contained a distinct free-trade declaration. The New York call, which Mr. Greeley signed, came very near making the same thing. It was felt, therefore, by the revenue reformers both from the East and West, that this platform also would have to contain some distinct expression of opinion on this subject. As the delegates arrived, however, and "conferred," it began to be clear that this would prove well-nigh impossible. As the movement grew in proportions, and success came to look more attainable, the determination to succeed and to cast aside everything that would interfere with success grew stronger. Pennsylvania had to be thought of; Mr. Greeley had to be consulted; and the more the matter was debated, the plainer it became that there was no common ground on which the protectionists and revenue reformers could stand. As the forces of the East swelled, Mr. Greeley grew more inexorable; and the Committee on Resolutions, after sitting up a whole night, were compelled to accept the compromise which he proposed—the reference of the whole matter to the people in the Congressional districts. It is right to add that the sentiment of the Convention was overwhelmingly in favor of this course. There is a touch of absurdity about it, it is true, but it is at least frank and honest, and, at all events, nothing else was possible. Even such outspoken free-traders as Judge Hoadly, of this city, were compelled to concur in this disposition of the question. The delegates were red-hot against the corruption, maladministration, paper-money, Ku-klux laws, and nepotism; about the tariff they were cool and collected.

Adams, I think, gained strength as a candidate all through Tuesday, Wednesday, and Thursday. Davis ceased to be formidable after Monday. Adams was the second choice of nearly everybody, and the conclusion generally reached on Thursday morning was, that after each delegation had made a complimentary fight for its own man, all would unite on Adams, and he would be nominated without difficulty. Several things occurred to disappoint this expectation and bring about the extraordinary result which followed. One was the selection of Mr. Schurz as Chairman of the Convention. Another was the split in the Illinois delegation over Trumbull and Davis. Mr. Schurz was unanimously recommended for the position by the Committee on Permanent Organization; but this, I may be allowed to say, as was evident at the time and as the sequel showed, was a mistake. He was already the most prominent man in the movement. Indeed, he might without much exaggeration be called the father of it; but this prominence had been won by his eloquence and character, and it was not desirable that at this stage it should not seem to rest on anything but his talents and character. It was desirable, also, that other men than he should appear in it conspicuously at the Convention, for its sake as well as for his own. *Diis aliter visum.* He was chosen, and took the chair with an eloquent speech full of the loftiest aspiration, and pointing distinctly to Charles Francis Adams as his choice.

When the news of all this reached Missouri, however, as it did on Wednesday forenoon, it kindled unholy fires in several breasts, and principally in those of Messrs. Frank Blair and Gratz Brown, who saw that Schurz was making too much "capital" out of the thing. On Wednesday morning, I was assured by a person in his confidence that Mr. Brown would not and could not attend. On Thursday morning, it was rumored that he was on his way to Cincinnati; on Thursday evening, that he and Blair had arrived and had concluded a "combination" with the Greeley men, by which Greeley and Brown were to compose the ticket. On Thursday night, the Adams men were filled with gloomy forebodings, and the knowing ones declared openly that nothing but a combination of Adams and Trumbull could beat the new arrangement. Still, strange as it may seem, Greeley's nomination was generally regarded as impossible. I think I am right in saying that nobody outside the circle of his immediate supporters treated it as a serious probability. Men laughed when his name was spoken of; all said he ought to have a good complimentary vote; but nearly everybody talked of his selection for the Presidency by the Convention as an utterly ludicrous thing, which would cover the proceedings with ridicule and contempt. What was feared by the reformers was not this, but some "sinful game" on the part of the politicians which would defeat Adams and deprive the movement of all weight and significance.

My own apprehensions were quieted on Friday morning by the assurance of the chairman of the Davis wing of the Illinois delegation that the whole delegation would vote solidly for Adams as their second choice, in case they found neither of their own candidates had any chance. The division in this delegation had been from the outset fierce, bitter, and irreconcilable. Davis had the larger force, the chiefs of which were highly respectable men, and, they assured me, the whole body also, but the Trumbullites accused them of bringing down a great body of "bummers" from Chicago to outvote them, and "yell" for Davis in the Convention. This split eventually proved the ruin of the Adams cause.

The building in which the Convention was held is immense, seating 8,000 persons, and was on Friday morning filled to its utmost capacity. The steady gain of Adams up to the fifth ballot, and the loud and widespread cheers with which every mention of his name was greeted, showed that whether he was the favorite of Fortune or not, he was generally believed to be. But the gradual narrowing of the contest, Davis and Trumbull dropping slowly out of sight, and the steady descent of the vote on Adams and Greeley alone, was fanning the excitement into anxious heat, when a small piece of paper was carried up to the chairman, on reading which he was visibly disconcerted. He announced with a somewhat faltering voice that a gentleman was in the hall who had received a large number of votes for the Presidency, and who desired to make a communication to the Convention; courtesy required that they should hear him. The balloting was suspended; and up the platform stairs slowly mounted Mr. Gratz Brown, the sun from the upper windows striking with a fierce light on his red beard and hair and pallid features. There was an exchange of ghastly greetings between him and the chairman, and then, turning to the audience, he commenced a performance of extraordinary effrontery. How much effrontery there was in it cannot be understood without knowing that a resolution had been passed the previous day forbidding the formal presentation of the names of candidates by speakers. He made the usual acknowledgment of the honor he had received in having so many votes cast for him, gave some account of the virtuous and unselfish condition of his heart, declared that he withdrew from the contest, that he desired the nomination of the man most likely to win, and that in his opinion that man was Horace Greeley. Thereupon the "practical men" of the New York delegation rose in their seats and gave three cheers; the Southerners, Vermonters, and the New Jersey men took up the cry, and shouted themselves out of breath. It was plain to everybody that we were witnessing the working of the "combination." Brown had done his part; but not well. The Greeley managers were dissatisfied. "Brown," said one of them near me, "has spoiled that whole thing. He ought to have stopped with his own withdrawal."

The Convention was by this time in a state of great nervous exaltation—the state in which panics come, and in which frantic resolutions are taken. The great body of them were in complete uncertainty as to the game of the leaders, and ready for any burst in any direction. The appearance of Brown satisfied them that the arrangement of which they had heard the day before was working, and that a rush for Greeley might occur at any moment. Adams had reached 325 of the 358 necessary to a choice. Had the Illinois delegation gone over to him on the previous ballot, as was expected, before the wavering had begun, he would now have been nominated. After Brown's appearance they retired for consultation, and their return was waited for with intense anxiety. In view of what had occurred, it was doubtful whether it was not now too late for them to save Adams, even by a solid vote. But when they came back with the announcement that only 27 were for Adams, and that 15 had actually gone over to Greeley, there was a general *débandade*. All the outlying delegations, and the gushing ones, at once began to change to "the friend of humanity," as some called him, or "the philosopher," as others called him; and he was nominated in a scene of the wildest confusion. The Illinois delegation had been unable to agree—were too much exasperated even to consult amicably; and finally a part of the Davis men had deserted to Greeley, apparently in order to spite the Trumbull men. Brown got his nomination for the Vice-Presidency in due course. As a "reformer," however, it may be safely said he has left the stage.

The result was so unexpected that it confounded nearly everybody here. It leaves the revenue reformers in a pitiable condition. They have not only been shut out of the platform, but they have helped to nominate the greatest living champion of protection. Worse than this, after spending months in the preparation of a great movement for the overthrow of politicians, they have been made the victims of one of the paltriest political tricks ever executed, and this at the hands of a professed and rampant friend of honest government. Last evening, they did not know what to say. This morning, they are more cheerful, and disposed to believe that Brown and Blair might have done worse things than give us Greeley for a President. On one thing I find that there is a general agreement among the shrewdest observers, and that is, that Greeley will be elected, so that the Administration will do well to employ its most expert "managers" at the Philadelphia Convention.

ENGLAND.

LONDON, April 19, 1872.

THE only thing that can well be said about the political situation is that the state of affairs would be anomalous if it did not bid fair to become chronic. A government with a large majority and little prestige; general discontent which stops short of a desire for absolute change, are the prominent symptoms of the day. The Geneva Convention just now occupies a good deal of attention, but in the absence of any precise information as to the policy adopted by our own Government and yours, it is difficult to say more than that there is a certain amount of rather vague inanity. The papers which systematically oppose Mr. Gladstone try to make out that we have every reason to infer that he is betraying our interests, and is urgently in need of such an inducement to speak out plainly as is supplied by Lord Russell's motion. The Government, it is urged, have not said unequivocally and distinctly the one thing that ought to be said, namely, that we cannot under any circumstances permit the arbitrators to decide upon the indirect claims. From day to day we may be more clearly informed upon the subject; and it is useless to enquire whether these suspicions are better or worse founded than the enthusiastic faith of the *Daily Telegraph* in Mr. Gladstone's infallible wisdom. Somehow or other Mr. Gladstone always creates more than the ordinary warmth of party feeling on both sides, which renders it more difficult than usual to judge of any matters in which he is concerned. I may, however, venture to describe the general feeling as compounded of a strong suspicion that English diplomats are always in a muddle, whilst American statesmen are supernaturally and discreditably acute, and of a doubt whether our rulers are not rather more clever than they ought to be. We are somewhat in the position of a rough country squire who is represented in a lawsuit with a shrewd antagonist by counsel whom he fancies to be too eloquent and cultivated and altogether too highflown for their work. He would like something more after the good old style of homespun Palmerstonism. This uneasiness about our representatives rather hinders speculation as to the probable fate of the Washington Treaty. The general impression is that it will not be carried out unless your statesmen make unexpected concessions, or ours allow themselves to blunder into some delusive compromise. However, it is plain that Government must in this case speak the voice of the nation on penalty of complete party ruin.

Meanwhile Parliament pours out its usual abundance of talk. It talks about all subjects in earth and heaven; about foreign policy, about the ballot, about liquor laws, about contagious diseases, about Epping Forest and the Thames Embankment, about the propriety of eating veal and lamb—a practice which one gentleman wishes to discourage by royal proclamation; about Irish, English, and Scotch education, about the burial of Dissenters, about local taxation, about dozens of other subjects, and, last but not least, about its own talking. For an impression has somehow got abroad that there is something in Mr. Carlyle's favorite maxim as to the relative values of speech and silence, and some vague attempt has been made to induce our great manufactory of talk to turn over part of its duties, those mainly which are concerned with private business, to another tribunal. Hitherto the attempt has failed, and the current of debate flows for the present in a torrent as copious as ever. Some staunch Conservatives have been delaying business by obstructing the Ballot Bill as much as possible. As that unfortunate measure had the most important place in the Government strategy for the present session, it was generally assumed that an obviously hopeless battle would be abandoned, and that Conservatives would be rather glad than otherwise to get the question out of the way. A rather singular incident, however, has just happened, which seems to show that, if not defeated, the measure may be seriously mutilated. The Government measure included a proposal to inflict certain penalties upon any voter who should "wilfully" expose his voting paper. In fact, secret voting ceases to be even in appearance an effectual guarantee against corruption or intimidation if the constituent may convert it into public voting at his option. The man who had received £5 or been threatened with the loss of his farm would be able and therefore would be forced to satisfy his briber or his landlord that he had complied with their wishes. A good deal of indignation, however, was expended upon this proposal, and it was moved to substitute for "wilfully" the words "with corrupt intent." A voter could only be punished under this law if it were proved that he had been guilty of voting under bribery or intimidation. Now, as it is already very difficult to detect the ingenious practices which have been generated under the old system, and as the Ballot Bill was advocated expressly on the ground of that difficulty, it follows that the corrupt intention of displaying a vote could rarely be detected. A man, for example, is afraid of losing a renewal of his lease unless he votes with his landlord. If the voting were strictly secret, the landlord would have no hold upon him; but if there were a tacit understanding, the existence of which it would be practically impossible to prove, that the man should display his vote, it is plain that the intimidation would be precisely as easy as before. I should beg your pardon for insisting upon so evident a point; but two or three Radicals appear not to have noticed or not to have been convinced by what seems a very obvious argument. Mr. Vernon Harcourt and Mr. Fawcett both declared themselves against the Government proposals. Both of them are Liberals of that type which considers the treacherous leadership of Mr. Gladstone to be worse than the open enmity of Mr. Disraeli. Mr. Fawcett is as honest a politician as any in the House, and was no doubt convinced by his own statement that an Englishman ought not to be prevented from discharging a public duty publicly. For my part, I entirely agree with him; but because I agree with him in this I differ from him in objecting altogether to the ballot, and it is in my opinion unlike his usual straightforward common sense to approve of secret voting and yet disapprove of what certainly seems to be an essential part of the machinery. Be that as it may, the change was carried against the Government by a majority of a single vote in a full house. Probably some means will be found of circumventing this awkward decision, otherwise the session will be even less creditable to the ministry than we had reason to expect. They proposed at least to carry the Ballot Bill, a measure which, if regarded with indifference by most intelligent politicians, is part of the regular Liberal platform, and which would therefore entitle them to a certain amount of party gratitude. If the gap now caused be not in some way patched up, they will simply have carried a measure for enabling those people to whom it is a matter of no consequence to conceal their votes; but they will have given the very smallest amount of protection conceivable to the classes which require artificial aids to their independence.

The fact is that the agitation about the ballot has a factitious character. Nobody really cares about it very much, except a few politicians who live on the traditions of the past, and nobody is sanguine or despondent enough to think that it will make any great difference. When the most intense Radicals are ready to sacrifice the stringency of the measure—and largely, as uncharitable people may suppose, in order to have the pleasure of embarrassing their own leaders—it is manifest that the pressure from outside cannot be very powerful. Meanwhile, if anybody cherishes the opinion that the ballot is all that is wanted to destroy the power of the English aristocracy, I can only recommend him to study the *Daily Telegraph* of two or three days back. There he will find a large part of the paper occupied with glaring descriptions of the extraordinary manifestations of delight exhibited by a large population in England, Wales, and Scotland; of parties of London tradesmen dining together in a rapturous state of mind, making speeches, composing addresses, and overflowing through all the established channels of enthusiasm; of the inhabitants of a Welsh seaport town turning out into the streets in a condition of excitement which the pen of the reporter utterly fails to describe; and of the sturdy farmers in Scotland rivalling the warmth of their more excitable Southern fellow-countrymen. What was the cause of this passionate emotion? If the *Telegraph* be right, even the recovery of the Prince of Wales, or the speech-making of Mr. Disraeli at Manchester, did not so stir the popular bosom. Well, if the truth must be told, it was that a young gentleman was about to be married. That happens, it may be said, every day; but this young gentleman was a marquis. Even so, the marriage of a marquis, though doubtless calculated to convey a thrill of sympathetic joy to the plebeian breast, is not a quite unprecedented phenomenon. This young marquis, moreover, had committed the one fault to which the middle-class Englishman has—and, in my private opinion, with much justice—the heartiest aversion: he was a pervert to Popery, and had been chiefly distinguishing himself by presenting a capful of jewelry (I don't know whether I am precisely right in the nature of the present) to poor old Pio Nono. What, then, was the amazing merit which atoned for this enormity and made the marriage of the marquis an event to be commemorated with as much bell-ringing, speech-making, address-delivering, as many special trains, and as many columns in the *Daily Telegraph*, as would suffice to celebrate a national victory? Simply this: that the Marquis of Bute is about the richest man in England. He almost rivals our excellent friend Lothair; and even Popery, which is detestable in an ordinary form, gains a kind of aristocratic grace which makes it rather ornamental than otherwise when accompanied by vast rentals, sumptuous palaces, and an indefinite amount of cash balances. The worship of the dollar is, I believe, known to exist occasionally in the United States; I will not ask whether the combination of this peculiar cult with the worship of rank makes it more or less respectable. But this much I may safely say, that there is an amount of fine unadulterated snobbishness in certain social strata in this country which makes one long for a touch of Thackeray, or, in more vulgar language, would suggest the wish that some thousands of persons were so united that a single kick could do summary and simultaneous justice to all. Whilst the aristocracy excites such keen emotions in the breast of the British Jeems, it does not seem as if the ballot would destroy its power. The feeling is too deeply seated and too evidently unaffected. Luckily, there are limits beyond which the mob religion becomes powerless, and feelings which on occasion can get the better of it. For the present, however, I must lay down my pen, lest I should be hurried into some remarks not suitable to the respect with which every true Briton should regard the peerage of his country.

Notes.

B. WESTERMANN & CO., German booksellers, have removed from the west side of Broadway to No. 524 on the east side, opposite the St. Nicholas Hotel.——The *Week* has passed into the hands of Holt & Williams, and will undergo a change of form with other improvements of a literary character.——A complete edition, in three volumes, of the "Dramatic Works of Richard Brome," will be shortly published by J. W. Bouton. The author wrote in the time of Charles I., and this reprint is one of the John Pearson series, of which Mr. Bouton is the agent.——J. B. Lippincott & Co. have in press "A Boy's Book about Indians," containing a brief history of the leading tribes and their customs, sketches of prominent chiefs, narratives of adventure, etc., by Rev. E. B. Tuttle, chaplain U. S. A.—a work which can hardly fail to be interesting, though not likely to surpass in this respect Mr. Catlin's two volumes prepared for the same class of readers, and of which it is singular that a popular American edition has never been attempted ("Life amongst the Indians," and "Last Rambles amongst the Indians of the Rocky Mountains and the Andes"). The same firm announce "Wesley and Swedenborg," a fraternal appeal to Methodist ministers, by Rev. E. R. Keyes, of the New Church; "The Ten Laws of Health," by J. R. Black, M.D.; and Prof. Haldeman's "Pennsylvania Dutch."

—The *Popular Science Monthly*, edited by Mr. E. L. Youmans, and published by D. Appleton & Co., begins with this month what seems likely to prove a useful career. Its purpose is, not to give a mere summary of scientific facts diluted to suit the capacity of the general reader, but to furnish thorough and comprehensive discussions relating to the most interesting and important topics of scientific enquiry. In realizing this conception the opening number is very fairly successful, giving a large variety of entertaining and instructive matter, though much of this is taken bodily from foreign sources. By far the best article in the number is that on "The Study of Sociology," by Herbert Spencer, the first of a series by this able writer, which is to extend through the year. By including such papers as this, and also Mr. Pike's, on "Woman and Political Power," the *Monthly* shows that it has outgrown the vulgar conception of science as restricted to the describing of sea-shells and experimenting with air-pumps, and recognizes the fact that the domain of scientific enquiry is coextensive with the number of problems in which effects are traced to their causes. The new *Monthly* will undoubtedly do good service in diffusing an interest in science as understood in this wide sense.

—Mr. John Fiske, of Cambridge, a gentleman whom most of our readers know as a learned and acute student of philosophy, and in whom some of the most distinguished philosophers of our day recognize an independent and valuable critic, and a kindred explorer, is at present in this city delivering a course of lectures, to which we are glad to invite attention, and to which, but for an oversight, we should have called attention before. The second of the course is to be delivered this afternoon in the rooms of the Geographical Society, at the Cooper Union, and this evening in Room 24 of the same building, the lecture being given in the afternoon to suit the convenience of ladies, and in the evening for gentlemen. The lecture is in each case the same, and the same in substance as the lectures which Mr. Fiske has been giving at Harvard in the University course. The subject of the first lecture, delivered last Tuesday afternoon and evening, was "The Nebular Hypothesis"; that of the lecture of to-day, and of next Tuesday, is "Darwinism"; and to any one who wishes to know what this much-discussed "ism" is, and what it is not, we can promise in Mr. Fiske a clear expositor, who will not make too great demands on his hearer's knowledge of scientific and philosophical names and things, and who may be depended on for perfect candor. Mr. Fiske is not a man of science in the worse sense of that term—a sense which implies a man who busies himself in some department of the natural sciences, and has a mind as much ridden by his mere facts, and as little capable of comprehension and candor, as ever any Scotch elder's was, or any Scotch minor poet's; he is a man of science in the better sense, a man of a just and comprehensive mind, well trained, well informed, and kept well in hand. Persons interested in speculative questions, and who dislike to see them handled without as constant a reference as possible to facts apprehensible by the understanding, will find in Mr. Fiske an engaging lecturer. Messrs. Holt & Williams and Messrs. Appleton sell tickets to this course, the Messrs. Appleton, as is well known, making works in science and philosophy a marked feature of their bookselling business, and Messrs. Holt & Williams having been Mr. Fiske's publishers when he has made ventures in authorship.

—Mr. Page, Mr. Ward, Mr. Perry, Mr. La Farge, and the rest of the Council of the National Academy of Design, having ordered that the gallery should be opened on Sundays, their action has provoked in some quarters the remonstrance that the question should have been submitted to the whole body of academicians, and not settled by the Council. The reason given for this remonstrance is that many of the artists and many of their patrons are opposed to the Sunday opening, and think the dissidents should have been allowed an opportunity to express their dissent. This view we have seen expressed in the columns of the *Evening Post*, a journal which is the time-honored organ of the elder artists of this city; but there is another view, which seems to us more reasonable. Among the academicians are many men who sincerely believe their works to be as capable of doing people good as most sermons preached on Sunday, and think that, for a part of the day at least, they should have a chance to be seen by people who rarely see a decent work of art. Of these artists there are many whose patrons, men of wealth rather than of discernment, are not up to the level of popular feeling in regard to the observance of Sunday, and who might possibly have resented a vote in favor of the new plan. In view of the situation of such artists, the Council's course seems to us to have been so considerate and judicious as to merit gratitude and commendation. If the convictions of the remonstrants are opposed to the Sabbatical observance of Sunday, or if their opinions are undecided, we should suppose the Council's action in taking the responsibility of deciding the question must really have their entire approval. If, on the contrary, their objection proceeds upon principle, or rather, let us say, if it springs from a rooted and resolute conviction, or if from any circumstance a protest should seem desirable, of course a decided expression of disapproval can still be put forth; but we doubt if any is heard. We, for our part, wish all the proceedings of the Academy authorities were as judicious as their proceeding in this instance. We wish, for example, that they would take counsel of their courage and invention, and contrive some more efficient sort of committee on the reception of pictures. Surely, if the committee could be so constituted as that its doings should be secret and irresponsible, some of the pictures which disfigure the walls of the Academy would have been instantly sent back to their owners, instead of being received and exposed. We have heard it said of a certain magnificent work now on exhibition in the Academy, that it is there because its author can "command the columns" of some of the cheap newspapers, of newspapers so cheap, too, that—to say nothing of the duty of all men of mature years to discourage them—even the Arcadian innocence and inexperience of the artistic understanding might have been expected to laugh at their pretence to influence anybody's opinions.

—The month of May appears to be a bad month for conventions. They are numerous, but the wisdom with which they are conducted is not seen to be remarkable anywhere, and in this city we are having some deliberations that are even wondrous. The American Labor Reform League is holding its sessions at the Cooper Union, and on Sunday last "Mr. Hanson said he had been trying for six months to solve the problem of the cause of the involuntary misery of nations." It is needless to say that his labors have been crowned with perfect success: "As talents, like natural elements, are the gift of nature to the race, nothing should be charged for their use," and it follows that "no human being can rightfully obtain an income of ten dollars a day." Mr. Heywood agreed with Mr. Hanson apparently, and stated that "the right to an income is purely imaginary," an opinion in which Mr. Brisbane seemed to concur. Mr. Brisbane remarked further that "the kitchen was woman's hell," though he did not say whether she was there as tormentor or as tormented, and that "it took railroads to stop the wickedness of the old stage-drivers." The old stage-drivers were like Saurians, "who had to take in a good deal of carbon to stand the rack of their inclement surrounding." This, we take it, means that the old stage-drivers drank spirits when the weather was wet, and forgot to leave off that practice when the weather was perfectly dry or otherwise clement. In view of these remarks and those of Mr. Hanson and Mr. Heywood, Mrs. Daniels said it must be acknowledged that woman is inferior to man in her reasoning powers. Mrs. Daniels gave it as her conviction that the true course for the Government to have taken at the beginning of the late war was to have submitted to the popular vote the question whether or not the people wished to have their money spent in the bloody struggle. The response would have been in the negative, and, this being so, the debt was unauthorized, and should be at once repudiated as unjust. Mr. Heywood thought, with Mrs. Daniels, that the debt ought to be repudiated, "its principal having been paid in the form of interest." Mr. Hume said that the agricultural laborers in England were, at the present time, "on strike" for the following reason: the peers became angry with Gladstone because he would not allow their sons to buy commissions in the army, so they conspired with the skilled mechanics to ruin Gladstone; then Gladstone, not liking to be ruined, got angry with the peers, and sent his agents down into the country, where they stirred up the soil-tillers so as to give the peers "something to do at home." The Labor Party, which has nominated Judge Davis, was condemned, and of course the Democrats, the Republicans, and "the Liberal Nondescripts headed by Greeley," all and sundry, came in for an impartial and complete denunciation. On the whole, it is an extraordinary gathering this Convention, and, with its outrageous pretensions and its silliness, together with its sincerity and its handling of topics destined to grave discussion at no distant day, it raises once more the question how it is that great reforms and revolutions attract in their first stages all the scatter-brained incompetents and half-crazed enthusiastic imbeciles in the community. We suppose there is no doubt as to the fact; and an explanation of it would be curious. It would be a handy thing to have, too, because when the imbecile or idiot comes forward with a reform which is his own private, proper, personal idiotism, and that unadulterated, pure, and simple, he always says to you, by way of offering his credentials as prophet and seer and inspired reformer, that he was intimately connected with the last Great Movement, whatever that may at the time chance to be. It would, as we say, be more convenient then to have at hand a philosophical explanation such as we have mentioned, because while it would not convince the idiot at all, it would convince the bystander, the third party for whom all argumentation is carried on, just what was the idiot's real connection with the last Great Movement, and make it plain that it was he and the wheel together which made so much dust, and not the idiot, or fly on the wheel, alone. It would be invidious in us, we fear, to point these remarks by naming individual ladies and gentlemen. We wish it would not, as we need not say that we have a great longing to mention the names of some distinguished residents of Boston "in this connection," and also some leading citizens of this city.

—It is well known what facility our troops acquired during the rebellion in throwing up entrenchments, and that anything and everything, from a tin cup to a belt-plate or a broken canteen, was used in digging when the proper tools were not at hand. A distinguished officer once told us of a feat of this sort performed by his command in face of an advancing enemy, when, having ridden at a smart pace down the line, giving the order to entrench, and returned to his starting-point in the course of fifteen minutes, he found already a fortification perfectly made as regards slope and thickness at top and bottom, more than breast-high, and impregnable even to artillery assault. We believe we do not overstate the performance, which of course had the aid of the proper tools methodically distributed at the right moment. The Rice trowel-bayonet, which seems likely to be adopted for our service to the exclusion of the more soldierlike but less useful pointed bayonet, promises to supply every man with a shovel which will be handy on all occasions, but invaluable in certain emergencies, such as having to hold an advanced position in the midst of an engagement. The trials made with this ingenious instrument at some of our Western posts seem to have given universal satisfaction. Had our fathers been provided with it at Bunker Hill, they would have had a substitute for their poor shelter of fences and stone heaps that would materially have altered the fortunes of that famous day. The story of the battle, we may remark, has just been retold in a perspicuous manner, and without embellishment, by Mr. David Pulsifer, whose little pamphlet, containing a fac-simile of a contemporary map of Boston and Charlestown, is published by A. Williams & Co., of the former city.

—The revised edition of the Catalogue of Harvard University for the current year, and the announcement of studies in the college proper for 1872–73, remind us that the elective system of that university, the recent extension of which has excited much interest among friends of learning through the country, is every year acquiring a firmer hold and a more comprehensive and permanent form. It is, indeed, a serious error to regard the changes made a few years ago in the light of *experiments*. They were the well-considered results of a discussion which has been going on at Cambridge for nearly half a century, and were made by a generation that has received its training while that discussion has been pending. Their whole function, moreover, has been to develop the elective system, and that has been fully enough in operation at Harvard College for a long series of years to make its practical character perfectly understood by those who advocated and have sustained its extension. There is, therefore, no reason to be surprised that the new plan of studies adopted two years ago, though it may have seemed revolutionary to those not intimately acquainted with the movement of thought that has been going on in the college circle, has, so far from losing any of its adherents when put to the test of practice, constantly gained new support in the Faculty, among the undergraduates, in the body of alumni, and in the general public. A steady increase has been taking place in the number of students ever since the election of President Eliot gave assurance that liberal and modern principles were henceforth to control the university; and a continually larger proportion of the students make their election of studies with intelligence and pursue them with the earnestness of real scholars, and with success of a higher order than is possible under the old lesson-learning system. The Announcement of Studies for 1872–73 is a highly creditable document, and one that we believe cannot be paralleled by any other university in America. The elective studies, which now constitute more than two-thirds of the instruction of the last three college years, are arranged in eight classes, namely: I. The Classics; II. Modern Languages; III. Philosophy; IV. History; V. Mathematics; VI. Physics (including chemistry); VII. Natural History; VIII. Music. In the first of these classes there are offered in Greek nine studies, occupying in all twenty-five hours of instruction a week, and in Latin seven studies, occupying eighteen hours a week. Instruction is also offered in Hebrew and in the elements of Sanskrit. In modern languages, English, German, and Italian have each three studies, occupying eight hours a week; French has four studies, occupying eleven hours a week; Spanish one study, occupying three hours a week; the philology of the Romance languages, the same; and instruction is also offered in Icelandic and Gothic. In philosophy there are six studies, occupying eighteen hours a week; in history there are six studies, occupying seventeen hours a week; in mathematics there are eleven studies, occupying twenty-four hours a week. In the sixth class, physics proper has four studies, occupying twelve hours a week, and chemistry four studies, occupying eleven hours a week. Natural history has seven studies, occupying twenty hours a week. Lastly, music has two studies, occupying five hours a week. These last studies are open only to students who are already familiar with the elements of musical knowledge, and they are constituted of such subjects as harmony, counterpoint, canon, fugue, and free composition—the instruction being given by one of the few really learned musicians in this country, Mr. Paine, whose university lectures on the history of music have been so favorably received during the last two winters. This programme indicates, as will be most clearly seen by those who will take the pains to scrutinize it in its details, that the extension of the elective system at Harvard College means not only that a greater proportion of the student's time can be disposed at his option, but also that a far wider and more satisfactory range of studies is presented to his choice; that, in short, thorough and advanced instruction is offered in every prominent department of liberal knowledge. Meanwhile, those students who prefer the regular curriculum usually prescribed in a college to any other arrangement of studies can obtain it by a suitable choice of electives. It is interesting to observe that the modern method has by no means had the unfavorable effect which some have feared on the old scholastic studies and especially on the classics. The greatest provision is made and the greatest numbers elect in that department, and instruction of a far higher character can now be given there, as in all other branches of learning, than the old required system rendered possible. Mathematics loses in numbers, but gains vastly more than it loses in the extension and solidity of its courses. The provision in physics, in the programme before us, seems meagre as compared with that made in other subjects; but in the strong corps of professors in that department attached to the university we have assurance that the deficiency is temporary. The system of honors is supplementary to the elective system, but we cannot now enter into the particulars of that scheme. We will only add that the elective studies of the college proper have recently been thrown open to graduates of any college on the payment of certain fees. This is likely to have the ultimate effect of extending the elective system still further, and of attracting to the university a continually increasing body of that serious class of students whose presence gives a high character to any seat of learning and has always honorably distinguished Cambridge. We observe that some improvement has been made in the practical instruction in English composition among the required studies, and a more important step has been taken in providing an elective study in the same subject, though we regret to see that a part of the philological study of English has at the same time been abandoned. We hope that this is only the beginning of an extensive elective course of instruction in English literature and style, in which, as in other subjects, the best work will certainly be done by elective sections.

—M. Emile Ollivier has never given us, from his retirement in Italy, that justification of his ministry which he so promptly promised the world before his blunder, worse than a crime, had borne its perfect fruit. But Benedetti has published his "Ma Mission en Prusse"; and the Duc de Gramont undertakes, in "La France et la Prusse avant la Guerre," to prove that the Emperor had been anticipating the war for three years, and was not the aggressor at last, without explaining why, if that were the case, he precipitated hostilities when he was so wofully unprepared for them. The documents which accompany this defence greatly outweigh in value the evasive arguments they are designed to bolster up. Jules Favre, meantime, still continues his apology of the Government of the 4th of September. The first part ended with the issueless negotiations for an armistice to permit the calling of a National Assembly; the second closes with a narrative of the arrangements at Versailles for the surrender of the city. Prof. J. Chautard's "L'Incendie Moderne" and A. Dupaigne's "Le Pétrole: son histoire, sa nature, ses usages et ses dangers," treat more or less directly of the Commune, which, according to the former, found in the discoveries stimulated by the siege of Paris an arsenal of destructive material of every kind, and ready to be turned on the city itself after it had proved unavailing against the enemy. Two other works touch the political side of the present state of France: "De l'Enseignement public comme principale Cause de la Crise actuelle," by M. Gainet; and a translation, by Louis Régis, of Lord Brougham's "Democracy and Mixed Governments," with an essay on Brougham by Viscount d'Haussonville. In the following there is a look backward: "Un Séjour en France de 1792 à 1795," letters by a witness of the Revolution, translated by H. Taine, in singular ignorance of the writer's sex and real character; "Le Directoire et les Origines des Bonaparte," in Michelet's "History of the XIXth Century"; and the first part of a "History of the Revolution of '48," by Henri Gradis. The interest attaching to Zanzibar, from the recent appearance of Capt. Burton's work on the city, island, and coast of that name, as well as from Dr. Livingstone's connection with it, will secure readers for "Voyage à la Côte orientale d'Afrique pendant l'année 1866," by Rev. Père Horner, missionary to that region and superior of the Zanzibar mission. We mention finally a work of high character, the late Louis de Carné's "Voyage en Indochine et dans l'Empire Chinois," which first appeared in the *Revue des Deux Mondes* in 1869.

—More amusing than any of the foregoing is "L'Allemagne aux Tuileries de 1850 à 1870," by Henri Bordier, honorary librarian of the National Library—a book of upwards of 500 pages, containing the whole or parts of 1,821 letters addressed by Germans to Napoleon III., mostly with the view of begging, and variously servile, impudent, or simple. The Emperor's experience might possibly be matched by Mr. Beecher's, but in some respects was of course unique. As representing France, he was called upon to redeem the old French assignats, even (by the less modest) with interest; as the nephew of his uncle, to bestow his bounty on soldiers of the First Napoleon; as reigning sovereign, to award, in numberless instances, the cross of the legion of honor. If he fell sick, a host of sycophants sent him infallible remedies—specifics and panaceas, salves, balsams, talismans—or offers to visit him in person if the expenses of the trip were paid, or a certain fee guaranteed. One Baurath, in Leipzig, solicited a subsidy of 20,000 francs per annum, to help establish a periodical devoted to religious song. Letter-seals and rare postage-stamps were some of the humbler and more preposterous objects of these petitions. But there was some giving as well as taking, or, at least, a pretence of *quid pro quo*. In this way the Emperor became the recipient of crabs for his table, boots for the young prince, and the confidential communication of all sorts of useful knowledge, political, financial, agricultural, mechanical—a new variety of potatoes, a contrivance for perpetual motion—together with endless quantities of verses on all the marked events of his career, from his marriage down to the Orsini attempt and the plébiscite. A composer of Gotha sent a symphony for the wedding festival, but, hearing nothing of it, asked if he should send a duplicate copy, and then got 100 francs, which spurred him to forward a second part of the symphony, but without result. An original MSS. of Humboldt's "Kosmos" was presented by Professor Buschmann, of Berlin, in return for the honor which he obtained by a little judicious flattery. This was the perfect draught with the author's latest additions; and the mortifying discovery has been made that the same Buschmann presented the rough draught to the Royal Library in Berlin, with a dedication to the King couched in very nearly the same terms as his dedication of the better copy to the Emperor, by whom it was deposited in the Imperial Library.

YONGE'S ENGLISH LITERATURE.*

THE steadily increasing attention paid to the study of English has had the effect of causing a large number of text-books to be prepared within the past few years for the purpose of furnishing instruction either in the language or in the literature. No one will pretend that the quality of these manuals has borne any sort of proportion to their number. As a general rule, it may be said that each one published has seemed the worst possible one until its successor has appeared. Accordingly, as this is the last, it is probably the poorest. At any rate, whatever may be its relative rank, there is no question at all as to its positive worthlessness. It is faulty in its facts, feeble in its criticisms, and absolutely abominable in its style. Professor Yonge's thorough unfitness for the task he has undertaken is manifest from the very outset. It is certainly proper enough for any one to select as his subject, if he so chooses, any three centuries of English literature, and to begin with any author he pleases, as has been done in this book with Shakespeare. But to assign as reasons for such a course those here given, such as that young men should not be recommended to devote their attention to writers of an earlier date, that the study of Chaucer belongs rather to the antiquary than to the modern scholar, that Spenser's works are shut out from ordinary readers by his perverse adoption of archaic forms—these, and statements like these, give ghastly glimpses of the future of instruction in our tongue, if leaders as blind as this are to lead the blind.

This book professes to furnish an account of the lives and writings of the English authors of the past three centuries, together with criticisms upon and illustrative specimens from their works. For this purpose it divides these authors into the seven classes of dramatists, "general" poets, lyric poets, historians, essayists, orators, and novelists, and takes up the members of each class in chronological order. A sort of sop is thrown to Cerberus by putting in at the end an account of Chaucer and Spenser. We do not object to the work that it is incomplete, as it manifestly is, but that it is grossly inaccurate. The list of blunders which a hasty inspection of the book shows reveals an amount of ignorance on the part of the author, which could have been due to no hurried investigation or chance misinformation, but must rather have been the patient accumulation of years. Not only probabilities, but likewise possibilities, are put down as certainties. Errors once prevalent, but along ago abandoned, are carefully revived, while a plentiful addition is made to the already existing stock. Chaucer is said to have been born in 1328, and to have been educated at Cambridge; both of which statements are uncertain, not to say untrue. He is represented as having joined the army of Edward III. on his arrival at man's estate, and as having been taken prisoner by the French a little before the battle of Poictiers. We have Chaucer's own deposition, made in the year 1386 in the trial between Richard Lord Scrope and Sir Robert Grosvenor, that he had borne arms for twenty-seven years, which would fix the date of his entrance into military service as 1359. As the battle of Poictiers took place in 1356, this would seem to indicate a difference of opinion on this point between the poet and the professor. He is also declared to have been a member of the first parliament in the reign of King Richard II. Richard's first parliament met in 1377, the year of his accession, and it was not until 1386, and after the intervention of many parliaments, that Chaucer was elected knight of the shire for Kent. And here again turns up the old story of the poet's flight and imprisonment. As Sir Harris Nicolas thoroughly exploded this more than twenty years ago, it seems to us that it is now nearly time to drop it from our manuals of English literature; more especially as the *Testament of Love* out of which it was concocted is pretty generally conceded to be not the poet's production. Indeed, Professor Yonge's whole account of Chaucer proves conclusively that he himself has followed the recommendation spoken of above which he gives to young students, and that he clearly looks upon himself, to use his own distinction, as a "modern scholar" and not as an "antiquary." He states that our language began to be called English in the fourteenth century, being clearly unaware that it has always been called so by the men who have spoken it, though for the sake of convenience we apply to it in its ancient forms the designations of Anglo-Saxon and Semi-Saxon. He speaks of the very earliest dramas in our tongue as having been composed after the accession of Queen Elizabeth, and specifically mentions "Gammer Gurton's Needle" and "Gorboduc" as being the first. Obviously he has never heard of Udall's comedy of "Roister Doister," which appeared certainly before 1553. The traditional stories of Shakespeare's life are here treated as being not in the least doubtful; and some new facts are furnished, especially in regard to the poet's private opinions, which are unquestionably important if true. He gives extracts from the drama of "Much Ado About Nothing"; but his comments upon it prove that he has either not read the play through, or has not read it intelligently, for many of his statements in regard to it are blunders of the most disgraceful sort. He repeats with childlike simplicity the stories current some fifty years ago of Ben Jonson's special malignity towards Shakespeare, and also remarks that the former conceived that his genius lay more especially in the tragic delineation of character. As out of Jonson's seventeen dramas fifteen are comedies, it is apparent at a glance upon what a firm foundation this assertion rests. In his account of Chaucer Professor Yonge says that that poet seems to have introduced into the language the ten-syllable couplet; in the account of Dryden we are told that to him we owe the introduction of the ten-syllable line. But we must stop somewhere.

In the critical remarks there is something more than mere feebleness; there is frequently an absolute fatuity which defies description, and can be but imperfectly appreciated by detached quotation. In his very opening page the author declares that history must be accounted the most important of all branches of literature; as if, by any possibility, the literature of knowledge, to use De Quincey's distinction, could be placed on a level with the literature of power; or, not to state it abstractly, that Hume, Gibbon, and Macaulay could ever be regarded as the equals of Chaucer, Shakespeare, and Milton. Towards our early authors Professor Yonge uses a most condescending tone. He patronizes them, declares that they did very well considering the circumstances, but that really they cannot be looked upon as models any longer. It would be a waste of time, we are told, to leave late writers and go back to the works of these, "which, however curious and interesting as indications of the gradual growth and progress of the language, and however admirable as proofs of the power of genius to surmount the greatest difficulties and hindrances (for Chaucer and Barbour lived before the invention of printing, and therefore knowledge had unrolled for them but few of her stores), are nevertheless not examples of English as it exists now." Saddest of all words, the poet tells us, is what might have been. What woe must then be ours when we think what Homer and Virgil and Dante would have accomplished if they had only lived after the invention of printing, and had access to the ample stores of knowledge deposited in Queen's College, Belfast. Spenser is declared to be a far greater genius than Chaucer; and this judgment is to a certain extent entitled to respect as regards each poet, because it is dictated by that thorough impartiality which springs from ignorance of both. On Southey, however, our author is thoroughly up. "Roderick" and "Kehama," he assures us, have always had readers and admirers, and he doubts not will a hundred years hence be far better known than the generality of the poems of the present day. This is certainly the gloomiest prophecy that has yet been uttered as to the intellectual condition of the twentieth century. With such sentiments as the foregoing, the manner of expressing them fitly corresponds. The style is vicious in the extreme. The sentences have no organic unity, but are of that involved and cumbrous kind caused by allowing a fact or idea contained in any one clause to suggest the topic spoken of in the one following; and as there is really no limit to this process of tacking clause on to clause, it is purely an act of grace on the part of Professor Yonge that he ever condescends to end a sentence at all. Certainly he who trusts himself to one of them never can predict when or where he will be likely to come out. To call this manner of writing tedious, or crude, or obscure, is putting it mildly. Compared with it, acts of Congress are entertaining, and *Alabama* treaties unambiguous.

In general, we may say we have no admiration for books of this kind, highly praised as they are in certain quarters. When well done they are doubtless of some service; and they are perhaps a necessity till the time comes when men learn that a knowledge of English literature can be got by reading the literature, and in no other way; that to understand Shakespeare, for instance, one must read Shakespeare's writings, and not what other people have said about them. We have given to this work far more space than its intrinsic importance warrants; but if books of this poor kind are to be used in our schools, the least we can do is to insist that they shall not be poor of their kind; that certainly no such dish of skimmed milk as this shall be set before students under the pretence that it is either palatable or invigorating.

A PROTESTANT "SISTER OF CHARITY."*

THE subject of this memoir, Agnes Elizabeth Jones, was the daughter of an English army-officer, and born in Cambridge in 1832. Her history was very uneventful. She enjoyed a careful English education, and made the usual European journeys, learning several of the modern languages, apparently with ease. Miss Nightingale speaks of her as "beautiful, rich, attractive, and witty." In her country home, in the North of Ireland, she early showed her extraordinary sympathy for the sick and unfortunate. Her composure and nerve, which she so frequently manifested afterwards, were strikingly exemplified in very early life.

---

* "Three Centuries of English Literature. By Charles Duke Yonge, Regius Professor of Modern History and English Literature in Queen's College, Belfast." New York: D. Appleton & Co. 1872.

* "Una and her Paupers. Memorials of Agnes Elizabeth Jones, by her Sister. With an Introduction by Florence Nightingale." New York: Geo. Routledge & Sons. 1872.

Amid her earnest religious efforts and her serious and solemn contemplations, a bit of human "common-sense" comes in refreshingly, as where she prays, in her diary, just before going to a social party, that her labors among the poor may not make her "narrow-minded" when in company with people of the world. The most striking thing in her record of her early labors is the joyfulness of them. "How the heart leaps with joy," she writes, "to see a look or smile of welcome from the poor much more than at a warmer reception from the rich!" And, again: "A blessing to-day from old Mrs. W. warmed me so that I felt not the cold; she said: 'The Lord love you, for I love you'" (pp. 48, 49). Her labors around her country home, at Fahan, among the poor Irish peasantry, were incessant, no storm or disagreeable weather deterring her from walks of miles through the hills and lonely moors to give medicine and sympathy to the sick and religious instruction to the ignorant. Throughout her life she felt a special sympathy for the depressed and ignorant peasantry of Ireland. In view of the peculiar calling she had marked out for herself—the nursing of the sick—she early determined to secure a preliminary training in the Institution for Deaconesses, at Kaiserswerth, on the Rhine. The principal benefit, however, she derived from the year spent here, as she avows, was "the habit of implicit obedience." Her duties in the hospital were often of the most menial and revolting nature, but she performed them without reluctance, and even cheerfully. On the whole, the impression left by her brief journal of this famous institution is somewhat depressing, and she seems herself, in her subsequent life, to question the utility of such schools of training, or of these Protestant "Orders," believing that without the dress and the name a lady could often do the same kind of work among her poor neighbors or in the low districts of a city. This impression, from so sensible and devoted a worker, is valuable, and should affect in some degree the increasing tendency of the Episcopal Church, both in Great Britain and the United States, to form distinct orders of female ministers of charity and religion.

After the year in Kaiserswerth, Miss Jones gave herself for a time to the labors of the "Bible-women" among the poor of London; and then, with a view to her especial vocation, accepted Miss Nightingale's proposition to enter, as a "nurse-probationer," St. Thomas's Hospital, in London, for a year's training. We gather incidentally from her journal that at one season here she did not sleep at night in her bed for six weeks, probably doing night-nursing. If this is the preliminary training to which refined young ladies are summoned from their mothers' luxurious homes by Miss Nightingale, we can hardly wonder at her complaints that the women of England do not respond. A refined class cannot step at once into such severe labors without breaking down, while a lower and more vigorous class cannot be much stimulated by an offer of "$50 per annum, with board."

The effect on this sensitive and highly-wrought girl of such efforts was just what any prudent mother would expect—she nearly broke down, and laid the foundation of a weakness which afterwards exposed her to fatal disease. The great work of her life now began to press itself upon her—the proposition to take charge of the nurses and paupers in the immense Workhouse Hospital in Liverpool. These touching passages will show her feelings at leaving home for these new duties:

> "I dare not think of that last morning—must not others have thought me cold? Yet I felt it was almost an eternal farewell to Fahan, a final and deliberate renouncing of home, a going forth, indeed, on a way I knew not. I dared not think almost, dared not cry, and could only occupy myself with the present, and meet the future with 'Lord help me.' J. says I brought sunshine home, which seemed to vanish when I left it. Yes, I was happy; and yet there were times of agony. Mother, sister, home—when ever so dear? I never felt what a life home-life was before; the contrast with the other, and yet that other was very happy; and so I will only think of this, and thank my God, who has hitherto helped, and believe he, who changes not, will surely continue to do so" (pp. 272, 273).

The following description from Miss Nightingale's vigorous pen will give a succinct idea of her work in the Liverpool hospital (pp. 12 and 13, Introduction):

> "All the last winter she had under her charge above 50 nurses and probationers, above 150 pauper scourers, from 1,290 to 1,350 patients, being from two to three hundred more than the number of beds. All this she had to provide for and arrange for, often receiving an influx of patients without a moment's warning. She had to manage and persuade the patients to sleep three and four in two beds; sometimes six or even eight children had to be put in one bed, and, being asked on one occasion whether they did not 'kick one another,' they answered, 'Oh, no, ma'am, we're so comfor'ble!' Poor little things! they scarcely remembered ever to have slept in a bed before. But this is not the usual run of workhouse patients. Among them are the worn-out old prostitutes, the worn-out old thieves, the worn-out old drunkards. Part of the work in workhouses is to see that the dissolute and desperate old sinners do not corrupt the younger women—fallen, but not hopeless; to persuade the *delirium tremens* case, wandering about in his shirt, to go quietly into his ward and his bed. Part of the work is to see that the mothers of the sick children do not quarrel, ay, and fight, and steal the food of one another's children. These are among the everyday incidents of workhouse life."

She herself felt most keenly the discouraging, debauched character of those large English workhouses (pp. 354, 355, 356):

> "I was one day coming in at the gate, and admiring the beautiful bread and plentiful supply, when, just because a bit of crust was burned—I should have liked it to eat—a woman began railing against the food provided. So it is often with our patients. There have been some fearful scenes in the oakum sheds lately, rivalling the 'prison matron's' revelations. You remember our visit there, and the woman who accompanied us. On Saturday the women in the sheds attacked her, threw her down, tried to run hair-pins into her eyes, and, when assistance arrived, were pounding her all over. . . . More and more I come to the belief that *these large institutions, grouping together such numbers, are the ruin of the inhabitants.* One would blush to tell the knowledge and practice of the vilest sins among the children, girls of seven escaping to be brought back from the vilest houses. On Wednesday we had a patient brought in who had gone out well a few weeks ago; he looked more like a wild beast than a man; he said he had not had his clothes off for three weeks, nor 'seen his legs,' deeply ulcered as they were. He had been drinking freely, and was on the verge of delirium tremens, of which he died that night. I sometimes wonder if there is a worse place on the earth than Liverpool, and I am sure its workhouse is burdened with a large proportion of its vilest. I can only compare it to Sodom, and wonder how God stays his hand from smiting. Then, so little effort is made to stem the evil. All lie passive, and seem to say it must be. The attempt at introducing trained workers has certainly not met with any sympathy from clergy or laity. In the nearly ended two years of our work, how few have ever come for the work's sake to wish us God-speed in it! I do not mean to say that I am discouraged . . ."

No labors which a friend of humanity can perform at this day are so utterly depressing, disheartening, and without external reward, as those for the semi-criminal pauper class. Yet for years this gentle and refined woman, with scarce a look of sympathy to encourage, ministered to the bodily wants, afforded her rich sympathy to the sorrows, and brought her religious inspiration to reform the vices of these ruffians, vagrants, harlots, and beggars in the Liverpool Workhouse. From five o'clock each day till eleven at night, with scarcely a half-hour for repose or reflection, with no congenial society or books, her only pleasure the few flowers sent in by a friend, she labored and toiled among these outcasts, not even allowing herself recreation at her meals, but taking them with the nurses, that she might influence them even then. All this done, as Miss Nightingale says, utterly without consciousness or vanity, simply from love for humanity and for her ideal "Friend." Her business and executive faculty seems to have been equal to the religious inspiration which filled her, so that everything under her charge flowed calmly and evenly. Her influence over the nurses and the sick and criminal was of course deep and pervasive, and she seems to have given an unaccustomed tone of humanity even to that dreariest of all administrations, the poor-law system. In such labors as these, an organization so delicate and highly strung as hers naturally soon gave out. Her health gradually failed, and in the third year of her work she contracted typhus from an assistant whom she had placed in her own bed, and died as joyfully and sweetly as she had lived. The light from her faith illumined the great darkness beyond. It was a fitting close that the tears of the pauper and the outcast she had labored with fell upon her coffin, and that the wild flowers she so much loved were scattered over her grave by crowds of poor whom she had befriended.

This little memoir will undoubtedly affect very profoundly great numbers of the young, both in England and America. But the question must be raised by every judicious mind, "Was this life wisely guided, and was it spent for the best purpose?" It is invidious to object to any deed of humanity. He that "giveth the cup of cold water" to the pauper and vagrant shall have his reward in his own consciousness and the gratitude of mankind. But here was a woman evidently of uncommon moral power; here was a country filled with startling evils, some of which might have been reached in their source. Would not Miss Jones's work have been a deeper and more lasting one had she devoted herself to purifying the springs of pauperism and crime instead of cleansing the full stream in its later and more powerful course? Would not these "women of England" whom Miss Nightingale so eloquently summons, be better employed in teaching the children of the poor, in promoting popular education, in elevating the working masses, in drying up the source of crime and poverty, and in solving some of the social problems which have created all these paupers and outcasts, than in despairing and exhausting efforts for the old vagrants and prostitutes and beggars in workhouses and hospitals?

Moreover, if our ladies undertake such labors, they must do them as men are accustomed to perform them. They should have time for recreation and variety; they should enjoy their proper rest; they should "organize" thoroughly, and learn to make others work for them; menial labor should be given to those trained for it, and the brain should take the place of the hands. With benevolent labor systematized in this way, the laborer in this field may work healthily a lifetime, instead of breaking down or spending himself in three years.

SOME RECENT NOVELS.[*]

THE principal objection, though by no means the only one, to Mrs. Spofford's story is its immorality. It is simply a very poor story of adulterous love. The heroine, Catherine Stanhope, while yet a girl, goes out on what is called in Boston the "North Shore" to gather samphire—in other novels it would have been sea-weed or clams, but Mrs. Spofford must have samphire—and, being overtaken by the tide, is in danger of getting her feet wet, when one Beaudesfords, a man quite as elegant as his name, happens to be passing in his sail-boat with his friend, Major Gaston, of the United States Army, and takes Catherine and her younger sister, Rose, ashore. It was here that the harm was done. As for the passionate love that instantly devoured these two men, who can chronicle it? "One not sooner than the other was wild with love of Catherine Stanhope."

> "'Beautiful, by God!' exclaimed Gaston.
> "'By all the gods!' cried Beaudesfords, turning on his seat.
> "'When was such a group seen before—two such women'—
> "'Ah! I saw but one,' said Beaudesfords.
> "'And yet the picture would be incomplete without that carnation on the darker cheek.'"

Could there be a better beginning for a love story? A samphire gatherer, "a fair, white woman, with hair of palest tint—so white was she that you saw the tracery of blue veins upon her temples and her throat: the large eyes were scarcely bluer. Though dark brows and darker lashes lent those eyes shadow and depth, they had an inner splendor of their own, a light that seemed to burn from the brain; they were strong and searching eyes, rejoicing eyes, that said, although the heart should break, the spirit would be glad and safe. But the mouth was another thing; for albeit its lips were like some pulpy fruit, yet the smile that played around its corners was full of melancholy." As for the men, Beaudesfords was a "millionaire from his cradle, his profile like that on the coins where the conquering Alexander had his own likeness struck in the name of Apollo." But what are those advantages compared with those of Gaston—debt-ridden poverty, a scar received in frontier service, and a habit of intense reserve and desperate mooning? Gaston and Catherine fell in love with one another in a gloomy way, Gaston's part in the flirtation consisting in being very strong, ugly, reserved, bitter, and generally offensive, while Catherine gushes and snubs Beaudesfords, until at length for the sake of "comfort for Caroline, peace with her mother, a future for Rose, the wealth and splendor that she loved, sumptuous ease, the certainty of honoring, the possibility of more, since life was so arid, since he was so kind," she marries him. Of course, she does not like him—what can be expected of women who gather samphire? She grows pale at home, and Beaudesfords takes her abroad. On his return he meets Gaston on his threshold, and the story fairly begins. Gaston is persuaded to stay with them while he oversees the building of some water-works in the neighborhood. The husband, as is usual in such cases, is good-natured, innocent, and madly devoted to his wife, who lies awake half of every night crying. Gaston stands in dark corners, leans on mantelpieces, and glowers. Of their calm domestic life we may take this as an example:

> "Gaston had just given his cup to the servant, and was standing before her' leaning one arm on the mantel; perhaps she did not care to dwell on the sight. Ere he could offer to conduct her, a scale ran up the keys of the piano; she had seated herself and commenced playing. 'Frost-bitten,' said Beaudesfords. 'The tones tinkle like icicles as they fall from your fingers.' He lay in the great cushions of the lounge, their soft carnation lending his face a flush and deepening the tints of his yellow curls. Catherine looked at him a moment, and thought of some of the richly-colored canvases she had stood before in Europe. His head was something superb; it had the look of some Capitolean god's; such youth and beauty had a kind of majesty next to immortal majesty. Then, the piano facing down the room, she raised her glance. Gaston still stood against the mantel, surveying her with his darkening eyes—the plain face, with its scar, its ruggedness, its gloom; and the other went out like a star in the night."

So they go on, Catherine feels herself "drifting," Gaston plays the mysterious, until "Candlemas," which is celebrated in the good old-fashioned New England way, with the guests, "tenants," and servants out-doors, "circling and recircling, and weaving a tracery of brilliant flourishes till the whole field was brocaded with trailing lines of light." Catherine and Gaston are watching this sight with a pardonable curiosity, when he asks her if she is cold, and, in his impetuous way, tries to pick up a fur cloak that had slipped from her shoulders. A little girl, the gardener's daughter, happened to be standing on it, and she is hurled over the balcony upon the ice beneath. This little incident arouses in her mind a not unnatural prejudice against Gaston, and, at last, she tries to think better of her husband. She determines to write to Gaston and ask him to go away. Her husband gets the note instead, takes to his "carved mother-of-pearl bed," and, to oblige his friend and wife, cuts his throat. The opening chapter of the novel represents him lying there, and the reader is started off on the false scent of his wife having murdered him. Gaston enters the room where Beaudesfords is lying in his gore, and with rare tact chooses that time and place to make hot love to Catherine. She refuses him; the husband revives, recovers; Gaston becomes an acknowledged maniac at first, and then again a prominent engineer in possession of his reason and so freed from this passion. Catherine loves her husband, and all is peace, and morality, it will be said, is triumphant.

The impression that this novel makes is a very curious one. The author sins against reality both by improbabilities of fact and impossibilities of sentiment. There is a misplaced splendor about it, a tawdry elegance, in which our own New England "Ouida" delights, which is as incongruous as a masquerade dress in a horse-car. The characters flaunt about in brocades and silks and satins; they dine off of gold, and never speak without alliteration. They are as elegant as the ladies and gentlemen on tailors' pattern sheets, but look to see what they really are, and you find something equally offensive by reason of its silliness and its wickedness.

The next of the volumes on our list is a very interesting sketch by the author of "High Mills," which we had occasion to review a few weeks ago. This story shows, to our mind, a greater degree of the same power which was to be seen in that novel, the power, namely, of a conscientious and thorough treatment of a severe plot. This story is a painful one. It is a study of a morbid character, but the work itself is far from morbid, it is intense. It is a book which can be rather admired than liked, for its grimness is a quality that is exceedingly prominent. On this account, it, like the "High Mills," may perhaps be found of less interest to the ordinary novel reader than to the by no means small class of those who are writing novels. In these days, when one sees so many stories in which the interest is so cheap, the attractiveness so flimsy, one cannot be too grateful for a novel which shows that the author is not above real and serious effort in her work. Of the sketches in the other volume this can hardly be said. They are good, although not of equal merit, and may very well be more popular than the rest of her work. They are all serious, and even pathetic; the quality most noticeably lacking, especially in comparison with the similarly unambitious work of Mrs. Parr, the author of "Dorothy Fox," is humor. But both of these ladies understand very well how to represent the poverty-stricken life they so often choose for their subject, without the sickly sentimentality that often mars such sketches of "still-life."

"A Crown from the Spear" is a novel of France of the Empire, but one that, were it not for occasional references to cigars, the railroads, etc., would seem to refer to, say, the middle of the sixteenth century. Not because it contains any such accurate study of human nature as is true of all ages and in all places, but on account of that vagueness of outline, that lack of sympathy with any human feeling which we generally find in melodramatic romances where descriptions of lofty castles, prancing steeds, and restless drawbridges lull the reader into forgetfulness of better work. We have in this story a cool-headed villain, who talks to himself as follows:

> "How I have delved, how I have dug into the mines of knowledge, that I might find the rare gems below the ken of the superficial seekers! I have explored the mysteries of the Cabala; that wonderful science has been my study day and night; the Zohar is my code; the languages of the past, most hidden among the things hidden, are as familiar to me as household words. Alchemy has revealed to me its secrets and its marvellous laws. Metaphysics have become to me but a repetition of commonplace dogmas. I have analyzed all, and each particle is before me separated from all foreign matter. I can weigh them in the minutest scale, and my nice balance is my judgment. The ignorant look upon me as a sorcerer. I am a sorcerer, for knowledge is sorcery. Fabien, the canon, at twenty-five, has more within the circle of his brain than the oldest doctor of the schools. *Laus Deo* for such power. My peers look upon me with amazement. Honors are being heaped upon me," etc., etc., etc.

"Fair to See. A Novel. By Lawrence W. M. Lockhart." New York: Harper & Brothers. 1872.

There are maidens distraught with love; there is the active villain who accomplishes the wiles of the crafty and conceited soliloquizer; there are separations, suicides, prison scenes. The hero wanders through France with a trusty hunchbacked servant, like a knight-at-arms, and, with the singular incongruity that perpetually surprises one in reading the novel, writes for the *Revue des Deux Mondes*, and is imprisoned for violating the laws about the press in his newspaper articles. The result of this combination is that we have both a poor romance and a poor novel. In the romance, one is willing to allow almost any use of machinery, provided the story is interesting; and in the novel we demand, as a basis, a resemblance to life as it is seen about us. While this is easily said, it is seldom attained. Novel-writing is like any other art: the end is clear enough before us, the means of attaining it are obscure. This story fails from its coldness. It is as artificial as a panorama, and moves in very much the same way. Different scenes are presented to us, but the characters are all in one position as long as we see them. In the extract we quoted above, does our author find any touch of nature? Rather, is it not the conventional soliloquy of the conventional villain? And that is the fault of the whole book. The author writes smoothly and has some power, which we trust to see in the future applied to less artificial stories.

"Righted at Last" is another American novel. It is the autobiography of a pauper girl who, after some years of harsh treatment, is taken from her squalid home by a rich young woman, who adopts her. She is sent to a school, in which she in time becomes a teacher, and afterwards, of course, she is found to belong to a high-born family, and she marries her aristocratic and wealthy lover. Every novel-reader knows the calm dignity that heroines display under the jibes and sneers of the cold world, how their acute conversation with the rather jaded hero shows immense reading, profound thought, and in time excites a tender interest even in his cynical heart. The retorts she makes to the fashionable people who snub her are very cutting, but at the end all are forgiven who have done wrong and the others are made happy. In short, the author has found it necessary to write a novel. But we cannot help thinking that she would do herself more justice if she would write simple sketches without the formality of a threadbare plot, would describe the characters with which she is familiar; we recommend as a model the second and third volumes of our list. Her novel is not without a certain modest merit, which, however, is more negative than positive, for it consists in the avoiding of certain common faults.

"Fair to See" is an exceedingly readable novel. It is an English story, The characters are two officers, one an enamored youth, the other a friend; two Scotch girls, one a flirt, the other sincerity itself. It is a very simple tale of a certain passion not wholly unfamiliar to the novelist, and it is very well told—in fact, it is just what a novel that is to be read once ought to be. At times it is very amusing, and it is never dull.

South-Sea Bubbles. By the Earl and the Doctor. (New York: D. Appleton & Co. 1872.)—When an author tells us that his work is made up of sketches from a log-book saved from a wrecked vessel in a moist and unpleasant condition, he at once disarms criticism as to the style, manner, and arrangement of his notes. That he was "persuaded to publish them" is a touch of nature which makes us (book writers) all akin, but it is, nevertheless, a feeble excuse worn so threadbare that it adds no force to the penetrating plea of pervading dampness. We read of Tahiti mountains, of every shade of blue, pink, gray, and purple, towering up from the bright green ocean, grand palms and cocoanut trees, huts peeping out from among the forests, soft summer seas stretching over dark water caverns where your gaze goes dreamily down among great fans of crimson coral and tufts and mounds like unto chased and carved ivory, amid which dart and shine fishes of wonderful shape and exquisite color—red, golden, orange, and cobalt-blue! How all this vividly recalls pleasant recollections of what in younger days we read of Typee, Omoo, and Mardi, and, although our respect for a live earl is very great, we still desire nothing better in the way of pictures of South-Sea scenery than those of Herman Melville, and, indeed, could not find them if we wished.

A wealthy and titled young English gentleman, with his own yacht floating in the bay, plenty of money in his pocket, and the object of the profuse attentions of foreign dignitaries and of all the natives from Queen Pomaré down to the scantily attired little boys and girls, needed no aid nor incitement from the exquisite scenery of Tahiti, Eimeo, and Huahine to see everything through a roseate tint. Of this state of things the picture of an earthly paradise is the inevitable result. The natives appear to have nothing to do but catch fish in picturesque attitudes, walk among orange groves with beautiful wreaths of *seva-seva* on their heads, eat bananas when they are hungry, and recline in slumber, fanned by balmy breezes, when they tire of doing nothing. An impatient foreigner is made to complain to our author that these happy people won't work, saying: "They've got their grub hanging over their heads, and their water at their feet; and when they want fish, they can go out and get it as soon as they like. If I could only get two nights' frost to make them work for their breakfast, I might do what I liked." But full well we know that through this Garden of Eden creep very many forms of the serpent, to say nothing of a multitude of small snakes; that the houris smell very strongly of sour cocoanut oil; that many of the lithe-limbed, bronze Apollos are swollen with leprosy; that the Elysian swains get unmanageably drunk on vile fire-water, and beg tobacco and old clothes; that vice and disease and improvidence embrute the father and mother and kill the child; that the paradise is to be depopulated. Even our enthusiastic bubble-blower unconsciously recognizes their presence in such unintentional admissions as these: "The natives suffer much from cold and rheumatism" (p. 23). "The chief occupation of the natives is gambling" (p. 29). "Elephantiasis is fearfully common both among the whites and natives, and is an intermittent disease" (p. 111). If we cared to do it, we might materially swell this list of infelicities, more especially under the medical rubric.

Our author is evidently a young gentleman—quite young, we should say—upon whom neither the anxieties nor the responsibilities of life have weighed very heavily; and he disposes of the knottiest problems of cosmogony, ethnology, theology, morality, and social existence with a *disinvoltura* quite charming. The ardency of the Southern suns has proved too much for the coolness of his blood, and we might almost apply to him his own words about his Otaheitans, and say that his pages reflect rather shamelessly, if we must use a harsh word, "the sublime innocence of perfect immorality." There is also a sublime impudence of imperfect morality, we must remind him. As we have been so easy on his sinfulness, we will say nothing of his syntax and his slang. Both are good enough for a peer of the realm.

Vollständige Sammlung der geltenden Wechsel- und Handels-Gesetze aller Länder. Von Dr. S. Borchardt, Geheimer Justizrath, Ritter, etc. (Berlin: R. v. Decker; New York: B. Westermann.)—This is a work of truly German industry and research—an essay toward an international and uniform code of exchange and trade. The first step toward a consummation so devoutly to be wished being the analysis of existing codes, with a comparison of their differences and possibilities of adjustment, the commercial codes of all countries in which laws or usages having the force of laws exist are brought together in their original texts—Spanish, Danish, French, Greek, English, Dutch, German, Italian, Portuguese, Hungarian, Roumanian, Russian, Turkish (through the medium of French)—and are also presented in a uniform German dress. As yet only the first division of the work has been published, the Laws of Exchange, making two volumes of 608 and 520 pages large octavo; the second containing the original texts, and the first the German translation. Not only the great commercial nations are represented, but all the Governments of Central and South America, Hayti, San Domingo, the Sandwich Islands, Malta, and Monaco.

The first impression of these multifarious codes is that their diversities are beyond the reach of adjustment; but Dr. Borchardt has reduced them to a systematic classification under two general groups: those which follow the French commercial code of 1807, and those which follow the German exchange laws of 1848 and the commercial code of 1861. To the first belong Belgium, Egypt, San Domingo, Greece, Hayti, Holland and her colonies, the British possessions of Lower Canada, Malta, and Mauritius, Italy, several Swiss cantons, Serbia, Turkey; and substantially in the same category are Spain and Portugal with their colonies, and the states of Central and South America.

The second or German group embraces as yet only Germany and Austria, with the exception of Hungary, under the commercial code; but the German laws of exchange are followed also by Finland, Sweden, and sundry Swiss cantons. Outside of these groups, Russia has a complete code of her own; Great Britain with her colonies and the United States of North America have sundry particular commercial laws and usages, which, especially in regard to exchange, agree in essentials, and have found acceptance in the Sandwich Islands and the colony of Liberia. The French laws of exchange obtain over an area of 507,500 square miles (German), with a population of 233,700,000; the English and American over 509,400 square miles, with a population of 252,300,000; and the German and more modern rules of exchange over 32,130 square miles, and 71,600,000 inhabitants.

After a critical specification of the main points of distinction in these several systems as to value, recourse, endorsement, etc., Dr. Borchardt emphasizes the newer legislation which is gaining ground in France, Germany, Austria, England, Sweden, Switzerland, Chili, and the United States, by which the once universally-allowed immediate execution against the person of the debtor is no longer permitted.

Such diversities in the laws and usages of exchange as present themselves in the codes compared in these volumes, are not founded in the nature of exchange itself, nor are they the necessary result of local circumstances; they are far more likely to proceed from some preponderating notion or doctrine of the science of rights current at the time of such legislation, or from a regard to the growing necessities of an increasing and ever-expanding commerce, which now spreads itself over the whole world without respect to the boundaries of nations. And hence, in view of the cosmopolitan character of exchange—the chief medium of commerce—the attempt should be made in the common interests of trade to set aside these diversities, and to merge all codes and systems in one international code of exchange. The bare suggestion of such a code reminds us how far our] age has advanced from feudal times; and the feasibility of such a code, as demonstrated by Dr. Borchardt, gives hope of a millennium of political economy. His work is a valuable study for statesmen.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*	
Alexander (S. D.), Princeton College during the Eighteenth Century	(A. D. Randolph & Co.)	$2 50

SUMMER TRIP TO ENGLAND
AND
THE CONTINENT.

The Principal and Professor of Modern Languages of a long-established and prominent Boys' Academy purpose taking a party of six young gentlemen on a three months' tour through England, Scotland, France, Switzerland, and Germany, sailing the last of June. Oral instruction will be given in History, and opportunity will be afforded for daily conversation in German and French.

Two or three boys of satisfactory character will be received.

For particulars, address

M. EDWARDS,
737 Broadway, Albany, New York.

COZZENS' WEST POINT HOTEL will open on the first day of June, under the direction of the undersigned. Three Cottages to Let, with board in Hotel. For further particulars address EDWARD COZZENS, West Point, N. Y.

A GRADUATE of HARVARD COLLEGE, who has had two years' experience as teacher in the best private schools of Boston and New York, will instruct a pupil during the Summer months, either in the city, country, or abroad. Address H. N. K., Box 100, Tribune Office.

MADAME MONDAN advertises her purpose of opening, on May 1, 1872, a Family Boarding School for a very small number of American young ladies at her house, No. 292 Rue Rogier, Bruxelles (Belgium). Madame Mondan is an American lady, for many years a student in Germany. Full particulars of the school will be found in circulars which are with Messrs. E. P. Dutton & Co., 713 Broadway, and Messrs. Holt & Williams, 25 Bond Street. Special information may be gotten by addressing P. O. Box 3819, New York, and reference is made to the gentlemen whose names follow: The Hon. Wm. A. Buckingham, U. S. Senate. Hiram Orcutt, A.M., Principal Tilden Ladies' Seminary, West Lebanon, N. H. The Rev. D. F. Banks, Yonkers, N. Y. The Rev. D. C. Roberts, Lowell, Mass. Gen. S. G. Griffin, Keene, N. H. James E. Learned, Esq., 209 Pearl Street, New York.

UNION COLLEGE, SCHENECTADY, N. Y.—Alumni Day, Tuesday, June 25th. Commencement, Wednesday, June 26th. For Catalogues or Circulars, address E. M. Jenkins, Registrar. For information respecting the Civil Engineering School, address Prof. Cady Staley.
E. N. POTTER, President.

GAZZAM'S TREATISE
ON THE
BANKRUPT LAW.
FOURTH EDITION NOW IN PRESS.
W. C. LITTLE & CO., Publishers,
Albany, N. Y.

JUST ISSUED:
A TIMELY AND INSTRUCTIVE WORK.

THE SCIENCE OF WEALTH:
A MANUAL OF POLITICAL ECONOMY,
EMBRACING THE
LAWS OF TRADE, CURRENCY, AND FINANCE.
Condensed and arranged for Popular Reading
AND USE AS A TEXT-BOOK.
BY AMASA WALKER, LL.D.,
Late Lecturer on Public Economy, Amherst College.
Complete in One 12*mo Volume, extra cloth,* $1.50.

LEADING TOPICS.

SLAVE SONGS OF THE UNITED STATES.
A Unique Collection of Original Melodies—words and music—obtained among the Negroes of the South; preceded by an account of these Songs, and an Essay on the Negro Dialect, as observed at Port Royal. By Prof. W. F. Allen, of the University of Wisconsin. Cloth, 8vo, price $1 50.

Sent post-paid on receipt of price. Address
Publisher of "THE NATION,'
Box 6732, New York City.

LIFE AND LETTERS OF CAPTAIN JOHN Brown. Edited by Richard D. Webb. The best ever written. With photograph showing the face without the beard. Price $1 50. Address, Publisher of THE NATION, Box 6732, N. Y.

CRITICAL AND SOCIAL ESSAYS. Reprinted from THE NATION, and in some measure supplying the place of the first two volumes of the paper, now somewhat scarce. Price $1 50. Address, Publisher of THE NATION, Box 6732, N. Y.

The Nation.

NEW YORK, THURSDAY, MAY 16, 1872.

The Week.

IT is almost impossible to form as yet an idea of much value as to the political prospect. But it is pretty certain that Greeley has gained steadily during the week, that much of the ludicrousness of his nomination has worn off, and that the feeling in favor of his adoption at Baltimore grows apace among the Democrats. In fact, the Southern Democrats have been laboring incessantly, and with considerable success, ever since the Convention, to create an opinion favorable to him which by the 9th of July would be strong enough to make his adoption seem a necessity. The unknown element in the problem is the extent to which the Democratic Convention can command the allegiance of the rank and file when the ticket is no longer regular. The calculation of the best judges is that twenty-five per cent. at least will wander off and follow their own sweet wills when the chiefs give up the game, and of these of course the great mass would go for Grant. Mr. Voorhees, of Indiana, who is, if anybody is, in good and regular standing in the Democratic church, has declared his sentiments on the subject of Greeley in a speech which was what the reporters call "excoriating," and doubtless was a very good statement of the reasons which will operate most powerfully against Greeley at the Convention. It was the more significant as it took the form of a comparison between Greeley and Grant from the Democratic point of view, and the result was altogether in favor of Grant—Greeley having to bear the burden of the Ku-Klux law and the Election law, to say nothing of his abuse of the Democrats from time immemorial. Against his bailing Jeff. Davis, Grant has to show *his* preventing the arrest of Lee, Johnston, and other Southern leaders after the surrender, and he has advocated amnesty if not as *often* as Greeley, as much in proportion to his means. But all the indications we meet with go to show that Democrats of the Voorhees way of thinking are in a minority, and that Greeley will be nominated and heavily supported by the party.

How Greeley gets on in the Republican ranks is more difficult to determine, as there is here much greater silence, and probably far more doubt and uncertainty. But he certainly does not lose ground, and this fact alone helps to demoralize the Administration men. As against them, he has been aided powerfully during the week by the "Treaty muddle," as it is now the fashion to call it. There is some slight talk, which however gains but little ground, if any, of Grant's withdrawing at Philadelphia. There are various small signs of a diminution of confidence among his friends, but not a few of them, and by no means the least sagacious, still maintain that the sober common sense of the people is at work on Greeley's case, and not in his favor, and that he will be repudiated by an enormous but *silent* majority in November—the "average man," however much he may enjoy the *Tribune* and admire its editor, being by no means prepared to hand the Government of the Republic over either to "honest Horace," or "honest old Horace," or "the Sage of Chappaqua," or "the later Franklin," or "the typical American," or to take it for granted that anybody who wears a "white hat" or "white coat" must be a statesman. "People say a great many wild things," said a very shrewd politician to us the other day, "but they do not say them in court with their right hand up, and there will be a great deal of admiration expended on Greeley's old clothes and 'big brains' between now and November by men who will take care not to show it at the poll." In other words, the greatest blatherskite among us has a little property and loves his country, and will feel that, good a man as Greeley is, he wants that fundamental title to human confidence which consists in furnishing by his daily conduct trustworthy materials for a judgment as to what he will do next.

Greeley's greatest embarrassment has threatened to be the *Tribune*, his connection with which he has just suspended. That he has not suffered from it seriously thus far must be ascribed to the singular discretion and fairness with which it is managed. A large portion of its space is given up to the comments of papers hostile to the Cincinnati nominee, and its articles on delicate questions are models of temperance and good taste. Indeed, the most wonderful decorum has settled down on the whole party press, owing to the dreadful uncertainty which prevails as to the future. It will hardly do to call men "dogs," or propose to "tie their legs to chairs," or accuse them of stealing sacramental plate, when half a year hence you may have to act with them, and find yourself in cordial agreement with them. Accordingly, the "organs" are all playing simple and soothing strains calculated to allay bitterness.

In spite of appearances, the nominations made at Cincinnati were essentially Western and not Eastern. Mr. Greeley, though born in New Hampshire and identified in his manhood with New York, would never have been deliberately chosen with a view to the vote of this section of country or of New England. Nobody will pretend that in either he could command a majority of Republican votes against the regular candidate. In fact, if New England had entered into the Liberal movement with anything like the zeal manifested in other States, there can be no question that Mr. Greeley would never have come to the front in the Convention. And it may be well for the better class of New England Republicans to reflect that if we are fated to exchange Grant for Greeley, it will be due to their timidity or indifference, to their studious contempt, in fine, of an honest effort at reform, for which they must suffer in common with the rest of us, but without the consciousness of having merited a different dispensation. When we turn to other sections, it does not appear that in Pennsylvania Greeley's protectionism is so much superior to Grant's as to invite a change, and it is not till we get to the West and South that there are very decided manifestations, if not of personal devotion to the editor of the *Tribune*, at least of great willingness to accept him as a relief from Grant. Even here, we believe somewhat without certain evidence. Of the South—the white South, of course, speaking through the Conservative press—we consider it fair to say that it is perfectly ready to support Mr. Greeley, but without enthusiasm. Its support, if largely due to his position in regard to amnesty, and to recollection of his services to Jeff. Davis, is also, we think, based upon an unsentimental calculation of chances; and would have been given quite as freely—perhaps with less reluctance—to some other equally promising candidate.

There could hardly be more striking evidence of the extent of the present political disorganization than the contest in Connecticut over the senatorship. Senator Ferry, whose term is expiring, is a very respectable and able man, but is open to the objection of feeble health, and leans toward Liberal Republicanism, or, rather, towards discontent. His re-election has been contested by General Hawley, also a respectable and able man with a brilliant war record, who is strongly devoted to Grant, and was nominated by the Republican majority in caucus. But Ferry led off enough discontented Republicans to give him, in combination with the Democrats, sixteen majority in the House, and to promise him at this writing ten majority on the joint ballot. The contest has been very exciting, and will probably lead forthwith to the formation of a Greeley party in Connecticut, and furnishes another sign to all whom it may concern that the work of "abolishing slavery and suppressing the rebellion" is ended. It was embellished by the appearance of a protest against caucus nominations, signed by Doctors Woolsey, Bacon, and others in New Haven, taking the ground that caucus dictation or selection of candidates in cases like this, in which no principle was involved, was improper, dangerous, and hostile to the spirit of our institutions, which rest on the independence of the individual judgment. This told against General Hawley, and is somewhat bitterly resented by him as (sarcastically) "a highly moral movement." The "moralists" are having a hard time in politics just now. If they produce any effect, they are set down as canting hypocrites; if they produce none, as harmless visionaries.

Mr. Gladstone has made a speech in the House of Commons, which throws some and much needed light on the transactions of the last fortnight regarding the "consequential damages," but is not likely to improve the position of the Administration here, as it is triumphant in its tone, and has even been accepted by the Opposition as a vindication. It appears from it, barring some errors of detail, that the proposal to add a supplemental article to the Treaty, explaining to the arbitrators that the United States expected no award of money under the claim for consequential damages, and that they (the arbitrators) were not to make any, came from General Schenck, and has been accepted by the British Government as the condition on which the claim will be allowed to stand in the American Case. The President has sent the additional article to the Senate to ascertain in advance the disposition of that body, and to solicit advice, and Mr. Sumner has attempted, but, we are sorry to say, failed, to get it discussed in open session. It will probably be approved now and ratified shortly, and, if it is, the troublesome business will be at an end, after having disgusted and wearied the entire population of the United States, except the Indians not taxed. Earl Granville's draft of the new article rehearses, on the part of England, her contention that the indirect claims were not included in the Treaty, and should not be admitted in principle as growing out of acts committed by particular vessels, in consequence of imputed negligence; and makes the President of the United States, while adhering to the opposite contention, consent to "adopt for the future the principle contained in the second of the said contentions, so far as to declare that it will hereafter guide the conduct of the Government of the United States"; and agreement thus having been reached, the President "will make no claim on the part of the United States in respect of indirect losses as aforesaid before the Tribunal of Arbitration at Geneva."

If the Senate ratifies this, there is hope that all will now be well, and the important doctrine will have been incorporated into international law that no nation will have to pay all the cost of its neighbor's fighting after the escape of a privateer from its ports to take part in the contest. This mode of settlement is ingenious and respectable, but why not lay the civilized world under still further obligations by another article, providing that personal vituperation and profane swearing shall in no case hereafter be permitted at any diplomatic conference, and that in all cases where the furniture is broken in personal encounters between high commissioners and envoys-extraordinary, the damage shall be paid by the powers by which the actual combatants shall be accredited, and shall in no case be levied upon *all* the negotiators present, unless all shall have taken part in the fray? The absence of any settled rule of international law on this point is a source of considerable anxiety to some minds, and the existence of the Geneva Conference seems to promise a happy opportunity for supplying one.

We shall be sorry to have the matter pass away, however, without some of those who have so vehemently opposed the withdrawal of the claim for the expenses of the war after Gettysburg telling us where they got the notion that when two disputants agree to leave the matter in dispute to arbitration, either party can submit whatever points he pleases, whether the other party agrees to them or not, or is willing to be bound by the award on them or not? In what year of what era was arbitration of this sort in vogue? Is not the consensus of the parties upon the points to be submitted the very essence of the whole process? Is it not as ridiculous to talk of arbitration in which this consensus does not exist, as to talk of steam-power without steam, or water without moisture, or fire without heat? If Mr. Fish has made a mistake, is that any reason why the rest of us should take leave of our senses? Is it not plain as a pikestaff, that though the British have no right to object to any arguments we may choose to employ in our case in support of our claims, and to dictate what claims we shall make, the agreement of the British as to *the claims to be submitted to the Board* is absolutely necessary to save the whole performance from being a silly farce?

The President has at last, on the strength of the Congressional report, removed Casey, his brother-in-law, from the collectorship at New Orleans. The principal offence with which Casey is charged was improper interference in State politics, which he carried to the length of using the United States revenue cutter for ten days, to carry several State Senators out of the reach of the sergeant-at-arms, and thus prevent the formation of a quorum in the Senate. This offence was about as notorious as the sun at noon; Casey has never been foolish enough to deny it, and it was committed months ago. To wait for a Congressional investigation to convict him of it, before ridding the service of him, therefore seems a singular mode of discharging the duties of the Executive. The delay has been rendered all the more unfortunate by the fact that, in the meantime, a great storm has arisen against General Grant, and his re-election has been seriously endangered. Moreover, to the best of our knowledge, not one word of remonstrance in this Casey matter has ever issued during all this time from any of the newspapers which defend the President most stoutly. Indeed, one of them proclaimed, even after the State Republican Convention had been held in the Custom-house, that Casey had "taken the Custom-house out of politics." The prospect opened up by these things of "reform inside the party lines" was not very promising, and they make "the Cincinnati Convention and its consequences" comprehensible enough.

The adoption of the eight-hour rule by the Government in its arsenals and workshops has made it almost impossible for private employers to resist a similar demand, and the strike of carpenters, painters, and others in this city, which occurs regularly every year, has this year met with prompter and more complete success than ever before. It is interesting, therefore, to read the report of the Commandant of the Springfield Armory and of the Rock Island Arsenal, upon the working of the Eight-Hour Law, which the Secretary of War has just transmitted to Congress. The Rock Island report says it has proved in practice that it was a mistake to suppose, as was maintained, that the men would do as much work in eight hours as in ten. They have not done so. Moreover, they have not turned their leisure time to good account, in "reading and study," as was expected. The carpenters and mechanics have done so to some extent, but the masons and stone-cutters have hardly done so at all; and to the laborers the increased leisure has been a positive injury, as they spend it in carousing and other mischief. The Springfield Commandant reports a "saving" in gas and coal, through the law, of about $2,000 a year, but can say little about the comparative amount of work done under the two systems, owing to the frequent changes in its character, as many as sixteen different kinds of breech-loaders having been put into the men's hands since the change. In short, it seems, as might have been expected, that the advantage of leisure to a man depends on the extent to which education has prepared him for its use. It is safe to say, that to nine out of ten ignorant laborers two hours' diminution in their day's labor would prove an unmitigated curse, and bring them nothing but more drink and gambling and fighting. The natural man does not, as our Sentimental friends would have us believe, long for Plato, or even for Dickens, as soon as he lays down the spade or axe. You have to get him ready by an artificial process, even for harmless repose.

The majority of the Committee to investigate the sale of French arms have made a report which is very far from being a model of good taste or temper. They petulantly say of the resolution under which they were appointed, that it "was based upon one falsehood, one misapprehension, and one unfounded suspicion"; accuse the Marquis de Chambrun of being "the source of all the aspersions which have been thrown upon our Government, and the suspicions which have been cast upon its officials"; denounce Senators Sumner and Schurz for refusing to answer certain interrogations, and express their astonishment that so conspicuous an advocate of the abolition of all caste should have sheltered himself behind his privileges and immunities as a senator; acquit the War Department of everything but "a mere error or irregularity" in the "manner of the sale"; acquit also Gen. Rufus Ingalls and the Remingtons, of whom they say, "our country may justly be proud of such citizens." They find that the sales were made "according to the settled construction of the statute of the War Department," with the single view of getting the highest possible price for them; that the prices received were higher than could have been expected; that the money was duly covered into the Treasury; and that the arms could very well be spared. They state further that at the time of the sales the Remingtons were not the agents of France, nor suspected to be; but that, if they had been, it would have made no difference:

> "The Government being engaged in such sales prior to the war between France and Germany, had a right to continue the sale during the war, and might, in the City of Washington, have sold and delivered any amount of such stores to Frederic William or Louis Napoleon in person, without violating the obligations of neutrality, provided such sales were made in good faith, not for the purpose of influencing the strife, but in the execution of the lawful purpose of the Government to sell its surplus arms and stores."

The minority report by Mr. Stevenson alludes to an expense of $219,634 47 incurred in selling the arms, of which the items had never been furnished; to the absence of any previous inspection of the arms sold, as required by law; and to the fact that the Judge Advocate-General's opinion, given in 1869, did not warrant Gen. Schofield's construction of the law of 1868, which has ever since prevailed at the War Department. He pronounces the sales of breech-loaders wholly without warrant of law, because there were left in the U. S. arsenals, and in the hands of the militia, arms inferior to those sold, thus impairing the defensive capacity of the country. He holds that the sale to the Remingtons, after their real character was discovered, should have been rescinded, in order to be consistent with the Secretary of War's order of Oct. 13, 1870, and that to consummate it was an open and flagrant violation of that order. The Ordnance Bureau is blamed for an appearance of connivance with the purchasers, both in the case of breech-loaders and of Gatling guns. The report acquits the Government officers of corruption, and Senators Sumner and Schurz of a want of patriotism.

The Legislature of this State, two-thirds of it Republican, and known (as it now appears, facetiously) as the Reform Legislature, has adjourned this week amidst general expressions of rejoicing from the reform press. It has been in all respects a most remarkable body. It is not encouraging for the friends of "reform inside the party lines" to be told, as they are told on the best authority, that it has been as corrupt as any Legislature we have had. It has, nevertheless, done some good. It repealed the Erie Classification Bill, but not until there was nobody left in the Erie Board who was opposed to the repeal. It passed, in its last days, a charter which the Governor vetoed, and prepared another and simpler charter, which is now in the Governor's hands, and it has ordered the impeachment of two of the corrupt judges, and will probably remove a third. Most of the other crying evils of the State government, including the system of taxation, it has left untouched. Cardozo has escaped trial by resignation. Barnard is going, however, to face it out, his friends maintaining that he is not "corrupt," meaning that his rascalities were committed gratuitously. In the meantime, the "Murphy Wing" or "Custom-House faction" of the party is profoundly disgusted by the prodigious elevation of Greeley, their old enemy. Should he be elected, "Tom" will have to "take to the woods." No "primary" will shelter him, and, in any event, the spectacle of Greeley "controlling primaries" and distributing "plums" would be more than he could bear.

The labor controversy has entered on one of its most singular phases in Dundee, Scotland, where the servant girls have formed a trades-union, binding themselves to insist on certain privileges, such as that of seeing company, or, in other words, being courted, which is, in Northern Scotland, sternly denied them, and of having their working day limited in length, and to make enquiries as to employers' characters, a provision called for by the fact that most of the Dundee servants are maids-of-all-work, and find that being shut up alone in the house with a "nagging" mistress is slavery in one of its worst forms. Should the movement succeed, it will certainly spread, and, if it spreads, it will infuse a new bitterness into the life of the large class in every country which, in order to be free to take charge of the higher interests of civilization, pays for having its household drudgery done for it. When one considers the enormous and, indeed, unbearable inconvenience which servant girls have it in their power to inflict, if they choose to combine, one cannot help feeling surprised that they have not combined before now, if not of their own motion, under somebody's instigation. Should they learn the tricks of the trades-unionists, they would precipitate some tremendous crisis in domestic life, such as the importation of coolies in good earnest; and when one sees with how much patience and fidelity they make an honest effort to do as well as their capacity will permit, we cannot help wondering at their forbearance.

In addition to the case of the Abbé Jonqua, convicted at Bordeaux of illegally wearing the priest's costume after excommunication by his bishop, the French Government has now a still stronger inducement for making up its mind in regard to its dealings with the Old Catholics and the Papacy. One ground of appeal from the above decision lay, as we mentioned last week, in the fact that there had never been any official (civil) promulgation of the infallibility edict in France, as was required by the concordat to give it validity. Since the Bordeaux incident, however, the Archbishop of Paris has on his own responsibility promulgated the Council's decrees, and the question now arises, what will the Government do about it? Consistency would require that its protest should be at least as sharp as in the case of the altered formula confirmatory of bishops, and as much sharper as the breach is a larger and bolder one, indicative of a settled purpose to take advantage of the anomalous condition of France to recover lost privileges. Moreover, in the present instance, even if the Archbishop's action is condemned, its effect upon the faithful cannot be recalled or scarcely neutralized. It is reported, indeed, that censure has been privately administered, with a warning against a repetition of the offence; but this only reveals the Government's embarrassment. Whatever else happens, the occasion will probably not be improved to disestablish the church, as some Protestants recommend.

SOME LESSONS OF THE CINCINNATI CONVENTION.

THERE are three or four facts brought out, perhaps not for the first time, but with unusual clearness, by the Cincinnati Convention, which we would commend to the serious attention of all friends of good government of all parties. Whatever one's opinion may be of the proceedings of that body or its results, they have a genuine importance, if not as agencies, at least as symptoms. The first thing in them which strikes one is something which everybody has long known, but which was perhaps never before presented to the public mind with such force and clearness, viz.: the completeness with which nominating conventions have ceased to be, what they profess to be, deliberative assemblies. In theory, they are composed of a body of delegates who meet for the purpose of exchanging opinions, and coming to conclusions with regard to platforms and candidates by the ordinary and time-honored parliamentary process—open debate—or, in other words, oral statement and counter-statement, argument on one side and argument on the other. The increasing changeableness in the composition of all deliberative bodies in the country, from Congress down, during the last forty years, and the consequent growth in the number of totally inexperienced and even ignorant persons which all such bodies contain, have, however, been gradually making debate seem unprofitable or worse, and have finally led to its almost total disuse as a means of bringing large assemblies to conclusions. The well-established practice now, in and out of Congress, is to transfer the whole work to committees, composed of a small number of knowing men sitting and discussing in secret; and the sole use of the larger body outside to which they make their report is the adoption of the report—as it is called—that is, giving a loud yell when the chairman asks for a vote on it. Any man who attempted to discuss it openly after the hurried reading of it has closed would be treated as a fool, or worse, and groaned down. Nothing can be more pitiable in one of these bodies than the spectacle presented by the ambitious local notable or "independent thinker," who occasionally rises and offers a resolution of his own manufacture on matters of doctrine, or on any matter having no relation to procedure. The fate which overtakes him reminds one forcibly of that which befalls hogs in the great slaughter-houses. The last word is hardly out of his lips when "the rules" take hold of him and fling his resolution into the committee-room, and shoot the author down a well-greased plank, at the bottom of which he is cut up and salted away in the densest obscurity and oblivion, amidst the ridicule and contempt of the bystanders. The Cincinnati platform, for instance, which was considered of so much importance, inasmuch as it promised to furnish the foundation of a new party, and which forty astute gentlemen labored over for twenty-four hours, was first heard by about 650 of the 714 delegates composing the Convention just one minute by the clock before the chairman declared it adopted. We doubt very much whether, when the affirmative yell died out, five per cent. of those present had any clear idea of what it contained. It may be true, and it doubtless is true in practice, that if a whole convention were allowed to discuss a platform, no platform could ever be adopted, and that the only way to "despatch business" promptly is to do what is now done. But this is simply saying that conventions, as now constituted, are absurd and cumbrous machines, which pretend to perform work which they do not perform, and furnish a cover under which those who really do not work escape responsibility to the public.

The worst result of the arrangement is, however, that it not only puts general discussion out of use, but creates and fosters a sort of contempt for it as a mere waste of time. This feeling, perhaps, found its strongest and most ludicrous expression in some of Thaddeus Stevens's performances in the House in the latter years of his life, particularly on one occasion when he, in perfect simplicity, demanded the previous question on the final reading of an important bill, and refused to allow any debate on it, on the ground that "he had private reasons" for wishing it to be passed that day. It is hardly necessary to point out the danger of this scorn of debate in any country in which debating machinery forms the most prominent portion of the government. It not only tends to get people out of the invaluable, indispensable habit of thinking and understanding before voting, of insisting on knowing what it is they pass on, and what will be the exact effect of their decision, but it fosters the influence of what is called "enthusiasm," which has its value in politics on some occasions which we cannot stop here to describe, but which at nominating conventions is as much out of place as it would be at a meeting of directors in a bank parlor. In its best and proper sense, enthusiasm is the overflow of generous emotion, but the thing which goes by that name at conventions, and which finds expression in what is called "acclamation," and which the "managers" sedulously encourage by every device within their reach, is simply a readiness to act without reflection and without caring what the results of action may be. What is most alarming and repulsive, indeed, about political "management" at conventions, is that it consists largely in the production, by various little arts, of this state of mind amongst the delegates, so that when the desired scheme is finally ready, they may be got to dash at it like a pack of hounds on the appearance of the game. There was nothing more comical as well as melancholy at the Cincinnati Convention than to see the activity of the old and wily chiefs, who never lose their heads for a moment, and who probably had not in thirty years known what it was to feel the thrill of a noble and self-forgetting impulse, in stimulating the enthusiastic way of looking at things among the rank and file of their delegates. Their hats were always in their hands ready for a "hurrah"; their tears were always on tap, and their hearts, to use the homely saying, always in their mouths; and they, who never act without the deepest and closest calculation, were bent on having everybody else do things by "acclamation."

The disuse of open debate and the great and unwieldy size of the body of course also greatly encourage all the covert modes of influencing the result, and so far increase the power of professional politicians and magnify their art. The process known as "manipulation," by which nominations are prepared, is a game in which politicians by trade beat everybody else, and in which hardly one of the qualities which make a man a valuable citizen of a free country is of the slightest use; and one of the saddest things one sees at conventions—the most ominous thing, as regards the future of the government—is the pride the younger men take in being good "manipulators"—that is, dexterous and adroit users of secret, corrupt, and base influences on individuals in hotel bedrooms and lobbies, and the contempt they feel for ideas or principles, and for open persuasion based on ideas and principles, or, at best, their want of all faith in its force and efficacy. This is not a pleasant subject to contemplate, and it would bear a great deal more discussion than we are able to give it. The only remedy we can suggest, and we do not offer it as one likely to be practical as yet, is the disuse of large, excitable, frantic, ill-governed mass-meetings as even an ostensible means of selecting candidates or drawing up platforms, and the reduction of conventions to the forty or fifty men who would do the real work, as they do it now, but who ought to be made to do it with greater publicity. Such a body would not, we sincerely believe, have made the preposterous nomination with which the proceedings at Cincinnati closed.

When we call Mr. Greeley's nomination "preposterous," we mean simply that it was a preposterous nomination to emanate from the body which made it. It furnished a final illustration of the utter and ludicrous uncertainty which attends the working of the machinery of nominating conventions as at present organized. Their size and composition and mode of procedure put them completely into the hands of professional managers. The result is that nobody can predict the result of their labors, though political traditions and the rules of party organization require men to abide by the decisions of conventions which they have helped to get up or in which they have taken part. It is true, where a party is already formed and its general course traced out, its leading ideas defined, and its prominent men already in charge of the machinery, one can make some approximation to accuracy in predicting what it will do. When the Chicago Convention, for instance, nominated Mr. Lincoln, it did something very unexpected, but it nevertheless did not commit any violation of the laws of its own existence, and did no violence to the aims and convictions of the great body of its members. Lincoln was a tried Republican, in full sympathy with all the party ideas, and already distinguished in their defence and propagation. But if, throwing Seward, and Chase, and Sumner, and Wilson, and Trumbull, and Lincoln overboard, the Convention had nominated Bell of Tennessee, or Davis of Mississippi, on a platform which relegated "the discussion of slavery to the people in the Congress districts," it would have done something not unlike what the Cincinnati Convention did the other day in nominating Mr. Greeley. The movement which brought the Convention together grew out of widespread dissatisfaction with the conduct of the party in power and of the executive. It came together under a call issued by certain persons in Missouri styling themselves "Liberal Republicans." That call was printed verbatim, in books prepared for the Cincinnati Convention, and every delegate who entered that Convention and took part in its proceedings, was compelled as a condition precedent to the receipt of his ticket to write his name in the book in token of his adhesion to its sentiments. It contained the following separate resolution:

> *Resolved,* That no form of taxation is just or wise which puts needless burdens upon the people. We demand a genuine reform of the tariff, so that those duties shall be removed which, in addition to the revenue yielded to the Treasury, involve increase in the price of domestic products, and a consequent tax for the benefit of favored interests.

Revenue reform was in fact the only question to which the Missouri platform afforded a separate and distinct plank, thus making it a "main question." Could anybody of ordinary credulity have imagined that a Convention meeting under this platform, and every delegate of which had signed it, would deliberately throw the tariff overboard as a thing with which it had no concern? Supposing, however, that there had appeared to be good reason for leaving the tariff untouched, as something on which agreement was impossible, what are we to say to their going to work and nominating on it the most open, determined, distinguished, and oldest champion of protection the country contains? Granting the truth of all that can be said against what is called "revenue reform" and in favor of protection, what name can be given to a transaction of this kind which would not be used in private life to characterize a fraud? If such things as this can be done with impunity, if candidates so nominated, on platforms so constructed, can be elected, will not all conventions become simply gatherings to witness the tricks of a parcel of impudent jugglers?

But this was not all. The Convention owed its existence in part also to dissatisfaction with General Grant's choice of his advisers and associates; it nominated a gentleman many of whose political associates, if transferred to Washington, would make Morton, and Conkling, and Cameron, and Leet seem tolerably pure and disinterested. It owed its existence in part to dissatisfaction with the ease with which General Grant allowed bad men to influence his judgment and get favors from him; it nominated as a successor to General Grant a gentleman whom we might almost call notorious for the facility with which he is imposed on by adventurers and schemers. The call contained a strong protest against the military government of the South under the Force Bill, and against the impetus which that bill gave to centralizing and despotic tendencies; the Convention nominated the most ardent and emphatic advocate of the Force Bill the country contains, so ardent and emphatic that he has never given himself the trouble to answer the arguments against its constitutionality or those drawn from its remoter effects on the structure of the Government and the habits of our public men. The call contained a loud demand for civil-service reform, and this the Convention had the decency to embody in its own platform, but it nominated on it a gentleman whose whole nature revolts against tests, who hates the very name of "discipline," who despises all training and has a low opinion of experience, and whose life has been in a large measure devoted to the glorification in all human concerns of the Rule of Thumb.

THE "TREATY MUDDLE."

THE Washington Treaty, it now appears, is to escape destruction by the addition of a supplemental article, in which both parties ask the Geneva Commission not to award "consequential damages," and bind themselves solemnly to each other in the presence of mankind never to ask each other for consequential damages again, and to treat all such claims as inadmissible. The affair, let us say in all seriousness, has been a sorry farce, on which nobody concerned will ever look back without a certain amount of shame and humiliation. It was discreditable to the Commissioners on both sides to have so conducted the negotiations, and so drawn the Treaty, that a claim of such gravity, which had undoubtedly been talked of, and much talked of, before they met, should neither have been expressly barred nor expressly admitted; it was discreditable to the American Minister to hear it spoken of by the English officials in the House of Lords as barred without ever uttering, or causing to be uttered, a word of protest; and it was discreditable to the English Premier to receive the first mention of it with a burst of passion. It is not to the credit of the press here that our Government should have received so little assistance from the press or public opinion in settling it. Mr. Fish was perhaps to blame for leaving the drawing of the Case which has caused all the trouble to a gentleman of so little experience, and apparently so little discretion, as Mr. Bancroft Davis; but, then, we can hardly doubt that Mr. Fish felt himself secured by the knowledge that Mr. Davis submitted his work, as he went along, to the leading publicists of the country. We know that he did submit the proofs to such men as Judge Hoar, Mr. R. H. Dana, Jr., and President Woolsey, but we know, too, that none of these gentlemen saw, or at least have any recollection of seeing, the claim for the expenses of the war after Gettysburg. Nay, we venture to assert that this gigantic absurdity was inserted, in the case of some of them, after their revision had taken place; and we believe they all disapprove of it.

But, then, the mischief done, the spirit in which the negotiations were entered on, which was, on both sides, one of frankness and loyalty, and which produced its first and noblest fruit in the English apology, demanded that it should be repaired in the simplest, speediest, and most straightforward way. If, on calm consideration, it was the opinion of the people and leading lawyers of the country that the claim for consequential damages was just, and money was really expected under it, why, the press and the public ought to have supported Mr. Fish in urging it and in resisting to the last all attempts on the part of England to gainsay it. But if, on the other hand, it was the general opinion that it was untenable, the State Department ought to have had the assistance of the country in abandoning it. But no assistance whatever, or next to none, was rendered the Secretary in dealing with it in any way whatever. For some weeks there was what seemed to be a conspiracy of silence about it. The newspapers kept quiet as mice, and the lawyers imitated them—all leaving Mr. Fish to get out of the scrape as best he could, some hoping he would get the better of the British, others hoping that the British would get the better of him, but none apparently bold enough and honest enough to throw passion and prejudice aside, and urge him to do the fairest thing, the thing most beneficial to civilization, whatever that might be, and no matter how it might look. The consequence has been that he has literally had to grope his way to a conclusion, and this on the eve of a Presidential election. One comical feature in the performance, which has given it the air of a gigantic game of brag, has been that while Americans insisted that Gladstone was resisting the claim solely to meet the exigencies of English politics, Englishmen were equally well satisfied that General Grant was making the claim solely to meet the exigencies of American politics; and each side proclaimed from week to week, that the other would soon "cool down" and give in. What gave the joke the finishing touch was that it was acknowledged on all hands that not one cent of money was at stake in the controversy.

It must be admitted that, on the whole, the affair is not likely to raise the character of American diplomacy in the eyes of foreign nations. That a claim so enormous as that covered by the term "consequential damages" should not have been expressly and without any manner of doubt provided for in the Treaty will reflect little credit on the ability of our negotiators, if it be true that we always had it in mind to urge it as a just claim. People will not unnaturally regard our failure to speak of such a demand in terms of unmistakable clearness as not unlike Commodore Vanderbilt's inability to remember whether he gave Fisk a check for a million of dollars. A debt of fifteen hundred millions of dollars, more or less, is not a sum which even the richest people in the world can afford to collect by inuendo or implication or "understanding." If, on the other hand, the claim was certainly not contemplated by the Treaty, its insertion in the Case, which might, if at once repudiated by the Government, have passed as the mistake of a subordinate, will, when upheld by the Government and connived at by the people, look very like sharp practice. What to call its insertion for the mere purpose of rhetorical embellishment, and without the hope or expectation of getting a cent under it, we confess we hardly know. To us it has always worn the appearance of one of those bits of absurdity which illustrate the small difference there is, after all, between men and boys.

We take leave to add that the position the *Tribune* has always taken in the matter, that, the claim once inserted in the Case, "dignity" requires us to keep it there, at whatever cost, seems to us to heighten this absurdity. If this negotiation had been conducted on the basis of "dignity," in the feudal sense of the term, no treaty would ever have been framed. The British apology was the strongest possible proof that the treaty was to be based and construed on principles of common sense and common honesty and fair play, or, in other words, on the understanding that everybody who felt he had been acting in a foolish or improper manner was to stand forward and say so, and endeavor to make amends for it. Mr. Fish is now trying to do so. It is not a brilliant performance, but it is a highly respectable one, and he ought to be treated with a reasonable amount of fairness while engaged in it. He is entitled to this treatment all the more because, as we have said, he has been sedulously let alone through the whole transaction—that is, left in a position of exemption from popular influence in which no minister of a constitutional government ought to be placed. The history of the transaction furnishes a striking illustration of the impropriety of the secresy with which we allow our foreign affairs to be managed, and of the indifference with which the public regards their management. There has been nothing more curious in the English treatment of this matter than the faith of the English press in the theory that General Grant and Mr. Fish had at their backs a howling, excited people, urging them on to the adoption of all sorts of "dodges," and sternly barring their retreat from any position once taken. The fact is that the Czar could hardly have enjoyed greater freedom in the conduct of a negotiation than the President has enjoyed in this one; the people have looked on in what may almost, in view of the present complication, be called guilty silence and acquiescence. We are learning several things from the muddle: one is the value of Mr. Sumner's proposition that an end should be put to the secret discussion of treaties in the Senate; another is the injury done to the national character by the silence of the press and public when important negotiations are pending with foreign powers. We have no right to leave our relations with the world without to be shaped by any one man or half a dozen men. Our leading publicists and politicians have no right to treat all bargains with foreigners as a kind of dicker carried on by the Secretary of State, in which bystanders are bound not to interfere lest they should spoil his chances. All agreements into which we enter with foreign powers are, or ought to be, great contributions to the work of human civilization, to which every one of us should offer something, the wise their wisdom, the simple at least their good wishes. To make the globe a happier abode, not for Americans or Englishmen or Frenchmen only, but for man, is the great object for which all Departments of State and all Ministries of Foreign Affairs ought to exist.

TURNER AND LIEBREICH.

LONDON, April 26, 1872.

IN the *Nation*, No. 354, occurs a note on the lecture by an eminent German oculist, in which the peculiarities of Turner's art are set down as the result of a malady which puts his pictures "out of drawing." If Dr. Liebreich were even correct in his diagnosis, it would not be the first case in the history of medicine that an unusually developed faculty had been treated as a disease; but to any one who has given Turner's art as much study as is needful to obtain a just appreciation of it, the phantasy of the speculative philosopher is simply so absurd as to make only merriment. That Prof. Ruskin's appreciation of Turner's work is in all particulars demonstrably correct is more than any one will maintain; in my humble judgment, it is in several points demonstrably wrong; but his system of criticism is, as compared to that of orthodox Teutonism, as the system of Copernicus compared with that of the Egyptians—the one has got at a central truth of criticism, and the other is still in the delusions of rules and laws on detail. It is useless to extract from the German intellect any appreciation of the ultra-academical qualities of painting, and even in the case of masters whose authority they admit as indisputable, as for instance Titian and Correggio, they are absolutely blind to the highest and most individual qualities of the painter. In everything but music they are tied to nature's apron-strings, and they set at painting like composers who should make an opera out of bird songs, utterly ignoring the capacity of art for rising above its themes.

Dr. Liebreich makes two enormous blunders—one of fact, in assuming that there were any such abrupt changes as he supposes in Turner's work at about 1831 or any other year, or any changes different from that which takes place in the style of all men of high power when they begin to feel the freedom of art, and get command of power of expression as contradistinguished from power of imitation; and one of theory, in supposing, as do all Germans whom I know anything of, that the realm of pictorial art is limited by facts and details. These are universal errors in the art-philosophy of the German painters, of whom I have yet to learn of one since Albert Dürer who has escaped from his model.

From the time when Turner began to feel his individuality in art, and throw off the excessive reverence of previous masters which appears to have held him in a not unprofitable training for many years, there is one characteristic which every year is more and more marked in his painting, and especially in the oil pictures—a sense of the value of indetermination in execution as the best expression of the infinite variableness of the appearance of detail in nature. What is called want of drawing is simply the result of a perception that any drawing of detail which was decided and definite was incompatible with that truth of nature greater than any definition, the infinitude and infinitely subtle modulation of all facts in open nature. Added to this was his dominant passion, the love of light, which in itself confuses all definition, and the steady development of these two motives made his execution always more and more mysterious, and his drawing always more and more accidental, until the facts of nature melted out in the fusion, and we have only the motives left—a soul of picture with just enough body to hold it together.

I am speaking now of Turner's art, and make no allusion in this connection to his intense imaginative vision, which delighted in the obscure and mysterious; but perhaps even in this latter might be found some root of the obscurity and mystery inherent in his methods of execution. All this is, I conceive, to any mind of purely scientific qualities, and certainly to any German savant, mere whim and phantasy, no part of art properly considered, and it is natural that a pure materialist in art should set it down to a diseased eye, as, to another type of positivist, art itself is only the vagary of a diseased mind.

But, Liebreich and his disquisitions apart, the question becomes one of as much importance as any question of art can be, involving as it does the problem whether a painter should, as the Germans advocate and practise, study to represent what he *knows* of a thing, or, like Turner, what he *sees* of it. Although Turner constantly violated minor laws of nature, as in putting a rainbow at right angles with the sunbeam—putting the color which nature only gives to a sky after sunset to one where the sun is still high above the horizon—taking the extreme of liberties with the features of a landscape, he has represented more of that higher class of truths which may be called qualities rather than facts, than any other painter; and his pictures, from the period when he began to follow his own bent, will be found a series of studies of the visible qualities of landscape, the laws of light and color, and of the largest relations of form and space, such as not only no single painter, but no school except the Venetian, ever embodied. He is the supreme painter of light and space, and these the German philosophy would have effectually debarred him from; he is also the great, and the only great, master of orchestration of color, which is to German painting what Beethoven is to a brown thrush.

Dr. Liebreich knows that there is no vertical streak proceeding from the sun, and when he puts on black glasses, he sees the sun as a clear, round disk. Perhaps he never looked the sun square in thefa ce to see what it is like to the eye without the spectacles or the scientific consciousness. I have, many and many times, and can assert that to an eye sufficiently closed to endure the glare of direct sunlight, the visible phenomenon is that of a double streak of light proceeding up and down from the luminary, as positive and palpable to the vision as the rays around a star—equally unreal, it is true, but just as much a fact for the painter or the poet; and that Turner is just as true to the effect of intense sunlight, especially with vapory and tremulous surfaces, as a Düsseldorf painter is to the texture of old stuffs. No painter who ever studied water carefully will hesitate to tell the learned doctor that there are myriads of cases in nature in which the object and its reflection are so mingled and confused that the keenest eye cannot draw the line between them, and the more brilliant the illumination, the more confused is the vision and the more unable to perceive the distinction between substance and shadow.

With regard to Mulready, I can speak with less knowledge or sympathy. The change in his color is certainly marked, and I should say not at all in the direction of matter-of-fact nature; but all colorists, even Turner and Titian, exaggerate more or less, as they progress, the tendencies of their color-feeling, and develop their contrasts and relations to greater degrees. There is a tendency to this in painters quite irresistible if they once give up to painting away from nature. The sense of color requires continually more and more force to produce the same pleasure, and so long as the relation of tone is right, the picture can by no means be pronounced bad or even diseased in color. No colorist, properly so called, aims at giving the relations of color as they are in nature; no picture would be counted good color which simply succeeded in it; but whatever the absolute departure from it, if it be kept within the laws of those harmonic relations which are as absolute as those of music, it cannot be set down as bad color. It may be agreeable or not—Mulready's is not to me; but if yellow or blue, or any other colors in the crystalline lens, will make a colorist like Mulready, it is a pity nature has not provided some way of injecting our colorless lenses.

W. J. STILLMAN.

LA VIE PARISIENNE.

PARIS, April 26, 1872.

I ATTEMPTED in my last letter to make a survey of the French press, as far as it has characteristics which are original. I believe that the genus *Figaro* does not exist yet in any other country; but my review would not be complete if I did not speak of another genus, which thus far is only represented by a single weekly paper, called *La Vie Parisienne* (Parisian Life). The originality of this magazine lies in the fact that it combines artistic and literary merit. You may, perhaps, think that I attach too much importance, in a social point of view, to a single paper; but I believe that there is not one which is more completely *Parisian*. The *Vie Parisienne* was started during the later years of the Empire by an unsuccessful painter, named Marcellin, who has not merit enough to make himself a name in art, but who has considerable cleverness, a great love of extravagance and of color, and who has naturally become the great *dessinateur* of our theatres. For you must know that whenever there is a new ballet at the opera, or a new pantomime, the question of the costumes becomes a very important one. Marcellin is now always consulted; he studies the piece or the libretto, and he makes a series of painted costumes, which are copied by the dressmakers of the theatre. His reputation is now so extended, and the love of extraordinary dresses is so intense, that Marcellin is even consulted for plays where the actresses appear in everyday costumes. He has, in fact, become a universal dressmaker, and as he entered the profession as an artist, with great powers of imagination, he has certainly succeeded in adding a new interest to most of our pieces. He has found a rival in the celebrated Worth; but the field is quite large enough for two such geniuses. It is not at all uncommon to hear ladies say of such or such a piece: "It is very dull, but I went to see it on account of the costumes." The *Vie Parisienne* has not, however, subsided into a dull and ridiculous journal of fashions. Marcellin and some of his friends make the drawings, which are certainly often remarkable for invention and executed in an off-hand, elegant style; and the articles are quite as interesting as the drawings—painters and writers complete each other. It is rather difficult for me to explain what their object seems to be; the paper is not only purely worldly and fashionable—it knows no man who does not belong to the Jockey Club, no lady who has no coronet on her carriage—it is what the English call *fast*, and, to use plain Saxon language, it is indecent. Not so much indecent in words as in ideas; it is the glorification of elegant vice; it begins invariably with some small story, as dramatic as possible, where the ingenuity of the writer is spent in the most sensual descriptions and the cleverness of the *dessinateur* in fitting illustrations.

The writer who invented this genre is named Droz; he was for a long time the principal writer in the *Vie Parisienne*, but he did not sign his articles. His reputation was made by a work called "Monsieur, Madame et Bébé," which has reached an incredible number of editions, and which is one of the most extraordinary books of the present time. It was quite symptomatic of the state of things which had been created by the long corruption of the Empire; it pointed, indeed, to a new sort of corruption—not plain, and, if I might say so, honest corruption, old-fashioned corruption, which does not pretend to take the place of virtue; but a new sort of corruption, the most revolting of all—conjugal corruption, corruption in love—a certain perversity of manners, of fashions, of ideas which effaced all the old limits of virtue and of vice. At the risk of seeming too grumbling a moralist, I maintain that the worst novels of the end of the last century, that the *Contes* of La Fontaine and of Voltaire, that even the stories of the light writers of the end of the eighteenth century, that in our time the disgusting stories of Pau de Kock, are far less immoral than this book of Droz, which has been read by all the ladies of society. I have heard women and men—perfectly well-behaved people—speak with praise of a work in which I saw only the worst form of immorality. There are scenes in "Monsieur, Madame et Bébé" which are truly revolting, as they surround conjugal and maternal life with all the associations, ideas, and images of vice. The immorality is never in the words; there is, through the whole work, an affectation of purity, of sentimentality, a studied attempt to give to vice all the *agrémens*, all the charms of virtue. Droz is a very able writer; he has a fertile imagination, a great command of the language, and, sometimes, a great sense of humor. The story he wrote in the *Revue des Deux Mondes*, "La Source," showed no ordinary talent. He had found a new vein, which he might have used with great advantage in ridiculing worldly religion. I remember, for instance, a very amusing piece in the style of Lucian, where a great lady, of the Faubourg St. Germain, has a conversation with St. Peter in Paradise. The great lady, who was in her lifetime very fast, but a great patron of religious societies, discovers to her horror that, owing to her own exertions, her coachman has found a place among the seraphim or the cherubim, and that *she* will not be quite so high in heaven as the man who used to drive her. Her remarks to St. Peter are quite amusing, and her disgust is painted in the best manner. This may be thought on the dangerous limit of profanity; but there is nothing to blame in a desire to show the folly and the vanity of the religion of some great ladies who would like to patronize St. Peter in heaven as they do the church on earth. But Droz has, unfortunately, often overstepped the limits of good taste; and when he is on the subject of love he seems absolutely ignorant of good and evil, and only desirous to appeal to the most natural instincts of humanity.

With his talent, and aided by the pencil of Marcellin, it is hardly to be wondered if the *Vie Parisienne* became rapidly successful. I shall perhaps astonish you if I tell you that Taine himself became desirous to write for it; he published in it—of course not under his name—various parts of the book afterwards published under the title of "The Opinions of Grain d'Orge," which is a description and a satire of Paris. This book is certainly the one which does the least credit to the character of Taine; there runs through it a coarse admiration of money, of fine clothes, of all the pomp and circumstance of wealth. It is too materialistic; there is no delicacy of feeling. When Taine speaks of women, he becomes instinctively somewhat indelicate. It may be that the atmosphere of the *Vie Parisienne*, which he breathed for some time, affected his delicate lungs. There is another writer who for a long time was a contributor to the *Vie Parisienne*, under the name of "De Podestal." His real name was Delprat; he was a young lawyer of much talent, who, three years ago, began to show signs of madness, and has now for two years been shut up in a lunatic asylum. He published his essays under the title of "La Comédie au Boudoir," a book which is likely to become very rare, and which has some *eaux fortes* by Delprat's own hand. I have a copy of it, which Delprat gave me. He was of a very good family, and he was very respectable himself. I did not hesitate at the time to tell him that I did not approve of the employment he made of his talent. He was also a poet, and wrote a very curious imitation of Victor Hugo, called "La Passe d'Armes du Roi Jean," which is really marvellous, for there is as great a command of words and imagination as in Hugo's greatest pieces. To give you an idea of Delprat's book, and, in consequence, of the style of the *Vie Parisienne,* I will only notice that the last chapter of the "Comédie au Boudoir" is called "La Vague et la Perle." The scene is in the water, at Biarritz, far away in the sea. The Marquis explains his love of swimming: Was not Venus born from the sea?

The war was a great blow for the *Vie Parisienne;* it had to turn all the powers of its mind to the question of uniforms; it made uniforms for the national *vivandières,* for the *francs-tireurs,* etc. But it revived very soon after the siege and the Commune; every hero now must be an officer of the Mobile, some young nobleman of the legion of Charrette. Civilians are at a discount; even the attachés at the embassies are disdained. The Empress, at the time of her glory at the Tuileries, was very fond of the *Vie Parisienne.* Princess Mathilde, who is herself an artist, patronized it. The paper has preserved an Imperialist character, but, whatever happens, it means never to quarrel with *society;* it is still, and means to remain, essentially fashionable. It cares little for politics, except as they affect the theatres, the promenades at the Bois de Boulogne, the races. It describes the fashions, not as Balzac, minute as he was, described dresses, but in the very style of a milliner. It speaks of horses in the style of a jockey; it speaks of life in general as if life was a very amusing joke, which requires only money, dash, large stables, a good tailor, and many theatres. So far, nobody has been bold enough to start a rival to the *Vie Parisienne.* It stands alone in its glory on the table of every club, and, I am sorry to say, on the tables of many ladies who think that they owe it to fashion to receive it. I wonder how long its reputation will last. I sometimes hope that the vein found by Marcellin and Droz must soon be exhausted; but they go on, and their fertility has as yet found no bounds.

It would not be fair to judge of French society by such a paper as the *Vie Parisienne;* in a city of two millions of inhabitants, frequented by so many rich foreigners who understand the French language, there will always be a public prepared to accept such a paper. But it cannot be denied that the lines between right and wrong are somewhat defaced and uncertain. Curiosity lost Eve; the modern Eve is still curious; she is not over-censorious, and she does not like to be deprived of amusement. But the spirit which inspires such works as the *Vie Parisienne* cannot fail, in the long run, to have a bad influence—even on the best of people. I firmly believe that, taken as a whole, there is not a more moral class than the middle-class of Paris. But its morality has more resemblance to that of *Philinte* than to that of the *Misanthrope;* it does not feel what Molière calls

> "Ces haines vigoureuses
> Que doit donner le mal aux âmes généreuses."

Our rich *bourgeoisie* has adopted the German motto, "Leben und leben lassen"; it is not austere, though it is well-behaved. It is very artistic, and what it would not receive in a coarse or brutal shape it is ready to receive when presented in an elegant form. This extraordinary admiration for whatever has any æsthetic value, even of the frailest sort, has often deceived foreign judges; the French often sacrifice the *fond* to the *forme,* the inside to the outside. They cannot bear dulness, what they call *ennui;* and perhaps the world owes enough to this idiosyncrasy not to be too severe upon it.

THE POPE'S RIGHT OF ASYLUM.

FLORENCE, April 14.

THE Italian newspapers for the last week have been and are still full of a deplorable event which took place on Sunday last in Rome, outside Porta Cavalleggieri. After all, the fact is of small importance in itself, especially in a country like Italy, where the *reati di sangue* (crimes of bloodshed) amount to some thousands annually, and among a population so fully deserving of the epithet *manesco* (ready with their hands) generally applied to them. One row and one case of manslaughter more in the suburbs of an Italian city would hardly be worth mentioning; but in this case the city in which it took place happens to be the capital of Italy and of Catholicism also, the murderers Italian National Guards, and the victims Pontifical Gendarmes; and these circumstances alone are sufficient to make an event of it. It is, moreover, one of those cases too easy to foresee not to have been foretold, which are calculated to put the famous Papal Guarantee Law, and the arduous task undertaken by the present ministry of a cohabitation of Tycoon and Mikado, to a dangerous test.

I need scarcely, I think, relate the simple facts, as they will, no doubt, have already reached you on the other side of the Atlantic by telegraph. Three National Guards, returning home from practising at a target, entered a public-house situated outside the gates of Rome. They there found a dozen Pontifical Guards, already busy drinking the dark-colored wine of Velletri, and engaged in animated conversation. It was not long ere the two parties began to exchange indirect provocations by pronouncing loud speeches of praise and blame on the past and present governments. From these they soon passed to direct invective and insults from one table to the other, whereupon the National Guards deemed it prudent to effect a Xenophontian retreat from the enemy's territory and overwhelming numbers. They had, however, not proceeded far from the tavern when they were overtaken by three of their adversaries who were imprudent enough to follow them. This time the proportions were apparently more nearly balanced, but apparently only; for the Papal Gendarmes had no arms about them but their knives, whilst the National riflemen were armed cap-à-pie, like Hamlet's father. Very soon a quarrel ensued, one of the unfortunate gendarmes was killed, and his two comrades lay weltering in their blood, severely wounded. The noise of the affray having alarmed the others who were still in the tavern, they rushed out to the rescue of their comrades, whereupon the brave descendants of Romulus took to their heels, and the remaining Pontifical Guards hastened to carry their three companions to the asylum of the Vatican.

It is easy to imagine the language of the papers after this occurrence. From the sentimental and resigned *Armonia* down to the wicked and ironical *Unità Cattolica,* from the vulgar *Voce della Verità,* Cardinal Nardi's clamorous organ, to the perfidious paper of the Jesuits, *L'Osservatore Romano*—there is but one outcry of rage, indignation, and alarm in the whole clerical press. The event of Sunday last is declared by them to be "a sanguinary *pronunciamiento* against civilization, church, and liberty"; Italy never witnessed "a crime more atrocious and more horrible"; . . . . "the blood of the faithful was only shed in order that some of its drops might spurt to the august forehead of the Holy Father"; and the murderers are far worse than those of the Paris Commune, "who at least allowed their victims to send for a confessor before expiring." One of these papers even affects to think that it is no longer safe for its editor and contributors to show themselves in the streets of Rome. With the papers of the radical party, all the fault evidently lies with the Pontifical Guards, who wantonly provoked the strife out of sheer religious fanaticism, and with the Government, who are to blame if these guards are still allowed to exist.

It is but natural that the moderate liberal press should strive to diminish the importance of the whole fact and give it the proportions of a common street row. They will, however, be obliged, by the consequences of the lamentable event, to view it in a less light and frivolous way. Justice is bound to clear up the case; but if the police found no difficulty in arresting the guilty National Guards in their homes, their bayonets stained with blood, it was a different matter to get at the Pontifical Gendarmes behind the doors of the Pope's "prison." Now, it is clear that the trial can give no result without the evidence of the two still living victims; and it is quite as sure that the jury—an Italian jury!—will never be found to condemn the murderers, unless the trial be a fair one. And thus we have before us the curious fact that the liberal party, the very first time a serious complication arises out of their famous Guarantee Law, are themselves the first to infringe it and force upon Pio Nono the extradition of the witnesses of their wounded comrades. Their argument is that either the men are innocent, in which case nothing will be done to them, or they are guilty, and then it is in the interest of justice that they should meet with the punishment they have deserved; to which fallacious reasoning the Vatican answers: "Supposing them to be guilty, we have still in our palace a court of justice of our own, nay, we have even a prison for the culprits. We do not know what your juries may be capable of, under the menaces of a miscreant government and passionate mob, while we do know that our own justice, dispensed as it is by priests who are directly inspired by the Deity, is incapable of being intimidated by any such reason. And besides, if you are determined to have these men, come and take them." Nothing can be objected to language such as this, and it is clearly attributable to the policy of the liberal party alone if things have come to this crisis. No statesman can serve two causes at the same time with impunity. Had the Italian Government followed a bold revolutionary policy whilst the great powers were still engaged in their mortal struggle and unable to interfere with them; had they simply reduced the Pope's position to that of a bishop like any other bishop, there would have been no pretext for such collision of jurisdiction. Or had they, on the contrary, been content to make of Rome a sort of a show-capital—like Moscow or Königsberg—and themselves remained quietly at Florence with their offices, their houses of parliament, their press, and all the necessary paraphernalia of a real capital, patiently awaiting the solution of the question from religious reform, not from political laws, nothing of this kind would have happened. But instead of a really conservative or decidedly revolutionary policy, what has been the line of conduct they have chosen to adopt and follow up? The present case shows it clearly with all its consequences. They have introduced modern laws and institutions of very doubtful value into a country in which they become absolutely mischievous. They have tried to resolve the most delicate and complicated problem of all human history by abstract bills, a compound of generous feelings of equity, false theories, and patriotic apprehension. They have left a city and a population eminently adapted for the seat of government, in order to transfer the capital to the very place which is least fitted for it in the whole world.

It would carry me too far, however, to demonstrate the folly of that institution called national guard which has become the hobby of all newly emancipated nations, and especially in Italy. This most puerile of all the *desiderata* and most dangerous of all the conquests of the revolutionary party, alike powerless for good and powerful for evil, has indeed proved utterly useless, both in face of internal and external enemies, in France as elsewhere. It has proved most perilous to order and security in Paris and in Vienna, the most tiresome of playthings in all countries, and has everywhere been given up at last, *de facto* or legally, after some years of existence. But if there is a country where this fatal institution is more particularly dangerous than another, it is among an irascible people like the Italians, especially when allowed to carry arms even when out of service. The only wonder is that more such accidents like that of Sunday last do not occur. I am afraid, however, Italy will have to empty the cup even to the very dregs, before she will do away with exotic institutions like national guards, juries, and municipal self-government, imported into this country in the Pandora box which seductive and irresistible Revolution offered her as a reward for all the hardships she had undergone to conquer independence and unity. Again, the Italian Parliament tried last year to resolve a great historical problem by the amplification of a phrase. Count Cavour had launched before his death one of those dangerous *mots d'ordre* and war-cries, so easily caught up by superficial minds, so likely to be upheld by absolute and narrow intelligences: *libera chiesa in libero stato*, he said, and never was a more fatal legacy bequeathed to a nation by a great man. It is, indeed, and will prove every day more so, the magic broom of Goethe's apprentices; it needs the skilful hand of the master to wield it; in the awkward fingers of schoolboys—and what else are our statesmen compared to Cavour?—it can only do harm. It was this famous principle—and, by the way, I think I am doing it great honor in calling a principle what in reality will never be anything beyond a sentence in our old European states—that was the Deity invoked to inspire Italian legislators when the law on the Papal Guarantees was framed; in reality, it was Fear, pale Fear, which alone presided at the making of that law, and which pervades every line of it. It was, in fact, never intended to be put in practice, but merely to prevent the calamity of foreign intervention. It now exists with all its dazzling points and its ingenious little invocations, and, ere a twelvemonth has elapsed from its promulgation, we have already hurt ourselves by coming in contact with its sharp though brilliant ornaments—the right of an inviolable asylum granted to the Vatican. Will our present statesmen have the boldness to break the very law they themselves framed? Will they find means to elude it? or will they really sanction by fact and right that enormous mediæval monstrosity of a whole category of subjects escaping not only criminal but, indeed, all law whatsoever?

And last, though not least, our politicians have insisted upon exchanging the quiet banks of the Arno, and its mild and pacific population, for the dangerous vicinity of the Tiber, and the hot-tempered, irascible inhabitants of the Seven Hills—which is just the same in fact, in spite of all classical reminiscences, as if you Americans were to abandon quiet Washington and its calm serenity, and transfer the seat of government to the turmoil and restlessness of your New York rings and city mobs. They have had already more than one occasion to repent this choice. But a very few days ago, on the same Sunday when the above-mentioned affray took place, for instance, on the occasion of the royal couple of Denmark and the Prince and Princess of Wales going to visit the Colosseum illuminated with Bengal fire, the band was obliged by the mob to substitute the Garibaldi hymn and the *Camicia rossa* (a sort of *Ca-ira*) for the Hymn of Savoy, the Danish national march, and the "God save the Queen" they had been ordered to execute. The conductors of the band—consisting of the Firemen of the National Guard—have been dismissed in consequence, it is true, but not without violent opposition, nor should I be in the least surprised if similar breaches of tact were frequently to happen after this first success. How elated the Italians were when they at last took possession of the Eternal City, that imperial *urbs* which ruled the world; how fascinated by words, or, even less than words, by mere letters—the magic letters of S. P. Q. R., indeed! I fancy they already begin to perceive that among the Quirites there are quite as many descendants of the Gracchi—nay, of Clodius and Catiline—as of Scipio and Cincinnatus. If the laws of political economy and the moral necessities of modern society were less strong, less invincible, our statesmen, of course, might ultimately succeed in checking the progress of Italy altogether; at any rate, they are doing all they can to achieve this desirable object, and it will not be their fault if the country continues steadily marching forwards.

April 16.

A letter has just reached me announcing that the Cardinal Prefect of the Vatican has allowed the witnesses of the row before Porta Cavalleggieri, who had taken refuge within the precincts of the palace, to give evidence before the Italian court of justice; and that the two wounded men are also to be put at the disposal of the royal tribunal as soon as they have sufficiently recovered. Thus, this time, at least, the right of asylum has not yet led to those unavoidable collisions to which it must sooner or later give rise. This victory over the ardent Jesuits, who would have gladly taken advantage of this very first occasion to come to a conflict, is undoubtedly due to Antonelli's influence, and still more to the representations of the foreign diplomatists. The Holy Father, in spite of the excitement and the palpable falsehoods and gross exaggerations of the clerical press, which spoke of a premeditated plot and six victims, could not help discovering the bad impression which his refusal to deliver up the witnesses, and the consequent frustration of the ends of justice, would have made. It is, however, doubtful whether he would have acted in the same way had his defenders been the aggressors and authors of the crime, instead of being the victims, and the perils resulting from this right of asylum are none the less serious because this time they have been averted.

Notes.

IT is an ill wind that blows nowhere. Mr. Greeley's nomination has brought joy to the hearts of a great number of deserving persons who, a month ago, would hardly have reckoned among their assets sundry stereotype-plates, steel and stone portraits, and wood-engravings, in which the Cincinnati candidate had been made familiar to the public as one of the celebrities of the day and as editor of the *Tribune*. All these articles have now a value which may prove to exceed the original, and when we think of the photographers as well as of the publishers and print-sellers, it is clear that a positive addition has been made to the capital of the country long before the first official act of the great protectionist, or his first recommendation to Congress, has revived industry, brought about specie payments, and restored the financial equilibrium. The Oneida Community is among the gainers, we observe. The last number of the *Circular* says: "Greeley's nomination to the Presidency brings Socialism to the front; for Greeley was and is the real father of Socialism in this country." It then proceeds to recommend Noyes's "History of American Socialisms"—a very creditable piece of workmanship—as a campaign document, inasmuch as "it is the only book that gives a full and authentic account of Greeley's career as a Socialist;" and luckily, Lippincott & Co. have recently reduced the price to $3, at which rate, or even at still lower figures, Greeley Clubs can now supply themselves. The *Circular* gives the following extract from the index:

> "Greeley, Horace, introduces Fourierism, pp. 14, 201; acknowledges the success of the religious Communities, 138; treasurer of Sylvania Association, 208, 233; toasted by Brisbane, 226; his position, 229; pledges his property to the cause, 232; relation to Ohio Phalanx, 356, 358; letter to Cincinnati Convention, 366; address at N. A. Phalanx, 463; offers a loan to N. A. Phalanx, 501; controversy with Raymond, 562; pronounces the Oneida Community a trade-success, 510; summary of his socialistic experience, 653, 655."

We must warn our readers, however, that these references will not in all cases repay research. Those, for instance, who turn to page 366 hoping to find an historical coincidence in the "letter to Cincinnati Convention" of twenty-eight years ago, will be disappointed to find a mere allusion to "interesting letters read from Horace Greeley, Albert Brisbane, and Wm. H. Channing." "Relation to Ohio Phalanx" is another misleading rubric, suggestive of the irreconcilable attitude of Judge Hoadly and his colleagues, but really concerning a Fourierite association of which a Mr. Grant was president. To him and to Messrs. Greeley and Brisbane "applicants for admission or stock were referred," and at their Fourth of July picnic in 1844, "the volunteer toasters liberally complimented each other and the socialist leaders generally, not forgetting Horace Greeley." The other references we must leave the curious to hunt up for themselves.

—In the *Nation* of 2d inst., we gave our readers some details touching the opening of the University at Strassburg under German auspices, and mentioned the appointment of a professor extraordinarius from

America, in the person of Dr. von Holst. By private advices from Strassburg we now learn that the professorship to which Dr. von Holst is appointed is that of American History. The suggestion as to the advisability of founding such a chair appears to have come originally from Dr. Friedrich Kapp, well known to our readers as an author of distinction in the field of American history. Baron Roggenbach, the Curator of the Strassburg University, to whom the suggestion was made, laid the matter before Minister Bismarck, who at once approved the idea and authorized the appointment. It is understood that Dr. H. von Holst will enter upon his duties on the 4th of October next. He is a German scholar of high merit, who has spent four years in the United States, devoting himself to the study of American history. Shall we by-and-by have a similar chair endowed in some American college?

—We learn from the *Renaissance* of April 20 that the letter in which our Paris correspondent lately described the condition of Protestantism in France, was copied more or less fully by some of the English journals, and among others by the *Unitarian Herald*. To this paper M. Réville subsequently addressed a correction of what he deemed to be errors in our correspondent's statement, of which the *Renaissance* cites but one, and that not very important. More than by any inaccuracies of detail, however, offence was given by the "couleurs très-sombres" of the picture, and the writer's depreciation of the vitality and influence of the Protestant body; and on this point also M. Réville has something to say. He indicates the important part which Protestants play in politics, in the army, in literature, and in business; and the *Renaissance* adds that they number seventy in the National Assembly—an enormous representation when compared with the slender ranks of the Protestants in the country at large.

—That part of the revenge of France on Germany which consisted in learning the difficult language behind which Bismarck and Moltke masked their odious plans of conquest, has proved quite as formidable as a military assault. The French Minister of War has had to complain that out of 100 officers who began taking lessons in German, only nine have persisted in this course —and perhaps the end is not yet. It is to be hoped that the army mapmakers have not also neglected their chance of improvement. They are old offenders, it seems. Some one has just unearthed the following passage from the "Mémoire statistique du département de Rhin et Moselle" of Prefect Boucquéau, a Belgian appointed to that department by the first Napoleon when consul, in the year XII. of the Republic. M. Boucquéau had this story to communicate:

> "In 1688, Marshal Boufflers besieged and bombarded the city of Coblentz without being able to take it, but Little Coblentz (Lützel-Coblentz), situated on the left bank of the Moselle, was totally destroyed. Although it has never been rebuilt since, it continues to figure in large letters on the geographical maps, and when, in 1794, the French seized Coblentz, they made a special requisition on the Little Coblentz which they had destroyed a century previous. This mania of our modern maps, which are always copied after older ones, for designating as important places localities which are only ruins, has often been the cause of like mistakes: sometimes a quartermaster, map in hand, has assigned lodgings to a battalion which, after having marched a league, found nothing but ruins, or an old tower in the city or chateau allotted to it for its winter quarters."

—Prof. Höfler, of Vienna, read a paper last May before the Imperial Academy of Sciences, upon "The Avignonese Popes," the object of which was to correct a common error in regard to this series of Pontiffs. It is a commonplace of history that Clement V. removed the Papal See to Avignon in 1305, and that during the seventy-two years of the "Babylonian Captivity" it was the submissive tool of the Court of France. This view overlooks the fact that Avignon was at this time not in France but in the Empire, and Prof. Höfler further points out that it was not Clement but his successor, John XXII., who commenced the line of Avignonese Popes, both in residence and in policy; further, that so far from being a period of Papal weakness, there was never a time when the Popes carried things with a higher hand. The residence at Avignon indeed was only an incident; for more than half a century the Popes had, as a rule, deserted Rome, residing for the most part at Viterbo, Anagni, Perugia, Naples, and Lyons, in order to avoid the seditions and conspiracies of the Eternal City. The great triumph of the Avignonese group was in realizing the arrogant claim of Boniface VIII., that all earthly power was united in the Pope, and in completely severing the Empire from the German kingdom. Here is a point in which this paper will help to correct, or rather to supplement, Mr. Bryce's "Holy Roman Empire." One does not gather from this work how completely the Empire was in abeyance during the period in question. It was *vacante imperio* that Boniface VIII. issued his famous bull, *Unam Sanctam;* and it is a striking fact that this abeyance lasted more than a hundred years, from the deposition of Frederic II., 1245 (or at least his death in 1250), to the coronation of Charles IV., 1355 (with the exception of the year's reign of Henry VII.) The bitter and violent contest of John XXII. and Lewis of Bavaria ended in the complete triumph of the Pope and of the doctrines of the bull *Unam Sanctam;* and when at last the Empire was revived in Charles IV., it was recognized distinctly and formally as subordinate to the Papacy. The popular view is right in one point: the policy of the Avignonese Popes (Frenchmen every one), if not distinctly *French*, was at any rate distinctly *anti-German*—and France was just now taking the place which Germany had vacated as the head of the European states.

—Another more elaborate paper by the same distinguished scholar is entitled "Anna von Luxemburg, Kaiser Karls IV. Tochter, König Richard II. Gemahlin, Königin von England"—Anne of Bohemia, as Miss Strickland's readers know her. In this queen began the connection between England and Bohemia which bore such fruit in the teachings of Huss as the pupil and follower of Wiclif. It was connected, too, with the important fact that England and Germany took the same side—the Roman—in the great Papal schism which began just at this time. And it is further significant of this important epoch, that nearly every great throne in Europe was vacated in a very short space of time—that coincident with the great schism we have a minority in England, France, and Germany, a female succession in Hungary, Poland, and Naples. Prof. Höfler aims to bring into notice the influence of Queen Anne and her Bohemian attendants upon the intrigues and party contests of Richard's reign, an aspect which has been hitherto overlooked. As to Richard himself, he attempts, with some success, to vindicate his character from the aspersions of the Lancastrian writers. Certainly he excites sympathy for the unfortunate and not unamiable prince, and appears to show that he was more sinned against than sinning; particularly, he brings into prominence the real excellence and prosperity of his reign while William of Wykeham was Chancellor, and in the years following. For all this, his narrative shows an arbitrary and despotic spirit in the king, which, as he remarks, belonged to the great development of monarchy at about this time in the various countries of Europe; he does not, however, appear to recognize fully the difference between the English liberties and those of other countries. England was not yet ripe for the policy of the Tudors. A large part of the paper is devoted to Wiclif, whom he judges, if we are not mistaken, from the point of view of a liberal or "Old" Catholic. He pays a high tribute to his character, aims, and ability, but certainly rates his influence less high than we are accustomed to do—for example, hardly giving him any of the credit of the anti papal (genuine Catholic, as he pretends) policy of 1393. The importance of this event he by no means underrates. England, he maintains, was legitimately a fief of the Holy See—one of that group of fifteen crowns depending upon the Pope, which was more than a balance for the smaller but more compact group which depended upon the Emperor. (Here again is a point of view which will be instructive to Mr. Bryce's readers.) The statutes of provisions, of præmunire, etc., which are so abundant throughout the fourteenth century, are the foreshadowing of this great act, which, at a time when the Papacy was hopelessly at variance with itself, was a severing of the feudal tie and a declaration of English independence. This important discussion cannot but modify some of the current views of English history, and must, we should think, be indispensable to any student of this period.

—The Historical Commission of the Bavarian Academy of Sciences, in its twelfth general meeting, held at Munich last October, announced the completion of its arrangements for a German Biography, which will be, when completed, a most extensive and valuable work. It is to be in twenty volumes, and to contain 40,000 articles, lives of rulers, statesmen, artists, scholars—all classes of men, in short, who have influenced the development of the nation. Liliencron of Munich is to be its editor, and the first instalment is to go to press next fall. This Commission, by the way, besides Bavarians like Döllinger, Giesebrecht, Hegel, and Von Maurer, contains distinguished scholars from all parts of Germany—Von Ranke and Pertz of Berlin, Waitz of Göttingen, Von Sybel of Bonn, Dümmler of Halle, etc. It is worth while to notice its wide and varied activity, and the results of co-operation and organization in this field. At the above meeting it was announced that nine works had been published by it within the year: 1. The Recesses, etc., of the Hanseatic League, edited by Koppmann (recently noticed by us). 2. Documents of the Thirty Years' War, by Ritter. Vol. I. (1598-1608). 3. History of the Sciences in Germany. Vol. IX. Germanic Philology, by Von Raumer (the last volume was "Sprachwissenschaft," by Benfey). 4. Chronicles of German Cities. Vol. IX. Strassburg, by Hegel (the last was Magdeburg.) 5. Annals of the Frankish Empire under King Pippin, by Oelsner (the last volume was of Charles Martel). 6. Bavarian Dictionary by Schmeller, new edition. 7. Forschungen zur deutschen Geschichte. Vol XI. Other works, in former years, have been collections of popular songs and of proverbs.

MR. ARTHUR HELPS.*

When Mr. Helps, twenty-five years ago, published "Friends in Council," he founded a school of essayists who undertook to apply what—to use one of their favorite expressions—is called "thought" to all the minor affairs of life. The school has notoriously flourished, and now boasts representatives in every magazine and newspaper, who teach the public how much thought may be expended on all those topics, down from the making of marriages to the arrangement of dress, which the uneducated fancied could be managed without the necessity for forming any abstract theories. The school has, in fact, become so large that it has split into various branches, and consists of the two great bodies of cynical essayists who instruct the public through the columns of the *Saturday Review*, and of genial essayists such as Mr. Helps and his disciples, "A. K. H. B." and "Timothy Titcomb," who pour forth truths or platitudes in books and magazines. Of the whole class of writers, whether cynical or genial, who handle "social topics," Mr. Helps is indubitably the leader, though A. K. H. B. is their most popular and their most influential representative. "Thoughts upon Government" seems intended to sum up the results of its author's experience and teaching, and the appearance of the book affords a fair opportunity for weighing the character of the school which Mr. Helps has created, as well as the position occupied by Mr. Helps himself as an essayist.

Mr. Helps and his immediate disciples have nothing cynical about them, and are, or intend to be, emphatically genial and benevolent writers. With the cynical branch of the school we shall, therefore, in the present article, have no concern, and we shall confine ourselves to Mr. Helps and those whom we consider to be, like A. K. H. B., his legitimate disciples. It is worth, however, pointing out that one great doctrine unites all writers on social topics, whatever may be the other differences which divide the school into sects. This doctrine is the supreme importance of little things. It is, as it were, a fundamental article of faith, for no one who did not hold it could bring himself to write, and write with ingenuity, on the subjects—such as "worry," "dress," "misunderstandings," "friendship," and so forth—with which modern essayists generally deal. The tenacity with which Mr. Helps, for example, believes in the great importance of minor matters is nowhere more visible than where, as in his last work, he takes as his ostensible theme a matter, such as government, which is in itself a topic certainly of sufficient magnitude; for throughout the whole book government is treated of in its very smallest aspects. Mr. Helps confesses, with a certain *naïveté*, that what he cares most for is "improvement," in contrast with "reform," and though his painful candor makes it difficult to draw any definite result from his carefully limited assertions, in which one truism is always balanced against another, so that the result of his reflections amounts to zero, yet the most definite lesson he insists upon is that "statesmen of almost every country might afford to despise the efforts of the most democratic agitators if the welfare of the common people in what are regarded as comparatively minor matters had been sufficiently attended to." In precisely the same spirit he dwells pathetically on the number of letters which overworked statesmen have to answer, on the mass of useless speeches made in Parliament, on the mistakes engendered by hurry, and on the evils ensuing from want of candor in the press and want of outspokenness on the part of ministers. The general impression, in fact, that his essay leaves is that it is not so much a collection of thoughts upon government as of hints how to avoid or lessen the minor difficulties of administration. These hints are in themselves often of value, but they imply the view that the great object of thought ought to be how to adjust and arrange a great number of petty matters—that on the whole the machinery of society and government is extremely good, and would go perfectly well if only the machine were kept properly oiled, and a little wheel here and there were occasionally mended and improved. Now, of the merits of this teaching we for the moment say nothing; what we do point out is, that it curiously exemplifies the great dogma of the importance of little things.

The view that all would go right in the world if only there were a little more organization and a little more active practice of all the minor virtues, such as candor, politeness, punctuality, and so forth, is closely connected with another doctrine held by Mr. Helps and his disciples, which is, that in England, at least, all things are arranged, if not perfectly, yet with a very near approach to perfection. Mr. Helps does not perhaps go quite as far as the great Dr. Pangloss, but certainly he leads one to the belief that all things are arranged for the best in the best of all possible constitutions, which, we need hardly add, is the English constitution; and that if it be possible to improve perfection, all that is necessary is to add power to that superexcellent institution, the Privy Council, of which Mr. Helps is, if we mistake not, the distinguished clerk. This optimism of Mr. Helps is indeed so excessive that we occasionally entertain a hope that it savors of irony. He, for example, though the most modest of writers, does not think "that it is too boastful to say that the British people and our near relations in America and the colonies are the most governable people on the face of the earth." Though "it may seem arrogant to enumerate our good qualities in this respect," he proceeds to run through a catalogue of merits which a Fourth of July orator would blush to put forth before the most patriotic of audiences. How high the praise is piled may be gathered from the one fact that Mr. Helps, who, whatever his defects, knows history, exclaims, apropos of the two English revolutions, "How dignified for the most part was our conduct in these crises. They exhibit a certain magnanimity of which every British reader must be proud." Certainly we had never hitherto thought that the Revolution of 1688, beneficial as were its results, was an occasion in which either the dignity or magnanimity of the British people was very conspicuous. But the most astounding and most obviously sincere piece of optimism is Mr. Helps's expressed conviction that modern English ministers never perpetrate a job. "I have served," he writes, "under many political chiefs. I suppose I must have been very fortunate, for if I were put in a witness-box, and asked upon oath to disclose any particular instance of jobbery of which I had been cognizant, I should be unable to name a single one." It is, we confess, so absolutely incredible to us that men should, the moment they enter the cabinet, exhibit a conscientiousness which is certainly quite unknown to persons occupying other positions of influence, that we are forced to conclude that the noble virtue of the author of "Friends in Council" abashed even the least scrupulous of his chiefs, and that they either committed no jobs whilst under his influence, or, what is perhaps the same thing, took care that if a job was done Mr. Helps should never hear of it.

Mr. Helps and his disciples owe their influence in part to the zeal with which they inculcate the importance of little things, and to their optimistic view of English society; but the school is, after all, distinguished rather by the mode than the matter of its teaching. A first principle of every popular essayist is never to follow out any subject to its end, or, in other words, to think about many things, but never to think *out* anything. Mr. Helps, for instance, publishes "Thoughts upon Government." The topic is one on which a man of the highest ability might well employ any amount of thought or reflection. It is, further, one on which clear thought is peculiarly necessary at the present day, for the least observant person must notice that a radical difference of view as to the extent to which government may and ought to intervene is gradually dividing English opinion, and will probably ultimately divide English parties. No one knows this better than Mr. Helps, yet, consistently with the practice of his school, he simply plays with the subject in hand. His general tone implies that he inclines to side with those who would extend the sphere of government interference; but he never argues, or attempts to argue, out this or any other point. Even when he comes to narrower questions, as, for example, to the functions of local government, he does nothing more than throw out hints as to the proper division of duties between the local and central authorities. His work is at least as long as Mr. Mill's "Essay on Liberty"; but while Mr. Mill really gives his whole mind to the subject, and produces, therefore, a treatise which, though open enough to criticism, represents with incomparable force one side of a great question, Mr. Helps only adds hint to hint; and while contriving, whether intentionally or not, to leave an impression that he could say a great deal if he would, ends by saying very little indeed to the purpose. This practice of trifling with everything may not raise our respect for Mr. Helps as an author, but, we believe, greatly increases his influence as an essayist, for ordinary readers dislike the trouble of consecutive thinking, and feel a sort of reverence for a teacher who seems always to hint at something great which he could say if only he chose to follow out the thought which he thinks it better merely to suggest.

The perpetual assumption of this half mysterious, half modest attitude of a teacher who simply hints rather than asserts is closely connected with the second characteristic of the school's mode of teaching. "Above all things," writes Mr. Helps, "I am anxious to take my readers into council with me." In other words, Mr. Helps and his disciples make it a point of conscience to establish a sort of personal relation between the writer and the reader. The mode in which this is done depends of course upon the particular author's sense and taste. A. K. H. B. narrates anecdotes about his little girl, his fireside, his sermons, and, if our memory does not deceive us, his gloves. Mr. Helps writes like a gentleman, and does not fall quite so low as this; still he is pleasantly confidential, and, as he says, wishes to bring himself and his readers "into closer contact." With a view to this result he gives the following pleasing details of his own life. "I sincerely think," he writes, "I have some especial claims to be heard upon questions of government. I entered the public service immediately after leaving the university. I held in succession several offices which ought to have given an observant man great opportunities of remarking the conduct of business in various departments. When I ceased to be actively employed in the public service I was frequently still obliged to entertain grave questions relating to government, being honored from time to time by having such questions sent me for consideration. I have since re-entered official life," etc., etc. "Nothing," he adds, a page or two later, "is more odious to me than dogmatism in matters which admit of much discussion and in which vast numbers of people are interested. I would even have my readers remember that I am an official man, and may have all the prejudices belonging to my calling." Now all this is inexpressibly sweet—what young ladies, we believe, call "nice." Youthful readers especially, just beginning to like speculation and not perhaps very fond of thinking, must find it unspeakably delightful to learn all these details about the great Mr. Helps, and to feel that the man who has been honored by having grave questions sent to him for consideration is so good and kind and considerate that he wishes to take Master Brown and Miss Jones into council with him, and wishes them to remember that he too is a man and may have all the prejudices of his calling. It seems almost cynical to suggest that such personal statements are at the best irrelevant, perhaps just a trifle vulgar and possibly delusive, for, though we are perfectly willing to believe that Mr. Helps possesses all the many virtues to which he lays claim, it is as well to bear in mind that a man's own testimony to his own merits is not always considered conclusive proof of their existence.

---

* "Thoughts upon Government. By Arthur Helps." London. Boston: Roberts Bros. 1872.

We have, however, no doubt that the personal tone introduced into modern essays—this bringing the reader into contact with the writer—has much to do with the influence of modern essayists. It gives the public the same sort of pleasure which is given in another form by having a good stare at a well-known author under the pretence of hearing a lecture or a reading. It is easy enough, in fact, to account for the influence of Mr. Helps and his followers. It is not quite so easy to answer the question whether this influence is in reality beneficial. We are compelled to say that we consider it, on the whole, bad. Mr. Helps, and still more his disciples, have done the best they can to stimulate two of the worst tendencies of their readers. The first is the tendency, which at any rate is very marked in modern English society, to turn the mind towards little, trivial interests. All this thought expended upon the petty matters of life is not only so much thought wasted, but is a direct encouragement to consider little things as great, and as a consequence to consider great things as little. The second evil tendency is the tendency to vulgarity which more or less besets all societies. A writer who teaches his readers to delight in personal anecdote—to think rather who the teacher is than what it is he teaches—to interest themselves, for example, in the anecdotes of A. K. H. B.'s fireside or the details of Mr. Helps's life, rather than in the worth of the arguments put forward by the person or the official, distinctly stimulates a vulgar curiosity instead of exciting intellectual interest.

Of Mr. Helps's school we confess we cannot with honesty say much good. Of Mr. Helps himself we gladly speak with considerable respect. He has, as an historian, produced works which place him high among historical writers of the second class. His earlier essays were graceful and intelligent, if not very profound or vigorous. There was a time when he wrote somewhat above the level of his readers, and strove rather to bring them up to him than to descend to their capacities. The candor, moreover, he claims he really possesses, and we suspect he might still as a critic produce works of considerable value. We greatly hope that he may cease to write vaguely on things in general, and produce once more works on history worthy of his considerable reputation. As an historian he has one great merit. He is one of the few men who still believe in moral force, since, in England at least, the limited number of persons who did not bow down and worship force when represented by Louis Napoleon, began to adore it when represented by Bismarck. From this passionate admiration for successful violence Mr. Helps is entirely free. Both his equity and his critical power are shown in the following tribute to a body of politicians who, with all their defects, receive at the present day little justice even from men who greatly resemble them:

> "If I were," writes Mr. Helps, "asked what would be the most fruitful subject for study which could be devised for giving foresight in political action, it is the history of the Girondins. There never, perhaps, was an instance in the world in which so many good men, having really great designs for the welfare of mankind, were so utterly deluded and deceived."

BROUGHAM'S AUTOBIOGRAPHY.—III.*

THE last volume of Brougham's autobiography describes the busiest and most conspicuous years of his life, between the ages of fifty and sixty, ending with the close of his official career in 1834. His highest honors were crowded into that short period. Even without the reputation gained by the incessant work of the years that preceded and followed it, a man less restless and vain might have been satisfied with the fame especially deserved by the leader of Parliamentary reform and the Keeper of the Great Seal, and with the credit, shared by his colleagues, though claimed for himself, of prudent, if not brilliant political management. What he had done before taking his seat for Yorkshire in that which was to become the Reform Parliament, was largely set forth by Henry Cockburn, who presided at the dinner given to him in Edinburgh on the occasion of his installation in 1825 as Lord Rector of the University of Glasgow. His nine hundred entertainers of all sects and parties were flattered by the persuasion that the Scotch system had fitted him for achievements described as greater than had ever been attained by the intellectual powers of a single and unaided man. His labors for popular education, declared to be his most appropriate and enduring monument, perhaps deserved this praise. But his fame as the Queen's advocate and the opponent of slavery had been won quite as much by the help of others as by his own genius or its northern training. What higher flights his ambition might dare in those troubled times, or what wayward courses his growing eccentricity might dictate, neither his Scotch friends nor his enemies could foretell, though all believed that he would go far, and feared lest he might go astray.

On his return to London he watched complacently the perplexities of Wellington's administration, harassed by the chronic trouble of Ireland, and weakened by dissension. "Very comfortable in his situation of spectator," he passes lightly over his difficulties in wavering between the support he was disposed to give the government and the perfect freedom he retained to oppose it at any time if he saw fit. The temptation to strike was strong, while the ministers were at the mercy of any one or two men of weight who might choose to make a run at them. The Duke's reticence, amid the passionate excitement of the Catholic question, justified the attacks invited by his allowing men who held his best places to take open part against him, and embittered by what the opposition called his "degrading aid-de-campish dictatorship." The situation deserves study as a precedent. A military clique held the government in the name of an illustrious soldier, unable or unwilling to pacify a turbulent province, and obstinately deaf to the demand for reforms sure to be won through their expulsion. It is not fifty years ago, but, slightly varied, the proverb fits, "Tempora mutantur, nec nos mutamur in illis."

Emancipation was yielded at last, in time to prevent civil war, but too late to save the minstry, not so much because it alienated the ultra Tories as because it came upon the country already aflame with a fresher and more general excitement. Before the next election, the fever of revolution broke out again in Europe, and the infection spread over England in the milder and more manageable type it always there assumes. Brougham stood for the great county of York, the prime constituency of the kingdom. The honor was unprecedented. Hitherto, Yorkshire had been represented only by its great landholders or their dependants—all other candidates, if not rejected through tradition, had been deterred by the expense of a contest, which, four years before, it had cost the sitting member twenty thousand pounds merely to prevent. Brougham, then employed at the assizes in an unusual number of heavy cases which he could not neglect, was astonished at a proposal that might well teach him to trust his lucky star. He was elected by a very united vote, without a penny of cost, after a three weeks' canvass, filled, night and day, with the hardest work he ever went through. He considered his return for the county of York his greatest victory and his most unsullied success. In Parliament it was regarded as the highest compliment ever paid to a public man; and it added greatly to his weight with the Whig party and his influence in the legislature. Both were soon to be put to the test; for although in the canvass the chief stress was laid upon the candidate's services to slave emancipation and education, yet representative reform had long been almost a kind of local question with Yorkshiremen, and it was felt that the future, more than the past, had occupied their minds and guided their choice. So that Brougham entered Parliament, in 1830, pledged to the support of that peaceful revolution which his abilities, his convictions, and the admiring confidence of the country called upon him to conduct. The principles of the subject were more familiar to him than to mere party men, though he declared as to its details that no Whig but Althorp, and no Tory besides Croker, understood them. Very early in life, as a student of history, he learned that the transition of real power from the sovereign to the great noble houses, and from them to the elected branch of the legislature, had not been attended by a corresponding change of formal authority, and that the time was coming to limit the peers who had limited the monarchy. Twenty years before, while sitting for a pocket borough, he had written temperately in favor of parliamentary reform, opposing universal suffrage and the extinction of boroughs, and had inspired the *Edinburgh Review* with a moderate tone on the subject. The perils and the passions of that contest are too familiar to be dwelt upon, and, indeed, little new light is thrown by this volume on its public aspects. When carried at last, after two years of stormy debate, after the suspension of the Whig ministry for five days, and the Duke's failure to replace it, among threats and preparations of insurrection, a dissolution only stimulating popular zeal, and a revolutionary plan to swamp the obstructive Upper House by a new creation of peers dismaying its opponents into silence, the Reform Bill was worth all the labor and danger it cost, and brought to Brougham all the fame he could desire. It added more than half to the existing number of county members, extinguished fifty-six boroughs and more than twice that number of borough members, created new and great town constituencies, destroyed the freeholders' monopoly of votes in counties, and extended the suffrage to tenants paying yearly ten pounds rent. Brougham often afterwards said that the reform went too far; but its whole course was implied in the first step. The spirit he raised proved too strong for the magician, and can do its work nowadays aided only by such clumsy adepts as Dilke and Odger.

---

* "The Life and Times of Henry, Lord Brougham. Written by himself. Volume III." New York: Harper & Brothers. 1872.

The gestation of the Reform Bill so far impaired the constitution of the Grey Cabinet that it could not long survive. Brougham is undoubtedly right in attributing its short lease of power to the unreasonable disappointment and attacks following upon unreasonable hopes. They expected from popular gratitude a long continuance in office, but they forgot to reckon with popular impatience. Reform was neither a finality nor a panacea, and its authors were deposed for not performing what they never had promised. They did accomplish a great deal in the four years during which they controlled a moderate and rational reformed House, with the peers generally hostile, and a king whose support was not always to be relied on. They removed the abuses of the Irish Protestant Church, and lessened its cost to the people. They seized the opportunity of renewing the East India Company's Charter to reduce that imperial monopoly to a proper political subjection. They transformed the poor laws and abolished slavery. The measures for which Brougham deserves particular credit were the complete and important reforms in municipal corporations, and the improvements and retrenchments introduced in the courts. He made haste to propose a sweeping measure of amendment in Chancery procedure, before, as he said, his good intentions should be paralyzed by routine, and proved his sincerity in the cause by pressing legislation for abolishing many sinecures in his gift, and reducing his own salary and retiring pension. Law reform continued throughout life to be his crotchet, as education was his hobby. So long as any work remained to be done in drafting codes or patching statutes, he was prompt to find it, or, if there was none, apt to make it.

It is certain that Brougham's abilities and passion for work did a great deal to keep the Grey Cabinet together. The interesting letters from his colleagues and from the king, largely cited in this volume, prove their sense of his importance and their respect for his character. Those from William the Fourth show sincerity and comprehension of his duties as a ruler, with a natural jealousy for prerogative, a natural anger at popular menace, and a troublesome desire to unite all men of ability and position in the conduct of the government. But the correspondence shows also that the Chancellor must have done a great deal to break the Cabinet up, by his domineering and egotistic temper. His assumption of authority is amusingly described in making all the state preparations required by etiquette for the hasty dissolution of Parliament, and ordering an escort of troops without warrant. He relates, without seeming conscious that they are at all extraordinary, many instances of strong measures and urgent pressure exerted upon the king. After wringing from him a verbal assent to the creation of new peers, he shocked and amazed Lord Grey by asking the royal promise in writing. And again, after Grey's resignation, while the king still hoped that a coalition ministry might be formed, he took the positive step of announcing in the House that the Government had not resigned, and thus forcing the king against his will to call in Melbourne. "He yielded a sullen compliance," the memoir says, "and never more smiled on me while he lived." All this kind of arrogance must have been very galling to his colleagues, especially to Grey, who, with high courage, discretion, and practical sense, had a morbid feeling as to his age, an occasional depression, and what his friends blamed and he himself admits as a want of executive coarseness. As the strongest unit in the Cabinet, Brougham was among the last to leave it. "The Whig ministry," Sidney Smith says, "were nearly dissolved before the king put them to death—they were weakened by continued sloughing, and the king put them out of their misery, in which I think he did a most foolish thing."

This volume gives a satisfactory explanation of some passages in Brougham's life which his enemies were never tired of misrepresenting. His candid narrative of the hesitation with which he took the great seal, at a sacrifice of profit and influence, disposes of the charge that he sulked like Achilles in his tent while the cabinet was forming. He needed to make no conditions, for the Whigs confessed that without him they could not go on at all, and his bitter complaint of their subsequent ingratitude is not without reason. He has been blamed for boldness in urging a new creation of peers to save the Reform Bill, and for timidity in not completing it. The truth is, he was both bold and cautious at the right time. The mere project gained its result. If it had come to the actual measure, he owns that both Grey and himself would have faced any risk rather than make so revolutionary a step a party precedent. On two occasions he was accused of ambitious intrigues unworthy of a man of honor or prudence—once during the five days' suspension of the Whig ministry, and again when Grey resigned, four months before its dismissal. But the memoir details the conversation after the first of these events, in which the king urged him in vain to form a cabinet himself, and gives letters written by Grey after the second one, disproving any charge of treachery towards him. These calumnies are embellished and embalmed by Lord Campbell in his Life. Brougham takes a just and clever revenge, by printing some of Campbell's begging letters, which go far to account for Sidney Smith's belief that the most delicate and sensitive turpitude is always to be met with in Scotland. Of the way in which his judicial duties as chancellor were discharged, Brougham says briefly and fairly: "There was never yet an instance of so few decisions in any court being appealed from or changed, or of so much business being disposed of in the time." As to the thirty-three years of restless and by no means fruitless activity that followed his retirement from office in 1834, linking him, the contemporary of Pitt and Canning, with the men and the interests of our own day, the memoir is silent. It abounds in anecdotes of famous people and events of the last generation, and contains generous and discriminating sketches of his contemporaries in Parliament and at the bar—of Lord Holland, Palmerston, and Grenville, Scarlett, Plunkett, Lyndhurst, and many others, all of whom, when he wrote, at the age of ninety, the pathetic words of his conclusion, were dead: "There was not left one single friend or associate of my earlier days whose recollections might have aided mine." It is but just to his memory to add that no one of those who have gone before him has left a name more conspicuous for the devotion of genius and energy to the interests of mankind.

STILL'S "UNDERGROUND RAILROAD."*

To readers of this work fifty years hence, the events with which it deals will scarcely seem more remote and improbable than they already do to us, at a distance of only a dozen years. It is not merely or principally the gulf between slavery and freedom which our imagination finds it difficult to bridge, but that between the North of 1850-60 and the North of to-day. There is still enough to remind us that slavery once existed at the South, but the traces are nearly obsolete of its invasion of the North, with the sanction of Federal law, prior to the armed invasion known as the rebellion. The Personal Liberty Laws of that period; the Jerry rescue, the rescue of Shadrach, the Oberlin "riot," the carrying off of Sims and Burns, the imprisonment of Passmore Williamson, the bloody sacrifice of Margaret Garner; ruffians fit for the penitentiary, but openly justified by the clergy and the press, stalking our streets in search of fugitives to reclaim or freemen to kidnap, filling peaceful communities with mingled terror and indignation, and calling to their aid all the resources of the State and of the Government; judges making haste to consign their victims to slavery on testimony that would not have sufficed to convict for theft; the warning placards of the Vigilance Committee; mass-meetings to denounce the decision of the court; the sometimes tumultuous, sometimes funereal aspect of the streets through which the military escorted the fugitive and his captors—all this, we repeat, has vanished not only out of sight, but almost out of mind. It is, nevertheless, a chapter in our history which cannot be skipped or obliterated, inasmuch as it marks one stage of the disease of which the crisis was passed at Gettysburg. It is one, too, for which we ought not to be dependent on tradition; and, all things considered, no one was so well qualified as Mr. Still to reproduce that phase of it with which he was so intimately concerned, as chairman of the acting committee of the Vigilance Committee of Philadelphia.

Of all the Border States, Pennsylvania was the most accessible to fugitives from slavery; and as the organization just named was probably the most perfect and efficient of its kind, and served as a distributor to the branches in other States, its record doubtless covers the larger part of the field of operations of the Underground Railroad, or, in other words, of the systematic but secret efforts to promote the escape of slaves (commonly to the British provinces). That by far the greater number of escapes narrated in this book were from Delaware, Maryland, and Virginia is not surprising, since only an imaginary boundary separates these States from Pennsylvania, while numerous water-courses connect them closely, as well as the South Mountain, that romantic highway for fugitives for half a century, which John Brown selected for his track into the heart of slavery and place of refuge against assault, and whose beautiful heights have been made for ever famous as the scene of the decisive conflicts of the rebellion. That the prominent actors in this work of Christian charity were to a considerable extent from among the Quakers, is partly explained by their being in force in Southern Pennsylvania. The best known of them, however, Thomas Garrett, who in the course of a long life had assisted upwards of two thousand fugitives, lived in Wilmington, Delaware, and practised his beneficent profession without concealment and in spite of the heavy disaster which it brought upon him. It may also be remarked that the limited area from which escape into Pennsylvania was practicable, was that in which slavery prevailed in its milder forms. We say this without forgetting the peculiar distinction of Virginia as a slave-breeding State, and without pretending that the superlative cruelties of the system were never developed in the regions in question. Mr. Still's readers will, we think, be struck by the paucity of harrowing accounts of slave life taken down from the lips of the fugitives who passed through his hands. This is all the more striking because they might naturally have exaggerated their sufferings for the sake of enlisting sympathy. Not a few had absolutely no complaint to bring against their late owners except of being their owners. In one instance, "the fugitives themselves innocently stated that one of the masters, who was in the habit of flogging adult females, was a 'moderate man.'" Even when fault was found with the master or mistress, the phrase was apt to be that he was a "mean" man, or that she had a "very mean principle." Sometimes, too, it would appear that the master's station was a grievance to his bondman, over and above the discipline which he meted out; that it was, for instance, an additional degradation to be the single slave of a poor white trying to change his caste by becoming a slaveholder. "They were about second-class in society," was Cornelius Henry Johnson's remark concerning the owners of a hundred head of chattels, who, for the rest, had treated him not badly.

---

* "The Underground Railroad. By William Still." Illustrated. Philadelphia: Porter & Coates. Pp. 780. 1872. (Sold only by subscription.)

Experience amply proved the general sincerity of the fugitives, and these three causes, above all others, seemed potent in determining them to take flight: the knowledge or apprehension that they were to be "sold South"; the breaking up of estates, which rendered their future uncertain; and some special outrage which passed endurance. The last straw that made a runaway of Lewis Jones was: "When my aunt died—all the kin I had—they wouldn't let me go to the funeral. They said 'the time couldn't be spared.'" Greater hardships than this, however, were commonly alleged; and while Mr. Still's book is not crammed with horrors, but, on the contrary, exhibits a scrupulous restraint in introducing them or expatiating upon them, it nevertheless contains narratives that would properly supplement the "Key to Uncle Tom's Cabin." Perhaps the most pathetic story in the whole volume is the one with which it opens, and which is entitled to this position not only on grounds of literary art, as containing all the elements of romance, suffering, vicissitude, heroism, and tragedy, but (the real motive in this case) because the author's own family is involved. It is of a white man, Seth Concklin, who "had read how, on arriving in Philadelphia, after travelling sixteen hundred miles, almost the first man whom Peter Still sought advice from was his own unknown brother (whom he had never seen or heard of), who made the discovery that he was the long-lost boy whose history and fate had been enveloped in sadness so long, and for whom his mother had shed so many tears and offered so many prayers during the long years of their separation; and, finally, how this self-ransomed and restored captive, notwithstanding his great success, was destined to suffer the keenest pangs of sorrow for his wife and children whom he had left in Alabama bondage." Concklin, who was a plain man, of strong sympathies and wholly insensible to fear, "volunteered his services, without pay or reward, to go and rescue the wife and three children of Peter Still." After a preliminary visit to them from Peter himself, who "proposed to Vina that she should give him certain small articles, consisting of a cape, etc., which he would carry with him as memorials, and, in case Concklin or any one else should ever come for her from him, as an unmistakable sign that all was right, he would send back," Concklin set out on his perilous undertaking. With the utmost prudence and daring, the rescue was effected, and the party arrived safely in Indiana, *en route* for Canada, when they were apprehended and lodged in jail. Almost immediately they were hurried back to the South; and while passing down the Ohio River Concklin was in all probability murdered and thrown overboard, for his body was afterwards found with the hands and feet in chains, and the skull fractured.

We must neglect many topics which invite remark, in order to find room for a general account of the work before us. It is an unpretending compilation from a diary kept by Mr. Still both before and during the existence of the Vigilance Committee, in which he noted down everything that would serve to identify the fugitives whose histories were related to him. "It seemed reasonable to hope," he says, "that by carefully gathering the narratives of underground railroad passengers, in some way or other some of the bleeding and severed hearts might be united and comforted; and, by the use that might be made privately, if not publicly, of just such facts as would naturally be embraced in their brief narratives, reunions might take place." Accordingly we have a series, in chronological order, of condensed notices of arrivals, varied here and there by episodes of some length, such as the Christiana (or Gorsuch) tragedy, the case of William and Ellen Craft, the trial of Euphemia Williams, etc., and the occasional insertion verbatim of correspondence had with fugitives after their arrival under the British flag. In view of the sameness of the experiences of these hundreds of slaves, it was no easy task to make the notices readable; but we must award high praise to the literary sense, not to say the literary skill, which has contrived to tell the old story again and again without staleness, almost without repetition, and with a pleasant humor predominating the seriousness of the subject in hand. That the record will have a genealogical value we do not doubt, though an index of names would greatly have increased it, and we should have been glad to see evidence of the author's having consulted a rather juiceless work of a similar nature, published some years ago by a missionary among the refugees in Canada. It may well be honorable hereafter to trace one's descent from some one of those whose brief biographies are here entered. "It scarcely needs be stated," says Mr. Still, "that as a general rule the passengers of the U. G. R. R. were physically and intellectually above the average order of slaves." This was long ago conspicuously shown in the case of Frederick Douglass and others, and is here illustrated once more. Abram Galloway, who escaped from North Carolina to Canada in 1857, went back there as a Union soldier, and, after the war, became a member of the State Senate. John Henry Hill, who broke loose from the very auction-block in Richmond, in 1853, is now a justice of the peace in Petersburg. Thomas Bayne returned as a doctor in good standing from New Bedford to his old home in Norfolk, soon after the Federal reoccupation, and became a nearly successful candidate for Congress. And these are but samples.

Partly as rounding out his subject, and partly as a contribution to the history of the anti-slavery movement in this country, Mr. Still has procured from several coadjutors sketches of the lives of a number of the "officers" of the Underground Railroad (though one looks in vain there for the names of Dr. W. W. Rutherford of Harrisburg, or of Francis Jackson of Boston) and of other leading abolitionists. We may say of this portion of the work that it is wholly interesting, though in a single instance a writer has made the mistake of patronizing the anti-slavery cause by dwelling on the social respectability of a by no means indispensable adherent. The accompanying portraits are less praiseworthy as works of art than as likenesses, being fairly good presentments for wood-cuts.

The Mother's Register. Current Notes of the Health of Children. I. (Boys.). II. (Girls.) From the French of Prof. J. B. Fonssagrives. (New York: John Ross & Co. 1872.)—The systematic disposition of the French mind has here been employed to very good purpose in preparing a series of tables covering the whole period of growth, from birth to manhood, and designed to furnish a physiological record of the highest character and, while it is forming, of great practical importance. "The mother records for the physician to interpret," says the motto on the title-page, but this is only a part of the story. The mother records for her own sake, to guard against the defects of memory, and to have at hand a tell-tale by means of which a disease once met with may be recognized on reappearing, and thus, perhaps, timely prevented, even without the aid of the doctor; by means of which, also, the constitutions of her children may be compared with each other, and which will early lead her to study the peculiar temperament of each, with the result of both governing and educating them more judiciously than she would otherwise be likely to do. The author doubtless did not expect that even the most intelligent mother would carry out his scheme in its minutest details; but he has nevertheless framed his forms on "Descent and Consanguinity," "Nursing," "Vaccination," "Weight," "Sight and Hearing," "Susceptibility and Resemblance," "Accidents and Operations," etc., etc., with scientific completeness, knowing that attention to even a small portion of each one will produce substantial fruits. He has, in fact, abridged the labor of making this sort of notes when attempted without system. "What I propose," he says in his preface, "is not a health account difficult to keep: only a word every three or four months, and one has orderly notes capable of usefully informing the physician, and the benefit of which may extend from infancy over the whole life." The possible effects of this practice faithfully carried out are perhaps hardly exaggerated by the author, and the best recommendation of his little work may be a partial enumeration of them:

> "The increase in families of the sense of the real value of health, and of the care which it demands; traditions established and preserved in matters which are commonly entrusted to recollections necessarily fallible and incomplete; the mitigation, as far as is possible, of the inconvenience of a constant change of physician—the regrettable consequence of our cosmopolitan habits; the possible proof of connection between two sicknesses, remote from each other in point of time, but associated by a common nature or a common filiation; hereditary resemblances between children of the same family, brought to light where they had not been suspected; individual peculiarities of susceptibility to this or that medicament, to this or that hygienic condition, brought to the physician's attention; exceptionally valuable deductions drawn from the inheritance, nursing, growth, diseases, and indispositions of infancy—in a word, from the *tout ensemble* of the previous life of the little invalid."

The World before the Deluge. By Louis Figuier. Newly edited and revised by H. W. Bristow, F.R.S., F.G.S., with 235 illustrations. (New York: D. Appleton & Co. 1872.)—It is gratifying to see some recognition of the need of qualifying and diluting "Figuierism" for English and American readers. The last dose, "Primitive Man," though gilded with gorgeous illustrations, was a bitter pill for those who regard the origin and early condition of mankind as a subject of serious scientific investigation, and who are therefore distressed by the verbosity and loose reasoning of this wholesale manufacturer of popular science. We have to thank the English editor of the present work for the valuable "table of British sedimentary and fossiliferous strata," etc., as also probably for the index, the appearance of which in one of Figuier's works is equally gratifying and unexpected. But while there can be no doubt as to the value of his other additions and alterations, it is to be regretted that the text affords no certain clue as to where Figuier ends and Bristow begins.

Of course, the former must be the author of the paragraph at the top of p. 297. He alone could locate the pouch of marsupials "in the *neighborhood* of the abdomen" (p. 244), or say that they are supported by the marsupial bones (p. 245), which all anatomists now agree have nothing to do therewith. No other could cover three pages with a sensational account of Pterodactyle (p. 233) before alluding to its chief characteristic, the elongated fourth digit; or speak of sigillaria and stigmaria as distinct plants upon one page (130), state that the latter is merely the root of the former upon another (137), and repeat the first inaccuracy upon p. 158 only to correct it again on p. 162; or represent a calamite with its root in the air, as in Fig. 64. None but Figuier could have given such a representation of the Asiatic Deluge as Pl. xxxii; the intense originality of which is somewhat marred, however, by the reappearance of the identical pair of nearly parallel zigzag lines which had already done duty as lightning in Plates vii. and xii. And surely only the genius which can produce half a dozen works upon as many branches of science at the rate of one every two years, and which, therefore, has no time for such trifling incongruities, could quote as equally graphic and correct the literal Mosaic account of the Deluge (p. 481), and then omit from both text and illustration all sign of the ark, with its anxious living freight. Indeed, we are rather surprised that his imagination did not lead him to supplement the narrative with an exact statement of the proportions of the vessel, and the amount of provision required for man and beast.

But while some, though not all, of the above-mentioned are matters which the English editor could perhaps not alter without "wholly changing the character of the book," he must be held responsible for some serious omissions. No allusion is made to the heterocercal tails of Devonian fishes (pp. 125, 126); and the Placoids and Ganoids are frequently mentioned (pp. 187, 217) with no reference to the existing forms which would give the unscientific reader some idea as to the peculiarities of those groups. Nor would it be out of place for the editor to give us some aid in a choice between the various views respecting the thickness of the earth's crust enumerated on pages 86–89; for while, according to one high authority, it is only 30 miles, others make it 200, 600, and 1,000 miles, and others maintain that the earth is a solid ball; the one view exciting our fear of a sudden and general incremation, which is hardly relieved by the assurance given by the other of the non-existence of "eternal fires."

We venture here to make an enquiry respecting the "genesis" of the present volume. The title-page and preface allow us to infer that it was originally translated from the French, and first issued in English by the present New York publishers. If this is the case, then there is no apparent excuse for the absence of a table of American geological equivalents and of references to some American authorities, as, for instance, Brigham on Hawaiian volcanoes, and Packard on fossil insects, with many other matters which an American public has a right to expect, and which a native geologist could have supplied. But if the above inference is not correct, then it would be proper for either title-page or preface to state from what English edition, and by whose authority, the present is reprinted; and we should be glad also to know who wrote the preface, since it either tells too much or far too little. It only remains to add that with all the faults and deficiencies above-mentioned, the present work may be very useful either in awakening an interest in the subject among general readers, or in supplying the beginner in geology with tolerably correct figures and descriptions of fossil remains in the order of their appearance; and in so far as it does this, it may be held to attain the object stated in the preface, "to trace the progressive steps by which the earth has reached its present state, and to describe the various convulsions and transformations through which it has passed."

Church Architecture. Illustrated with thirty-five lithographic plates from original designs by H. Hudson Holly, architect. (The Church Press, Hartford: M. H. Mallory & Co. 1871.)—This book is to a certain extent a contribution to the small stock of published thought upon subjects connected with building. There is in the text a great deal of good sense, and what seem to be the results of experience in planning churches, and supplying the needs of congregations in villages and in the country. The thought in it is not orderly or consecutive; symbolism and common building materials, ventilation and Christian iconography, are found in close juxtaposition—overlapping, as one might say. But the knowledge and insight that have gone to make up an unsatisfactory result in this case might, if the same matter were to be recomposed in a pamphlet not weighted down with pictures, and the quarto-form rendered necessary by them, aid the advancement of building art. Every attempt by an American architect to speak to or for his profession is to be welcomed, and criticised sympathetically, for there have been few intelligent utterances hitherto in this department of thought, and few men in the country capable of them. Books whose sole object, however, is to advertise their authors as practising architects, can of course not be brought under this category. The first impression made by "Church Architecture" is, that it is but another such advertisement, like a dozen that have gone before; but examination proves it to be something more than that, and better than that, as we have said above. Still, inasmuch as the designs for churches offered are all by our author, and as his business card and schedule of charges occupy the first page of the advertising sheets at the end of the book, his work appears rather as one to be sent to a building committee as a "feeler," than as one which an architect or a student of architecture could buy. And here we have a touchstone by which this class of publications might be tried: Would an intelligent student of the subject ever think of buying it?—the book in question, whatever it is called. In the instance before us, the answer would hardly be favorable.

The illustrations to this book are not admirable; for, though there is merit in some of the designs, as we understand them, there are none of very great interest, or that show much novelty of conception or originality of treatment, and the rendering is very poor. Moreover, the book is disfigured by an advertising sheet of illustrations of gas burners and the like, got up for sale by an enterprising New York firm, but of about the usual ugliness for all that; by a commonplace design for a stained-glass window; and by a colored title-page in not very good taste as regards design, and most execrably printed. In fact, all the photolithographs in the book are poor enough, and certainly do Mr. Holly's designs injustice.

Annual Record of Science and Industry for 1871. Edited by Spencer F. Baird, with the Assistance of Eminent Men of Science. (New York: Harper & Bros. 1872.)—The specialist must go much further than this volume takes him in his own department, though it places him abreast of collateral literature; the general reader, desirous of knowing the leading scientific discoveries of the day, will find it extremely useful and convenient—in fact, all he could reasonably desire. It reflects the present status of scientific enquiry in a double sense, not only showing what has just been done by the workers themselves, but also indicating a healthy state of the public appetite for what they have to teach—demand regulating supply, as usual. The "Record" is a digested abstract of such of the more important discoveries of the past year as are of general interest, or likely to prove of lasting importance to science, pure or applied. Aside from its comprehensiveness—a quality that a glance at the table of contents shows that the work possesses—the most satisfactory feature of the present volume is its thorough reliability. It is prepared, we hardly need say, by one of the leading men of science in this country, who possesses in a high degree the peculiar tact, as well as the knowledge, required for excellent work of this kind, and who enjoys unusual facilities for its successful accomplishment. We have here the cream of the regular publications of all the leading scientific bodies in this country and Europe, and of some sixty scientific or semi-scientific periodicals besides. The compilation might seem easy for one who is thus thoroughly conversant with current literature, but a moment's reflection makes it evident that just here lies the source of much embarrassment, the difficulty being, what to rule out. Opinions will differ according to individual bent of mind, but it will doubtless be generally conceded that the author has weighed fact against fact, appreciated their relative value, and made his selections with praiseworthy care and skill.

Much of the "Record" will be recognized as the scientific intelligence that has lately appeared in *Harper's Monthly* and *Weekly*, systematically rearranged according to subjects. Considerable new matter is however introduced, consisting of "original ideas, unpublished elsewhere, and derived from personal investigation, or else supplied by collaboration" with various eminent scientific men. Upward of two thousand items are given, accompanied in most cases by reference to the publications in which the articles of which they are abstracts appeared. A copious, well-arranged table of contents, with a complete index, makes the information given upon any particular subject readily accessible; whilst the tabulated list of periodicals consulted points the way to further research. The necrology of the year embraces forty-four more or less distinguished names. The "General Summary," although necessarily very brief, is a valuable essay, and gives a good idea of late progress. Professor Baird finds that "the year that has closed has not been remarkably fruitful in the way of great discoveries in science, although much progress has been made in filling out gaps in our knowledge of many subjects" (p. xvii.)

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—*	*Prices.*
Abbott (Rev. L), Laicus	(Dodd & Mead)	$1 75
Auer (Adelheid von), It is the Fashion	(J. B. Lippincott & Co)	1 50
Byles (J. B.), Sophisms of Free-Trade	(H. C. Baird)	1 25
Baird (S. F.), Annual Record of Science and Industry, for 1871	(Harper & Bros.)	
Christianity and Modern Thought	(James Miller)	
Collyer (Rev. R.), Nature and Life, A Man in Earnest, The Life that Now Is, 3 vols.	(Lee & Shepard)	4 50
Cooper (J. F), The Deerslayer, swd	(D. Appleton & Co.)	
Dana (Prof. J. D.), Corals and Coral Islands	(Dodd & Mead)	6 00
Dunglison (Dr. R.), History of Medicine	(Lindsay & Blakiston)	2 50
Der Kindergarten in Amerika, swd	(E. Steiger)	
Dupuy (Miss E. A.), Who shall be Victor?	(T. B. Peterson & Bros.)	1 75
Dumas (A.), Memoirs of a Physician, swd.	(T. B. Peterson & Bros.)	1 00
Freeman (E. A.), Growth of the English Constitution	(Macmillan & Co.)	2 00
Fullerton (Georgiana), Constance Sherwood	(Cath. Pub. Soc.)	2 00
Gardner (F.), Phædrus, Justin, Nepos	(Lee & Shepard)	1 25

Hutchings (J. M.), Tourists' Guide to the Yo-Semite Valley	(A. Roman & Co.)	3 00
Joynes (Prof. E. S.), Le Misanthrope, swd	(Holt & Williams)	
Lyell (Sir C.), Principles of Geology, 11th ed., Vol. I	(D. Appleton & Co.)	
Mulock (D. M.), A Brave Lady	(Harper & Bros.)	
Morris (Rev. R.), Historical Outlines of English Accidence	(Macmillan & Co)	1 75
Maurice (Rev. F. D), The Lord's Prayer	(Hurd & Houghton)	1 25
Mill (J. S.), Principles of Political Economy	(Lee & Shepard)	2 50
Mahan (Rev. M.), On Confession, swd	(Pott, Young & Co.)	
Olrig Grange	(J. R. Osgood & Co.)	1 50
Pulsifer (D.), Account of the Battle of Bunker Hill.	(A Williams & Co.)	0 50
Pelletan (E.), The Pastor of the Desert	(Dodd & Mead)	1 25
Rolfe (W. J.), Shakespeare's Julius Cæsar	(Harper & Bros.)	
Ralston (W. R. S.), Songs of the Russian People	(Ellis & Green)	

"One has to wade through so much that is useless to get at anything really worth reading." This is the complaint of those who try to read many papers. Why not have somebody else do the reading and pick out what is valuable? This is done by the Editor of "The Week." Specimens sent free on application to HOLT & WILLIAMS, Publishers, 25 Bond Street, New York.

NEARLY READY.

I. NOTES ON ENGLAND. By H. Taine, D.C.L., Oxon., etc. Translated by W. F. Rae, with an Introduction by the Translator, and a steel portrait of the author. Post 8vo, $2 50.

"A brief review can do but scanty justice to M. Taine's book. We can only deal with it in its broad results, while its charm lies in its detail. . . . Even were France more prolific of literature than it is at the moment, no one should neglect to read these letters in their collected form."—London Times.——"This volume possesses great value as a rapid, succinct, comprehensive sketch and critical survey of our English society and institutions. Even those who have made a careful study of their country will be benefited by the perusal of a book like this, where the whole field of English life is brought, as it were, within the compass of a glance."—London Examiner.——"Mr. Rae has rendered Mr. Taine's masterly French into the most delicate, lithe, and racy English; so that the book is one of the most valuable recent additions to this class of English literature."—British Quarterly Review.

II. TAINE ON INTELLIGENCE. First American Edition. 8vo. $5.

III. SMOKE. A Novel. By Ivan Turgenef. 16mo. $1 50.

"Turgenef's masterly fiction."—Nation.

IV. MY LITTLE LADY. An English Novel by a new writer. 16mo, cloth. A new ornamental binding. $1.

"The novel is one whose originality and beauty will carry it far."—Trade Circular.

HOLT & WILLIAMS, PUBLISHERS,
25 Bond Street, New York.

COZZENS' WEST POINT HOTEL will open on the first day of June, under the direction of the undersigned. Three Cottages to Let, with board in Hotel. For further particulars address EDWARD COZZENS, West Point, N. Y.

A GRADUATE of HARVARD COLLEGE, who has had two years' experience as teacher in the best private schools of Boston and New York, will instruct a pupil during the Summer months, either in the city, country, or abroad. Address H. N. K., Box 100, Tribune Office.

TWO German Ladies, residing in the City of Hanover, Germany, are prepared to receive a few young ladies as private boarders who wish a pleasant home while finishing their education in the excellent schools of that city. For particulars, apply to "I. D.," P. O. Box 2136, Philadelphia.

UNION COLLEGE, SCHENECTADY, N. Y.—Alumni Day, Tuesday, June 25th. Commencement, Wednesday, June 26th. For Catalogues or Circulars, address E. M. Jenkins, Registrar. For information respecting the Civil Engineering School, address Prof. Cady Staley.
E. N. POTTER, President.

NOW READY.

SHAIRP AND MAURICE.

SHAIRP'S STUDIES IN POETRY AND Philosophy. (Wordsworth, Coleridge, and Keble.) 16mo, red cloth, gilt edges, $1 50.

SHAIRP'S CULTURE AND RELIGION. New edition, with new preface. 16mo, red cloth, gilt edges, $1 25.

MAURICE'S THE LORD'S PRAYER; with sketch of Frederick Denison Maurice. 16mo, brown cloth, red edges, $1 25.

To be followed Immediately by

JOSEPH MAZZINI: His Life, Writings, and Political Principles; with Portrait, and Introduction by William Lloyd Garrison.

A SATCHEL GUIDE, for Vacation Tourists in Europe.

AUTUMNAL CATARRH, commonly called Hay Fever. By Dr. Morrill Wyman.

HURD & HOUGHTON, New York;
THE RIVERSIDE PRESS, Cambridge.

SLAVE SONGS OF THE UNITED STATES.

A Unique Collection of Original Melodies—words and music—obtained among the Negroes of the South; preceded by an account of these Songs, and an Essay on the Negro Dialect, as observed at Port Royal. By Prof. W. F. Allen, of the University of Wisconsin. Cloth, 8vo, price $1 50.

Sent post-paid on receipt of price. Address
Publisher of "THE NATION,'
Box 6732, New York City.

CRITICAL AND SOCIAL ESSAYS. Reprinted from THE NATION, and in some measure supplying the place of the first two volumes of the paper, now somewhat scarce. Price $1 50. Address, Publisher of THE NATION, Box 6732, N. Y.

SUMMER TRIP TO ENGLAND
AND
THE CONTINENT.

The Principal and Professor of Modern Languages of a long-established and prominent Boys' Academy purpose taking a party of six young gentlemen on a three months' tour through England, Scotland, France, Switzerland, and Germany, sailing the last of June. Oral instruction will be given in History, and opportunity will be afforded for daily conversation in German and French.

Two or three boys of satisfactory character will be received.

For particulars, address

M. EDWARDS,
737 Broadway, Albany, New York.

NOW READY, NO. 41, MAY, 1872.

THE AMERICAN BIBLIOPOLIST.

A LITERARY REGISTER AND REPOSITORY OF NOTES AND QUERIES.

The new number contains, among other articles, the following: "Humboldt," "New Jerseyout of the Union" "Nonsuch Palace," "Cervantes and his Translators," "An Hour in the New Jersey Historical Society," "The Breeches Bible," "A Pretty Kettle of Fish," "Was Shakespeare Ever a Soldier?" "Cruikshank and Dickens," Literary Gossip, Book Notices, Book Catalogues, etc., etc.

Subscription $1 per year; cheap edition 50 cents.

J. SABIN & SONS,
84 Nassau Street, New York.

REMOVAL.

B. WESTERMANN & CO.,
GERMAN BOOKSELLERS,
Have this day removed from 471 Broadway to
524 BROADWAY,
Near Spring Street, opposite the St. Nicholas Hotel.

GAZZAM'S TREATISE
ON THE
BANKRUPT LAW.
FOURTH EDITION NOW IN PRESS.
W. C. LITTLE & CO., Publishers,
Albany, N. Y.

The Nation.

NEW YORK, THURSDAY, MAY 23, 1872.

The Week.

GREELEY has not, we think, gained during the week at the North, though this is a point on which it would of course be absurd to speak with any confidence, the gain or loss of a candidate in popular estimation during any one week being too vague and ill-defined a thing to be weighed. But the sober second thought is, we believe, telling heavily against him among all the more influential friends of the Liberal Republican movement. The Springfield *Republican* and Chicago *Tribune* are the only two influential papers which were instrumental in getting up the Cincinnati movement which make even a pretence of warmth in supporting him, and we suspect in both cases it is done with much heaviness of heart and bitterness of spirit. We doubt if a single prominent originator of the movement will appear on the stump for him; and we venture to affirm that there is not one of them who does not regard his nomination as a national misfortune, of which we have yet to see the worst fruits. The question whether it is irretrievable, whether something cannot yet be done to carry out the true object of the Cincinnati Convention, and offer the country a candidate for whom all honest and conscientious men can vote with pride and respect, and a platform which all could understand and most men could adhere to, begins to be asked with a good deal of earnestness, and the *Evening Post* suggests a decided effort in that direction. There ought not to be any great difficulty in getting together a convention of forty or fifty representative men, who would do what it was hoped and believed the Cincinnati Convention would do. The helplessness with which at this moment all classes lie at the feet of a gang of wretched politicians, whom nobody respects or believes in, is most discreditable and disheartening; and we include under this characterization many of the Grant "workers" as well as those of Greeley.

But it must be confessed that without some violent interference with him, Greeley is pretty sure of a strong following at the South. All we see and hear of the state of Southern feeling goes to confirm the belief that Adams was the first choice of Southern men; that he would have carried the South triumphantly; that Greeley's nomination was received with surprise, but that it has gained favor, and is gaining favor every day since; and that in all probability the Southern white vote will have all but escaped completely from the control of the Baltimore Convention by the time that body meets, and that nothing but a display of unprecedented wisdom will save the Convention from having to accept Greeley as a necessity. There appears to be no doubt whatever that the Northern Democrats have completely lost the confidence of the Southern men, and that one of the regular Democratic nominations, such as Seymour's, would do Greeley little harm. He will be supported, if nothing better offers, by the better class of Southern whites, as a means of breaking up the existing party organizations, in the hope of securing the support of the Federal Government against the carpet-baggers; and by the old, virulent, and "unreconstructed rebels" as a means of bringing the Government into contempt and ridicule. They look on him as a ridiculous old fool, and for that reason will do their best to install him at the White House, as a bitter, revengeful joke. What the negroes will do appears to be still a mystery, but the chances seem to be that they will stand by the man with the soldiers.

There is also talk from Cincinnati of a renewed attempt on the part of the Reformers in that region to get before the public a candidate for the Presidency who shall either stand on the Missouri Platform, or, at all events, be a person who can reasonably be supposed to hold the opinions set forth in that document. They feel that at present the Liberal Republicans are somewhat in the position of the Brahmin who, when preparing to sacrifice, had a mangy dog passed off on him by some unholy wags as a fine sheep, and who, having offered up the unclean beast, was smitten by the gods with disease in all his joints. To avoid an analogous fate, the disappointed brethren now propose to hold another Convention, or, in other words, to assemble once more in the Cave of Adullam. They have our best wishes, but we urge them to be sure this time, as one of our correspondents suggests, to have entire control of the Cave, and let nobody in whose antecedents and appearance do not inspire confidence. Readiness to sign papers is evidently no true test of trustworthiness.

Both the Republican and Democratic Conventions of this State have been held, and they seem to us to go far towards making the result at Philadelphia and at Baltimore sure. The Republican Convention was for Grant; the Democratic was, we take it, quite as decidedly for the Greeley and Brown ticket. Although there was, of course, a far greater degree of apparent unanimity among the Republicans than among the Democrats, it seems plain that the earnestness and confidence were to a great extent monopolized by the latter. We assure the President's confidential friends that these gentlemen certainly seem to think that they smell the offices—State and Federal, but especially the State offices. What other business was done in the Conventions besides giving each party delegation the required direction was of no importance. The Tweed wing of the Democracy are stated to be in good spirits.

Mr. Greeley has accepted the nomination in a letter which is mainly devoted to a reproduction of the Cincinnati Platform (as he understands it) in slightly altered phraseology. He agrees, with somewhat comical solemnity, to leave the mode of raising the revenue to the people, and, we are glad to see, declares himself in favor of the regular payment of the pensions of the soldiers and sailors. The depraved persons who have for years been trying to get those pensions stopped, must by this time be growing tired. Mr. Greeley also bids defiance to the Administration, believing that "in vain do the drill-sergeants of the decaying organizations flourish menacingly their truncheons, and angrily insist that the files shall be closed in and straightened; and in vain do the whippers-in of parties, once vital because rooted in the vital needs of the hour, protest against straying and bolting, and denounce men nowise their inferiors as traitors and renegades, and threaten them with infamy and ruin." We do not believe the "drill-sergeants" will wince or hide their "truncheons" before this. Mr. Greeley's English manifestly declines sadly when he is writing cautiously. His supporters ought to have got him into a towering rage before setting him down to prepare his answer, and then let him loose.

The members of Congress have no doubt been this week giving their earnest attention to politics, but Congress has been ostensibly busy, so far as the House is concerned, with the Tax and Tariff Bill, and, so far as the Senate is concerned, with the Ku-klux Bill. We give up the attempt to account for the tactics of the Administration senators. Whether their insolent domination for so long a period has blinded them to their real situation we do not know, but that would seem to be the likeliest explanation of their course. Their Ku-klux Bill no one can expect the House to pass. The representatives showed their state of mind very plainly when, the other day, they very emphatically stamped out General Butler's attempt to have a "recess" instead of an adjournment. This device—and, by the way, it is not so long ago since it would have been perfectly successful, and various gentlemen whom we could name would have been hurrahing for it—this device was intended to keep in force the present Ku-klux Act, which expires at the end of the session. Butler's recess would have set the end of the session after the Presidential election. It was a sufficiently shallow scheme, but Mr. Conkling, Mr. Morton, and Mr. Edmunds appear to be not yet out of conceit of it. As for the House's action on the tariff, we may say in general that it was hasty, ignorant, and ill-considered, but that it shows the representatives to be at last awake to the fact that the country demands lower taxes, and that the bill, as got through the House by Mr. Dawes, is an immense improvement on the law as it stands. We suspect it is idle to hope that the Senate will make it into a law, yet it could do nothing more generally acceptable. The shipbuilding interest and the book-buying public have particular cause to be grateful to the House; but the bill as passed was a measure of general relief—estimated at $45,000,000. The last forty pages of it, relating to internal taxes, were rushed through—there is no other term to use—with the utmost precipitancy and heedlessness. Mr. Dawes saw by a vote on an adjournment resolution that everybody was anxious to get home. Seeing this, and not being crazy with enthusiasm for the success of Mr. Conkling and Mr. Morton, and being desirous of getting his bill through, he proposed to the House to pass it in a lump, and the House actually did so.

The Foreign Relations Committee of the Senate have agreed by a majority of five to two to recommend the ratification of the supplemental article, with certain modifications of form designed to render it more palatable. There can be very little doubt that the ratification will take place. The pressure of the financial world in its favor is very strong, the imbroglio having thus far exercised a very serious influence on business, and the point in dispute being in itself in the highest degree ridiculous. The termination of the affair is not gratifying to the national self-love, but the final touch of absurdity is put to it by treating this termination as "a surrender to England." By the Treaty, as it will now stand, the United States gets (1) an apology; (2) the adoption, with retroactive effect, of three rules of international law which contain all she ever contended for in this controversy in the matter of neutral duties; and (3) the reference to arbitration under these rules of all claims for damages which any jurist of standing, native or foreign, has ever maintained had any solid foundation, or which in any court of law would receive five minutes' hearing. The "surrender to England" is very like a declaration on the part of a gentleman who has expressed, in a moment of heat, his intention of pulling an adversary's nose, of his willingness not to pull it in case the whole matter in controversy is left to the arbitration of a common friend. What should we say of a counsellor who should maintain that, his principal having once said he would pull the nose, he was bound—not to pull it, that would be undignified and absurd—but to persist in threatening to pull it until the arbitrator had rendered his decision, and to insist that the arbitrator should pass also on his right to pull it as part of the controversy, and who should fall to wailing and weeping over his friend's disgrace and overthrow because the latter had promised on reflection that he would not hereafter pull that nose or any other nose, the owner of which agreed reciprocally not to pull his nose! And yet we think boys are so silly and adults so wise.

We are assured by very good witnesses that Liberal Republicanism, or "Greeleyism," had nothing to do with General Hawley's defeat in the late senatorial contest in Connecticut; that personal devotion to Mr. Ferry played a large part in it. This was aided by the dislike of others than his personal friends to seeing an officer whose capacity, fidelity, and honesty no one questions turned out of his place merely for the sake of change and at the dictation of a caucus. But the fact remains that the Democrats have given practical proof of their willingness to act with any portion of the Republican party which chooses to revolt, and the importance of this fact it would be impossible to overrate, no matter by what name it is called. It, indeed, took three hours of severe labor in caucus to bring over all the Democratic members to the support of Mr. Ferry; but most of the labor was expended on a very small minority—at the last upon one obstinate man, and he from a hopelessly Republican county—and the large majority at once, and without difficulty, showed themselves ready to do anything to win.

We advise people who have been throwing up their hats, white or colored, over this election to think once more before they ascribe it definitely to any one cause. The causes were several, and some of the most operative were strictly personal to Mr. Hawley, Mr. Ferry, Mr. English, Mr. Sperry, and other influential gentlemen, and have no significance outside of Connecticut, nor much important political significance inside of Connecticut, now that the election is past. Nevertheless, the original inventors of the scheme were Democrats little more friendly to Mr. Ferry than to Mr. Hawley, and not personally hostile to either, who feel that after years of defeat there is now a chance of victory. Then, again, the protest of President Woolsey and his friends against the caucus dictation is a sign which may be pondered with advantage. Clearly, revolt is in the air; and although we dare say Mr. Ferry is as much a Grant Republican as he is a Greeley Republican, and is not a Democrat at all, and although it is difficult to say just what the meaning of his election may be, it is a thing certain that party lines are breaking up. It is, by the way, rather curious to reflect that General Hawley might perhaps to-day have been in Mr. Ferry's place, and Mr. Ferry in his, had the General, at the beginning of the Cincinnati movement, put himself frankly on the Liberal Republican side. Personal reasons might have ensured his defeat; but, again, Democratic partisan reasons might well enough have overborne these. As it is, he has spent much good labor, and it is to his conscience alone that he can look for recompense.

It is an actual fact that the Hon. William M. Tweed will be a part of the tribunal which is to try the Hon. Judge McCunn for corrupt conduct in office. This, on the whole, is one of the most striking achievements of the Reform Legislature, and we request for it the attention of all kinds and conditions of men. We wish the pure-minded Greeley and Fenton man, and the incorruptible Conkling man, and, in general, all men who are warm partisans of any of the candidates who are to be voted for this year, would unite to tell us how valuable would be "a new deal" in this State and in the nation at large, it being provided that our new deal is to be made by our well-known old dealers on the one side or the other. In the proceedings against a judge whom it is sought to remove from the New York bench, it is requisite for success that a two-thirds majority should vote for the removal, and this majority must be a two-thirds majority of the full number of senators, and not of those who may happen to be present. The absence of a senator from his seat is, therefore, equivalent to a vote for acquittal, and Tweed, still a senator, is safe to be absent in a case of this kind, where for a wonder his room is quite as useful to the cause of rascality as his company used to be.

This is a striking but fair example of what it is in general that Fenton-Greeley Republicanism and Conkling-Murphy Republicanism have brought upon the State of New York, which last November had such fair hopes of relief and help. The whole wretched winter's work has been done just as certain other things have been done later in the year, that a faction in this State might get the better of another miserable faction. An "inside history" of the struggles of Conklingites to pass innocent emigration bills which would give them the control of railroads and enable them to influence the Presidential campaign; of Fentonites to get control of the speakership; of Conklingites to get control of the elections in this city; of Fentonites to screen the corrupt judges; of Conklingites to save a bribed senator—an inside history of all these things, of which the public knows too little, would be of wonderful instruction and profit. Some member of the Bar Association should write it. In case McCunn and his friends are left on the bench, some of the members of that body will have to turn their attention to literature. Mr. Conkling may get his re-election as senator next winter, but we confess we shall live in hope.

They have been having a terrible time in England over the Athanasian Creed, with which few American Christians are familiar, and which may be briefly characterized by saying that it consigns to everlasting damnation, article by article, all persons who fail or neglect or refuse to believe a long string of propositions about the Trinity which, as the *Spectator* says, "no two of those who defend them understand in the same sense," and which no clergyman now ventures to teach his flock. The Creed has long been an offence to the laity of the Established Church, a reproach and absurdity in the eyes of the Dissenters, so a desperate attempt has been made to have it at least revised. In the Convocation of the Irish Church, which since the disestablishment, as in the American Church, contains a lay representation, the revision was carried by a majority of 192 to 106, 67 clergymen and 125 laymen voting aye, and 80 clergymen and 26 laymen voting no. In the Convocation of the English Province of Canterbury, no laymen being present, a similar proposition has been rejected by a vote of 62 to 7, Dean Stanley contending for revision eloquently, but almost alone. Some of the arguments used in defence of the Creed were in the highest degree diverting. One minister said the Duke of Wellington, who was a far higher authority than Lord Palmerston, had, "after a careful examination," satisfied himself that the Creed contained the true Christian doctrine.

The Woman's Rights movement, which a year ago seemed to enjoy a fair prospect of success in England, has just received a terrible blow in the House of Commons by the defeat of Mr. Jacob Bright's bill for extending the suffrage to female householders. It was lost by a majority of 222 to 143. This is not a very formidable majority on the surface, though greater than that of last year, which was only 63, but it is formidable in reality, inasmuch as it contains some prominent men who voted for the bill last year, but confess they are now sorry and disgusted, and a large number of distinguished Liberals, who, if the movement were making any progress, would by this time be won over. Moreover, the debate showed that the matter had lost all seriousness in the eyes of both friends and foes, both treating it very much as a huge joke, the public out-of-doors apparently taking little interest in it, the women even less than the men. This reaction is due somewhat to the reform movement, or desire of change, generally having lost much of its force; but in the main to further consideration of the real character and probable consequences of such a revolution as female suffrage, even in the modified shape in which it is presented in England, would work. One argument which seems to have had a good deal of weight is that it will never do to make it possible to separate the preponderance of physical force from the majority in numbers, which would be the case if the women, who are in nearly every state a majority, should pass any measure over the heads of the men. Considerable influence adverse to the bill has also been exerted by the experience the community has had of the performances of even the very clever and very well-meaning Englishwomen who have already plunged into politics in advance of the suffrage. No Woodhull has appeared amongst them, and yet their methods, manners, and spirit seem to have shocked the public considerably and to have repelled large numbers of their own friends.

The temperance men in England have been making a desperate effort for some time past to get what they call a Permissive Bill passed, giving the majority of ratepayers in each parish the right to prohibit the sale of liquors absolutely within its limits. The bill has been killed, mainly on the ground that it would be wrong to allow the majority in any one parish to prohibit the doing of things permissible elsewhere, and which the legislature, by refusing to prohibit them generally, clearly considered neither good nor bad, but indifferent. But the debate produced a speech from Mr. Healey full of curious and instructive statistics, in which he showed conclusively, and contrary to all received opinion, that the number of public-houses in a place has no necessary connection with the amount of drunkenness in it, which seems to depend on a variety of other considerations. For instance, a poor neighborhood will be a drunken one, no matter how few the taverns; so will a neighborhood inhabited by the men of certain exhausting trades; so will an Irish neighborhood. All this goes to show that there is no middle course between permission and prohibition.

The most interesting question of French politics at this moment is the proposal made by the Government to revive the "Council of State," one of the most efficient and famous pieces of despotic machinery. The Assembly agreed to revive it, but wishes to elect the twenty-eight members itself, while M. Thiers wishes to appoint them all, but to this the Assembly has by a small majority refused to consent, and the Executive accordingly is once more, as the French say, *en délicatesse* with the Legislature, but the latter will probably give way. The Council of State, under the Empire, drafted all the laws submitted to the Corps Législatif, gave or withheld—in practice always withheld—the permission to sue public functionaries, controlled absolutely the conduct of the prefects, and indeed the whole internal administration, and was, to all intents and purposes, the private council of a despotic monarch. No institution in Anglo-Saxon political history can be compared to it except the Star Chamber, which it resembles also in forming in certain cases a court of last resort. Should M. Thiers carry his point, and appoint its members, the farce of calling the French Government republican would have received its finishing touch; and what is most curious in the debates is that Gambetta and his friends heartily support the Executive. They hope to get into power yet themselves; and the more absolutist tools they find ready to hand, the better they will be pleased. The Assembly has passed laws prohibiting public meetings; the police arrest on political grounds wholesale and ransack houses on mere suspicion; newspapers are suppressed and punished with greater arbitrariness and severity than under the Empire; there is no habeas corpus, no decentralization, no freedom of speech; and all the tendencies of legislation and opinion are apparently in the other direction; and yet, as long as "the chief of the state" is not called a king, the Radicals are perfectly happy.

Marshal Bazaine, after much investigation, is awaiting his trial by court-martial for his conduct in surrendering Metz and the Army of the Rhine. By way of stemming the tide of public opinion, however, which runs strongly against him, he has published a book giving his own version of the affair, which, whatever it may do for him morally, is likely to damn him politically, if not legally, as it reproduces the document from his pen in which he gave the reasons which led him to offer to capitulate in case he were allowed to preserve the army, and these were none other than that the army was necessary to "save France from herself," or, in other words, to restore "order." This took very much the form of an appeal to German forbearance, and acknowledged his incapacity for further resistance, and, in short, after Bismarck had seen it—and he *did* see it—made the surrender at discretion only a question of time. The book goes far to justify the charge made against Bazaine of having been influenced in his strategy by "dynastic considerations," and will thus probably ruin him, though it is but just to remember that he had no communication with the Government of Paris or of Tours, both of which, at the distance of Metz, must have seemed utterly absurd and contemptible.

FOR WHOM SHOULD ONE VOTE?

WE publish elsewhere a letter which gives utterance to a doubt into which the performances of the Cincinnati Convention have plunged thousands of voters all over the country. We do not flatter ourselves that we are competent to remove it, and hardly feel called upon to institute a formal comparison between General Grant and Mr. Greeley until they are both fairly in the field as opposing candidates. But it is not by any means too early to consider Mr. Greeley's absolute fitness for the office to which he aspires. Whether he is more or less fit to be President than somebody else is one question, which is hardly yet ripe for discussion. Whether he can fairly be considered fit at all is another, which he and the Convention which nominated him are vehemently asking the public to discuss now. On this point there is a great deal to be said, and unfortunately nearly everything that is said on such a subject must be personal, and must, because personal, look somewhat rancorous. But there is no escape from it. A candidate for the Presidency, when he accepts the nomination, challenges every species of investigation, and agrees not to get angry, no matter how far it is pushed.

What Carl Schurz said at the Convention—that "anybody to beat Grant" was not the watchword which called it together—was perfectly true. We took the liberty before it met of warning it that the country would not be satisfied with a mere change of Administration; that in order to get it to repudiate Grant, something not only confessedly better than Grant, but plainly good, would have to be provided to take his place; that the gentlemen who went there would have to go there for some better purpose than "to win."

Now, we think the first disappointment experienced by those who looked for anything in the shape of reform from the Cincinnati Convention came from the early and outspoken declaration of many of the "managers," that "they came there to win" and for nothing else, and were ready to swallow any platform or accept any candidate that seemed likely to render most efficient service in defeating the Administration. What was to follow the defeat of the Administration was something about which they apparently gave themselves no concern. The steady preaching of this doctrine did much—nay, did more than anything else to prepare the way for Mr. Greeley's nomination. What was said in his favor oftener than anything else was that he would secure more support from the Democrats, and carry off more votes from the Republicans, than any other person recommended to the Convention. No attempt was made to promise in his behalf any serious or marked improvement in the conduct of the Government, more wisdom in council or vigor in action. That his methods would be purer or his ends loftier, nobody, so far as we know, ventured to assert at the Convention, and nobody, as far as we have seen, has ventured to assert since the Convention. We hear a good deal about his hold on "the people" in the country districts, about his popularity among the negroes, about the likelihood that the Democrats will endorse his nomination, about the warmth of his heart, the bigness of his brains, his love of agriculture, his extraordinary success in life, and his singular independence of character, and about the manly oddity of his clothes; but none of his friends say anything or say much about the policy he will pursue, the councillors he will call around him, or the changes he will introduce into the Administration. The Springfield *Republican* has indeed given a sort of hint that he will offer places in his Cabinet to Mr. Adams and Mr. Trumbull; but this, we suspect, was a purely gratuitous suggestion, and one, for reasons we shall give hereafter, unlikely to be adopted.

We can only think of two reasons which seem to us strong enough to induce any honest man to vote for Greeley. One is that his election would break up what we believe to be the thoroughly corrupt and time-serving Ring which has for some time past been managing the present Administration, and which, by connecting itself in the popular mind with "the results of the war," and by playing on General Grant's ignorance of affairs and desire for re-election, has made it all but impossible to turn the virtue and intelligence which exist in the Republican party to any account for purposes of general reform. By steadily preaching the horrors that will ensue from any renewed participation of Democrats in the management of affairs, they have managed to get the mind of the public into a purely suspicious and defensive attitude, which makes all demands for change or improvement, or even investigation, wear the appearance of treason, and which, by maintaining and prolonging some of the precautionary measures growing out of the wear, threatens to introduce into the very structure of the Government, and into the political habits of the people, dangerous and even fatal modifications. Greeley's election would put an end to this state of things. It would release the public mind from what we may call the military spell, and, by clearing the political field of the existing organizations, would call into activity once more the old American idea that improvement, and not preservation simply, is the proper work of Government, and that no improvement can be thorough or enduring on which the whole people have not had their say, and have not taken an untrammelled part either in supporting or opposing.

This leads us to the second reason, which is, that as Greeley's election is only possible by a combination of Republicans and Democrats, it would operate as a veritable burying of the issues of the war, and the release of the Democratic party from the old pro-slavery traditions, or, in other words, its extinction as a political organization, and would bring the South back again into cordial political relations with the North; which, every one must see, is a condition of all real national progress. It would put an end to the sectional divisions which have for the last thirty years been the curse of American politics, and would make it possible for Massachusetts and South Carolina to act together once more on national questions. We have been so long accustomed to look on harmony of this sort as necessarily the result of some base compliance or sacrifice of principle on one side or the other, that it is difficult to get men to think of it as under any circumstances a blessing; and yet a blessing it would be, and one of the greatest that could descend upon the country. If Greeley's election helped us to it, we should so far gain by Greeley's election.

It will thus be seen that our gains from Greeley's success would be to our mind wholly indirect and incidental. They would be gains to which Greeley's character or capacity would contribute nothing whatever. He would play the part in the matter of a natural agent clearing the air of pestilential vapors. Anybody else whom a combination such as would elect him could be induced to put in Grant's place, would serve the purpose equally well. When we come to consider him by himself, as a man or politician, with opinions, powers, antecedents, we know of nothing to entitle him to the place for which he now aspires, and we should look on his election as likely to do good only on the theory that no radical improvement can be looked for until things have reached their worst. We think there is a fair chance that by making the bad ridiculous as well as intolerable, he would create a reaction that would initiate an upward movement. It may be that four years of Greeley is a necessary preparation for an era of statesmanship, dignity, and decency; but we confess we have a profound distrust of the theory that you must get to the bottom in politics before you can hope to begin to ascend; that plan has been pretty thoroughly tried in this city and State, and we know with what result. We let things go down here till we had apparently reached the lowest depth. We then found that the healthy public hatred of wrong, and public shame at the sight of wrong, were so eaten away by long use that it was with difficulty that even Cardozo and Barnard were brought to trial; that we could not secure the expulsion of even Tweed and Fields from the Legislature; and that even the "Reform Legislature," which was elected in what was supposed to be a storm of popular indignation, proved to be a body which the *Tribune* described in this way (all other respectable papers concurring) on its adjournment:

> "A large and corrupt lobby has been actively at work throughout the winter and spring, and current opinion is very much out of the way if nearly half the men who pretend to serve the State for three dollars a day have not handled

> more or less money which came from other sources than the Treasury. This is plain truth, and it ought to shame those constituencies who are content to be represented here year after year by men alike destitute of character, talent, and honorable ambition. The absence of this latter quality is one of the most deplorable signs of the disease which infects both State and nation. It is high time the honest citizens of the Empire State realized the disgraceful and perilous position in which they are placed by a stupid and almost universal indifference to local politics. It is not here asserted that the present Legislature is absolutely more corrupt than its predecessors, but, if it fairly represents the character of the people, then the Republic has seen its best days."

Now what bearing has this on Greeley? Do we mean to compare "Honest Horace" to "Bill Tweed" and "Tom Fields"? By no means. We have already done full justice to the good there is in Greeley's character and career. In the position which he has occupied for thirty years, it is not possible for any man to belittle him or degrade him. He has played a leading part in one of the greatest philanthropic movements of the age; he has founded a great newspaper possessing enormous influence; and has induced a large body of his countrymen to admire and love him. He has many able and honest men now supporting him. But his election to the Presidency would none the less, in our opinion, be the triumph of the combined forces of corruption and folly. Our firm belief is that there is not a political knave in the Union who has failed to get what he wants from Grant who is not at this moment "working" for Greeley heart and soul, and for obvious reasons. There are probably not ten per cent. of his supporters who expect good government from him on his own motion. What they look for at his hands are facilities for attaining their own ends through some one or other of his many weaknesses. That worthless men would surround him, influence, deceive, and use him, is a legitimate deduction from his whole career which worthless men have not been slow in drawing. That he would take into his councils men of mark, and weight, and character is a presumption which that same career goes far to rebut. His vanity and love of flattery, his confidence in his own opinions, and his childlike brutality in asserting them, would disincline him to draw about him those who would consider themselves, and whom he would suspect of considering themselves, his superiors; or, if he did, would make it well-nigh impossible for them to act harmoniously with him. With his habits of mind and his opinion of the value of his own ideas, it is difficult to conceive of his allowing his judgment to be affected by what any man in the nation could say to him on any public question. What confusion and uncertainty this would foreshadow, one can hardly conjure up without recalling the multitude of wild, startling, and utterly absurd opinions which he has during the past thirty years upheld with the greatest vehemence.

But the strongest objection to him is that he is, as a Presidential candidate, the final attempt of that large class of quacks, charlatans, ignoramuses, and sentimentalists who are engaged in every civilized country to-day in trying to substitute "the heart" for the head—or, in other words, to make singing, weeping, and wailing do in politics the work of memory and judgment—to get possession of the government of the United States. They have succeeded in ruining one great and noble nation; their fondest desire and proudest hope is now to ruin this. They attain their ends by steady war on nearly all the methods, practices, principles, and ideas which have raised man from the condition of a naked savage to that of a civilized citizen of a free state. They have no faith in any training; they despise all education beyond what fits a man to read their own speeches and articles; they treat the experience of the human race as a mere collection of fables; they delight in the abasement and overthrow and destruction of everything that most stimulates human endeavor in the way of honor or reward. Their ideal of human society is one in which there reigns the equality of the herd on the prairie, in which a life of instinct is passed under the partial guardianship of a few noisy old bulls, whose sole duty to the state is to bellow. We should be sorry to see them installed in Washington, playing tricks with the great fabric which has thus far defied them, which, "defended by reverence, defended by law, a fortress at once and a temple," and resting on the solid rock of popular common sense, it is not in their power to bring to naught, but which they might sadly deface, and might even for a brief period bring into contempt.

WORKINGMEN'S LEISURE.

WE are witnessing in this city what we may consider the final triumph of what is called "the eight-hour system" in all or nearly all the trades, and this without compromise of any kind; that is, without either reduction of wages, or division of the day into hours, or payment by the hour. Owing to the fact that the summer is the busy season for building, house-carpentering, painting, and so on, the mechanics have for a long while past made a practice of waiting till the bosses had made their contracts, and then striking for an advance of wages. Resistance under these circumstances would, to many employers, be total ruin; so the men have almost invariably carried their point. This year they have struck, and with unusual unanimity—not for an advance of wages, but for a reduction in the hours of labor without a reduction in wages—and the bosses have again yielded, but not without publishing a melancholy and unavailing protest. The press, they say, panders to the workingmen's indolence and unscrupulousness; so do the politicians. The Government has, without a particle of justification, introduced the eight-hour system into its arsenals and workshops, thus throwing its weight into the scale against private employers; and the men of business with whom builders and carpenters have contracts refuse to make any concessions as regards time. There is, therefore, nothing left to employers but to submit. They cannot submit, they say, without serious loss. They deny utterly the correctness of the current notion that the average workman will do as much in eight hours as in ten, and laugh at the idea that he will turn the two hours of leisure to good account in self-improvement. They maintain that he will, on the contrary, at best pass them in loafing, and, in a large majority of cases, pass them in drinking or some other form of vice. Moreover, they add that even if he did do as much in eight hours as in ten, in the large shops, where there is a heavy investment of capital in machinery, a diminution of two hours in the day's labor means a loss of twenty per cent. in the return on the investment.

The first and most marked effect—the only one, indeed, which for some time will be sensible of this movement—will be a retardation of the growth of New York. The city, as everybody knows, has been for the last ten years falling back in the race in which it has ever since the opening of the canals distanced all competitors. Year by year, down to 1860, it steadily drew off their commerce from Boston, Philadelphia, and Baltimore. Since 1860, it has not grown in the same ratio. Indeed, it has only held its own by submitting to inconveniences in the shape of dirt, and defective house accommodation and sanitary arrangements, to which other cities did not expose themselves, and by the accumulation of an enormous debt, which enabled it temporarily to keep down the taxation, and, though last not least, by having been the first city to become possessed of a fine park, which made it very attractive as a place of residence to people of large fortune. But these devices have not been sufficient to prevent manufacturers from stealing away to a greater or less extent, or to prevent the partial transfer of some branches of commerce to Boston and Philadelphia and Baltimore, and, above all, to drive out into the country districts and into New Jersey, in greater and greater numbers every year, that large middle class on which, rather than on the very poor or very rich, every city must rely in the main for its growth and prosperity. These losses are, of course, not the result of any one cause. The thefts of the Ring and other abuses of the municipal government have had much to do with them, but the cost of living in New York has much to do also, and this cost is of course greatly increased by the inefficiency of labor in all branches. Printing, to take one instance, is, we believe, done where the nature of the work will permit, more cheaply out of New York than in it, and furniture costs less out of New York than in it. Houses of course have to be built by New York mechanics, but once it becomes well settled that capitalists are at the mercy of New York mechanics, and that these are not troubled with scruples or industry, people will more and more prefer building their houses elsewhere.

It may be asked, however, whether the reduction of the day's labor to eight hours is not, on the whole, a good thing, and cheaply bought, should it become general, by the decline of any or all great cities; whether the intellectual or moral improvement of the workingman is not a consideration superior to all considerations of pecuniary profit or loss? This is a serious and important question, and it is one on which there is so much wild talk that it can hardly receive too much attention. Whether the shortening of the hours of his labor is a benefit to a man or not, depends partly on the means by which the shortening is procured and partly on the man's own character. In the not very encouraging account given the other day, by the commandant of the Rock Island Arsenal, of the result of the eight-hour system there, it appeared that the extent to which the men turned their increased leisure to good account depended on their moral and mental training. The higher classes of mechanics profited by it; the masons did so to some extent; but to the common laborers it was simply a source of injury both to health and morals. Therefore, before we can tell whether a man's condition is likely to be improved by having his day's work shortened, we have to find out what kind of man he is; and if we test the value of the success of the movement in this city in this way, we fear the prospect will not be found to be very cheering. The great body of the younger mechanics who are foremost in the agitation have not received the kind of training, and are not in the state of mind, to make them very likely to use the newly-acquired two hours for their own real benefit. The present writer had occasion, a few months ago, to witness the working of two elderly carpenters, bred in the old American school, on a very nice job, side by side with two younger ones of the new, noisy, rhetorical, agitating school. The seniors were model workmen, faithful, punctual, and industrious, although working under a boss's contract, at a distance from the shop; and keenly interested in their work, and sensitive to the last degree about its excellence. The juniors came an hour later than they every day, and went off to the nearest grocery every day, some days as many as five times, to get drinks, and were invariably fretful and querulous, disgusted with the job, and anxious to quit it when it presented difficulties which only seemed to rouse the older men's ardor. On enquiry, we found that the latter belonged to no union, never had, cared nothing about the eight-hour movement, and did not believe any first-class carpenters were in it; while the juniors were apparently leaders.

Now, we think it may be laid down as a rule, that repose which a man extorts or gets for nothing is, if not hurtful, of little benefit to him. Inherited leisure is generally a curse, which only strong characters can escape, and so is leisure won by gambling or lucky speculation. "Well-won repose," as it is called—that is, the repose earned by hard work, or taken, as the vacation of most workers with the brain is taken, simply as a means of qualifying one's self to work more effectively thereafter—is, indeed, on the whole, the only repose by which the race has gained anything. If the workingmen sought leisure for these reasons and in this spirit, society would undoubtedly gain by their having it, and so would they themselves. If, for instance, carpenters were as deeply interested in carpentry, or masons in masonry, as lawyers are in the law, doctors in medicine, and ministers in the ministry, and longed to excel in it and perfect themselves in it more and more, it would not be possible to lengthen their evenings and diminish their purely muscular toil by two hours without greatly increasing their power of doing good, honest work. They would use their leisure to perfect themselves in one way or another in their trades. But if it be true, as we believe it is, that the great body of those engaged in this movement look on their callings as simply repulsive forms of toil, to which stern necessity compels them to submit, but which every man is justified in escaping by any means within his reach, and in putting out of his mind as well as out of his sight as soon as he lays down his tools, it would be very rash to look for any better results from it than a diminution of production, a transfer of industry to other places, and an increase of extravagance, drinking, and other forms of demoralization among the workingmen.

In fact, we have no hope that the eight-hour system will be of any value to the workingmen, except under the co-operative system. As long as it comes in the form of a victory won over the greedy bosses, with huzzas and waving of hats, it cannot do permanent good. When it comes by the deliberate resolution of the men themselves, after mature consideration of what it will cost *them* in production, and with full knowledge that it will cost them something—as it *would* come if it came through the vote of a co-operative society—it is pretty sure to result in better work, better health, better morals, and greater happiness. No man who sees these wretched conflicts between labor and capital called strikes in their true light, can hope for any good to the laborer to result from them except increased skill in combination. To suppose that the laboring class can make real moral and mental progress as long as it looks on the daily work of its hands not as one of the social functions and its contribution to the general civilization, but as a sort of exaction inflicted by another hostile and selfish class, which it is lawful to evade as one would the demands of a robber or a slaveholder—is to suppose something for which nothing in human nature affords any warrant. If education has lost its power of making men faithful in the discharge of their daily duties, self-interest must be called in to do the work.

THE EXPERIENCE OF A PUBLIC LIBRARY.

I.

At a club dinner in Boston not long since, at which the company was made up of middle-aged professional men, men of business, and *littérateurs*, most of whom were Harvard graduates, the conversation turned upon the current literature of the day. The popularity of various authors was incidentally discussed, when suddenly one of those present, who had taken a prominent part in the management of the Boston Public Library, rather startled the rest of the company by intimating a decided doubt whether any person then present could give the names of any one of the three most popular authors of the day. In saying this, he explained that by the expression "most popular authors of the day" he meant those for whose works the most frequent and eager demand existed at the desks of the public libraries. The challenge was rather derisively accepted, and the most familiar names in our literature, from Shakespeare down to Tupper, were one after another mentioned. After each had been met by a more or less decided negative, those present were duly impressed with a becoming sense of their own ignorance by the information that, judged by the standard referred to, Mrs. Southworth, Caroline Lee Hentz, and Maria J. Holmes stood at the head of all those who ever had written or now were writing in the English tongue.

To those best calculated to judge, and who have any acquaintance with the works of these gifted authors, such a statement may not appear very encouraging; it is, nevertheless, decidedly suggestive. If nothing more, it at least shows what a vast capacity for improvement as regards literature must exist in the average American mind even in the most generally educated parts of the country. And yet it would hardly be safe to draw too decided an inference from such a fact as here stated. It is to be remembered that, while some books are bought which are not read, very many books are read which are not bought. There be books and books—books, as Charles Lamb said, which are not books, and books which no gentleman's library *should* be without, and yet again books which no circulating library *can* be without. Now the works of Mrs. Southworth and of Mrs. Hentz may well belong to the class last referred to; it may well be that they are immensely sought for at the desk of a city library which may contain twenty dilapidated duplicates of them, not one of which is allowed to rest twenty-four hours on its shelf; and yet the class of readers from whom this demand originates probably are not the book-buying class. After all, the true test of popularity in authors is not found among readers of this class. It is and always will be evidenced by the dog-eared volumes of Shakespeare, or Bunyan, or Defoe, or Dickens, which turn up generation after generation in houses where no writer of the day ever penetrates. Where the works of Mrs. Southworth and of Mrs. Hentz do go, other and better books can be made to go, and to make them go there and thus get control of this potent engine of popular education, is the real mission of public libraries. These are indeed the necessary complement to our system of common-school education, and now that they have ceased to be an experiment—now that in many cities and towns, especially in Massachusetts, libraries which ten years ago were beyond the reach of the best educated of their citizens are thrown open to every inhabitant—the single wonder is that such an indispensable concomitant to any tolerable popular education should have been forced to await its development in our times. Through this agency, in fact, we are only just now beginning to popularize literature. The experience of one community as regards these institutions will probably be found to be the experience of all, and the subject is yet sufficiently novel to give it a general interest. We propose to take a New England suburban town, in no respect apparently different from most others, and say something of its experiment with a public library, as showing what a New England community reads and how as yet it reads it.

The town of X. is situated in the vicinity of Boston, and contains, scattered more or less densely over rather large territorial limits, a population of about 7,500 souls. They are mainly native Americans and Irish, while the occupations of the inhabitants, except in so far as they are workers in stores, in no respect differ from those of the residents of any other large town in close proximity to a great city. A movement in favor of a public library was organized in X. in the spring of 1871, and by midsummer the necessary amount, $5,000, had been raised, half by public and half by private subscription. It took a longer time to procure this small sum, as the persons having the matter in charge deemed it very expedient that those for whose benefit the library was intended should feel that they had contributed to it, and so, declining to allow a few wealthy persons to make up the amount by large subscriptions, the town was districted and actively canvassed until the necessary sum was contributed in amounts ranging from ten cents upwards, but only in a single case exceeding fifty dollars. A suitable library room was offered free of charge by the liberality of a seminary established in the town.

The issue of cards upon which books could be borrowed free from the library began on December 11. Every inhabitant of the town over fourteen years of age was entitled to one of these cards, upon registering his name and address, and at the end of six weeks 1,320 cards had been issued, upon which over 7,000 volumes had been borrowed from the library. This was an average of nearly 200 volumes a day, and afforded some indication of the intellectual famine which must previously have existed. At the end of five months the number of cards issued had increased to 1,750, while 24,000 volumes had been borrowed upon them. Of this great number no book had been lost, and only one bore marks of having been intentionally mutilated. Saturday evening was uniformly the busiest of the week, when, not uncommonly, the library room would be oppressively crowded with persons of both sexes and all ages waiting for their books, giving the two young women who constituted the entire librarian force of the institution all and more than they could attend to. Sometimes as many as one hundred persons would be waiting at once, and the number of books delivered in any one day has even exceeded four hundred.

What are these books? What is the class of literature in such great demand? At first blush the answer to this question is a little startling—perhaps even somewhat calculated to appall. Of every hundred books taken out there will, upon an average, be 45 works of fiction for adults, 35 of fiction for juveniles, and 20 volumes of every other description of literature. This library does not happen to contain the works of either Mrs. Southworth or of Mrs. Hentz, which would undoubtedly be in as great demand here as they are found to be at the City Library in Boston. Meanwhile, in their absence, the three writers whose works are most eagerly sought are Mrs. Stowe, Mrs. Whitney, and Miss Alcott, while the most frequently read books are "Uncle Tom's Cabin," Miss Cummings's "Lamplighter," and, strange to say, side by side with "We Girls" and "Little Men," and in close competition with these modern favorites, come the literary offspring of good old Misses Roche and Porter—"The Children of the Abbey," "Thaddeus of Warsaw," and the "Scottish Chiefs." Meanwhile the great Sir Walter, the world-renowned contemporary of the last-named two excellent ladies, lingers far behind them in popular appreciation; he is, in fact, clean distanced in the running. At first he could not be forced upon the market at all, and the modern boy even seemed to have lost all relish for "Ivanhoe." Of late, however, the public has given signs of an improved education, and Sir Walter is looming up in the distance, ranking, perhaps, among favorites of the third or fourth class.

Indeed, if the writers of fiction in most popular demand were to be roughly classified, it would be somewhat as follows: In the first class, after the various chief favorites already mentioned, would come Mayne Reid, Charles Reade, Dickens, Cooper, Charlotte Brontë, A. S. Roe, Miss Muloch, Wilkie Collins, M. J. Holmes, T. S. Arthur, and, pleasant to add, good old Miss Austen. The works of these writers, and a few miscellaneous favorites, such as "Robinson Crusoe," "The Arabian Nights," and "Gulliver's Travels," are almost never on the shelves; as the copies are read to pieces they are replaced by others, but the demand does not stop. In the second class, popular, but not nearly so popular, would come Marryat, Disraeli, Anthony Trollope, Lever, Dumas, Hawthorne, Bulwer, Thackeray, Mrs. Charles, Mrs. Walker, Miss Douglas, Walter Scott, Miss Kavanagh, and Miss Edgeworth. It is useless to go into details as to the works of the authors thus miscellaneously jumbled together; it may be enough to say of the three probably greatest masters of contemporary English fiction, that the "Old Curiosity Shop" is the favorite among the productions of Dickens; that not many books are more read than the "Scarlet Letter"; and that Thackeray is confined to a comparatively limited circle, which is chiefly addicted to "Vanity Fair." One little circumstance connected with the circulation of Thackeray's works would, however, have excited the most intense humorous gratification in the mind of that gentleman could it but have come to his knowledge. A very considerable demand for all books upon Ireland, or Irish subjects, exists among the foreign-born citizens of the town. From the life of St. Patrick to the stories of Gerald Griffin and Charles Lever, and beyond these to the ballads of Ireland and the memoirs of Sir Jonah Barrington, nothing comes amiss. Into this category the "Irish Sketch-Book" and, better yet, the famous "Luck of Barry Lyndon" have found their way, and of all possible Saxons Thackeray enjoys a species of Celtic vogue as a chronicler of Ireland's fame and a depicter of Irish character.

There is not much to say on the subject of juvenile fiction. Oliver Optic, Mayne Reid, Baker, and Kingston occupy the field, and their productions, as they seem to satisfy all youth indiscriminately, leave the critic of a public library in much the same situation, so far as food for reflection is concerned, that he would be in as regards adults did they all demand Victor Hugo or Charles Reade, and were all equally satisfied therewith.

Such is eighty per cent. of the literature which goes out of the institution; and, upon the whole, can it be said that it is otherwise than a healthy average? That the appetite is a natural one no one can deny, for the first intellectual demand of human beings, whether in the infancy of the race or of the individual, is for the story-teller. Homer was only the most popular and brilliant story-teller of the Greeks; the Book of Ruth was evidently regarded as the choicest novelette in Hebrew literature; the Arabian Nights are as old probably as the Koran. A certain class of sentimental and professional philanthropists love to depict the son of toil, as they designate him, returning from his legal day's work of eight hours, eager to revel in some treatise on political economy, or, perhaps, the correlation of forces. One workingman in fifty may indeed be equal to that heroic treatment; but it is the business of public libraries to supply the world as it is, and the two in a hundred do not constitute the world. A few giants among toiling men—George Stephenson, for instance (whose biography, by the way, is far less read than it might be)—a few like Stephenson are equal to an evening's work with the brain succeeding a day's work with the muscles; well, it is the special vocation and pride of the public library to supply every man who has a glimmering of Stephenson's power and ambition with everything in the way of books that money can buy. Having done this for the two in the hundred, and practically for these two alone, it seems but right that the weaker brothers and sisters, who, after all, do and must exist, and who are and will comprise the vast majority of the race—it seems but right that these should be gratified in their taste for story-telling, and through it for amusement and distraction of mind, even though their taste does incline to nutriment of a rather feeble character. That as many as one book in five is of a solid or useful character should be the true subject of surprise, and probably so high an average could be found nowhere out of New England, at least in America.

ENGLAND.

LONDON, May 3, 1872.

IT is sometimes said, I know not with what truth, that women are likely to obtain the right of voting in England sooner than in the United States. Certainly any one who had been present at the meeting held in St. George's Hall on Monday last would have been inclined to augur favorably of their prospects. Not only was the room so crowded that many speakers had difficulty in obtaining admission, but the overflow was so great that a second meeting was improvised at some other rooms in the neighborhood. The eloquence was of the most enthusiastic kind, and all the stock arguments were applauded to the echo. I shall not attempt to philosophize upon the causes of this vigorous agitation. One thing, however, may safely be said, namely, that it owes a good deal to the character of the feminine leaders. Two of the most conspicuous agitators are the sisters, Mrs. Anderson and Mrs. Fawcett, the last the wife of the member for Brighton. Mrs. Anderson has a high reputation as a physician, and Mrs. Fawcett has assisted her husband in setting forth the principles of political economy. Both of them, if I may be permitted to venture so far towards personality, are of thoroughly ladylike appearance and manners, and they have considerable talents as public speakers. They owe a great deal of their success to avoiding the danger into which feminine advocates of Radicalism are too apt to fall, of adopting extreme and, if one may now be permitted to use the word in any but a complimentary sense, womanish views of political questions. Indeed, if one were inclined to find fault with them, perhaps one would be disposed to say that they were rather too obtrusively masculine and unsentimental. Mrs. Fawcett, for example, is an ardent advocate of the Malthusian doctrines. She has lately published a volume of essays in conjunction with her husband, of which it appears to be one main object to attack what used in old-fashioned phraseology to be called the divine law about increasing and multiplying. She vigorously attacks the movement for gratuitous education, because she thinks that if children could get their schooling for nothing there would soon be more children than we could feed. In all this there is a good deal of sense, which is put forward in a rather hard and uncompromising manner. If we might judge from such specimens, we might be disposed to think that the most conspicuous result of admitting women to the franchise would be to give new currency to the driest and severest rules of political economists. However, as we ought to be all aware, though I cannot say that reformers generally seem to have laid the lesson to heart, the motives which dictate the choice of a particular bit of political machinery are generally quite different from the purposes to which it is directed in practice. The emancipated part of the sex is of course that which clamors most loudly for the removal of the present restrictions: but it is quite another and a very difficult question whether they would be allowed to guide the force which they seek to put in action. However that may be, the meetings of which I have spoken were roused to a high pitch of enthusiasm, and went far to justify the opinion of those who took part in them that the agitation now fairly launched is one of those which may be expected to gather strength as time goes on.

A certain chill was cast over the enthusiasm when the House of Commons was invited on Wednesday to pronounce its verdict on the proposal. The debate was a dreary one on both sides; but two or three members have been converted backwards since last year, and the proposal was cast out by a larger majority than before. The numbers were 222 to 143. The more prominent leaders, as, for example, Mr. Gladstone and Mr. Disraeli, abstained from recording their votes, and the composition both of the majority and minority was rather curious. Thirty-five Conservatives voted for the bill, whilst it was opposed by a considerable number of Liberals. The present Attorney-General, Sir J. Coleridge, and Mr. Disraeli's Chancellor of the Exchequer, Mr. Ward Hunt, voted for the women, whilst several Ministers voted against them. Probably a good many members were determined by a consideration the relevancy of which is energetically disputed by the agitators. It can hardly be doubted that the first effect of the measure would be to increase the power of the clerical and Conservative party, whatever might be its consequences in the long run. We are of course informed that it is opposed to all principles of justice to consider which way people are likely to vote before entrusting them with the franchise; but practical men will insist upon taking that consideration into account; and it is not unreasonable to suspect that Mr. Disraeli, who almost avowedly admitted the lowest classes to the franchise because he thought that they would be more accessible to the influences of rank and property than those immediately above them, may have a similar project in his mind when he abstains from opposing this concession to women. However that may be, the arguments on both sides avoided this delicate topic, and ran through the ordinary platitudes about human rights on one side and about the sphere of woman on the other.

Meanwhile, a good deal is being made by the ladies of a couple of practical arguments. One is that several women were elected upon school-boards, and, though I fear it can hardly be said that the school-boards have discharged their duties in a manner calculated to awaken the admiration of the universe, the female members are supposed to have shown as much capacity as their male rivals. The other argument which has lately received some practical illustration is derived from the manners and customs of our laboring classes. The husbands have a decided mode of expressing their views of masculine government which is not exactly creditable. Lately, for example, a miner knocked down his wife for no particular reason, and proceeded to kick her to death in the presence of her children and of several neighbors who had not the courage to interfere. These brutalities, it is assumed, would disappear, or would at any rate be more severely repressed as soon as women received votes. A gentleman who had knocked out the eye of his wife or mistress (I forget which) was punished by three months' imprisonment, whilst seven years' penal servitude were not thought too much for a less aggravated assault upon a man. Probably the judge might have some justification for an apparently preposterous decision; but several such events which have occurred lately have been turned to great account by the advocates of women's rights. On the other hand, there is apparently a slight reaction in a conservative direction. Concession to any popular cry has become so much the rule lately that there is a strong *prima-facie* presumption that any proposal to abolish anything will sooner or later meet with success, and a temporary defeat will by no means damp the spirit of the assailants of any privilege. Just for the time, however, it seems to have occurred to a few people that we are asked to take rather a leap in the dark, and that a little hesitation is permissible before admitting a principle which might not only upset the existing balance of political power, but lead to an indefinite series of important social changes.

With the exception of this little episode, Parliament has been staggering on pretty much in its old ruts. Three severe defeats in one week lately showed how much the influence of Mr. Gladstone's Government has declined; and yet it is also incidentally clear that nobody wishes to get rid of them at the present moment. The most significant passage of arms was that which took place between Mr. Gladstone and Mr. Fawcett. Mr. Fawcett had succeeded, contrary to the general expectation, in securing another hearing for his bill upon Dublin University. It leaked out through the *Daily News* that Mr. Gladstone was prepared to treat a vote in favor of Mr. Fawcett's bill as a vote of want of confidence. According to the usual parliamentary etiquette, precedence should have been given over all other measures to Mr. Fawcett's motion. When, however, the critical evening arrived, Mr. Gladstone explained at his usual length that, although the Government would certainly not continue in office should such a measure be passed, he did not consider its proposal as amounting to a direct vote of want of confidence, and accordingly that he did not feel bound to provide a day for its discussion. Translated out of parliamentary language, this simply means to say that Government is determined to shelve the question for the present session. They are determined not to show their hands or to announce any definite line of policy. They will not say whether they are carrying on a flirtation with the priests, and ready in one form or other to give in to the demands of the Roman Catholic hierarchy; though of course they assert in general terms that the course which they intend to adopt will be thoroughly satisfactory to everybody, and especially to their own party. And on the other hand, Parliament is not disposed to press them. So soon as it was known that Mr. Gladstone was ready to stake the existence of the Government on the fate of Mr. Fawcett's motion, everybody, with the exception of one or two ardent radicals, was only too glad to smother up the question for the present. The secret is a very open one. A great many Liberal members have no desire to encounter the risks and expenses of another dissolution, which must follow the unseating of ministers. On the other hand, the Conservatives are by no means anxious to press for a speedy decision. They have a confident expectation that if Mr. Gladstone has rope enough he will succeed in hanging himself. The tide of discontent has been gradually rising, and they do not wish to spoil their game by snatching prematurely at the fruits of victory. On the two last occasions of their coming into office they were merely on sufferance, and they would prefer waiting until their opponents have accumulated a sufficient load of odium to give a decided Conservative majority, and to promise them a more or less durable tenure of office. They have, moreover, been expecting to find a more favorable battle-ground in the American negotiations. We now, I am thankful to say, have hopes of a satisfactory solution of the difficulty, and if the United States withdraw the indirect claims, the result of minor importance will be that Mr. Gladstone will have extricated himself from a very ugly scrape. I am afraid, indeed, that under any circumstances there is not much cause for boasting as to our mode of carrying on negotiations; but one may say with some truth that in such matters all is well that ends well. If, after all, the Treaty should break down, Government will be exposed to a very serious attack, and there will be no longer the motive for keeping them in office derived from the necessity of allowing them to conclude the transaction.

And meanwhile there is something not very pleasing of contemplation about the general aspect of our politics. The Ballot Bill has at last been got through committee, though, as some people maintain, with very serious mutilations. Whether mutilated or not, I do not suppose that any reasonable person who has not been getting up the subject for hustings speeches cares one farthing about it, or believes that it will make the very smallest difference one way or the other, or, in short, considers it from any other point of view than that of a crotchet which has somehow got embodied in the recognized list of orthodox liberal measures. Government finds it a cheap and easy mode of advertising its own heartiness in the cause; but one is inclined to wonder, after the old-established precedent, how any two of its energetic advocates can look each other in the face without laughing. Indeed, I suspect they sometimes cannot. Yet the whole session has been devoted to endless twaddle about this sham bit of liberalism, and will probably be fruitless of all other results. We are going through a period evidently like that which succeeded the Reform Bill of 1832. The first impulse produced by the extension of the franchise has been pretty well exhausted by the Irish Church and Land Bills, and it is being succeeded by a general indifference, due to the discovery that we have not yet entered the millennium. At any rate, one result is that we are just now uncommonly dull.

ARMY REORGANIZATION IN GERMANY.

BERLIN, April 30, 1872.

"THERE is no Germany but Prussia," said a proud official the other day, "all else is *Schwindel*," which, being interpreted, signifies "humbug." Such, however, is not the tone of the Prussian Government, whether of the king or of the Ministry. It is now generally believed that the Emperor refrained from opening the Reichstag in person through a delicate regard for the standing of the sovereigns of the smaller states, whose choice had designated him to the headship of Germany; he would not impart a personal character to an occasion the dignity and interest of which should centre in the affairs of the nation. He would not monopolize for Prussia the honors of the Empire. In the same spirit the Chancellor of the Empire, Prince Bismarck, in a speech before the Reichstag, advocated an adjustment of times and topics between the national and the local parliaments, which should ensure as far as possible their working together toward a common end. As it now is, the session of the Reichstag in Berlin comes in conflict with the protracted sessions of the Landtage in Würtemberg and in Bavaria, so that many members of those local parliaments, who are also members of the national parliament, are not in their places here. The Prussian Government is careful to magnify the national parliament, so far as this can be done without prejudice to the internal economy of Prussia herself. For though Prussia has been the making of Germany, and is and must continue to be the leader of the Empire as now constituted, he would not use the Empire as a tail by which to fly her kite, but would feel the Empire behind her as a well-articulated and firmly-compacted body, of which she is the proper and the guiding head. For, if this now incorporated unity of Germany shall endure, the whole body must be fashioned substantially after the model of Prussia; and that is the question which just now absorbs the attention of Parliament and of the press through the discussion of the code of military uniformity. If Prussia has made Germany, the army has made Prussia. That army is the product of long and careful study in the science of organization, and especially of the combination of intelligence and discipline. Bull Run taught the North how little intelligence, patriotism, and enthusiasm could avail in battle without military discipline; Sadowa taught Austria that a merely tactical discipline must yield to a discipline guided by intelligence; and Sedan taught France and the world that *prestige, gloire, élan,* were nothing when both intelligence and discipline were wanting.

Now, if Germany would hold the position she has gained in Europe, she must for many years keep her army up to the Prussian standard of numbers, intelligence, and discipline. This I say with all deference to the Peace Society, and in the interest of the peace of Europe. A proposal from Germany for the joint reduction of the military force would be met by France with scorn or with treachery. For a whole generation the motto of every political party in France will be "Revenge upon Germany"; Austria may not long submit to be overawed by Prussia, nor Russia admit that she is overmatched by her Teutonic neighbor, without a trial of strength; and the Pope would not scruple to stir up a war in any quarter which might promise him a restoration of the tiara. For her own existence, therefore, as well as for the stability of peace in Europe, in our day at least, Germany must be a military nation. But for her efficiency as a military power, uniformity of organization and of discipline must be secured throughout the Empire. The Prussian type of organization and drill is now provided for through the training-schools for officers, of which that at Potsdam is a model. To these schools under-officers are sent from all parts of the Empire, in a certain ratio for every regiment; and these students become allied to one another as comrades, and carry back the same regimen to their several barracks. It remains, however, to bring the whole army under a common discipline, and for this the Government has introduced a military code which now agitates Parliament. The army of the Empire on a peace footing consists of infantry 259,216 (of which Prussia furnishes about 180,000), cavalry 65,296 (Prussian, 46,000), artillery 41,759 (Prussian, about 29,000). Add to these some 15,000 pioneers, etc., and in the total peace army 383,899, Prussia is represented by about 260,000; and in the war-footing of 1,117,000 combatants she furnishes even a larger ratio. Prussia, long ago (at the instance of Stein), abolished from her army corporal punishment, running the gauntlet, and other cruel and degrading penalties; but her military code still retains severe punishments, such as imprisonment in a dark cell, without fire or bed, and with only bread and water. Deputy Lasker made a long and eloquent speech against such punishments as degrading to the person of the citizen, and inhuman upon physiological grounds. He would have the army governed by intelligence and by moral motives, and would reform it into an institution of philanthropy. The conservatives are aghast at this as foretokening the breaking down of all order in the state, and introducing an era of social democracy; and many liberals feel that their champion is going too fast and too far. The comic papers picture jolly soldiers petting the little figure of Lasker, and calling him a nice boy. When we consider that compulsory military service brings together all grades of intelligence and all sorts of character, it can hardly seem safe to dispense with all physical rigor in the discipline of so vast an army. Just now the bill is so encumbered with amendments that it is difficult to foresee its fate; but the prevailing feeling is that there must be but one army, in training, in spirit, and in discipline, throughout the Empire, and that the Prussian system has proved itself the best. The philanthropy of peace must wait a little longer upon the discipline of danger.

AUSWANDERER.

Correspondence.

IS THERE NO REMEDY FOR THE CINCINNATI NOMINATIONS?

TO THE EDITOR OF THE NATION:

SIR: It is to be hoped that you will ere long consider in your paper the question which is just now perplexing many minds—whether it is better, as matters now stand, to support Grant or Greeley.

At least a portion of those who went to Cincinnati and those who at home were in favor of the movement desired to wage war, not upon a man, but upon a system. As Mr. Schurz said, "anybody to beat Grant" was not the prime idea of the Liberal movement. Horace Greeley was beyond question one of the last men whom a person not "inside politics" would have considered the best exponent of the reform idea, and it is also beyond question that he owes his nomination, at least in part, to the efforts of shrewd politicians who did believe in the "anybody to beat Grant" doctrine.

Will it not be really more dangerous to the true cause of reform that Greeley should be elected rather than Grant? It seems to be generally admitted that Greeley is a man who, though honest in purpose, is easily "befooled" and misled by those in whom he places confidence, and that he does place confidence in some of the worst of the tribe of "Toms" and "managers" to be found in the country—men who have no more real sympathy with any reform that would deprive them of place and patronage than have Carpenter, Butler, and their like.

But in the one case there is no pretence that the candidate represents reform. He asks to be re-elected because things as they now are are on the whole satisfactory. Should he be re-elected, and should many things which we consider abuses be continued, at all events we should not be responsible.

If the next four years are to be like the last two, they will not bring discredit upon those who have dared to demand a change, but will so teach the people the need of a new order of things, that in 1876 there may be an uprising such as took place in New York last November. But can we have confidence or hope that Greeley and his advisers will heal the foul sore in the body politic from whence these abuses come; and, if not, if these things continue under a nominally "reform Administration," will it not have a tendency so to disgust and dishearten the honest supporters of the movement, and afford such opportunities for animadversion on the part of its enemies, that real reform will be postponed for years?

P.

NEW YORK, May 14, 1872.

TO THE EDITOR OF THE NATION:

SIR: There were many who, thinking the Cincinnati movement merely a disaffection among the Republican politicians, and expecting little from that class, took no interest in it until the name of Charles Francis Adams was broached for the nomination, when it became a thing of life. My own interest thus awakened, I made it a point during the month of April—spent in travelling through several States, North and South—to discuss the prospect freely; and the satisfaction with which his nomination was expected of the Cincinnati Convention was so widespread that it astonished as much as it gratified me. It is no idle assertion to say that three-fourths of all with whom I came in contact accepted his probable nomination as the harbinger of better things in our political life; and these expressions were not passively given, but earnestly and with evident conviction. Nor were these sentiments confined to members of any one party; they were common alike to Democrats and Republicans—accustomed, heretofore, to work in the party traces, and accept the dictum of their party leaders. There were Republicans who had striven for, because they believed in, the doctrines which their party advocated, but who now feel that if it has not "achieved its mission," it has at least outlived its usefulness; that while it has wrought much good in the past, it falls short of the demands of the future; that it seeks to rest from its labors, and trade on the glory of its traditions. This will not do. In our country, we cannot sit down and content ourselves with what has been done. When any party shows that disposition, its vitality is on the wane. The motto of the Republic is ever "Excelsior." We must go on; and those who cannot lead must stand aside. There were Democrats, too, anxious for the opportunity that Adams's nomination would afford, to bring about a better order of things—men strong in their party discipline, but satisfied by successive defeats that their party has lost its hold on the people's confidence.

To learn that this is the actual condition of things, it is not necessary to go far from home. Within the circle of one's own friends and acquaintances they exist. Men who have been associated together, as well as those who have been separated by party lines, find a singular harmony of views as to the ends which need our best efforts in the coming years. There is no real difference between us as to the vital matters to be secured, and we are only kept apart and working at cross purposes by the politicians. We are under the whip of the "ring-masters"—men who consider many things besides the wants of the national life; men with whom the paramount consideration is what will catch the popular fancy, and best secure their own control of the vast patronage which our unfortunate system renders possible; men who look to "availability," and are too short-sighted or too wilfully blind to know that the most *fit* is the most available. It was these men who crowded and choked the Cincinnati Convention to such inadequate expression. The Liberal Republican movement, which promised so well, is only a partial movement, a half-way step; and, as organized, gives no assurance of anything new save in the way of party leaders, trained in the same school with those who now rule the nation for their selfish ends. Are we, who wanted not only a change of men but a change of means far more, and who looked to Charles Francis Adams's character and record as the realization and embodiment of our best aspirations—are we to be thwarted thus? Must we accept the "lame and impotent conclusions" of the Cincinnati Convention? Is there no remedy? Shall we quietly fold our hands and see the politicians twist us to their own uses?

There were enough good men at Cincinnati, there are enough to-day in the Democratic and Republican ranks who seek something higher, to form the nucleus of a national party that shall send the nation forward with new impetus along the ever ascending plane of civilization. Why cannot such a party be organized—free from the shackles of old party traditions, and seeking only the welfare of the Republic? Good men and true from all sections and from all parties are eager to lend themselves to the good work if it be once fairly started. Can there be a time more propitious than this, when there are so many who realize and regret the failure of the political conventions to respond to the spirit of the people?

Very respectfully, etc., S. W. Edgar.

Wilmington, Del., May 14, 1872.

Dear ——: I suppose we agree in the opinion that the Cincinnati Convention is a failure. The question is, What next? I do not pretend to be a politician, but I think it was a mistake to call a convention. Some wise man—I forget who—said he never asked advice unless he was prepared to follow it when given, and I do not think that Wells, Trumbull, and Schurz should have run the risk of consulting with such men as McClure and Scovell. The convention necessarily was, to a great extent, a self-appointed body, and nobody would pretend that some of the delegates—those from Pennsylvania for instance—at all represented the body of respectable citizens who are disappointed with Grant's administration. I know that a political party cannot be altogether composed of wise and pure men, and the cave of Adullam is often cited as an instance in point; but there David was on the ground first and master of the situation, and whatever the rest were, he was wise and good, and had control of the others.

Now, if I am right so far, what is the remedy? I think I will offer a suggestion, though it may be too late now, and might not have been practicable at any time.

In a Democratic country, it is of no use to try to force any measures, however good, upon the people before they are prepared for them. But they are the wise leaders of the people who are able to give shape to a growing sentiment, and to present it to the people in such a form that they recognize it as their own. I think Wells, Trumbull, and Schurz might interpret the feelings of a large part of the people. Now let them, with such others as they may choose to consult with, frame a platform—a platform broad enough for a number to stand on, but distinctive enough to make it worth while to get up a party to maintain, giving no uncertain sound about free trade and reform, asking for amnesty for the South for the same reason that Lincoln would have given—"Charity for all, malice towards none," and for the same reason avoiding anything like unkind personalities towards other men and parties. It is hardly likely that after the failure at Cincinnati a nomination on such a platform could be now made, even if it was desirable. But let the men who start the movement, keeping the reins in their own hands, see whether good men cannot be found in each State—men of standing, whose wisdom and disinterestedness were generally acknowledged, who would be willing to run as electors for such a party. It might be that some States could be carried for the principles—not men—of the party, and that when the electoral college met there would be in it some men, unpledged to any candidate, who could influence, if not control, the election. I think it would be a move in the right direction to try to return to the original idea of electoral colleges, composed of the best men of the country, to whom the selection of President and Vice-President was entrusted. It would at all events be a "new departure," and that in the present state of the Reform party would be something.

All this may seem very visionary, but I dare say the *Nation* will have divers suggestions equally crude made to it, and while I do not wish to address any "communication" to that paper, I thought I would take an indirect way of letting the editors have my thoughts. If it shows nothing else, it does this: that there are some men who had hoped something from the Reform movement, who would still like to see some other course open to them than to support Cameron and Forney.

Very truly thy friend,

—— ——

Philadelphia, 5th month, 6, 1872.

[The above was not written for publication, but it is too suggestive to be withheld from the public.—Ed. Nation.]

MR. DANA, AND THE AMERICAN CASE.

To the Editor of the Nation:

Sir: In your paper of the 16th I see the following statement:

> "We know that he [Mr. Bancroft Davis] did submit the proofs [of the American Case] to such men as Judge Hoar, Mr. R. H. Dana, Jr., and President Woolsey; but we know, too, that none of those gentlemen saw, or at least have any recollection of seeing, the claim for the expenses of the war after Gettysburg."

While it is true that Mr. Bancroft Davis did pay me the compliment to send me the printed Case for criticism, I wish to add that I did not examine it. I returned it to him with the seals unbroken, for reasons conclusive to my own mind, and to which Mr. Davis took no exception, although he politely expressed his regret at my determination. I ought to add that the request to examine the argument was not made to me by the Government or by the Department of State, but by Mr. Davis, as a personal and private matter.

Yours very truly,

R. H. Dana, Jr.

Boston, May 20, 1872.

Notes.

THE Palestine Exploration Society, recently organized here with a view to maintaining the high reputation of American scholarship in that Oriental field, has selected for special investigation the country beyond the Jordan—the Moab, Ammon, Gilead, and Bashan of old—and purposes a complete examination of the meteorology, topography, archæology, geology, zoölogy, and botany of the region in question. As an historical scientific undertaking, it may properly enlist the support of Jews, Christians, and Gentiles generally, and contributions from any source will be welcome. Rev. James H. Dwight, 26 Exchange Place, is the General Agent; Mr. James Stokes, Jr., 104 John Street, the Treasurer.——Lee & Shepard republish Tylor's "Researches into the Early History of Mankind" and "Primitive Culture," and announce also the following American works: "Autobiography of Amos Kendall"—Jackson's Postmaster-General, and the man who permitted the grossest violation of the mails ever tolerated in a civilized country—edited by Wm. Stickney; a "Handbook of English Literature" (American authors), by F. H. Underwood; Vose's "Handbook of Railroad Construction," together, says the publishers' advertisement, with railroad maps and plans never before published, “and which eminent engineers have, for the purpose of examining, crossed seas and continents”; and “Stories and Poems by Mother and Daughter,” who are Mrs. Caroline Gilman and Mrs. Lewis H. Jervey, respectively.——A good many interested readers should be found for “Autumnal Catarrh, commonly called ‘Hay Fever,’” by Dr. Morrill Wyman, of Cambridge, announced by Hurd & Houghton.——Turnbull Bros., Baltimore, will publish a “History of Annapolis and the U. S. Naval Academy,” by Owen M. Taylor.——“Monarchy in America under Louis XIV.,” by Francis Parkman, is to be the fourth volume of this author's invaluable series called “France and England in North America,” and bears, like the preceding, the imprint of Little, Brown & Co., who also publish a new edition of Richard Frothingham's “Siege of Boston”—an exhaustive monograph—and “The Rise of the Republic of the United States,” by the same writer.——Dodd & Mead, 762 Broadway, have become agents for the sale of the publications of the American Naturalist's Agency and Peabody Academy of Science, at Salem, Mass.——The second annual meeting of that prosperous organization, the American Institute of Mining Engineers, is now in progress in this city, the proceedings being held in the rooms of the Geographical Society at the Cooper Union. To-night and to-morrow night will be the last opportunity of listening to the papers, discussions, etc., the daytime being given up to excursions to various points of professional and scientific interest in this vicinity. The rapid growth of this society is as remarkable as it is encouraging, and at Wilkesbarre, Bethlehem, Troy, and Philadelphia it has met with decided social successes.

—Mr. Robert Morris Copeland, a landscape gardener of large experience, has been making a contribution to the great-city problem in an “Essay and Plan for the Improvement of the City of Boston” (Boston: Lee & Shepard), which will be found worth reading even by those who fancy that they have no interest in this particular application of a general principle. That such a notion is a mistaken one we need not labor to prove. It would be none the less mistaken if Boston were not “the most beautiful city in America,” and capable of being made still more so. Mr. Copeland approaches the subject, in the first place, from the side of sanitary, commercial, and other economical considerations, but is most at home when urging his strictly professional view, with a sort of fervor which only a Bostonian could feel, and with an intimate knowledge of those delightful suburbs which, sooner or later, are destined to be wholly absorbed by the city. We regard his main proposition as entirely correct, and almost self-evident: that the nature of the ground indicates a series of verdant preserves, embracing the numerous heights which encircle the city, and knit together by a system of highways of a more or less sylvan character. One great merit of this design is that each quarter of the future city would have a breathing-place of its own, distinctive in its special attractions, accessible without long journeying, and still forming part of the net-work of drives and walks. Another is that the public would retain its rightful hold on eminences affording such a diversity of prospect as is seldom witnessed, and which are already in danger of being lowered into the plain by the remorseless steam-shovel. Whether the public has not as good a right to the Charles River front and sunset, is a question on which we should think there would be a difference of opinion between Mr. Copeland and his fellow-citizens. They will probably accept, too, with difficulty his ingenious proposal to run a freight railway between the Common and the Public Garden, as part of a system of railroad communication between all the depots. Perhaps he is too confident in anticipating, as one of the consequences of that system, the withdrawal of all wholesale business “from the narrow and crooked streets of old Boston.” In New York our experience is, that this business prefers the narrow streets, even with horse-cars running through them, to the broad ones; and we believe that no one expects that the next removal up-town will make Canal Street the centre of the wholesale trade, but rather Grand or Broome Street. To catch a customer, or to visit a great number of dealers before purchasing, is much easier in an alley than on an avenue; and Mr. Copeland would, we apprehend, find a similar contentment with their crowded locality on the part of the wool-dealers on Federal, Channing, and Congress Streets, in Boston.

—Mr. Thomas Buchanan Read, who died in this city last week, was one of the better representatives of a class of American literary men whose day is now pretty much over. He flourished as a poet in a time when to have written smooth verses, to have had them praised in an English review as very good for United States verses, and to have had them judicially considered in the *North American Review*, was to have secured a title to be called a poet of distinction. As we have said, Mr. Read was better than many of the men who thus had fame thrust upon them, and he cannot, as some of his contemporaries can, be made to look ridiculous by simply collating their works and the praises which were heaped upon them by a generous public. Nothing that he has written will live, but he had true poetic feeling, he worked conscientiously, and his poetry is better than most of what is produced for the magazines. We do not think it is much better. Besides being a poet, Mr. Read, who began life as a sculptor, was a painter in fair repute, though about his painting, as about his poetry, there was something very amateur-like. As in the case of Mr. Story, another American genius of all trades, his work better expressed a general æsthetic turn than any marked bent in a particular direction, and he had still less than Mr. Story's intellectual power. Mr. Read was born in Chester, Pennsylvania, in 1822. His best known productions are a picture and a poem both of which have for their subject General Sheridan's action at the battle of Fisher's Hill. Neither the picture nor the poem has other than extremely popular merit, and neither can be taken as of historical fidelity.

—The treeless plains of the West are about the only portions of our country where the cultivation of timber is pursued, and there the sole aim seems to be to procure material for fencing the land. In our wooded districts, the timber is either entirely removed, or else only the worthless trees are left standing, and nothing is done to prevent the supply of useful wood from becoming exhausted. A very good opportunity is now offered to show to the community the value of care in this important matter. Some large corporations in the Eastern States have lately acquired large tracts ot mining land, much of which is fit only for the growth of timber. The forests that once covered the land are gone, and the soil is either barren or is producing stunted trees and useless shrubs. By planting such trees as are best suited to the soil and climate, these corporations would, in a short time, be able to supply themselves with much of the timber which they are now compelled to bring from a distance, and the rapid growth of the cultivated trees would soon convince the landholder of the advantage of a little care and intelligence in dealing with our forests. Meantime, our agricultural colleges and our Agricultural Bureau (if the right sort of man were at the head of it) might give to arboriculture something of the attention which it merits, and which it has obtained in other countries, as, for instance, in Germany, whose schools are visited by students from all countries. According to a Blue Book on forest conservancy in India, only ten years ago railway sleepers had to be imported from Norway, for though the forests renewed themselves by seeding, the jungle choked the new growth wherever the good timber had been entirely cut away. A German arboriculturist, Dr. Brandis, was appointed to organize a forest department in British Burmah (that province furnishing the chief supply of teak), and in 1868 there were fifty conservators in the one province in Bengal, all Government officials, chosen by competitive examination, after having received a training in the forest schools of France and Germany. Norway and Sweden also have profited by these institutions, saving many a copper and iron mine from enforced idleness; and even Spain is resorting to them, in spite of the proverbial hatred of a Spaniard for a tree. The good results produced in France, in preventing floods and devastating torrents, by scientific forest culture, are notorious. To awaken an interest in this subject in the United States, we have only to spread the necessary information; and happily we have for this purpose one of the best works in any language. Mr. Geo. P. Marsh's “Man and Nature,” circulated as a whole or separately in tracts, would both interest and enlighten our farming population. Cannot Messrs. Scribner, Armstrong & Co. give them a cheap edition, of the handy size of the Italian version published in Florence? and could the *Tribune* render a greater service to its country readers than by making some arrangement for the sale of this admirable work?

—A new edition of his “Rob Roy on the Baltic” gives Mr. Macgregor an opportunity of stating that the lectures he has delivered regarding his several cruises have produced nearly $33,000, which has been paid over in full to churches, schools, hospitals, and societies; and further that all the expenses of these cruises were amply covered by the sale of their “logs.” Other books of travel that have recently appeared or will shortly appear in England, embrace Payton's “Diamond Diggings of South Africa”; “Modern Turkey,” by J. Lewis Farley, Consul of the Sublime Porte at Bristol; “Thirty Years in the Harem,” by Madam Kibrizli Mehemet Pasha; Captain Burton and Mr. Tyrwhitt Drake's “Moabite Cities”; “In the Morningland: Travel and Discussion with the late H. T. Buckle,” by J. S. Stuart Glennie; the late Captain John Wood's “Journey to the Source of the River Oxus”; “Life in India,” by E. N. C. Braddon, of Lucknow; the third volume of the Marquis de Beauvoir's “Voyage round the World,” treating of Pekin, Jeddo, and San Francisco; “Very Far West Indeed,” telling of rough experiences on the N. W. Pacific Coast, by R. Byron Johnson; and “The Great Lone Land,” by Captain Butler, of the Red River Expedition of 1869–70. In biography we have the peculiarly English “Life of Thomas Cooper, the Chartist Poet,” by himself;

a "Life of Captain Marryat," by his daughter, Mrs. Ross Church; more "Letters of Lord Byron," leaving none to come after that have not been already in print, and "entirely free from scandalous matter"; the "Letters and Journals of James, Eighth Earl of Elgin," Viceroy of India, Governor of Jamaica, and Governor-General of Canada, and one of the very best characters among modern English administrators; the "Diaries and Letters of Sir George Jackson, from the Peace of Amiens to the Battle of Talavera"—another capable though less famous official; and Mrs. Oliphant's "Memoirs of Count Montalembert." With these may be mentioned "Alexis de Tocqueville—Correspondence and Conversation with Nassau W. Senior," edited by Mrs. M. E. Simpson; and another posthumous work, "Notes of Thought and Conversation," by the late Charles Buxton, M.P.

—"A History of the Church of France," by W. Henley Jervis; "A Catechism of English History," edited by Miss E. M. Sewell; and "The History of Modern Serbia," by Elodie Lawton Miyatovics, are the only historical works that need mention. The following titles we give without formal classification: "A Dictionary of Christian Antiquities and Biography," edited of course by Dr. William Smith; the "History of Creation," by Prof. Ernst Häckel, which we can hardly follow the *Bookseller* in putting under the head of "religious" announcements; "A Manual of Palæontology," by Prof. H. Alleyne Nicholson; "Elementary Lessons in Anatomy," by St. George Mivart; "The Forms of Water in Clouds, Rain, Rivers, Ice, and Glaciers," by Prof. Tyndall; "Contemporary English Psychology," from the French of Prof. Ribot; "An Essay on the Culture of the Observing Powers of Children"—a promising title, surely—by Joseph Payne; "The Rise and Development of Mediæval Architecture," lectures by G. G. Scott; "Prospective," by Lieut. W. H. Collins, R.E.; "A Volume of Emblems," illustrated, by Mrs. Alfred Gatty; "Memorials of the Dead," by F. and M. A. Palliser, a selection of epitaphs "for general use and study."

—The physical explanation offered by Mr. Stillman in our last issue, of Turner's so-called astigmatic representations of nature, is corroborated by Mr. W. Mattieu Williams in a communication to *Nature* of April 25. This writer is the author of a work called "Through Norway with a Knapsack," published in 1859, on page 67 of which he said, speaking of the peculiar midnight sunset effects of the North:

> "Turner, like an eagle, has dared to face the sun in his full glare, and to place him in the middle of his pictures, showing us how we see a landscape with sun-dazzled eyes, when everything is melted into a luminous chaos, and all the details blotted out with misty brightness."

And he now adds:

> "In all these peculiar pictures that I have seen the sun is thus placed in the middle of the picture, and just sufficiently above the horizon (from about 10° to 20°, or at most 25°) to pour his rays about perpendicularly to the curvature of the eye-ball, when the face is in position to contemplate a landscape. I have frequently repeated the experiment of contemplating a landscape under such circumstances, and on every occasion of submitting to such torture have seen all the effects of even the most extravagant of Turner's later pictures, which are so well described by Dr. Liebreich. I have seen the 'vertical streakiness, which is caused by every illuminated point having been changed into a vertical line,' with an 'elongation, generally speaking, in exact proportion to the brightness of the light,' and that 'there proceeds from the sun, in the centre of the picture, a vertical yellow streak.'"

He explains the vertical streaks by reference to the flow of tears caused by the dazzle, producing on the lower eyelid a little pool "the surface of which has a considerable vertical curvature," and in that direction "must act as a lens of very short focus," and "produce a vertical magnifying effect, the definition of which will of course be very confused and obscure on account of the irregular curvature, and the fact that the eye is focussed to the distant objects." As for the other phenomena represented by Turner, they are, in Mr. Williams's opinion, "simply a faithful copying of the effects of glare and suffusion produced by painful sun-gazing, and the looking at a landscape where the shadows are, so to speak, nowhere, or all behind one's back." So it would seem as if the Turnerites might breathe again, for whether or not an artist had best look at landscapes with tears in his eyes, it seems to be a fact that so looking he may see what Turner's pictures record.

—Particular accounts of the recent fire at Düsseldorf show that it broke out on the morning of the 20th of March, at three o'clock, in the Academy, and a great portion of the old building was destroyed. Fortunately the valuable collection of drawings, etchings, and engravings by the old masters were saved, also the wing of the Academy containing the old picture-gallery, and in which was Rubens's "Ascension of the Virgin." The collection of pictures by the modern Düsseldorf school is safe, having been removed from the academy building some four years ago to a suitable gallery built expressly for it. The remnant of the once celebrated Düsseldorf gallery was also saved, although there are but few pictures among them of any great merit. The good ones were all removed some years ago to Munich. These, with the elementary and antique class-rooms, together with the library, are all that was saved: the rest, which was nearly two-thirds of the whole building, was entirely destroyed. Certain artists who had their studios in the part of the building that was burnt suffered losses of considerable importance. Professor F. Müller lost an altar-piece on which he had been working for four years. It was a commission from an American, and was valued at 10,000 thalers. Müller's pictures are very much admired by the lovers of high finish, and of motives imitated from the early pictures of Raphael, Perugino, Gentile da Fabbriano, and others of the mystic Umbrian school. But few of them have been brought to this country. In part of the building the Rhenish and Westphalian Kunstverein had its offices, and all the books, records, plates, and engravings belonging to the association were totally destroyed, including among the plates Professor Keller's engraving of the "Disputa," on which he had been at work more than ten years, and from which but few impressions had been taken.

—The sale of the pictures, water-colors, studies, and sketches left behind him by the late Henri Regnault, the young artist—one of the directors of the porcelain manufactory at Sèvres—whose name was suddenly made famous by his "Salome," exhibited in the Salon of '70, and who was killed in the last sortie from Paris in the opening of the next year (19th January, 1871), proved extremely successful. There were nineteen pieces in oil, for which 75,860 francs were obtained; twenty water-color drawings, which fetched 44,260 francs; one hundred and twenty-five studies, sketches, pencil-drawings, pen-drawings, and other slight matters, which brought 20,911 francs, making a total of 141,031 francs. Something of this result must be attributed to the enthusiasm for Regnault's memory, but by no means all. He was a painter of no ordinary power, and if he had lived would have made a great impression upon French art. The sale took place on the 5th and 6th of April. On the 4th was the sale of the pictures belonging to the late Duc de Persigny, when was seen the fate that waits on an amateur with slim knowledge and a well-filled purse. The pictures went a-begging, although the late duke's galleries were believed by himself and his set to be rich in "Raffaelles, Correggios, and stuff." Among a crowd of copies, and pictures wrongly ascribed, were a few genuine and valuable works which went for far less than their real value, owing to the general belief that had got abroad that the collection was wholly worthless. Among others, says the *Chronique des Arts*, was a picture attributed to Velasquez, and which was probably painted by one of his scholars or followers, Mago, Pareja, or perhaps Carreño de Miranda. This picture, remarkable in itself, was sold for 750 francs—a price far below its value. It is on such occasions—and they occur more often than might be supposed—that the real connoisseur comes sailing in triumphantly and bears off his prize; the amateurs, and make-believe knowing-ones, discovering too late that a thinker has been let loose among them.

DEAN STANLEY.[*]

I.

DEAN STANLEY is the most popular English writer on ecclesiastical history. He has engaged in all the theological controversies of the day, and is the leader of the "Broad Church." Yet he can hardly be called an historian, and is certainly not a dialectician. His influence as a writer, a preacher, and a party leader is due in part, no doubt, to his high personal character, but mainly to the fact that he is, though an inaccurate historian and a loose thinker, an almost unrivalled rhetorician. His rhetoric, which owes a good deal of its power to being probably unconscious, can be traced in every page he has written, for in every line you will see the true rhetorical power of presenting facts so as to strike the imagination and to suggest conclusions which are hardly stated, combined, it must be added, in many cases with a rhetorician's weakness for warping facts which do not bear out his views. In no book which the Dean of Westminster has written is the rhetorical character of his mind and of his works more manifest than in his recent lectures. Readers who look at the book as an historical sketch will feel equal amazement and disappointment. As a history it is absolutely worthless, and this not because of the small size of the work, for a writer of much less than Dean Stanley's skill might easily within the space at his command have given a clear outline either of the external or of the dogmatic history of Scotch ecclesiastical institutions. Dean Stanley presents us no history either of the church or of its dogmas. He commences with a sermon about the new commandment; he then gives a sketch of the church before the Reformation, which seems to have very little bearing on the development of the modern kirk; and then, when, after apparently wasting the limit ed space at his command, he at last approaches his subject, he pours forth throughout the remainder of the book a mass of anecdotes which are always interesting and frequently amusing, and a mass of reflections which, if never profound, are often striking. Of Scott, of Erskine, of Burns, of David Hume, of Dean Stanley's personal friends, we hear a good deal (and indeed of the friends perhaps a little too much); but of the history of the Church of Scotland, of its growth and development, of the dogmas for which it fought, of its triumphs and defeats, of its numerous disruptions, and of the causes from which they arose, we hear from next to nothing, and any student unfortunate enough to purchase the book hoping to find therein such a sketch of Scotch ecclesiastical history as, for example, Mr. Freeman has given of the English Constitution, would no doubt feel that he had utterly wasted his money, and wonder how a man so able as Dean Stanley could have thought it worth while to use so much ingenuity in avoiding the subject on which he professed to lecture.

---

[*] "Lectures on the History of the Church of Scotland, delivered in Edinburgh, in 1872, by Arthur Penrhyn Stanley, D.D., Dean of Westminster, Corresponding Member of the Institute of France." London: John Murray; New York: Scribner, Armstrong & Co. 1872.

But though it would be very natural for the purchaser of a work entitled “The Church of Scotland” to fancy, after reading the Dean of Westminster's production, that the author had, from some inscrutable cause, utterly failed in telling the history he had undertaken to narrate, such an idea would be in truth without foundation. Dean Stanley is, above all things, a skilful writer, and has produced exactly the work which he always intended to produce. As a history the book is without value, simply because the author never intended to write a history. As a rhetorical essay, of which the Church of Scotland is the text, but of which the views of English Broad Churchmen are the theme, the lectures are as artfully written a composition as any one need wish to read. “I appear before you,” says the author at the commencement of his first lecture, “as the representative of a prelatical hierarchy, as an *Erastian of the Erastians*.” “I come before you,” in other words he might have said, “to show you how the history of the Scotch Church confirms the truth of the views held by Broad Churchmen. To do this I shall occasionally refer to the history of your church; but an indirect defence of certain political and theological doctrines is the real object of my address, and to the attainment of this object, and not to the narration of history, my lectures will be directed.” It is almost a pity that some distinct statement of this sort was not made, for, by setting forth the real aim of the lectures, it would, we suspect, have saved them from a good deal of irrelevant criticism. Looked at, at any rate, as a rhetorical essay in favor of the opinions now prevailing among liberal churchmen, they exhibit in the strongest light the strong and weak points of the Dean of Westminster and of the party to which he belongs. Of the position of his party we have in this article nothing to say; our object is to point out some of Dean Stanley's merits and defects as a rhetorician.

He nowhere throughout the work states what precisely are the principles which it is his object to defend, and in this omission follows a perfectly sound rhetorical instinct; but a careful reader soon perceives that the Dean is bent upon maintaining, or rather upon enforcing, two doctrines which may be described as the fundamentals of the Broad Churchman's creed. The first is the supreme advantage of maintaining a church establishment kept up and ruled by the state. The second is the unimportance of theological dogmas, at any rate, as compared with what, for want of a better term, may be called religious morality. Now, at first sight, a Scotch lecture-room seems about the last place any man would choose for propounding these doctrines, for the two most marked features of Scotch ecclesiastical sentiment have been a rooted dislike to any control of the church by the state, and a rooted belief in the supreme importance in certain very definite, very stern, and, as opponents would say, very narrow theological dogmas. Dean Stanley, of course, well knew the difficulties of his position, and probably a temptation to deliver the lectures was a keen sense of the humor involved in making Scotland bear witness to the truth of Erastianism. Whatever judgment one may form of the ultimate success attending Dean Stanley's efforts, no one can read his book without a feeling of amused admiration at the skill with which he avails himself of every point in his favor, and contrives, whilst virtually contradicting every principle for the sake of which the Scotch Church has existed, to enlist in favor of his argument various sentiments and prejudices likely to exist in a Scotch audience.

The subject of the connection of church and state is approached with some caution. The first lecture forms a sort of prelude to the discourses which follow. It is, among other things, an attempt to hint rather than show that the Scotch Church is not a body created by the Reformation, but in some sense the representative of the earliest national ecclesiastical establishment. When the Dean has accustomed his hearers to look on an established church as a thing to which Scotland had always been accustomed, he then proceeds a step further to point out that on the subject of establishments the modern Broad Church and the Scotch Church had always been at one “Many of the Scottish sects,” he writes, “have in later times drifted into the doctrine of an imaginary separation between church and state. Nothing can be more unjust to themselves or more untrue to history. Their independence is as secular, as political, as national, as ever was the compliance of the most latitudinarian of Erastians.” Now the point in which we most admire the Dean's art is that he has here found a point of sympathy between himself and the founders of the Scotch Church. These reformers, like all the reformers of their age, no doubt held that the church and state ought to be one, and it is also perfectly true that in Scotland “each separate communion maintained that it and it alone was the true Church of Scotland.” The Dean, therefore, and John Knox, and John Knox's successors may each, argues the lecturer, in substance be considered as holding the same view of church government, because they are, each and all, opposed to modern voluntaryism. “English nonconformists,” he adds, to clench the matter, “pride themselves on their nonconformity, but Scotch nonconformists pride themselves on their churchmanship.” The unimportant fact which he omits to notice is that Scotch reformers and their followers held that the church should rule the state, whilst Dean Stanley and his friends mean that the state should rule the church. However, by omitting this trifling circumstance and by hinting not obscurely that at the disruption of 1843 good men made themselves martyrs by mistake, and a suggestion that the disruption itself was caused by Christian men misunderstanding the effect of an obscure law point, he certainly leaves the impression that a keen sympathy in the union of church and state makes a bond between Scotch Covenanters and English Broad Churchmen, who are only divided on this matter by something hardly more serious than a misunderstanding.

He, however, relies comparatively little on general arguments. His real defence of the Established Church of Scotland is one which, though not easily put in an argumentative form, is practically very effective; and lies in the description and eulogy of the numerous great men who have formed part of that church. The learning of Blair, the statesmanship of Carstairs, the genius of Burns, the fame of Scott, are all indirectly but none the less effectively brought forward to the glory of the Established Church. In the third lecture, Dean Stanley reaches what is really the culminating point of this part of his argument. That lecture is an elaborate eulogy of the “Moderates” of the last century; a party in whose tolerance, liberality, learning, and, we fear we must add, want of religious enthusiasm, can no doubt be traced a strong likeness to the ecclesiastical liberals of modern days. “Not till quite our own generation have poetry, philosophy, and history found so natural a home in the clergy of England as they did then in the clergy of Scotland. Robert Watson, the historian of Philip II.; Adam Fergusson, the historian of Rome; John Home, the author of the tragedy of ‘Douglas’; Hugh Blair, the author of the celebrated sermons and the lectures on rhetoric; and, lastly and chiefly, William Robertson, the historian of Scotland, America, and Charles V., were all ministers of the Church of Scotland.” By the time the speaker had conducted his audience to the point at which they and he could both thoroughly sympathize in the eulogy of that branch of the Scotch clergy who probably most nearly resembled the clergy of the English Establishment, Dean Stanley for the moment, at least, achieved his first great rhetorical triumph, and worked his audience up to the feeling that to have had an establishment had been, is, and would be the great blessing of Scotland.

The recommendation of the Dean's first thesis was, however, a comparatively easy matter, for he had this circumstance in his favor, that the history of the Scotch Church lends no more countenance to voluntaryism than does the history of the Church of England. The much more difficult and important achievement was to persuade Scotchmen to entertain at least the idea that dogmas might be altogether unimportant.

FREEMAN'S NORMAN CONQUEST.*

THERE seems to be some fatality upon historians who publish by instalments, which brings to naught all their calculations as to the compass of their works, so that they either make more volumes than they planned, like Mr. Bancroft, or stop at an earlier date than they intended, like Mr. Froude, or swell their later volumes out of all proportion. This last is what Mr. Freeman is doing. His volumes have steadily increased in bulk from 650 pages to 827; and the next volume, one would think, must be the thickest of all, for he has reserved for it a great deal of matter which was designed for the present one, but shut out for want of room. Probably the truth is that every zealous student finds his work grow upon his hands as he becomes more at home in it; and events which had seemed of trifling importance now appear in his eyes so characteristic and instructive that he cannot bring himself to pass them cursorily over. Of course, in one sense this is just. The most commonplace incidents have a high value when the period is distant and our information scanty, because of the occasional and incidental light they throw upon the life of the time. But we need only a moderate amount of this; more than enough is wearying. So with the personalities whom Mr. Freeman brings before us. He can hardly place Lanfranc and William Fitz Osborn too vividly before our eyes; but many names pass like the kings of Banquo's race, and are named and described only to be forgotten.

---

* “The History of the Norman Conquest of England, its Causes and its Results. By Edward A. Freeman, M.A., Hon. D.C.L., late Fellow of Trinity College.” Vol. IV. The Reign of William the Conqueror. New York: Macmillan & Co. 8vo, pp. 827.

The present volume is superior to any other in smoothness and evenness of style, and is inferior to none in sustained interest. There are some most graphic passages—for instance, the account of the death and funeral of the Conqueror is a remarkable piece of narration. After all, however, the volume is too large. It contains detail which can be skipped without in the least interfering with one's enjoyment or understanding, and which, if read, cannot possibly be remembered—matter which belongs to the chronicler rather than the historian, and which really throws no light on the character of the times. The chief reason why we object to this fulness of detail is that it makes it necessary to omit some matter that one naturally looks for in these pages. Not only is the whole subject of the social condition of England, as affected by the Conquest, left for the next volume, but the treatment of contemporary European events and international relations is far less satisfactory than one would expect from Mr. Freeman.

The special point in which Mr. Freeman is pre-eminent as a historian is his power of presenting the age of which he treats vividly and distinctly before the eye; the personality of the leading characters, the actual working of the institutions, and the exact territorial relations. He is an earnest believer in the importance and efficacy of these things, as well as an unusually accurate student in their details. His aim is to present the age as it knew itself, so that the reader shall see it as an intelligent contemporary would have seen it; or, if this is not a conscious aim, it is, at all events, the result accomplished; and one is disposed to welcome his pure objectiveness as a reaction from the excessive disposition of some writers in late years to assign historical events to *general* causes almost exclusively, disregarding the influence of personal character and special circumstances. Mr. Freeman does not strive after picturesqueness; his aim is, first and last, accuracy—a quality which is apt to be neglected when picturesqueness is the chief thing. But he is the master of a vivid, animated style, and has a generally excellent judgment as to the relative importance of facts, joined with that invaluable faculty of investing the dullest statistics with a certain liveliness and instructiveness which results from this very practice of pointing out their practical bearing, and their relations to everyday affairs. Now, seeing that his chief merit is in presenting an epoch with great life and distinctness before his readers, it seems a pity that in the important period covered by this volume he has been obliged to omit or slight certain points of the greatest value in such a view, and thus make the view somewhat incomplete.

So far as it goes, however, the view is very distinct, and complete to a certain point. The subject of the present volume is, strictly speaking, the conquest of the island; for it is shown that the battle of Hastings was only the first step to this, or rather, perhaps, only made it possible. The gradual steps of the conquest, its thoroughness, and the influence of this upon the unity of the kingdom, are made very clear, especially by the aid of a map, which shows, by colored lines, its successive steps. A map like this is, he says, "as far as I know, a new attempt." The plans of the chief cities as they existed at this epoch are also an original and most serviceable feature. By the careful narrative it is demonstrated that England was very far from being subdued by the one battle; and it seems to have been only the lack of a competent leader of the English that made a complete conquest possible. Mr. Freeman emphasizes, however, the important fact that William was now, by whatever means, the legitimate King of England, formally elected, and duly consecrated; so that all future resistance was, in point of law, rebellion against the legitimate authority, not resistance to an armed invader. To get the letter of the law on his side was the first and greatest step in the conquest after the victory which gave him a foothold in the land.

In his subsequent actions, in the gradual subjugation of the kingdom, nothing is more striking than the slow and solid progress of each year, the thoroughness with which each new acquisition was made fast, and especially the sagacity with which the tenure of land was made an instrument of policy. William knew just how much of feudalism would serve his purpose, and how essential it was in a permanent conquest to strike root deep in the soil. Here his policy reminds one strongly of the conquests of the Roman republic. The Norman fortresses, at every important point, were like the Roman military colonies in their strategic importance; yet the Roman colonies were not merely military posts, but were at the same time an occupation of the land by actual settlers, who continued likewise to preserve a share at least of Roman citizenship. Now, this most original characteristic of the Roman system was, to be sure, not made use of in the Norman military posts themselves; but the same result was reached by means of land-grants. The Roman military posts were colonies, the members of which still continued *municipes* of the mother city. William, instead of colonies, used fiefs; but both institutions, however widely differing in other respects, were alike in this—that the immediate occupant of the soil was the representative and soldier of the sovereign.

Connected with this policy, and not less remarkable in point of sagacity and efficiency, is the vigor with which William "conquered the tendencies to anarchy and division which lurked both in the old institutions of the land and in the new institutions which he had himself brought in and fostered" (p. 696). In laying the foundations of a developed feudalism, he took care not only to arrest the tendencies to disintegration in England itself, which, after all, were one of the chief causes of his success, but, still more, those which existed in continental feudalism. Polydore Vergil, an Italian, who resided in England in the sixteenth century, remarks as a peculiarity of the country that "by reason of an auncient custome in England, dukes and earles have their titles of dignities of the counties, within the which oftentimes they have no possessions nor patrimonies; but their revenue consisteth of lands and possessions which they have otherwhere." Now, it was William the Conqueror that laid the foundation for this by taking care that his tenants-in-chief should hold detached fiefs scattered in all counties rather than large stretches of contiguous territory—a policy precisely analogous to that by which the ten tribes of Clisthenes were made up of non-adjacent demes. Moreover, not only was he careful that the properties of his earls and barons should not be compact territories, but, as governors of shires, they were not invested with such powers as their peers on the Continent. Only in three exceptionally-situated counties—Chester, Durham, and Kent (two of them ruled by ecclesiastics)—were palatine powers conferred. It was to this subordination of the great feudatories, and the fact that the king was in reality as well as in name at the head of the feudal hierarchy, that England owes at once her unity and, in a great degree, her healthy and steady development of constitutional liberty.

Another important point which is made prominent by Mr. Freeman is the continuousness of English institutions under the rule of the Conqueror, a view, it will be remembered, very characteristic of him, and which, therefore, it would be expected that this volume would take pains to make clear. For example, the succession of the three annual *gemôts*, at Gloucester, Winchester, and Westminster, was kept up as in former reigns, and made use of by the king for carrying out his policy—just as the Tudors used parliament as their regular instrument. See also particularly (p. 364) the account of the Shire-gemôt of Kent in relation to the Penenden controversy. The great formal change made in this reign—most characteristic for a contemporary of Gregory VII.—was the removal of ecclesiastical affairs from the control of the Witena-gemôt. Mr. Freeman is careful, however, to point out the degree of independence still enjoyed by the English Church, even in the Pontificate of Gregory. When the Pope sent to him, demanding "that the King of the English should profess himself the man of the Bishop of Rome," William quietly replied that this fealty "he had never promised, and his predecessors had never paid" (p. 432). So we find quoted (p. 347) the expression of Pope Urban, calling Archbishop Anselm "quasi alterius orbis papam."

Of special points of interest we will mention the description of the municipalities of Exeter (p. 157) and Lincoln (p. 203), with the strong tendencies that existed to develop both into free republics like Lübeck and Florence. We wish there were more of this, but shall probably find it in the next volume. The frequent use of Domesday Book as collateral authority often suggests interesting points of detail, as, for instance (p. 805), where it is shown that the hero Hereward was a landholder not only in Lincolnshire, but probably also in Warwickshire and Worcestershire. A particularly interesting and instructive point is (p. 624) as to the existence in England of English and Norman law side by side, according to the nationality of the parties. "In England this reference [to the judgment of God] took the form of the ordeal of water or of hot iron, while in Normandy it took the form of wager of battle. William recognized both modes of trial." It is interesting, too, to a reader of Scott, to find an ancester of Peveril of the Peak (p. 201) holding lands both in Nottinghamshire and in the Peakland of Derbyshire.

Mr. Freeman may be an example to all historians in the care that he takes to instruct his readers; not only in giving authority for his statements —for all good historians do that—or in arguing special points in appendices. for this, too, is not uncommon, but in giving an opportunity to compare his own expressions by numerous cross-references to his own volumes. These are most serviceable, especially in a work which comes out a volume at a time; but we know no other historian who gives them as abundantly and systematically. Maps, too, as we have already indicated, are a strong point in all his works. We anticipate in his next volume important results from the combination of his minute and accurate investigation with his habit of giving the reader the means of weighing every detail of argument, and comprehending every point of illustration. The transition from the Anglo-Saxon system to pure feudalism will be a subject well adapted to his highest powers.

Journal d'un Diplomate en Italie. Notes intimes pour servir à l'histoire du Second Empire. Par Henri d'Ideville. Turin, 1859–62. (New York: F. W. Christern.)—This volume is to be followed by a second, treating of the author's stay in Rome (1862–66), and a third, divided between Athens (1867) and Dresden (1868). It will be seen from these dates that the author was fortunately situated for observation during the important decade which his journal covers, having witnessed in Italy the complete emancipation of the country from Austria; the Garibaldian conquest of Southern Italy; Castelfidardo and Aspromonte; and having been in Greece at a time when French diplomacy, which more perhaps than anything else had precipitated the Cretan insurrection in 1866, offered almost no hindrance to its disastrous conclusion; finally, having served in Germany in the pregnant interval between Sadowa and Sedan—perhaps with as little insight and foresight as his colleagues, Baron Stoffel excepted, and with as little usefulness to his Imperial employer and to his unhappy country. He himself remarks that, "in the latter years of the Empire, the traditions to which French diplomacy owed the influence it formerly exerted abroad, and which refused admission to the incapable and unworthy, had completely disappeared." The ambitious personage in whom this deterioration seems to have reached its lowest pitch, M. Vincent Benedetti, is described by his unwilling associate in no flattering terms, though Count d'Ideville ranks him far above "those secondary personages," MM. Rouher and Haussmann, whose character, he says, is if possible inferior to their abilities. He appears on the scene in March, 1861, as an officious intermeddler in the treaty ceding Nice and Savoy to France, having got himself appointed second plenipotentiary. Shortly after his arrival in Turin, being in the diplomatic gallery when some member of the Parliament makes an incidental allusion to France, he has the impudence to ejaculate audibly: "If they go on talking like that, I shall have to interfere." Later we find him a vehement partisan of the radical policy of the Roman question, intriguing with Rattazzi, opposed to Ricasoli. Of each of these statesmen we have interesting delineations, especially on the conjugal side. The author on one occasion was, together with an Italian deputy and the senator Cibrario, used by Mme. de Solms to prevent a solitary interview with Rattazzi, not yet minister, but already her lover, and destined to marry her a fortnight after she became a widow. As for Ricasoli, his wife not having been above suspicion, he kept her closely secluded till her death at his chateau between Florence and Siena. Cavour is of course the principal figure in these memoirs, our diplomat confessing to a warm attachment for him. His simple mode of life, his subordination in his domestic relations to his elder brother, his passion for farming, his unostentatious appearance in the streets—he almost never used a carriage—the untiring industry which finally killed him; this and the public grief over "Papa Camille" are well expressed in Count d'Ideville's notes. One whole chapter is mainly a translation of reminiscences of Cavour that appeared in *Pasquino*, the comic paper of Turin, for once serious and mournful like the rest. When Parliament met to receive the news of his death, and the ministers had entered, all eyes were turned to the premier's empty seat, and from there, by a singular absence of mind, to the door, as if he were still expected. An anecdote is told of him which should be good reading at the American legation in London: how that, the Austrian Minister of Foreign Affairs having, as a mark of friendship, reserved for him a thousand shares in the Austrian railways, which had just been conceded to a French company, making the investment a very safe and valuable one, Cavour replied: "I thank your Excellency for your offer, but since I have become minister I have renounced all speculation."

We pass over the glimpses of social life in Piedmont, whose sturdy inhabitants—"the muscles of Italy"—treated the French almost as compatriots, though after Villa Franca they filled their print-shops with portraits of Orsini, and exposed revolutionary pamphlets on the stalls; of the Milanese Anglomania; of the Parmese poverty, such that "when the Duchess wished to give an entertainment or a ball, she was obliged, in order to have ladies for the dance, to import from Paris gowns, head-dresses, etc., and distribute them among the notables of the place." Nor can we stop long with Lamarmora, Cialdini, or Garibaldi, taking his seat as a deputy and forgetting himself in the middle of his set speech; with the Comtesse de Castiglione; with Dumas, contracting with the Government to write from the secret archives a history of the House of Bourbon at Naples; with Victor Emanuel, even, though he merits a few words. The king's traits are drawn with respectful freedom, and his good qualities—courage and a capacity for tenderness and delicacy of feeling—not overlooked. Though not beautiful, says d'Ideville, he is savage and picturesque, and not without grandeur—"un roi hun, un chef barbare." His morganatic connection with the Countess Millefiori is set forth without censure. Most amusing are the illustrations of his detestation of ceremonies, and especially dinners, he himself eating but once a day. On the opening of the railway from Bologna to Ancona, he took passage with his suite and the diplomatic corps, and alighted at Rimini, the half-way station, for refreshments, the time allowed being three-quarters of an hour. Disdaining to eat, he endured the halt for about six minutes, and then abruptly ordered the train to proceed, to the dismay of the invited guests, who had scarcely begun to satisfy their hunger. A general pillage of the feast ensued, in which the king's lackeys played a conspicuous part, getting well intoxicated before they arrived at Ancona.

We must close with an extract or two, serving to compare 1861 with 1871. The bitter pill of "compensation," which cost the new kingdom Savoy and Nice, was coated over by a substitution of "reunion" in the treaty, in place of the words "annexation" and "cession." Napoleon, himself, in a letter to Persigny, dated July 29, 1860, speaks of his desire "to see *reunited* to France provinces essentially French." When the treaty was submitted to the Italian Parliament for ratification, certain of the deputies from the ceded provinces spoke for the last time, "using, as was their wont, the French language, whereas they were replied to in Italian." Finally, says d'Ideville, "the comedy of universal suffrage ended, as usual, to the entire satisfaction of the author and the actors." The bearing of this precedent on the annexation of Alsace and Lorraine is too obvious to require comment. "The French character is always the same," says the diplomatist, telling of the rude and disorderly behavior of some of Lamoricière's troops who had been taken prisoners at Castelfidardo and sent to Turin, where they were granted a large degree of liberty. "Cavour sent for me: 'I allow your youngsters their freedom,' said he, 'but for Heaven's sake don't let them insult us because they were beaten.'"

Our Poor Relations: A philozoic essay. By Colonel E. B. Hamley. With illustrations, chiefly by Ernest Griset. American edition. (Boston: J. E. Tilton & Co.)—Every *ism* is entitled to its light literature, so we must patiently await the coming of the host of flimsy child-books and trashy novels which are to popularize the new gospel of philozoism, altruism, or whatever the theory is to be named which is the motive of our societies for the prevention of cruelty to animals. It may well offend the souls of those who are striving to embody in our society the spirit of the great moral as well as physical discovery that the brute is our neighbor and kinsman, to see, as they must, how nothing is sacred to the book-maker, nothing beyond the reach of the modern masters of namby-pamby. If we accept the spirit of the age, and regard every question as entitled to its share of fine writing and baby-talk, we can find something interesting in this book of Colonel Hamley's. It always marks a considerable success in any reform when half-pay colonels of Pall Mall clubs take it up. It is evident, however, that it is not in the spirit of the reformer, but of the dilettante, that the author has written. If there be any purpose in his work beyond the indulgence of a considerable power for stringing small stories together, it is to abuse professional naturalists.

The pictures which illustrate this "essay" are poor in execution and overstrained. Griset has failed in giving a pathetic look to animals, which seems to be primarily a German knack, though some English pencils have acquired it.

THE WORKS OF W. D. HOWELLS.

New and enlarged edition. "Venetian Life," 1 vol., 12mo, $2; "Italian Journeys," 1 vol. 12mo, $2; "Suburban Sketches," 1 vol. 12mo, illustrated, $2.

These unique and delightful works of Mr. Howells, which have won great favor in Europe and America by their humor, fine observation, and unsurpassed grace, are now published in enlarged editions. "Suburban Sketches" contains "Some Lessons in the School of Morals," not included in previous issues; it is rendered yet more attractive by the addition of several illustrations. "Italian Journeys" embraces an important chapter on "Ducal Mantua," which describes a visit to the old city in the last year of the Austrian rule, and is also a monograph upon her history from the earliest times, bringing into relief the picturesque and romantic incidents in which it abounds, and sketching her social and political aspects under the Republican chiefs, the lords, marquises, and dukes. It presents a completer view of Mantuan history than exists elsewhere in English, and is drawn from sources little known outside of Italy. A new chapter has been added to "Venetian Life," entitled "Our Last Year in Venice." It sums up the impressions of previous years, and completes the record of the author's residence in Venice, while it touches upon aspects and traits of the city not treated in other chapters of the book.

THACKERAY'S WORKS.

Kensington Edition. Illustrated. "Vanity Fair," 1 vol. 8vo, $2; "The History of Pendennis," 1 vol. 8vo, $2.

The first and second volumes of an entirely new edition of the great novelist's writings, to include his Novels and Miscellanies, newly arranged, in 12 elegant, large-type, tastefully-bound volumes. The most desirable library edition of Thackeray.

OLRIG GRANGE.

A Story in Verse. 16mo, $1 50.

"'Olrig Grange' is plainly the work of a ripe student of life and nature. It has dramatic power of a quite uncommon class; satirical and humorous observation of a class still higher; a graceful and ingenious turn in playing that game of speculation with the data of modern thought which always makes a book stimulating for the modern mind to read; and, finally, a very pure and healthy moral atmosphere. The social insight and epigram of the little poem would have furnished forth several ordinary novels, had they been turned to that service."—Pall Mall Gazette.

PANSIES. A Volume of Poems.

By Mrs. A. D. T. Whitney, author of "Leslie Goldthwaite," "We Girls," "Real Folks," etc. 1 vol. 16mo, $1 50.

This book contains poems of Occasion, of Suggestion, of Interpretation and Hope. They possess in eminent degree the qualities which have made Mrs. Whitney's stories exceptionally popular among the most intelligent readers. The purity, sweetness, shrewdness, tenderness, humor, the elevated and cheerful religious faith, which find expression in her writings, endear her to all who know them.

A DICTIONARY OF AMERICAN BIOGRAPHY.

By Francis S. Drake. 1 vol. large 8vo, cloth, $6; sheep, $7; half calf or half morocco, $8 50; full calf, $10; full morocco, $12.

"Its comprehensiveness appears in the fact that it contains nearly ten thousand notices of persons of both sexes, of native and foreign birth, who have been remarkable or prominently connected with the arts, sciences, literature, politics, or history of the American continent. To this fulness has been added the correct pronunciation of many peculiar names, and the assumed names of many writers. These excellences of arrangement, however, would be comparatively of little worth but for higher essential excellences of other kinds; and in regard to the latter emphatic words of commendation are to be applied to this production, truly 'continental in its scope.' It will be seen, therefore, that this dictionary may be spoken of as the dictionary, so far as Americans of note, dead or now living, are concerned, and to be regarded as an authority."—Boston Transcript.

For sale by all Booksellers. Sent, post-paid, on receipt of price by the Publishers,

MACMILLAN & CO.'S

NEW BOOKS.

ESSAYS AND LECTURES ON POLITICAL and Social Subjects. By Prof. Fawcett, M.P., and Millicent Garrett Fawcett. 8vo, $3 50.

Contents: Modern Socialism—Free Education in its Economic Aspects—Regulation of Hours of Labor by the State—National Debts and National Prosperity—Education of Women—Why Women require the Suffrage, etc.

*THE GROWTH OF THE ENGLISH CONSTI*tution from the Earliest Times. By Edward A. Freeman, D.C.L. Crown 8vo, cloth, $2.

NEW WORKS, by the late Rev. Frederick Denison Maurice, M.A., Prof. of Moral Philosophy in the University of Cambridge.

*MORAL AND METAPHYSICAL PHILOSO*phy. New edition. With Preface. 2 vols. 8vo, $9.

SOCIAL MORALITY. Twenty-one Lectures. 8vo, cloth, $4 50.

THE CONSCIENCE. Lectures on Casuistry, 2d edition. Crown 8vo, $1 75.

THEOLOGICAL ESSAYS. 3d Edition, Crown 8vo, $3.

THE PROPHETS AND KINGS OF THE OLD Testament. 3d edition. Crown 8vo, $3.

THE PATRIARCHS AND LAWGIVERS OF the Old Testament. 3d edition. 12mo, $2.

THE RELIGIONS OF THE WORLD AND their Relations to Christianity. 4th edition. 12mo, $1 50.

THE GOSPEL OF THE KINGDOM OF Heaven. A Series of Lectures on the Gospel of St. Luke. Crown 8vo, $2.

THE GROUND AND OBJECT OF HOPE FOR Mankind. Four Sermons. Crown 8vo, $1.

THE COMMANDMENTS CONSIDERED AS Instruments of National Reformation. Crown 8vo, $1 25.

DIALOGUES ON FAMILY WORSHIP. $1 50.

New Edition, crown 8vo, $1 50.

THE WITNESS OF HISTORY TO CHRIST. Being the Hulsean Lectures for 1870. By Rev. F. W. Farrar, M.A., F.R.S., Head Master of Marlborough College.

EDWIN WILKINS FIELD. A Memorial Sketch by Dr. Sadler. With an Address delivered in the Hall of the Incorporated Law Society by Sir Roundell Palmer. Crown 8vo, cloth, $1 75.

HISTORICAL OUTLINES OF ENGLISH Accidence. Comprising Chapters on the History and Development of the Language, and on Word-Formation. By the Rev. Richard Morris, LL.D. 12mo, cloth, price $1 75.

AN INTRODUCTION TO GREEK AND LATIN Etymology. By John Peile, M.A. 2d edition. Crown 8vo, cloth, $3 50.

THE CLARENDON PRESS SERIES.

SPECIMENS OF EARLY ENGLISH: a New and Revised Edition, with Introduction, Notes, and Glossarial Index. By the Rev. Richard Morris, LL.D., and the Rev. Walter W. Skeat, M.A. Part 2. From Robert of Gloucester to Gower, A.D. 1298—A.D. 1393. 12mo, $3.

SPECIMENS OF ENGLISH LITERATURE. From the "Ploughmans Crede" to the "Shepheardes Calender," A.D. 1394—A.D. 1579. With Introduction, Notes, and Glossarial Index. By the Rev. Walter W. Skeat, M.A. 12mo, $3.

THE PHILOLOGY OF THE ENGLISH TONGUE. By John Earle, M.A. 12mo, $2.

POPE. Satires and Epistles. Edited by Mark Pattison, B.D. 12mo, 75 cents.

MACMILLAN & CO.,
38 Bleecker Street, New York.

The Nation.

NEW YORK, THURSDAY, MAY 30, 1872.

The Week.

THE supplemental article of the Treaty of Washington has received the advice and consent of the Senate by a vote of 43 to 8, a number of senators abstaining. The influences which brought about this result, and made the opposition to it of so little account, have been various. The weightiest has been the decided and well-settled and almost unanimous conviction of the country that the "indirect claims" were decidedly absurd, or rather discreditable, and its anxiety to get them in some way out of sight and out of mind. The exigencies of the political crisis have also contributed a great deal, the Administration being in a cruel fix. If it stood by Davis, it lost the Treaty, which is one of the principal feathers in its cap; if it sacrificed Davis and his claims, it "surrendered" to England in a mean, cowardly, crawling, and disgustingly abject manner, which left the people no alternative but to elect in Grant's place that renowned jurist, Horace Greeley. Under these circumstances, there was nothing for it but to swallow the bitter dose. Modifications intended to make the obligation not to claim consequential damages reciprocal have been made in the article, though we do not know in what language, and they apparently are weighing on Gladstone's soul, for when questioned on the subject in the House of Commons he was sombre and uncommunicative. The settlement, or even prospect of settlement, has given a considerable impetus to business.

The tactics of the Greeley managers have during the week become much more clearly defined. The union between North and South is clearly to be the main reliance of the Greeley speakers and writers, and the managers are now daily occupied in "clasping hands across the bloody gulf." We hear little, and every day less, of civil-service reform, or revenue reform, or the extirpation of corruption in office, which were originally the main features of the Liberal Republican movement. In this way, the effect of Greeley's early opposition to the war, of his proposal to make peace at any price if Lee got as far as the Delaware, and to buy peace by paying for the slaves, and of the Davis bail-bond, is best neutralized, and attention turned away from the candidate's unfortunate personal career as a politician, and the bad character of his political friends and associates in his own State. The sentimental side of him, contrary to general expectation, does not, for reasons we have given elsewhere, seem to make much impression. The "white hat" and "white coat" seem, on the whole, to be failures; as "Uncle Horace" and "Old Horace," and as a "wood-chopper," he does not appear to make much progress. These sources of enthusiasm were indeed exhausted in Mr. Lincoln's and Mr. Johnson's time. The excitement caused by Mr. Lincoln's having split rails, and Johnson's having been a working tailor, makes Greeley's career as a printer and his exploits with his axe at Chappaqua seem very tame. The Springfield *Republican*, which suggested timidly at first that he would call Adams and Trumbull into his cabinet, now makes the much safer prediction that he will have no wine on his table at the White House. His friends would evidently like nothing better than that "the dissatisfied reformers" should assail his clothes, and his boots, and his manner of living. Their objections to him, however, do not concern his manner of covering his body, or eating his food, but his way of talking and acting on public questions; and in this, heaven knows, his worst enemies will find plenty of ammunition.

Politics, it must be confessed, are "mixed" just now. The Paris *Patrie* is the only journal of our acquaintance which has arrived at certitude in its search for the truth about our parties. Mr. Greeley, it says, was elected President in the city of Cincinnati, and will enter upon his term of office in November. We trust that some of our heated journalists, reflecting on how the thing looks at the distance of Paris, will now cool down a little. Still, they have some excuse for crossness in the extremely perplexing character of the problems under consideration. Nobody knows, for example, whether the Democracy of pig-iron Pennsylvania itself can be made to take up the principal expounder of Pennsylvania protection, and the probabilities seem to be that the delegation to Baltimore will fight the New York delegation for the control of the Convention and in the interest of a regular ticket. The Grant men appear to count on a sufficient number of Bourbon Democrats, disgusted at the thought of Greeley, to ensure them the State. But then again the Republicans go into the October election divided on the question of Hartranft; and those who are for him savagely tell those who are against him and have already denounced him in the harshest way, that if Hartranft is "slaughtered" in October they will "slaughter" Grant in November. These dissensions and the generally squally outlook in that important State give rise to rumored consultations in Washington as to the advisability of throwing over Mr. Colfax and giving the Vice-Presidential nomination at Philadelphia to some Pennsylvanian. To those accustomed only to the simple issues and broad divisions of our last sixteen years of politics, the coming campaign clearly promises to afford an improving lesson in practical politics.

It is plain as possible that the Southern whites will go for Greeley, and that the Baltimore Convention will have little power over them. The disposition of the Northern Democrats seems to be as doubtful as ever; Voorhees appears to lose none of his courage, and has been making a violent anti-Greeley speech at his home in Indiana, and seems ready to stake his political existence on Greeley's not getting the Baltimore nomination. What the rank and file think, it is very difficult to make out. Of the three leading Democratic papers of the North—the *World*, the Cincinnati *Enquirer*, and the Chicago *Times*—only the second supports him; but a good many of the leading men have declared for him, and others favor him, but reserve final decision till the Convention meets. The Germans show little sign of coming over. The New York *Tribune* announces the preparation, by Mr. Schurz, of a great pro-Greeley "campaign speech," shortly to be delivered. We venture to assert that there is no foundation for this story; that Mr. Schurz will deliver no speeches for Greeley, and could not honestly deliver any; and that if he simply keeps silent, Greeley will have reason to be grateful to him.

The *World* has a long and interesting letter from a person whom it styles a "leading Democrat," and who describes as an eye-witness the inner workings of the Democratic Convention which met at Rochester the other day, and which, though it did not instruct its delegates to vote for Greeley at Baltimore, was in all respects favorable to him. The story of the writer is that Greeley was put forward by the New York delegation at Cincinnati, and supported by all the Fentonites, in pursuance of an agreement with the Democrats of this State, by which "reform" was not to be pushed too far in the Legislature, Hoffman was to be sent next winter to the Senate; and Greeley was to get the Baltimore nomination. It must be admitted that the leading facts, thus far—such as the character and work of the Legislature, Hoffman's vetoes, the kind of men who went from this State as delegates to Cincinnati in support of Greeley, and the kind of men who are now rallying to his support here, the conduct and composition of the State Convention as the writer in the *World* describes them—all help to corroborate his account. Greeley himself may not be capable of entering into a conspiracy of this kind, but we believe that nothing is easier than to make him the tool of such a conspiracy; and we believe that the men who are now "running" him for the Presidency intend to turn him to far vaster uses than he himself yet knows of.

The Liberal Republicans, too, who are engaged in supporting Greeley merely to bring about a general break-up, would do well to think seriously about the responsibility they are incurring. If they imagine that they will be allowed any share in managing Greeley at Washington, or will be allowed to make anything out of him for any good cause, they are simpler by far than we supposed it was possible for anybody to be who saw what happened at Cincinnati. Their plan of using Greeley to produce chaos, with the expectation of then building up a better order of things, has been not inaptly compared to the device of the Maryland doctor who, pluming himself on his skill in the treatment of "fits," threw all patients into "fits" as the first step in their cure.

The Eastern politicians have been a good deal stirred up by a speech from Mr. F. W. Bird, a practical politician who has been as influential within the managing circle of Massachusetts Republicans as any man in the State. So far as we at this distance can interpret his speech, it may, in brief, be described as expressing fully Mr. Sumner's deep indignation with General Grant. Mr. Bird made it plain that his friend is very angry, and probably unappeasably so, but it is to be noted that he committed Mr. Sumner to nothing further than continued opposition to Grant's renomination. He did not even so much as say that in case the Philadelphia Convention made the President a candidate Mr. Sumner would leave the party or remain recalcitrant; nor did he venture the prediction that Massachusetts can be got away from the Republicans by any coalition supporting Greeley and Brown. That Mr. Bird "endorsed" the Cincinnati nominations the report does not show; it does show that he will have nothing to do with Philadelphia. The fact is that Massachusetts Republicans and New England Republicans generally have never at any time "taken stock" in Mr. Greeley to any great extent. The Republican party was invented there while Mr. Greeley was still fighting hard for the Whigs, slavery and all. In Connecticut, where the Democrats even in defeat are perennially so close to the offices that their mouths are constantly watering for them, the Cincinnati ticket takes better than anywhere else in New England, but even there it will alienate a certain percentage of Democrats of the straitest sect, and we should like to hear a positive statement from any Democratic or Liberal Republican journal that any ticket now before the people will inevitably carry even the close and doubtful State of Connecticut in November next.

The disappointed Revenue Reformers are to hold a meeting to-night in this city, with Mr. W. C. Bryant in the chair, and Mr. D. A. Wells as one of the principal speakers. The object is both to free their minds with regard to the Cincinnati Convention, and to consider what their plan of future operations should be; and the *Evening Post* hints that out of the meeting may grow another attempt to give the hundreds of thousands of honest men all over the country a really reform candidate to vote for. There is an enormous number of electors who are waiting to see whether something better than anything which now offers will not turn up; and who, if something better does turn up, will show Mr. Greeley-Brown that his last trick was an unwise one. The preparations that are evidently going on to make the Baltimore nomination another "hurrah" affair—that is, to extract it from the warm and gushing "hearts" of a parcel of political hacks—are evidently of a very formidable character, and anything that can be done by way of counter-move ought to be done quickly, whatever it is; it ought to be something into which all reformers, whether hearty free-traders or not, can come. The Cincinnati platform, on the Tariff question, much of a departure as it was from the Missouri call, would at least have been honest and truthful if the right men had been nominated on it. We ought to say here that we find we are mistaken in asserting that the Chicago *Tribune* supports Greeley, with much "heaviness of heart and bitterness of spirit." It supports him on grounds of policy which the editor holds to be wise, and with expectations as to Greeley's official career which are brighter than we think his antecedents will warrant, but which any man may honestly hold.

The Baltimore *American*, commenting on the course of the *Nation* with regard to the Cincinnati nominations, says "the editor [of the *Nation*] was a delegate to the Cincinnati Convention from New York City, and did all he could to secure the nomination of Mr. Adams, and that, failing in that and neglecting to 'bolt,' Mr. Greeley had a right to suppose that he would be bound by the action of the Convention." It does not, perhaps, make much difference to the public or to Mr. Greeley what the editor of the *Nation* said or did at Cincinnati; but it is due to himself to say that he did not go to Cincinnati as a delegate to the Convention, that he took no part in its proceedings or in those of any delegation, and never gave anybody the slightest reason to suppose that he would be "bound by the action of the Convention." Some great change must take place in his mental and moral constitution before he agrees to allow General John Cochrane, "Rocky" Moore, and their like to settle for him what his course of action on any great public question shall be during the six months next ensuing, by giving "three cheers" and waving old hats round their heads. He did advocate the nomination of Mr. Adams, on what he conceived to be rational grounds; he considers the failure to nominate him a great misfortune, aggravated intensely by the nomination of Mr. Greeley. What Greeley's nomination means, as the issue of such a movement, nobody has accurately pictured to himself who has not asked himself what reply the good men who originated the Liberal Republican movement would have made, last March or April, to this question: Is it not our best remedy for Grant's maladministration to let Senator Fenton, General Cochrane, Mr. Waldo Hutchins, and Mr. Theodore Tilton get up a convention and nominate Horace Greeley for the Presidency?

It appears that the story that Casey, the New Orleans collector, had resigned was the invention of somebody who hoped to promote "reform inside the party" by spreading false news. The collector, it appears, still holds his place, and the report of the Congressional committee is still not forthcoming, on the plea that they have to examine other witnesses. The effect of its non-appearance is, however, very bad, partly owing to the fact that Casey still holds his place, and partly to the thoroughly partisan tone of the majority report on the French arms affair and the Robeson charges.

The majority report of the committee on the Robeson case is written in the same strongly partisan spirit as that of the committee on the sale of French arms, and indeed in spirit as well as language merits the term "whitewashing." The two principal charges against the Secretary were that he made, without advertisement, an illegal contract with one Roach to take the old engines and boilers out of the steamer *Tennessee*, and put in new ones at an exorbitant price. The defence which the majority make is that the usual advertisement for bids was dispensed with because the new engines to be put in were of the peculiar kind called "compound engines," the construction of which nobody in this country but Roach understood; that the price paid is admitted by all experts to be small, the sum allowed for the old engines and boilers large, and the bargain on the whole an excellent one. To which the minority (Messrs. Blair and Archer) reply, that whether the bargain was good or bad is not the principal question; it was certainly illegal to award such a contract privately to Roach, and it was contrary to the practice of the Department. If he is the only man in the country competent to construct these engines, he would have obtained the contract after advertisement as well as without it. If he is not the only man, advertisement would have produced the others, and have given the Government the benefit of their competition. That Roach paid a good price for the old engines and boilers is also nothing to the purpose. The Secretary has no legal right to barter away old boilers and engines and put in new ones on his own motion. If he may do this for one steamer, he may do it for the whole navy.

On the Secor claim, the majority say the claim was a good and honest one, which had been repeatedly examined, and that the question whether it was barred by the words of the statute under which the $115,539 00 was paid—"which shall be in full discharge of all claims against the United States on account of the vessels upon which the Board made their allowance," etc., is one on which lawyers may differ. This we must call an astounding assertion. If lawyers can differ as to the meaning of such a phrase, language cannot be of much use to lawyers. The Senate Committee on Naval Affairs declared, in their report of May, 1870: "that in law such a receipt [a receipt for payment made under the statute] is a complete bar to all further recourse, cannot be denied." The fact is, as the minority report shows, and as the majority do not deny, that there was at least very considerable doubt, not as to the justice of the Secor claim, but as to the Secretary's power to pay it; that in order to pay it he had not only to construe the statute for himself against the plain and ordinary sense of the words, but to disregard the usage of the Department, which forbids the reopening of accounts closed by a previous Administration, and to use, contrary to law, money voted for the ordinary naval expenses of the year to pay an old claim. Moreover, he did this when the Appropriation Committee was sitting, and when, on application to them, the claim, if proper, might have been regularly provided for by Congress. This is the plain truth of the matter. Both the majority and the minority agree that there was no foundation whatever for the charges made by the *Sun* against Mr. Robeson's personal integrity. The charge proved against him is that to which so many other officers of the Government have rendered themselves liable—well-meaning but reckless disregard of the law.

There has been, as might have been expected, a bill filed in the English Court of Chancery, by a stockholder of the "Emma Silver-Mining Co.," seeking to restrain two of the principal American promoters of the enterprise from parting with some of the stock which they hold, or from receiving any dividends on it, and praying that they may be made to render an account of their transactions with regard to the disposal of the mine to the too confiding Englishmen. Mr. Schenck's name is not mentioned in the bill, but it is expected to figure very prominently in the evidence and subsequent pleadings. The "orator," as the Chancery lawyers call the unfortunate petitioner, has a very unpleasant theory about the mine and its great vendors. He thinks briefly that it is a cheat, says that the dividends have been paid out of the capital, and that no silver whatever has been extracted from "the inexhaustible lode" since the sale. We trust the suit will be pushed on vigorously, and think we can promise that the "disclosures" will be a good deal richer than the mine. We may be pardoned for reminding our readers that we drew attention last November, when Mr. Schenck's connection with it became known, to the fact that the enterprise bore several marks, easily recognizable by persons familiar with mining speculation in this country, of a swindle; that we predicted that the sale of it in the London market by the aid of Mr. Schenck's name would lead to legal proceedings, from which Mr. Schenck's diplomatic position would save his property, but could not save his good name and that of the Government he represents; and that we warned the English dupes of the promoters that the "monthly dividend," so ostentatiously promised, was a sham, and could not be depended on.

Mr. Schenck withdrew from the direction under the outcry raised over the matter here, and by the advice of the State Department; but he did not withdraw until he had made all that was to be made by his participation in that enterprise, nor without writing a letter commending it to continued public confidence and support, which, whether he knew the facts or did not know them, he could not have honestly written. He ought to have been recalled, or at all events censured, when his share in this business became known, and his letter endorsing the company was an aggravation of his original offence. If it should now appear that his share in it has been such that were he an Englishman or a private individual he would be personally liable, Mr. Fish can surely have no hesitation as to what he should do in the matter, and we hope all who lose money by it will, in the interest of public morality and decency, write Mr. Schenck a letter containing their opinion, and asking him for such atonement as he would be compelled to make if it were not for his ambassadorial robes. It is worth notice, too, that his most prominent defender in this country has been Mr. Horace Greeley, our present "reform" candidate for the Presidency. Horace declared he could see nothing in Mr. Schenck's performance but legitimate trade, and wondered what all the fuss was about. Was it possible that an American was to be forbidden to trade because he entered the diplomatic service of his country? said Mr. Greeley. We are afraid we shall have many views of this kind when Old Horace gets into the White House. He will be surrounded by "honest traders" doing all sorts of queer things, which they will persuade the Sage of Chappaqua that nobody but "monarchists" would think of objecting to.

Marshal Bazaine has been ordered to be tried by court-martial, but the court has to be organized under a special act, the law regulating the trial of marshals not being operative, owing to the fact that the four marshals needed for the court are not forthcoming, the others having either served under his orders or being disabled by age or wounds. General Chanzy has declared himself a Conservative Republican, which has raised him into political prominence, but the "Republic" seems to go from bad to worse. M. Thiers is now proposing to recur to the Imperialist plan of having the debates of the Assembly reported by the Government, and prohibiting the publication by the newspapers of any but the reports thus furnished. There is some excuse, if excuse be possible, for this performance to be found in the manner in which French newspapers behave with regard to everything that can be called "news"—that is, they do not even make a pretence of supplying it. Erckmann-Chatrian, in their last novel, "L'Histoire du Plébiscite," contrast with great bitterness the plan of the French papers of having their war-news invented in Paris by professional liars, with that of the English and American press of sending correspondents to report on the spot. Anybody who should start a newspaper in Paris of the American kind would begin an absolutely novel enterprise, and he would probably do more, if he succeeded, than all the politicians in the country in making a republic possible.

The most marked incident in French news is, however, the speech of the Duc d'Audriffet-Pasquier, in presenting what we should call the report of the committee on the conduct of the war. He made the most shocking exposures of Imperialist corruption. He showed that a vegetable dealer named Cholet had been sent to England when the war broke out to buy cartridges, and had made $500,000 for himself on purchases to the amount of $2,000,000 in the course of a single year. The best of it was that half the cartridges did not reach France till the war was more than half over, and the remaining half until it was entirely over. Several foreign houses offered, in 1867, to supply Chassepots at $12, but their bids were disregarded, and the contracts given to two Frenchmen at $14. The books made it appear that the French army was in 1870 possessed of 10,000 pieces of artillery; the sorrowful truth was that it had only 2,000 all told. The books said there were 3,000,000 muskets in the arsenals, when there were only 1,000,000. But the administration of the navy appeared to be absolutely pure. The Duke wound up with a glowing eulogium on the men and officers of the army, and when he spoke of their courage, patience, laboriousness, and self-denial, and said that "all their children should serve in it," this declaration in favor of compulsory and general military service brought the Assembly to its feet in a burst of enthusiasm. The report has damned the Empire beyond redemption, and the effort of M. Rouher to make head against the storm of indignation in a two-hours speech at a subsequent period, proved utterly unavailing.

THE SENATE AND THE TREATIES.

THE conduct of the Administration in referring the Supplemental Article to the Senate for advice before transmitting it for ratification has been somewhat severely criticised, as showing a desire on the part of the Executive to shirk its proper share of responsibility. But the conduct of the Senate during the past ten years on questions of foreign policy has been such that it will hereafter be very difficult, if not increasingly difficult, for the President to enter on any negotiation with any foreign power on his own motion or from his own sense of fitness or expediency. The relations between him and the Senate have, as everybody knows, of late undergone serious and important, though not always perceptible, modifications. The number of ill-informed men and self-seeking men and simple adventurers in the body is, for reasons with which all are familiar, much greater than it used to be; and the tendency of these men to use all discretionary powers for their own advantage, and of better men, for the gratification of their own whims and caprices, to disregard all limitations or checks which are not set down in the written law, is well known. The first result of this state of things has been, as might have been expected, the virtual usurpation by the Senate of the appointing power as regards that class of officers for which the senatorial confirmation is necessary. As the practice of the Senate now is, many of the President's nominations, for which he is responsible to the country, are merely timid suggestions, of which he can only secure the adoption in extraordinary cases and by the use of underhand influence; and the Senate, in debating the confirmation, consults not so much the President's wishes as that of the Senators from the State in which the person nominated resides. We are all familiar with the abuses to which this leads and has led.

All complications between the Senate and the Executive, however, which only affect the interests and feelings of the people who elect them and to whom they are responsible, are of comparatively small importance. They often cause inconveniences and sometimes scandals, but the country can at any time it pleases save itself from both one and the other by calling to account and punishing those who bring them about. When, however, these complications affect foreign nations and bring discredit on us in our international relations, they become a much more serious matter. Our national reputation is then injured by them, our good faith brought into doubt, and our standing in the family of nations lowered; and injury inflicted by us on communities which have no means of redress, and which cannot oppose the re-election of the cantankerous Jones, or the corrupt Smith, or the boisterous and ignorant Brown. Moreover, they are aggravated by the fixity of tenure which both the Senate and the Administration enjoy during its four years' office. In those European countries in which the consent of the legislature is necessary to the execution of a treaty with a foreign power, or in which there are practically two powers whose ratification is necessary to give a treaty validity, the executive has always the resource of an immediate and direct appeal to the country in case it finds itself in irreconcilable difference with the other branch of the government. The Ministry can, if their foreign policy does not meet with the approval of Parliament, dissolve Parliament, and submit the whole question to the people at a general election, and have their opinion on it after a full and fair discussion by the newspapers and stump speakers, and if it be adverse, can resign. In this way, it is out of the power of the cantankerous Jones, or the corrupt Smith, or the boisterous and ignorant Brown, or any combination of them, to break down a treaty or arrest a negotiation. The whole question is dragged out into the light of day, and the national honor committed for safe keeping to the national integrity and common sense.

But under our system an appeal to the people is impossible, and Jones, Smith, and Brown have it altogether their own way. It is for a variety of reasons desirable, especially in these days of incessant and often inaccurate and wrong-headed or malevolent newspaper discussion, that negotiations with a foreign power should be conducted secretly. But the negotiations over, and the result transmitted to the Senate for ratification, it is in the highest degree desirable that the discussion of the treaty should be public. Treaties are, under the Constitution, part of "the supreme law of the land." They bind everybody to the same degree as Acts of Congress; they often affect trade, commerce, and manufactures very seriously, and they affect the national honor more than any Act of Congress can ever do. The public is, therefore, as much entitled to know, before the Senate has finally passed upon them, what motives the President has had in concluding them, and what are their exact nature and probable effects, as it is to be informed of the proceedings in either House of Congress in the passage of a bill. The action of the Senate on a treaty, too, though executive in form, is legislative in fact. Whatever reason there is for having its debates public when bills are under consideration, applies with just as great or even greater force when treaties are under consideration. We want to know, and we ought to know, what senators of weight and learning have to say for or against the proposed bargain, and we want and ought to know what excuses or pretences the cantankerous Jones, corrupt Smith, and boisterous and ignorant Brown put forward in defence of *their* course, whatever it may happen to be. But the Administration, after concluding a treaty and transmitting it to the Senate, is absolutely tongue-tied till the Senate has reached a decision. It cannot explain or defend its work before the country; it cannot, if the Senate refuses to ratify, either dissolve the Senate or appeal to the people, or even compel the Senate to state publicly why it refuses to ratify; and it cannot be dismissed in case of gross miscarriage or glaring incompetency. The most delicate and important piece of negotiation may thus perish in thick darkness, under, it may be, purely factious opposition, the people whom it concerns in the meanwhile knowing nothing about it except what reaches them in the vague rumors picked up by the bohemians in the lobbies of the Capitol. We shall say nothing here, for want of space, of the effect this has in cultivating indifference to and consequently ignorance about foreign affairs on the part of the country, and in thus increasing the power of corrupt and unscrupulous demagogues and blatherskites over public opinion on this class of questions.

We have had, during General Grant's Administration, now three striking illustrations of the inconveniences of our mode of dealing with foreign affairs, and of the growing tendency to make the management of our international relations subservient to the purposes of party politics—which is another way of saying, of the growing indifference to national reputation and national continuity. The Reverdy-Johnson Treaty was objectionable on two grounds. One was that it obtained no formal atonement for the outrages on the national dignity, and the other was that the machinery it provided for a settlement was defective, and mixed up the *Alabama* matter with all other subjects in dispute between the two countries. But it was dictated from first to last by our Government, and it is notorious that it failed less on its merits than because Reverdy Johnson was the appointee of President Johnson and Secretary Seward, who had just been driven from office amidst great excitement. Of course Mr. Johnson's own social indiscretions in England had something to do with the failure; but nobody who has witnessed the complacent condonation of Mr. Schenck's participations in the operations of a band of swindling speculators, will pretend that if the former had not been Seward's agent his too great effusiveness at dinner-parties would have lashed either the Department or the Senate into uncontrollable wrath.

This view is strengthened by our second illustration—that of the St. Thomas Treaty with Denmark. Denmark was literally teased by the American Department of State into consenting to sell the Island of St. Thomas. She was unwilling to do so—at first refused to do so—but was finally pressed into consenting. The bargain was closed, as far as the Administration could close it; the vote of the islanders was taken on the scheme, was given in the affirmative, and the King formally released them from their allegiance—the American people and Senate all the while looking on, to all outward appearance approvingly; and the treaty was sent to the Senate

The Senate was then, however, out of temper with Mr. Seward, and it determined to punish him. Now, it is a well-settled principle of international law that, when the ratification of one branch of a government is necessary to the validity of a treaty concluded with a foreign power by another, the ratification should not be refused for "mere reasons of convenience," to use Martens's phrase, but for strong and solid reasons, going to the merits of the case, and based on considerations of justice and right. Well, it seems hardly credible, but it is nevertheless true, that the Senate not only did not ratify this treaty framed under these extraordinary circumstances, but it never gave itself the trouble even to discuss it, *and has to this day never discussed it at all.* In other words, to punish Seward, it has inflicted on Denmark, a small but friendly power, one of the grossest insults ever inflicted by one nation on another, and has committed as gross a breach of faith as could well be imagined; and in this performance it has had the connivance of the present Administration, for General Grant has actually refused to take up the St. Thomas matter, on the ground that it was "an affair of Seward's" with which he had nothing to do—thus presenting the American Secretary of State who represented the American people to foreign nations during the most momentous period of its existence, as a kind of interloper, whose acts were not binding on any of his successors.

Last of all has come the Washington Treaty. At this writing, it is the general and we hope the correct impression that this particular muddle has been brought to an end by the adoption of the supplemental article. That article, it is safe to say, would never have been rendered necessary, or, in other words, the complication about the Treaty would never have arisen, if the debate on the ratification had been public. We believe that in that debate it was openly stated, and without dissent, that the claim for consequential damages had been abandoned in consideration of the apology and the retroactive rules, and that it was ratified with that distinct understanding. Now, had this been laid before the country, as other Congressional discussions are, neither Mr. Bancroft Davis nor anybody else would have ventured on the extraordinary addition to the Case which created the recent imbroglio. No room for the display of smartness of any kind would have been left to anybody, and we should have gone before the Board with a plain statement of undeniable facts, and have got all we are going to get now without the humiliation. That this last performance will not deepen in foreign eyes the distrust with regard to our diplomacy which the Reverdy-Johnson Treaty and the Danish-Island Treaty have already created, it is useless to expect.

THE PUBLIC RECEPTION OF MR. GREELEY'S NOMINATION.

It seems pretty plain that this is not to be a "singing" campaign. We do not see a hint of that enthusiasm with which some of the astonished reformers were at first disposed to console themselves. The valuable element of fun and humor which it was supposed Mr. Greeley's nomination would bring into the canvass is altogether missing; and were it not so much easier to foresee things after they have come to pass, we should marvel that anything else was expected. No joke is irresistibly funny and delightful after two weeks' contemplation. The mood of the public is cynically cool; the people appear perversely indisposed to be amused. Mr. Greeley must stand before the country entirely denuded of all his ludicrous or attractive accidents; his white hat and overcoat will not hurt him, but they will not help him. At first glance, the state of the popular mind would appear to be apathetic, but this impression is superficial. The people do not believe that anybody's election is necessary to the salvation of the country. The country has been saved, at least for some time to come. Not Fernando Wood, not Murphy, not Morrissey, can destroy it. But, nevertheless, some things should be done, and other things should not be done, so there is room for as much conscience as we propose to bring to bear upon the question. The country feels that it has plenty of time in which to make up its mind; it has no need to be in a hurry; but there is a latent determination to decide the question upon its pure merits, to put that man into the place who, upon the whole, shall be the fittest or the least objectionable.

Of the two candidates at present before the people, Grant has rather the warmest following. When we look at the characters and careers of the candidates, this fact, if it be a fact, is certainly noteworthy. Since Donelson, when he was merely a name to us, Grant has excited scarcely a spark of enthusiasm in the national breast. Not only is he not popular at present, but we have by no means a satisfactory sense of his personality. Greeley, on the contrary, is better known to us than any living man, and, with the exception of Jackson and Lincoln, than any man in American history. He has made out of journalism what men of genius, with a passion for confession and the exhibition of their own natures, have hitherto made out of literature. The utterances of the newspapers had previously been supposed to escape out of some nebulous and inscrutable impersonality; the value of the opinion was thought to be in proportion to the mystery of its origin. But Greeley may be said to have brought down journalism from the clouds; through him we have discovered that an utterance rather gains than loses in interest and authority when associated with some vigorous and familiar character. It is not the *Tribune* that speaks to the New England mechanic and the Illinois farmer; it is Greeley. When wicked enemies assail him, and he begins to call hard names, then it is known that "H. G." is angry, and there come up vividly before the mind of his far-away reader the face and form of the enraged editor. The New York *Tribune* may be described as the daily fulmination of Horace Greeley to the American people. The country people say, "Greeley says;" the simplest of them not quite accepting, but nevertheless considering the opinion.

At first view, then, it was natural to imagine that Greeley would be a popular candidate. But the difficulty is that men who are enthusiastic about Mr. Greeley are not apt to care much for reform, while ardent reformers cannot be enthusiastic about Mr. Greeley. There was certainly no lack of enthusiasm before and during the Convention. But the enthusiasm was one for facts and ideas; that expected for Mr. Greeley was of the traditional raccoon and log-cabin sort. The only enthusiasm it is now in the power of this country to give, Mr. C. F. Adams was the man to embody. He would have had at his back the "honest few that give the devil even his due"—the men who neither find truth in the extremes nor yet get at it with a pair of compasses midway between them, but recognize it wherever it appears; who see things as they are and not as they ought to be; who believe in law; who have an imperative sense of doing little things well; and who consider it not unpatriotic to accept the experiences of other countries where we have none of our own. From men who believe in these things, Mr. Greeley could never get anything but a lukewarm and an enforced support. We are not now in a condition to live over again one of our historic Presidential excitements. But even if we were, we doubt if Mr. Greeley could inspire the people with one of the old-time passions. He is not quite the sort of man to be the pet of barbecues and village processions. The popular leaders who have heretofore attracted the women with their babies to the mass-meetings, and caused hungry followers to roast and devour whole oxen, have had in their port a little more of command, have appeared with a little more of station before the people. Have we not exaggerated Greeley's strength with the multitude? Have we not confused familiarity with popularity? A man's character may be very familiar to us, and yet we may not have very great affection for or confidence in him. We may have confidence in his honesty, but it does not follow we should put great trust in his ability. The people relied implicitly upon Jackson; they believed him to be the one man who could lead and rule them, and they were utterly impatient of anybody who thought otherwise; not the most gushing of lady correspondents could "rest on" Mr. Greeley. The state of mind which the farming population of this country is supposed to entertain towards him, we fancy, is exaggerated. With the newspapers, and the telegraphs, and the immense dead-level of intelligence through the land, it is impossible that what has so long been the true estimate of Greeley should not by this time have percolated into the remotest agricultural regions. The bucolic patriot from whom so much is expected will probably, after all, turn out to be the figment of a not very cautious imagination.

The only men who seem to profess a hearty concurrence in Mr. Greeley's candidacy are those who would be glad to support any opponent of Grant. The people, as we have said, do not feel called upon to make up their opinions at once; but the impression in most minds is against Greeley. There is something apocalyptic and second-adventish about the recent untoward event at Cincinnati—the sort of thing that Dr. Cumming might find an interpretation of in the Revelations. The just, no doubt, should have nothing to fear, but to men not yet ready to ascend, the phenomenon is most unwelcome. It is a comfort to such to feel that their feet press the familiar earth. The ills they have are grievous; the insolence of office and its excessive security for Casey and Kramer; Conkling's contumely (now abating); the law's delay—all these are bad to bear, but then follows the reflection of the possibilities of the future, "what dreams may come," and the upshot of their soliloquy is that the attractions of space do not, upon the whole, quite compensate them for its uncertainties.

THE EXPERIENCE OF A PUBLIC LIBRARY.

II.

THE vast majority of those who borrow books from public libraries know nothing of systematic reading. As yet, the old-fashioned circulating library is plainly evident in the general literary taste. It would be unjust to criticise these institutions harshly, for they served their purpose, and, for more than one generation, provided that which was in most common demand. Through them Cooper and Dickens were widely disseminated, no less than "The Red Rover of the Gulf," or even Ainsworth's precious "Jack Sheppard." It was no fault of theirs if the poorest trash was most frequently called for. They would have been equally ready to supply works on philosophy, on theology, on science, or on history, had the public asked for them; as it was, they did not do so; and, indeed, how could they? In five months not one half of the volumes of Macaulay's Essays have yet been taken from the shelves of the library in X.

In fiction, therefore, the previous generations had received a certain rude education, such as it was, and transmitted to the present certain traditions. As regards a more instructive class of reading, the case was wholly different. It is, indeed, surprising to see how little distance into the mass of mankind even the most brilliant literary reputations have penetrated. As regards history, for instance, the desire for information is very pronounced, but the familiarity with authors amounts as yet to almost nothing at all. About three volumes out of every hundred borrowed from the library at X. are historical, strictly speaking, but even this small percentage amounts to a monthly aggregate of over 120 volumes. Yet in this department there seem to be absolutely no popular favorites. Macaulay's History has, indeed, been more successful than his Essays, and is read probably as much as any book of the kind. Buckle follows close upon him. Milman and Ranke, also, have had their share of persevering reading, and both of them, strange to say, at least as much, if indeed not more, than either Motley or Prescott. Froude, too, is in tolerably steady demand, but this partly for another and somewhat singular reason. There are few things about a public library more noticeable than the generally evinced desire to read anything relating to the careers of certain well-known public characters. That Napoleon should still exercise a strong fascination over the average New England mind is not perhaps surprising; at any rate, everything relating to his career, from Las Cases through Thiers's "Consulate and Empire," down to Abbott, is eagerly perused; but how are we to account for a similar interest in Mary, Queen of Scots? Yet everything relating to Mary is devoured with avidity, and, whilst Froude's "Reign of Elizabeth" has constant readers, Meline's vivisection of that dubious authority is one of the very few historical studies which circulates as rapidly as a favorite fiction. This we may probably attribute in part to the presence of the Irish element in the population of X., for among Roman Catholics Mary does duty as a sort of saint and martyr, and has received popular canonization. And in part it must, no doubt, be attributed to the romantic interest which attaches to Mary's story, and which will long attract readers of all religions and of none.

The desire for historical information does not, however, extend back to classical times. Grote and Mommsen and Merivale and Gibbon rest undisturbed on the shelves. But this absence of interest is compensated by an additional development of it in favor of anything relating to America. It is encouraging to see this take the form of a thorough and popular appreciation of books so different, and yet all in their ways so excellent, as Irving's "Columbus," Parkman's works, and Edmund Quincy's memoir of his father, which last, by the way, is in so great demand that a single copy fails to supply it. Parton's books also circulate freely, though scarcely so much as those just named, and hardly more than Wirt's "Patrick Henry" or Sargent's "Major André." Bancroft's History is the work on America most frequently labored through "in course," and Palfrey's "New England" seems to follow; but Hildreth cannot be made to go at all, while the original productions of Calhoun, and even of Webster, rest absolutely undisturbed. Not unnaturally, Cooper's "Naval History" retains its great charm for young men; but the especial demand relates to the history of the rebellion—such books as Draper's "Civil War," Badeau's "Grant," and Swinton's "Decisive Battles," and even Lossing's compilation, or "Carleton's" sketches, or "The Rebel War-Clerk's Diary," give ample outward indication of the strong interest felt in their contents.

A full enumeration of the books in each department which are more or less read would constitute little less than a list of familiar authors, and so, passing away from history to more general literature, it is very noticeable that scarcely any demand exists for books of a religious or devotional character. In the very hot-bed of the Unitarian movement not one volume of Channing's works has yet been asked for. Beecher has, however, to a degree usurped his popularity, and the "Life of Christ" circulates with some rapidity. In the department of arts and sciences there is a singular demand for works on geology, chemistry, and natural history. Not only do Jacob Abbott's treatises on heat, light, and water, and land show the marks of constant reading, but Lyell, Miller, Darwin, Humboldt, and Lewes are read frequently and with evident intelligence, while the study of Figuier's works extends even to the "To-morrow of Death."

Next to fiction, however, accounts of travel and adventure are in greatest demand, and of these there are sent out upon the average about 200 volumes a month. From Marco Polo down (Mungo Park, by the way, has not yet been discovered) those "who seek a wonder world" or "sail beyond the sunset" find many interested followers, but especially so if they are bound for the Arctic regions or the recesses of Africa. There are ten calls for Sir Samuel Baker to one for Professor Pumpelly, and Ross Browne and Bayard Taylor, popular as they are, will only attain the fullest possible currency for their works by going the one to Puget Sound and the other to the sources of the Niger. Among this class of books, it is pleasant to find Dana's "Two Years Before the Mast" still retaining its popularity as much as any. It is read more even than most works of fiction.

Judged by the standard of popular demand in X., utter oblivion would seem to have fallen on many of the most famous of the English essayists and humorists. Sir Roger de Coverley has found but a single curious reader, while Charles Lamb, Leigh Hunt, Christopher North, and Hazlitt are absolutely unknown. So much with a miscellaneous collection of readers depends upon an attractive title, that a work without one might almost lie hid indefinitely. This, too, often leads, on the other hand, to grievous cases of deception. Many a youth has thought to find in "The Adventures of Philip" something after the style of Robinson Crusoe or Gulliver; but, in this respect, Hugh Miller's "Cruise of the Betsey" is perhaps the most heartless fraud of all—the promise is so strong for a second edition of the "Cruise of the Midge," and the performance so very different. It is to adventurers of this sort that the humorists and essayists seem to owe what little attention they have received. De Quincey captivates by such a title as "The Avengers," and then tries to beguile his victim into some "Supplementary Note on the Essenes"; Leigh Hunt promises a modern Joe Miller under the title of "Wit and Humor," and then tries to palm off as something funny long extracts from Chaucer or Ben Jonson or Beaumont and Fletcher. They are detected, however, and thereafter left severely alone.

Of the modern essayists, it has already been mentioned that Macaulay has very few readers, and it may be added that Carlyle, Sidney Smith, and even Stuart Mill have none at all. Among Americans, Russell Lowell has a few, but Emerson forms no exception to the rule; a few have tried him, but with most unsatisfactory results. Of writers of another class, Holmes and Howells do better, but their circulation cannot be said to indicate popularity. Not all of them put together would have the circulation or supply the popular place of the singularly skilful selection of papers contained in "Chambers's Miscellany; or, Papers for the People."

In poetry, as Browning somewhere says of music, "it is strange to see how fashions change." Browning himself, by the way, is unknown, though

Mrs. Browning is somewhat read by loyal admirers of her own sex. What are known as the standard poets, however, make but a beggarly show for themselves; they keep each other permanent company on their shelves. Byron, indeed, is called for somewhat, and Burns still more, but from Spenser and Milton down to Wordsworth, the rest of the great choir sing only to themselves. But here again one singular exception to the rule cropped out. There was a demand for George Herbert, and that quaint old devotional bard experienced a revival for which it would not be easy to account. And yet the demand, though confined to a few modern authors, is good, and such as it cannot but be good to supply; the favorites are Longfellow, Whittier, Tennyson, and Lowell, while Mrs. Hemans also numbers a few admirers; Bryant, however, has no takers.

Here, then, is an engine in the education of the future, only recently brought into play, the potency of which may be measured by the simple statement that already it sends out among a population of 7,500 persons of all ages not less than 50,000 volumes of reading matter each year; while of this vast number no single volume is bad, and a large proportion consists of the very best books in the language. The immediate obstacle in the way of the perfect efficiency of these institutions is, that those for whose use and benefit they are especially designed do not as yet know how to get at them; they do not know where the real treasures are, nor do they know how to avail themselves of them when they find them. The act of reading with the great mass of those with whom reading is something more than a mere harmless and aimless source of recreation, is little better than a blind labor. To educate it, and through education to give it an intelligent direction, several things are needed.

In the first place, public libraries require catalogues peculiar to themselves. A collection of 5,000 volumes with a skilfully prepared catalogue is of more real popular service than 50,000 volumes piled up for people to gaze at across a librarian's desk. These libraries are not intended, except in great cities, for the use of scholars and specialists; they are meant to give the mass of the people perfectly easy access to the whole range of standard literature and the more valuable books of ordinary reference. Rare books and choice editions are wholly out of place where everything should be calculated for hard and constant use. The possession of too many books is, therefore, an absolute injury, if their mass, on the ground of labor and expense, is to prevent the frequent revision and renewal of the catalogue. Any effort at bibliographical learning is altogether out of place in it; some indication of the character of each work is very necessary. This may be very slight, but it should be enough to prevent the blind groping among titles which now causes works of science to be called for as novels, and occasions not less unnecessary labor to the librarian than vexation to the borrower. Cheapness and simplicity are the two essential things never to be lost sight of, and one great effort of those managing these institutions must be to prevent their growing so fast that their list of contents cannot be placed in every house.

Even this, however, will assist but little him who is referred for information to a catalogue containing even as few as 10,000 titles, when he scarcely knows the name of one author from another, and is familiar only with the outside of the few books he may have read. Now, and for years to come, until a traditional knowledge of the better writers in the language can be educated into the mass of the people, there is great need of a number of little elementary treatises on literature, authors, and courses of reading, very short, very simple, and very popular—something which would be contained in a space of not more than four or five pages, or, indeed, even on single broadsides. At present, even such a cumbrous work as Taine's is called for to meet this elementary demand, and our own people actually seek to get an insight into English literature through French eyes. Everything we now have of the introduction to literature—and the name of such works is legion—is too cumbrous and too costly. Literary tracts are wanted, and nothing more, that the libraries may circulate them with their catalogues.

Finally, the career of the librarian must be made a specialty. It is not every one who is competent to stand behind the desk even of a village public library, and intelligently satisfy the demands made upon it. A large proportion of those who come, come asking openly for direction; and for want of it it is sad to see the waste of time and of perseverance and of real honest desire for improvement. In this way, during the last winter, one unguided Irish youth in X. was allowed to labor through the twelve mortal volumes of Edmund Burke. He wanted a course of improving reading! A good librarian, therefore, needs something more than an extensive acquaintance with books and authors; he must feel, also, that he (or she) is an instructor, and knowing men, and especially young men and young women, must feel a sympathy with them, and, divining what it is they want, see that they get it. It would constitute a vocation more useful than that of a school-teacher, and incomparably more attractive. Living among his authors, and selecting his pupils, it would require no great stretch of the imagination to enable a good librarian to realize that, after all, it was reserved to him, in the middle of the nineteenth century, to make every treasure of literature as accessible to the son of the day-laborer as heretofore they have been to the millionaire. The public library would, in his hands, become the cheap university of the grammar-schools.

THE GILLOTT SALE.

London, May 7, 1872.

THE announcement in the reports of the auction sales of pictures of the presence of an agent of the Metropolitan Museum of Art, has produced an agreeable flutter amongst the dealers *et id omne genus*, as all American pockets are now supposed to be filled to overflowing, and it is a remark quite *banal* to me already: "Now you have got into the market, you'll bring prices up." But I must, in sincerity, say that the début of the New York Museum on the London market has been a costly one. Of all places in the world to get things cheap, Christie & Manson's at this season is the last, and of all things to buy, Turners of special note are the dearest. The game of buying at such sales as Gillott's, which has just closed, is one which people go into for the name and for the excitement. Reckless Manchester and Sheffield men, who have more money than they know what to do with, put it into "Christie's stuff," and this without choice and sometimes without sense; but no man who wanted a picture at a reasonable price, and of a certain quality, would think of competing there for what he meant to buy. It is a well-known fact that pictures of men in fashion, as Turner, Cox, Muller, Hunt, etc., etc., will bring higher prices at these sales than at private sale, especially if from highly reputed collections. The Gillott collection is a famous one; it had a prestige which no lately-sold one has had; and the competition to secure the pictures was something insane.

To show this, I will instance sales of pictures of similar size in and out of the auction-room. Not long since, one of the gems of Turner's England and Wales, the "Llanthony Abbey," perhaps the most lovely and marvellous of the pictures of that period, and from the collection of Mr. Ruskin, sold, I am credibly informed, for £1,000, and was considered excessively high. The "Ehrenbreitstein," a drawing of the same size, and in no respect superior to the former, was sold at Gillott's sale for 2,650 guineas, and two examples from the England and Wales series, inferior to that sold at private sale, sold for 1,210 and 1,950 guineas. These drawings are all of the size for which Turner received 80 guineas (until the latter part of his life, when it was raised to 100), *i. e.*, 12×18 inches. Drawings not at all inferior to those which, in the Gillott collection, sold for 1,210 and 1,950 guineas, went, not long since, at Mr. Leyland's sale for 600 or thereabouts. In fact, it was a species of tulip-mania, in which the price to be given had no relation to the article to be obtained, but referred simply to the rivality of picture-maniacs to get something from the sale of Gillott's pictures; and it is safe to say that, either before or after, any sensible picture-buyer could have bought equally good pictures with any of those sold for half to three-quarters of the price thus bought.

How far it was wise under these circumstances for the New York Museum to buy from the Gillott collection, I leave New Yorkers who don't care for Gillott and have no picture-mania to judge; but the sale reports two Turners as bought by the Museum—one very indifferent and one very fair, but both of the same subject and much in the same manner, but neither of them, as general prices go, to be considered cheap or even moderate. The picture which a note in the *Nation* reports as bought by Mr. Blodgett for Mr. Johnston is better worth £10,000 than these are the price paid for them. "The Slaver" is not only a celebrated picture and a noble one, but marks Turner's highest power and strongest individuality. The writer of the note in the *Nation* did not, perhaps, notice what would be an item of general interest in America, that the flag which drifts on the nearer waves, pitched overboard with the slaves, is the Stars and Stripes. Turner's bitterness against the United States is said to have been owing to the loss of money in Pennsylvania bonds. It is droll that the two leading national sins, slavery and repudiation, should be so picturesquely tied together, and that the picture should thus come to America to be taken care of. It is not, by the way, the only picture of Turner's prime in America, Mr. James Lenox having another, also a sunset, of which I remember talking to Turner himself a year or two before he died, when the old man said, with, however, a look of not unmistakable complacency: "I wish they [the pictures of this period were the subject of conversation] were all put in a blunderbuss and fired off." Mr. Lenox's picture, if I remember right, was a French ship ashore and some forts firing on her.

The prices which the water-colors brought at this and other sales, and the sale of an eighty-guinea drawing for £1,000 at private sale, show the greatest enhancement of value, probably, in a work of art ever known. And when we know what an almost incredible number of such drawings Turner made—I think I may say thousands, and hundreds of oil pictures—it will be a curious problem in political economy to decide his exact position as a producer of values. He died worth about £100,000, and left behind him pictures unsold which, at the time of his death, his agent declared to me his readiness to pay an equal sum for, and which are at current prices now worth twice or thrice that sum; but as they are the property of the nation, we shall never know what they would have figured for in the floating wealth of the country.

Under the influence of the mania for English masters, the works of the earlier epochs have declined much in value, the Dutch pictures even from Gillott's collection bringing very low prices; and in general the Italian masters are less invested in than any other class of pictures. The prices of modern French pictures have been greatly enhanced by the English market, and though not here what they seem to be in the sales at Paris, are yet respectable approximations to those of English works.

Messrs. Bierstadt's and Bradford's pictures have been rejected from the Royal Academy, as I could have foretold. Any American non-resident, or who at least has no large personal acquaintance here, is unwise to trouble himself to send to the Academy, especially when the International offers space to every country, and the control of it to each Government that will give itself the trouble to make proper arrangements. The Academy is always crowded—it is a close guild, and managed for mercantile interests. If a foreigner get in, some Englishman is pushed out, and we have no right to expect concessions of this kind. Then the chance of American pictures selling here is not worth calculating; and as all that can be gained in any way is to be seen and noticed, the International furnishes this more advantageously than the Academy. W. J. STILLMAN.

PREVOST-PARADOL.

PARIS, May 9, 1872.

A FEW days ago, the French Academy had a formal sitting for the reception of M. Camille Rousset, one of the newly-elected members. These sittings have been from time immemorial great solemnities, which unite all the scientific and literary celebrities with the *élite* of French society. The space under the cupola of the Institute where the receptions take place is not very large, and it is not easy to obtain tickets of admission. These tickets are given away by the members of the Academies to their friends and acquaintances. The last sitting was as brilliant as possible. The Count and Countess of Paris were present, with many ladies of the Faubourg St. Germain and of the Faubourg St. Honoré. These two names represent the two rival camps of the old nobility and of the rich bourgeoisie. I took a particular interest in the reception, as the two orators, M. Rousset, the new Academician, and M. d'Haussonville, the president of the day, who had to receive him, were both obliged to speak of Prévost-Paradol, who was M. Rousset's predecessor. I had long been the friend of Paradol, and had known him at the time when he was still obscure. M. d'Haussonville was also his personal friend, and he and I were, I believe, the only friends of his who did not congratulate him on his nomination as Minister to Washington, as we disapproved of his taking service under Napoleon III. It was easier for M. Rousset, who had never known Paradol, to speak of him, of his extraordinary abilities, of his clear and fluent style, of the elegance of his mind. He asserted, what has always been my opinion, that, from a literary point of view, the most remarkable work of Paradol was his "Essay on the French Moralists." I believe that the French language cannot be brought to a greater perfection than it is in this work, the only one, perhaps, of Paradol's which will go down to posterity. The "France Nouvelle" made more noise, as it touched on the pressing questions of the day; but it has no great depth, and was written in a hurry. It has now acquired a sort of posthumous and renewed celebrity, because Paradol prophesied in it that France and Germany would soon meet in formidable encounter. He compared them to two locomotives running with full steam towards each other on the same line of rails. When he took his farewell audience of the Emperor and the Empress, the Emperor as usual was very reticent, but the Empress, who was the most ardent promoter of the war, spoke with great warmth of the formidable character of Prussia, of her encroaching policy. Still Paradol had no warning. Ollivier had said in Parliament that the world was at peace and would remain at peace. While he was crossing the Atlantic, however, the gates of the Temple of Janus were opened; and as he landed in America, Paradol learned the ominous news of the Gramont declaration, of Benedetti's interviews at Ems, and he foresaw at once the consequences. He saw the Empire lost, and thought himself lost. He was, said M. Rousset, the first victim of the war—thus slurring over the fearful drama of Paradol's suicide in Washington. M. d'Haussonville must have meant better, but he also covered up the perilous incident with flowers of rhetoric.

The Academy, however, is hardly to be compared to the Palace of Truth. It was thought becoming in a eulogium to represent Paradol as a victim of his patriotic sufferings. The truth on this delicate point is perhaps better known in Washington than anywhere else. As for myself, and judging only from the little light I have, I cannot help thinking that the causes of Paradol's death were very complex. I do not hesitate to trace among them a hereditary tendency to insanity. Knowing as I do several people related to him by blood, I am convinced that in this charming and apparently so well-balanced mind there was a defect, a want of equilibrium, a dangerous and morbid tendency. It is rather curious that in a novel which was attributed to him (the only one he ever wrote, though he did not sign it), the hero is a very ambitious man, who, disappointed in love and in politics, finally shoots himself with a pistol through the heart. I found something morbid even in his extreme fondness for moralizing, and his very acute perception of the elements of moral life. He was essentially a moralist, by which I mean a man who brings all the actions of humanity, of nations as well as of individuals, to their true source, the elementary human passions. Living in a very coarse time, amidst corrupt politicians, intensely ambitious himself, he always preserved a curious virginity of intellect. He was, as he once said himself to the French Academy when he had to speak on the "prizes of virtue," given annually:

> "Ami de la vertu plutôt que vertueux,"

in the words of Boileau; but no eye could discern more exactly the true from the false, the paradox from the axiom, good from evil. He was a sort of sensitive plant in this respect; he did not always dwell among the best people, but he was never ignorant who the best people were. He did not conform his conduct to his ideal; but his ideal was of the highest and the noblest kind. For years he struggled for his political ideal; and finally, tired with work, disgusted with the ingratitude of electors who preferred to him the meanest and coarsest Rabagas, pressed by poverty, he yielded, and consented to become the representative in your country of a man whom he had always treated as his personal as much as his political enemy. There was in such conduct a certain want of good taste of which nobody could be a better judge than himself. He was more severe towards himself than the people who were about him. He never was his own dupe; he never was taken in by the shallow phraseology of serving one's country, helping the state, giving support to the attempt to reconcile liberty with authority, and so on. He knew what it all meant; he saw clearly that the Liberal Empire was still that Empire which he had pursued with his irony, his taunts, and his indignation. I met him occasionally at that time, not so often as before; and I must do him the justice to say that he never tried to convert me to his new policy, that he never did me the injury to treat me to the commonplace arguments which were then the fashion. We had too often talked together not only over politics, but over philosophy and morals; he had too often told me that there is a certain continuity in the history of individuals as well as of nations—that the most dreadful character of vice is that it cannot change into virtue. He never really believed in the amendment of the Empire, though he was obliged to affect to believe it.

It is a satisfaction to me that I never said a harsh word to him, and never manifested to him my disapprobation of his conduct in any other way than by my silence. He understood this silence, and he knew that I pitied him more than I blamed him. I will say nothing of the conduct of the leaders of the Constitutional party, who all—M. Thiers more than any other—pressed him to enter into the service of Napoleon III. They have shown since how free they themselves are of old connections and memories, how easy it is for them to change their colors and to conceal their personal ambition under patriotic expressions of sentiment. They spoke at that time of Paradol as of a spoiled child, to whom everything must be allowed. They have shown since that second childhood can take as many liberties. What struck Paradol in his inmost fibre was the insolence of the Bonapartists as soon as he accepted office. So long as he had not crossed the Rubicon, they were very flattering and caressing; as soon as he was over, they showed him that he had done all they expected from him, and that he could be of no more use. The first time he called on the Duc de Gramont, then Minister of Foreign Affairs, he found himself in a new element; alone, as it were, in an atmosphere of contempt and coldness. The Duke himself never presented him to his mother the Dowager Duchess, and Paradol felt this as a great insult. Your own countrymen were universally kind to him; they had long admired him; and he felt very proud of the kindness which was shown to him in the American colony of Paris. I have no details of his last days in Washington; but I am fully convinced that he was very unhappy before he left France, that he was clearly conscious of the fault which he had committed; and I shall always look upon him more as a victim of remorse than a victim of the war. I will not judge his conduct from the standpoint of religion; humanly speaking, there is something indescribably sad and touching in this immolation of a man who had all the gifts of greatness to the morbid scruples of his own conscience. Such a dreadful sacrifice shows an innate nobility of soul, which is in strong contrast with the easy morality and the vulgarity of our day. Compare, for instance, Paradol with Gambetta: here is a man who undertook to save his country, who for a while tried to inflame it in the name of all that is sacred, who stamped on the ancient soil of France and saw armies rise under his feet, who sent thousands and thousands of victims to a certain death. This Titan attempted to fight destiny, and he was defeated. Had he the severe conscience of a moralist, he would, in my opinion, live in silence and retirement, weeping over the too many victims of his patriotic frenzy, and proving by his abdication that he did not struggle for the vain satisfaction of his personal ambition; we see him, on the contrary, moving on the political stage which he has covered with ruins, with all the ease and indifference of an old actor, still contented with the applause of his admirers—self-contented, self-satisfied, without remorse, without any troubles of conscience. Compare Paradol with Thiers; the historian of the glories of France is the tranquil and happy ruler of an humbled France, deprived of her finest provinces. He has built for himself a sort of republican throne on the ruin of all our institutions. He sits for his picture, which is exhibited to-day in the *salon* just opened in the great Palace of Industry; he goes to the races, and passes in review his defeated regiments; he is happy. Happy are his ambassadors, whom he sends all the world over, and who represent a fallen France; happy his ministers, who go on speechifying and patronizing.

Paradol was of another stuff: surely he was not the strong man of Horace, of whom the poet says:

> "Impavidum ferient ruinæ."

He was not a Stoic, a Cato; but still the constant reading of Lucretius, of Seneca, of Marcus Aurelius, of Pascal, of the moralists of all time, had given to his moral fibre a vitality which is becoming very rare. He was born a Protestant and educated in the Huguenot faith. Though he was not churchgoing, he always preserved a Protestant love of truth. In short, he was born to be good and to be great; but he was thrown among elements which were too strong for him, and he bore in the obscurity of his inner nature a hidden element of physical and mental decay. His history will always be a curious enigma and study for the moral philosopher, as his works will always remain the best specimens of the French language in the nineteenth century.

Correspondence.

"PERSONAL ENTHUSIASM."

To the Editor of the Nation:

Sir: The Cincinnati Convention, as it has resulted, is far more important as an index than as an actual event, and is so full of instruction that it will bear examination from every point of view. It was a matter of general remark that there was present an unusual number of sober and sensible men anxious to secure reform, though quite at sea as to the means of doing so. The gathering was well described by a bohemian as based upon "too much brains and too little whiskey." How is it, then, that it resulted in the nomination of a man the very embodiment of opposition to all the principles with reference to which the call was issued? The secret seems to me to lie in this, that the final assemblage was governed by personal enthusiasm. The platform of principles was, as you say, elaborated in secret by a few men, was read to the meeting only a few moments before the nomination, and excited very little interest, partly on account of its generality and partly on account of the great fact in human nature that a crowd like that in Exposition Hall, though a very well-disposed crowd and probably a very fair sample of the people of the United States, cannot be roused to enthusiasm by an abstract statement of principle. They must have a personification of it, whether real or fancied. Thus I heard several very sensible men express an anxiety to proceed to ballot on Thursday before the platform was announced, saying that if we could get the right man, the latter was of little consequence.

The English people are wont to say that their monarchy is superior to our republic because loyalty and personal attachment fix men at large, which an abstract constitution cannot do. The general statement is doubtless true, but not when applied in this way as a distinction. It may be true that the attachment to the sovereign preserves the nation from civil discord, but the active political force, the machinery which has guided England through so many dark and stormy periods, consists in personal enthusiasm for men not connected either with the crown or in many cases with the aristocracy, who might just as well have arisen under our government—as William Pitt, George Canning, Sir Robert Peel, Gladstone, and Disraeli. The two conditions necessary for this state of things are, first, that men shall be so placed as to have power to carry out measures, while at the same time every step of their public and almost of their private life shall be kept before the public eye in such a way that every man, woman, and child may have some idea of their character and capacity; and, secondly, that they shall occupy a national position, so that local jealousies may be absorbed in the pride and affection of the whole nation. Thus, under the French Empire Louis Napoleon absorbed all power and therefore all responsibility in himself; and when he went down there was nobody who filled any place in the public eye, and the country was forced to turn to M. Thiers, a man of another age and generation. Of the second point, the student of the history of Eastern Europe can furnish abundant examples. Poland went to pieces because her nobles were too jealous of each other to allow any one to have precedence. The Hungarian attempts at freedom have failed mainly from this cause. Germany made no progress towards unity till one man was strong enough to wrestle himself to the top, and that man not the Emperor by divine right, but a private gentleman.

All history teaches the necessity of personal enthusiasm, and we have at Cincinnati a fresh illustration, which forces itself to the surface in spite of the fact that the whole movement was an effort in the contrary direction. As with the great forces of nature, if we attempt to resist it we simply dash ourselves to pieces. It is only by adopting and guiding it that we can achieve anything.

Let us see now how this force worked at Cincinnati. It needed but a very slight circulation among the crowds at the various hotels for some days previous to find that the question was not what, but who, should be adopted. Of the candidates, Charles Francis Adams was known chiefly as of historic ancestry. Very few indeed had any acquaintance with his personal antecedents. A general impression prevailed that he was reserved and cold in character, but honest and independent. Of a record of struggles in behalf of free trade, popular education, civil-service and financial reform, there was not a word. It was: "What do you think of Mr. Adams's letter?" The choice of the nominal ruler of a great nation was to turn upon a brief note in which he had hastily expressed his views as to the nomination. Still, the very discussion of the letter showed the striving after personal knowledge. As to the other candidates, I believe I follow politics as closely as the average of people, but it required an effort of memory and some enquiry to find out who Davis and Palmer were. Of Gratz Brown I had certainly heard as connected with some local squabble in Missouri, but I doubt if five per cent. of the population of the country could give any particulars about him. The one man of whom the nation knew anything was Horace Greeley; and that not through any career of statesmanship, but from a somewhat erratic course, not always free from ridicule, as the leader of a popular journal. That Senator Trumbull did not occupy any such position shows how little Congress at the present time offers any field for distinction by means of industry, talents, integrity.

When the time for nomination came, the applause—shall I say the independent tone of the galleries?—was for some time in favor of Mr. Adams. But as the minor candidates began to grow weaker, the hack politicians put on the show of enthusiasm which you have so forcibly described, and tossed their hats and shouted like boys of seventeen, and thus in a few minutes was established the complete triumph of personality.

What, then, is the lesson to be drawn? If a champion wrestler or billiard player were to be elected, we should not trust to the *à priori* predictions of journals or individuals, and then allow the incumbent to pass four years without any exercise of his profession. We should provide an arena where all comers could test their powers, and the one who could prove himself the best man would be a candidate against whom all caucuses and primary meetings would rage in vain. And while he held the office, he would be exposed to the assaults of all comers claiming to be better fitted for the post. Every man who can speak or vote in Congress is a representative of a locality, and all are equal. Like the Poles who brought the *liberum veto* to the armed assemblies of the plains, they will tolerate no superiority. There is no room for leadership. To get any business done, it must be cut up and distributed into secret committees, upon the reports of which majorities and minorities are marshalled, to the utter destruction of individuality and of the publicity upon which alone intelligent opinion can be based. And yet we wonder and lament that the business done is always for local and private interests! Mr. Sumner of Massachusetts and Mr. Trumbull of Illinois have precisely the same weight as Mr. Nye of Nevada and Mr. Kellogg of Louisiana. The chairman of a delegation at Cincinnati made a cheap but telling demonstration when he cast his vote for Horace Greeley "of the United States."

Meantime the elected of the whole nation is dumb. Who knows anything of General Grant or any of his Cabinet, except what other people say of them, with the drawback that anybody who speaks in their favor is presumed to be corrupt, and sensitive people are therefore shy of doing it? The most ordinary fair play demands that the Executive should be heard before the country in the only place where he properly can be, and where alone the personal enthusiasm which must be the ruling force can be created legitimately and with safety to the country. G. B.

BOSTON, May 20, 1872.

[We dissent from the above on several points. We especially dissent from the opinion that personal knowledge of, or enthusiasm for, a man, has had much to do with nominations for the Presidency in any case except Grant's for many a day. Who knew or cared much about Pierce, or Buchanan, or Lincoln? Lincoln was, out of Illinois, an utterly unknown man when he was nominated. Our private belief is that the charge of want of "magnetism" is now a favorite and powerful weapon in the hands of politicians for keeping the best class of men out of the field. Hardly any sober, self-respecting man, with brains and honesty, and with work to do, is "magnetic" in the sense in which politicians use the term, or is known in the way they insist that he must be known. The most "magnetic" man the country contains is Bill Tweed. He beats Uncle Horace completely as a man of the people. When he is among "the boys," he emits sparks at every touch, and "draws" them to him like a locomotive; is kind to the poor, and is the best known man in this nation. If Jimmy O'Brien had not spoiled his chances, he would be one of the most prominent men in the Baltimore Convention, and would be carried over the head of Thurman, Hendricks, Groesbeck, or other "fossils," by just the same arts as Greeley was carried over Adams's. "Who knows Groesbeck, with his white cravat, and his daily bath, and his icy paw?" "the boys" would say; "Give us glorious old Bill, that never turned a poor man away from his door, nor ever deserted a friend," etc.!—ED. NATION.]

BURKE AND THE KU-KLUX ACT.

TO THE EDITOR OF THE NATION:

SIR: I have just happened on a passage in Burke's Letter to the Sheriffs of Bristol, which, though written in 1777, is so peculiarly applicable to the present condition of affairs with us that I am induced to send it to you, in the hope that you will publish it; for though doubtless familiar to you and to many of your readers, it may be new to some:

> "I confess, gentlemen, that this appears to me as bad in the principle, and far worse in the consequences, than an universal suspension of the Habeas Corpus Act. . . . Far from softening the features of such a principle, and thereby removing any part of the popular odium or natural terrors attending it, I should be sorry that anything framed in contradiction to the spirit of our constitution did not instantly produce, in fact, the grossest of the evils with which it was pregnant in its nature. It is by lying dormant a long time, or being at first very rarely exercised, that arbitrary power steals upon a people. On the next unconstitutional act, all the fashionable world will be ready to say: Your prophecies are ridiculous, your fears are vain; you see how little of the misfortunes which you formerly foreboded is come to pass. Thus, by degrees, that artful softening of all arbitrary power, the alleged infrequency or narrow extent of its operation, will be received as a sort of aphorism; and Mr. Hume will not be singular in telling us that the felicity of mankind is no more disturbed by it than by earthquakes or thunder, or the other more unusual accidents of nature" (Burke's Works, vol. iii. pp. 146–50, 8vo edit.)

The above extract may also be found in a note to vol. viii. of Grote's "History of Greece," p. 291. Should any one be tempted to turn to Grote, let him read the account of the conduct of the restored Athenian democracy after the expulsion of the Thirty Tyrants. Then let him say which was the wiser, in his day and generation, on the subject of political amnesty, Senator Morton or Thrasybulus. Is it not a national misfortune that our Ku-klux legislation should have been beneficent in its immediate effect? And is it not the plain duty of enlightened patriotism to struggle against this tendency to sacrifice the future to the present?

S. L. PARRISH.

PHILADELPHIA, May 26, 1872.

Notes.

WYNKOOP & HALLENBECK publish next month "The Dangerous Classes of New York, and Twenty Years' Work Among Them," by Charles Loring Brace. This will be not merely a narrative of the author's wide experience in remedial charities, but a discussion of most of the problems which arise in dealing with juvenile depravity and misfortune.——"The Minnesingers of Germany," by A. E. Kroeger, and "The City of God and the Churchmakers," are announced by Hurd & Houghton.——Richard A. Proctor's "Essays on Astronomy" is published here by Scribner, Welford & Armstrong.——The New York branch of the Naturalists' Agency, Dodd & Mead, announce "The Birds of Florida," by C. J. Maynard, to be issued in twelve parts, at $1 each. The book will contain five plates, drawn and colored from nature by Helen S. Farley.——De Witt C. Lent & Co. have in press Lady Barker's "Station Life in New Zealand."——Part II. of Downing's "Encyclopædia of Fruits" is in preparation by John Wiley & Son.——Henri Regnault was, by a typographical error, last week spoken of as one of the directors of the porcelain manufactory at Sèvres. He was son of the Director.

—Prof. F. V. Hayden's "Report of Progress of the U. S. Geological Survey of Montana and Portions of Adjacent Territories" for 1871, has been issued from the Department of the Interior in the familiar and none too attractive guise of our public documents. It contains the two maps we have previously described, viz., of the Yellowstone National Park and of the Yellowstone Lake, with others showing the White Mountain Hot Springs on Gardiner's River, and the Upper and Lower Geyser Basin on Fire Hole River. The volume is also illustrated with rude but sufficiently graphic sketches of rock strata, a great variety of sulphur and mud springs, landscapes, etc., which stimulate one's curiosity quite as much as they gratify it. Prof. Hayden, in his letter to the Secretary which serves as a preface, gives a brief account of the route followed by the expedition, and also of the explorations of the Basin by other parties since 1869. More than half the Report is adapted for popular reading, and we especially commend those sections on tree-culture to be found on pp. 218–227 and 274–279. The Kansas experiments in planting without irrigation are very encouraging.

—Mr. N. B. Dennys, the present editor of the *China Mail* at Hongkong, and the projector and original editor of *Notes and Queries on China and Japan*, is about to revive this useful and highly creditable periodical under a new title. The *China Review; or, Notes and Queries on the Far East*, will appear, says the prospectus, at intervals of two months, each number to contain about sixty octavo pages, occasionally illustrated in the best manner. The papers which will give it character will have regard to the ethnology, folk-lore, geography, history, manners and customs, religion, etc., etc., of China, Japan, Mongolia, Thibet, the Eastern Archipelago, and other parts of the Far East. Some will be original, others selected; for example, from among the more valuable articles in the *Chinese Repository*. Original contributions will be admitted in Chinese, Latin, German, or any of the Romance languages. We must add that this enterprise is conditioned upon a satisfactory subscription-list ascertained in advance. The price is $6 50 gold per annum. Our relations with Asia have already become so intimate that Mr. Dennys and his publisher ought to rely on this country to furnish a certain portion of the needed support.

—At the meeting of the American Oriental Society held in Boston last week, one of the principal topics of interest was a set of alleged Phœnician inscriptions recently offered for sale by a Mr. Shapira, of Jerusalem. "Squeezes" and lithographic copies of these inscriptions, sent home by the agents of the Exploration Society, were exhibited, and were pronounced by Messrs. Ward and Van Name, on a variety of grounds, to be palpably spurious. The wonderful success of the genuine Moabitic Stone seems to have given a (commercially) healthy stimulus to the production of imitations. Dr. Ezra Abbot exposed an imposition of another kind in the absurdly wild and false statement and reasonings of Rev. J. W. Burgon as to the comparative antiquity of the Vatican and Sinaitic MSS., in its bearing on the authenticity of the closing verses of Mark's Gospel. A communication was read from Dr. W. M. Thomson, of Syria, describing traces of glacial action on the flank of Lebanon, hitherto sought in vain, as distinctly exhibited in a peculiar cleft or gorge not far from the sea-shore. Mr. Attwood had collected from Japanese visitors to this country some interesting notices of archæological remains in their country. Of other papers possessing less general interest, we merely mention one on the Pali literature from a Burmese point of view, by Dr. F. Mason; statistics of Sanskrit verbal forms in the Sâma-Veda, by Prof. Avery, of Iowa; and a chapter of Arabian anthropology, abridged from Dieterici by Rev. C. H. Brigham.

—A recent writer in a city contemporary has devoted some space to praising a new iron building which stands in Broadway, near Broome Street, and which does indeed deserve some praise, but perhaps even more blame. It deserves all the more blame because, while it beckons in the right direction and away from the grossest errors, it does so in a manner which will merely confirm in their mistake those of our builders who persist in treating iron as if it were not iron but something else. The new building is constructed in obedience to the common-sense maxim that it is money wasted and fitness sacrificed to make iron pillars into a poor resemblance to stone, and to repeat in castings the forms given by the hammer to a material as different from granite and marble as they are from wood. Not all of our builders see that to make this attempt is foolish, wasteful, and tasteless, though there is none perhaps who does not recognize the mistake of making wood simulate stone. The architect of the Broadway building is too clever a man not to see this, which is plain enough to laymen even, like ourselves. But when he had made his front and came to the business of using his opportunity to decorate it, he thoroughly undid the good which he had done by putting up a building in which iron is for once used as it should be, or something like as it should be. We do not say that we give anything like full approval to the forms here employed, but nothing could be more ugly and repulsive than the way in which he has managed his coloring. Throwing on heavy, ill-harmonized simple colors, he has succeeded at once in so disintegrating his structure to the eye, that no unity of effects remains, and in making his coat of paints look rather more substantial than the structure itself. Compare this deformity with the simple, unpretending, indeed the overchastely colored front of Messrs. Appleton's store a little higher up on the opposite side. The difference is that between an excellent thing fairly well done and capable of propagating good, and an excellent thing so badly done as to repel the untaught observer from seeking the excellence it so ill represents—vilifies, in fact.

—A correspondent, who writes us that it has recently been proposed to raise the tone of the State Legislatures by the election of members at large, suggests the following as a likely form for the constitutional amendment that would be rendered necessary:

> "Whenever electors, from any part of the State, amounting in number to —— thousands [the average number of a local constituency], shall have enrolled themselves at a Bureau thereto provided, as wishing to form an independent electoral organization, their names shall be stricken from the local registry, and the candidate selected by them shall be admitted to the Lower House."

The immediate effect of this provision, he continues, would be to throw a few active reformers from among the first names in each State into its legislature, and the opening, in so far, of a permanent political career to brains, dignity, and culture, too often closed by local party weaknesses or local jealousy. A development of the plan would lead to the election of a legislature by permanent organized constituencies, representing earnest opinion and entirely beyond the control of nominating conventions—*i. e.*, to "personal representation." Thus far our correspondent, who seems, however, to have overlooked some difficulties of a rather serious nature. For instance, he appears to contemplate an indefinite increase in the number of members at large, without any corresponding diminution in the fixed number of legislators provided by law. In practice, this might not be found inconvenient, though it would tend to produce inequality in the strength of local constituencies, and would confirm party control in those from which there was the greatest secession in favor of a representative at large. To illustrate our meaning: Suppose, in this State, as gerrymandered by our "Reform Legislature," the Democrats of two or more districts in which they are barely outvoted, but in which they are debarred all chance of electing a representative, should withdraw and unite upon a candidate at large. The Republican managers would not only elect their candidates as usual, but, having no longer any opposition, would lack even the small motive which they now have for making a respectable choice.

—We are still of opinion that, in this matter of representation, it is best to aim at the freedom of all rather than of a part of the electors; and while it is true, as our correspondent says, that "the methods of Hare and Mill for securing the ideal representative body are so complicated that a community whose average intelligence could understand them would be raised above the evils we are fighting," it does not follow that some modification of these methods securing all, or nearly all, of their advantages cannot be found or ought not to be striven after. We have from time to time called attention to more or less ingenious simplifications of the Hare system, and can now report still another: Mr. Archibald E. Dobbs's "General Representation on a Complete Readjustment and Modification of Mr. Hare's Plan" (second edition—London: Longmans). This pamphlet (like Mr. Hare's own work) has been written with strict reference to elections for the British Parliament, and therefore has less immediate interest for American students of the question. However, it is worth examining if only to see what a formidable amount of red tape is considered necessary to invest the act of voting with proper solemnity and safeguards. There are also some useful speculations on the good that might be derived from the book of electoral statistics which his system of counting involves. His plan, stripped of all but the essentials, may be stated in a few words. Each voter writes the name of but one candidate on his ballot. Those candidates who receive more than the quota (ascertained in Mr. Hare's way, by dividing the number of voters by the number of candidates to be chosen) distribute their surplus votes at pleasure among the candidates who have failed to receive the quota. This is a very simple and a tolerably safe improvement, and may well be kept in mind by those who are working at this problem.

—And, on the whole, it seems to us that we are not far off from the finality. Mr. Walter Baily, whose plan we lately noticed, has very nearly closed the door upon discussion of details. We do not agree with his notions in regard to the proper quota, but the system of the Registered Ballot, with his method of counting the votes, is about as complete and efficient as anybody could wish. It simply provides that representatives shall be distributed among parties according to their size *pro rata*. At the same time, it provides every facility for the formation of new and temporary political alliances, and offers the greatest possible publicity in the casting and counting of the votes. The problem of scratched and mixed tickets, which for a time seemed to present insuperable difficulties, has found satisfactory solutions, identical in principle, at the hands of the Geneva Reformers, and of Mr. Fisher of Philadelphia, and again, within a few weeks, of Mr. Horton of Cincinnati. After all the discussion the subject has received, a solution seems to have been at last reached which combines all the practical advantages with none of the practical disadvantages of the various methods that have for fifteen years been under discussion, and one upon which the best thinkers and writers are substantially agreed. It is not the least of the good that the overthrow of the Rings has done, that it has taken the name of reform out of the doubtful associations that were getting to be attached to it, and given it a respectable standing among practical men. Every good work must prosper accordingly. In regard to Electoral Reform, with which Proportional Representation is identical, one can hardly doubt that if the friends of free voting would prepare and set before the country a clear and brief statement, with sufficient illustrations of the system of the Registered Ballot, as it has now been perfected, it would commend itself, without discussion, to nine men out of ten, of whatever political complexion.

—The last number of the *Historische Zeitschrift* contains a valuable article by Rudolph Usinger, upon the German territory (Staatsgebiet) in the early Middle Age, in which he discusses the relation of the several duchies to the royal power. The Duke of Bavaria, he shows, was as a king over his duchy. Every count and margrave was amenable to him; even the bishops and Pfalzgraf, although appointed by the king, were distinctly subordinate to the duke and were required to appear at his court. It is a significant fact that the duke himself held no counties (Grafschaft) under his immediate jurisdiction, having the supreme jurisdiction over all. Swabia was much less completely centralized. The counts here held of the king rather than the duke, and the duke held many counties in his own hands. He was therefore not as a king, but the representative of the king, exercising an administrative rather than a sovereign power. The northern duchies differed from both. Saxony was as distinct a nationality as either Bavaria or Swabia, but not as distinct a government. Its most powerful family, the Ludolfings, obtained the royal crown in the person of Henry the Fowler, and his patrimony became and remained royal domain—the chief foundation of the royal power. In this part of Germany the "Grafschaft" rested on the genuine feudal principle of the assimilation of the office and the property in land, as contrasted with the merely administrative powers of the count in the South. The title of duke was here held by one of several co-ordinate princes, who in virtue of this was merely "primus inter pares," holding the leading place in the duchy, without being its ruler like the dukes of Swabia and Bavaria. The same was the case in a certain sense in Franconia and Lotharingia. These were not *nationalities* like the other duchies, but simply portions of the old Frankish Austrasia. Franconia was that which had lain between the subject Swabians on the South and the free Saxons on the North—that is, essentially the *Frank*-land of Germany. In the eastern portion of this territory the bishops of Würzburg obtained the entire political jurisdiction (Grafschaft) as well as ecclesiastical; on the Rhine, the powerful family of the Salians, with their heirs the Hohenstaufens, had what was equivalent to ducal power, without, however, the title, at least as an established rank. Their immense possessions continued private property and became the foundation of the Rhenish palatinate. The dukes of Upper and Lower Lotharingia, although their rank was more distinctly recognized than those of Franconia, had even less power and prestige than those of Saxony, and soon sank to an equality with a mass of other princes. The three inferior duchies of Carinthia, Thuringia, and Frisia hardly need to be mentioned at length.

—While Sir Samuel Baker on the Upper Nile is proving anew Mr. Hosea Biglow's apothegm that

"Civlyzation *doos* git forrid
Sometimes upon a powder-cart,"

the love of riches at the southern extremity of Africa is also doing something for the same cause. The newly-discovered diamond diggings are said to have already a population of over 50,000, and the value of the diamonds shipped thence to Europe during the last twelve months is about 1,500,000 pounds sterling. Besides this, it is estimated that the finders hold diamonds to the value of another million and a half sterling. The British Government has devoted the territory which embraces the diggings, West Griqualand, into three districts, Pniel, Klipdrift, and Griquatown, and put the whole under the control of Sir Henry Barkly, Governor of the Cape of Good Hope. The immediate government of the territory is in the hands of three commissioners, appointed by Sir Henry. A "High Court" has been established at Klipdrift, which continues to be the principal business place. The number of letters, according to the official report, that passed through the post-office of the latter town during the last ten months amounted to 170,000; and there has been only one mail a week. There are several papers at the diggings—the *Diamond Fields*, *Diamond News*, and *Diggers' Gazette* being the principal. There are hotels enough to afford ample accommodation to all new-comers, and churches and hospitals also have been erected in numbers sufficient to supply present need. The banking of the country is done by branches of the Standard Bank of South Africa and the Bank of the Cape of Good Hope. The climate, even in the "dry diggings" in Du Toitspan, is represented as healthy, although in the latter place there is generally a scarcity of water and no special sanitary provisions have been made by the authorities, while the quantity of chalk-dust which the miners are compelled night and day to inhale, would seem likely to produce injurious effects. Living is, on the whole, cheap, but vegetables command fancy prices.

DEAN STANLEY.[*]

II.

Whether the Dean or any one else will ever gain much reception throughout Scotland for the doctrine that dogmas are or may be altogether unimportant, we greatly doubt, for, as far as we have remarked, your Scotch liberal is as great a dogmatist as your Scotch Free Church minister. The one, it is true, denies what the other affirms, but each entertains an unshaken, splendid confidence in the importance of his own doctrine, and seems absolutely incapable of either genuine scepticism or that easy-going indifference to dogma which, right or wrong, is the characteristic of a large number of Englishmen. No one, in fact, we will venture to say, ever met a Scotchman who did not, at the bottom of his heart, think the Disruption, either for good or bad, the most important crisis in the world's history.

Dr. Stanley, however, knows the strength of the position which he attacks, and begins his works a long way off:

> "In the oldest and most venerable of all ecclesiastical divisions, the ancient Samaritan community, who have for centuries, without increase or diminution, gathered round Mount Gerizim as the only place where men ought to worship, there is to be read upon the aged parchment scroll of the Pentateuch this commandment added to the other ten: 'Thou shalt build an altar on Mount Gerizim, and there only shalt thou worship.' Faithfully have they followed that command; excommunicating and excommunicated by all other religious societies, they cling to that eleventh commandment, as equal if not superior to all the rest. This is the true likeness of what all churches and sects, unless purified by a higher spirit, are tempted to add."

These sentences foreshadow the lecturer's main line of assault. Dogmas about predestination, dogmas about justification, dogmas of Episcopalians, dogmas of Presbyterians, are all tacitly assumed to be, at the very best, eleventh commandments, and each party and church are led by the lecturer to feel that this is true, by being shown the pettiness of the doctrines held by their opponents. All the audience, for example, no doubt felt the smallness of the great Samaritan article of faith. Most of the audience, again, were fully prepared to admit the pettiness of the controversies which have divided the Scotch Episcopal body; but once go as far as this, and it is not easy to avoid the reflection which the following sentences suggest: "What Burghers and Anti-Burghers, Relief and Secession, Old and New Lights, were to the followers of John Knox, that the long disputes of Collegers and Usagers, of Old Episcopalians and New Episcopalians, of the Scottish and English Communion Offices, often were to the followers of Laud and Sharpe." If the feuds of the Episcopal Church are, in other words, of no importance, can any Presbyterian feel sure that his own favorite watchwords and shibboleths are of any great permanent value? Once adopt this line of thought, or rather of feeling, and you are almost driven to advance a greater distance in the same course. If men like Knox and men like Laud, and all the descendants of Knox and Laud, have wasted soul and spirit over vain controversies, what sensible man can feel assured that the dogmas of any sect or church whatever can claim the character of eternal truths? When once this feeling is insinuated into a student's mind—and it is not, we think, unfair to assert that to propagate this view of dogma is one main object of the "Lectures on the Church of Scotland"—the learner is prepared to feel the full force of another though kindred reflection which Dean Stanley constantly presses on the attention of his hearers. "Behind the mountains," to quote a proverb of which he is fond, "there are yet people." In the lands, in other words, which you do not know there are controversies and controversialists as fierce and as zealous as in England or Scotland. Realize this fact, and you will see how small are the questions on which you think the fate of the universe turns. This statement is never made in direct terms by the Dean, but no intelligent reader can peruse the lectures without having constantly before his mind that the controversies of the Scotch Church are the petty controversies of an insignificant ecclesiastical body, and that the dogmas for which churches of any kind have struggled have been invariably of little interest to the great majority of the human race. This sentiment may or may not be of importance as an argument addressed to the understanding, but it indubitably exercises immense force upon the feelings, and is a most powerful solvent of all conviction in the truth of theological dogmas. If it has a defect, this defect is that the sentiment once introduced into the mind is apt to have a greater effect than Dean Stanley means it to produce, for it loosens belief in doctrines which the Dean would himself hardly consider the dogmas of special sects.

Add to these reflections yet two other points to which our space allows us only to allude, but which the lecturer brings out with extraordinary clearness. The first is that the controversies of the Church of Scotland have always shown, whatever their intrinsic importance, a singularly petty side as regarded the immediate question at issue. No doubt, for example, there were important, if not vital, interests at stake when in 1637 the English liturgy was rejected by the whole Scottish people; but a great national and ecclesiastical contest sinks to a somewhat small affair when the point in dispute is narrowed down to the propriety of reading out a singularly beautiful collect, or of terminating a prayer with a sonorous amen. The second is that Scotch theology may be represented as merely the ecclesiastical side of Scotch civil history, and it is therefore for an educated man hardly possible to believe that dogmas which originated in the peculiar circumstances of an exceptional national history, can be doctrines of universal validity and application.

It is further hardly possible not to reflect that if the theology of Scotland is really of local growth and the fruit of special national characteristics, there is no theological system throughout the world of which the same thing is not true in a greater or less degree. No one can doubt that before the lectures were ended hundreds of the Dean's hearers had begun to entertain thoughts of a character unfavorable, if not absolutely opposed, to any fervent belief in dogmatic theology. In other words, the speaker had, as a rhetorician, achieved an immense triumph, and prepared his audience to consider, if not to admit, the two great doctrines of which he was the defender, and further to hear with patience two conclusions which, if put forward at the beginning of his address, might have appeared hopeless paradoxes. The first is that the Westminster Confession partakes "of the latitude and largeness of a compromise," and stands alone "amongst Protestant confessions for the acknowledgment, far in advance of its age, of its own fallibility." The second conclusion is like unto it, and is, we confess, to us still so paradoxical that we must as far as possible express it in the lecturer's own words: "As of the Church of England, so of the Church of Scotland, the glory is . . . . to carry, like the Prophet Amphiaraus, a blank shield with no device of sects or party. . . . The Established Church . . . . . bears no other device but the thistle of the Scottish nation and the historic recollections of the burning bush of the Scottish Church. Whatever Scottish Christianity is prepared to become, that the Church of Scotland is prepared to be. It treats Presbyterianism, Episcopacy, Patronage, Non-intrusion, as in themselves mere accidents." The Church of Scotland, that is to say, may under proper management be made the stronghold of liberals who disbelieve every article which the church avows to be true, and who must necessarily look upon doctrines for which John Knox and his followers would have died as what we may term interesting, though obsolete, historic curiosities. On the other hand, the Scottish Church will, if we understand the Dean rightly, whilst preserving the Westminster Confession as an "historical document" which has ceased to express the mind of the modern church, yet keep all the essential features of the old national establishment. "Its romance, its independence, its fervor, its prudence—must we not add, its exquisite and unrivalled humor?—these are the heirlooms of the

---

[*] "Lectures on the History of the Church of Scotland, delivered in Edinburgh, in 1872, by Arthur Penrhyn Stanley, D.D., Dean of Westminster, Corresponding Member of the Institute of France." London: John Murray; New York: Scribner, Armstrong & Co. 1872.

Church of Scotland which it has never lost, and which, whatever be the change of its internal form, it need never lose."

When a speaker ventures to propose that an established church should be kept on foot for the preservation of that very painful Scotch characteristic known as "Scotch humor," critics may venture to suppose that the orator in intoxicating his audience has lost his own head. The sentences we have just quoted, though they show the Dean of Westminster's unrivalled power of bringing round his audience to his own point of view, suggest that he is sometimes run away with by his own rhetoric. In truth, these lectures exhibit in the strongest light at once his strength and his weaknesses as a rhetorician. His habit, in the first place, of treating history from a didactic or rhetorical point of view, inevitably leads to the distortion of historical facts. Our own knowledge is not wide enough to enable us to say how far in particular cases he has gone astray; but we confess to a suspicion that he has pretty often, though most unintentionally, misrepresented the character of the individuals and parties to whom he refers. It is, for instance, extremely doubtful whether Leighton can in any sense be considered as belonging in spirit to the party who at a later time were called Moderates. We have, again, a constant feeling that Rutherford's whole character is never really put before the reader. "With Samuel Rutherford, the bitter and bigoted controversialist, let us have no fellowship. To Samuel Rutherford, the writer of those glowing letters, let the full sympathies of our souls be given." This sentiment, quoted from another writer by Dr. Stanley, sums up apparently the Dean's estimate of Rutherford. A more unsatisfactory one can hardly be given, for the simple reason that you cannot divide a man into two parts. In nine cases out of ten, that which you admire has a close connection with that which you dislike. If you are really to enter into Rutherford's letters you must also take into account Rutherford's controversies. Take, again, the whole position of the Moderates. We are fully inclined to believe that they do not now receive the credit due to them; but to estimate their virtues you should have some fair account of their defects, whereas Dean Stanley never attempts anything like a complete account of the position of the men he so warmly eulogizes. His works are, both from an historical and controversial point of view, injured by another characteristic besides the didactic spirit in which he writes. He exhibits both in narrative and in criticism a singular want of fine discrimination, and thus often fails to point out most important distinctions. Take the following passage, which we are glad to quote as a good specimen of the anecdotes and remarks with which his lectures abound:

> "It is recorded that a poor half-witted lad in Forfarshire clamored incessantly to be allowed, as he expressed it, to partake of his Father's bread in the sacramental elements. At last the minister conceded the point. He partook, and the same night, on returning from the sacrament, he kept repeating in a rapture of reverence, 'I have seen the Pretty Man!' The next morning he was found dead in his bed."

Now, the object for which this tale is told is to show the identity of feeling which may be discovered in Presbyterian and in Roman Catholic Churches, and no doubt there is a superficial resemblance between the sentiment which this tale embodies and the feeling "which has given birth to the miracle of Bolsena and the excesses of transubstantiation," but a subtler critic would have seen that the points of dissimilarity are, though less obvious, of much more importance than the points of likeness. In the Presbyterian story you have represented all those feelings of awe and horror to which Presbyterianism has given birth. Now these are certainly not the sentiments which are inspired by the extreme form of sacramentarian doctrine or sentiment. The feeling of the Scotch narrator was obviously the terrible responsibility incurred by those who come to the communion. Take the lowest and most superstitious form of Roman Catholicism, and you will find the subject of terror is not so much taking the sacrament unworthily as dying without it. You have the whole contrast between a religion which attributes everything to the state of the individual's soul, and the religion which attributes everything to the mysterious effect of external rites.

The desire to draw a moral, combined with a want of subtlety, lead Dean Stanley into what are in reality little better than rhetorical tricks. It is, for instance, his constant habit to diminish the importance of a principle by bringing into view the smallness of the occasion on which a contest for the principle took place. It is, to be sure, as we have already pointed out, curious to note that all Scotland rose in arms on the question whether a collect, in the sentiments of which every Christian would agree, should or should not be read out by the minister. But when one has noted this fact, one has done nothing to prove that the question at issue between Charles I. and the Scotch nation was a trifle, any more than it can be proved that Hampden risked everything for a mere bagatelle, by showing that he could have paid ship-money twenty times over without any effect upon his income. Exactly the same tendency which leads the lecturer to dwell on the trifling circumstances attending the outbreak of the contest with the Stuarts makes him treat the Disruption as depending upon mere legal subtleties, and remark that "there is no other country in the world where the consciences of so many able and excellent men would have been so deeply wounded by the intricacies of a legal suit, of which the point at issue can only be ascertained by a searching investigation of conflicting statements." This remark seems at first sight to reduce the controversy between the Free Church and the Established Church to nothing, but in reality it amounts to little more than an oratorical and, we venture to say, somewhat childish quibble. No doubt the law case referred to is, like most law cases, rather hard reading for a layman, but, in reality, neither Dean Stanley nor Dean Stanley's audience, neither the ministers who stayed in the church nor the ministers who went out of it, could have any real difficulty in understanding the main principles at stake. To argue that no man could know what they were fighting for who is not well versed in legal technicalities, is like arguing that no plaintiff can understand why he has come into court unless he can follow the pleadings in which his cause is stated.

We come here, in fact, across the dean's fundamental defect. He is an excellent rhetorician and an excellent man, but he never really argues. He always addresses the sentiments, and never addresses the understanding. Let it be admitted that the sentiments to which he appeals are in the main good, honest, praiseworthy feelings, still it remains true that he encourages the sentimentalism of the day. On all topics, and especially on religious topics, men are more and more falling into the habit of appealing to the heart rather than to the understanding. Such appeals are, in the hands of men like Dr. Stanley, eminently effective. They produce their result; they persuade multitudes and change opinions; but such rhetorical appeals, however effective, tend gradually to undermine the belief that, in theology as in science, the great question is not, What is pleasant? what is genial? what appeals to our sentiments? but, What is true? Rutherford's saying, "In God's matters there is not, as in grammar, the positive and comparative degrees; there are not a true, a more true, and a most true; truth is an indivisible line that hath no latitude," is no doubt narrow enough; but men educated in such doctrine are, after all, not likely to forget the importance of truth; and the great struggles of the future, like the great struggles of the past, will ultimately be decided by an appeal to truth, and not by an appeal to rhetoric; and we confess that when any struggle takes place between truth and error, either in Scotland or elsewhere, we doubt whether it will be carried to a successful issue by the disciples of even the best and ablest rhetoricians.

MODERN SCULPTURE.*

It is said that when Viardot, the well-known art critic, was asked his opinion of English sculpture, he replied, "Il n'existe pas," and he might have added that the same could be said of most modern so-called schools of sculpture. In point of fact, the modern habits of art-study, of life, and of art-feeling are in every way unfavorable to sculpture. The world is too old, mankind is too sophisticated, its culture is too complicated, and its social organization too artificial, to allow those instincts of beauty and that intuitive sense of proportion and the fineness of the musical (as the Greeks used the word, implying all harmonic relations) relations of form to develop themselves with veritable intellectual motives. That curious law of physical development, that the fully developed animals of a previous epoch resemble in their specific character the fœtus of the corresponding existing species, has an analytical verity in the life of the human race, and the Greek epoch was unmistakably that of the youth of mankind—that adolescence in which life is perfect and asks nothing of the future; when the impressibility to the outer world, and that supreme content with what one does, which only youth knows, are at their maximum; in which emotion and not thought controls the being, and before (in healthful and active natures) the violent passions and disquieting ambitions have begun to disturb that tranquillity and love of repose in outer things which are the unfailing characteristics of all exalted art, be it visible or audible. Such is, so far as we can gather it, the character of the Greeks of the great time, of all great childhood, and especially of Greek art, and these characteristics are also those of all the good sculpture which the world has ever seen. The introduction of color into art demanded a maturer sensuous development than the Greeks could have had, if we may judge from their literature, history, or art; and, in spite of all which has been written to prove analogically the perfection of Greek painting or color, there exists no evidence, literal or pictorial, that color as we now know it was even conceived of by them. The crude way in which color was applied to their architecture, the remains of their painting, and the character of their music, as well as we can gather this from what data we have, and even the perfection of their sculpture (for no people has ever perfectly developed two motives of art simultaneously) indicate that nothing more than the simplest elements of music or color were understood by them, but these were naturally marked by the subtlety and other general characteristics of the national temperament.

---

* "The Sculpture Gallery: A Series of Eighty-one Engravings. Accompanied with Descriptive Prose and Illustrative Poetry, by James Dafforne, Esq., T. K. Hervey, Esq., etc.; preceded by an Historical and Critical Essay on Sculpture, Ancient and Modern." London and New York: Virtue & Co.

Speculation on hidden causes for the unapproached excellence of the Greeks in sculpture is futile and unnecessary. The one principle of study and development which we can deduce from a comparison of early Greek work will put at rest all theories based on unknown elements: they worked from impression, and the growth of sculpture was the result of *centuries* of slow clearing of their ideals from the imperfections of the traditional standard—growing, like the great Italian school, from Archaic to the Grand style, then the Beautiful, and after all and the degradation of all, the Imitative (Winckelmann). The ideal and not the natural was always the standard, and nothing is more clear in the whole range of Greek art, architecture as well as sculpture, than that no course of study like the modern ever entered into the Greek system. From the Archaic up to the Grand style, there is no hint of imitation, only a gradual perfecting of the revered ideals by fuller knowledge of details, with utter absence of the influence of the model and freedom from confusion as to proportions. We talk of canons and measurements of Greek art, but there are no two ideals in which they agree, and even the Doric temples have distinct rules of proportion, each unlike all the others. This diverse perfection is unapproachable, even unsuggestable by any system of imitative study, and the secret of the whole is in the perfection of the sense of beauty (for want of a better expression) to which the Greek artists attained by the system of working subjectively and seeing objectively, embodying conceptions always growing clearer and more harmonious, until, the perfection of the style being reached, and imitation setting in because the *ne plus ultra* had been reached, the unused powers of vision perished.

And from that day to this, imitation has ruled sculpture—imitation of the antique first and of the model finally—until in all the schools of Europe there is nothing but a corrupt and wooden ideal, in which by no chance does the unconsciousness and creative character of Greek art ever appear, but in its place a dreary, profitless *pose plastique*, in which the defects of vulgar models are only hidden, when hidden, by a destruction of all reality, and when reality is attained, it is, *per contra*, at the expense of all ideality. We believe that the practical and technical root of the Greek perfection was in their never working from models. A study of most of the known antique portraits induces us even to believe that in portraiture of the best period it was not the physical presence which served as model to the sculptor, but the mental image. Portraiture, physically speaking, was the creature of the imitative epoch.

The book under notice is one of the best illustrations which could be desired of the real frivolity of modern sculpture, its weak and far-away imitation of the great school. Amongst the national schools which contribute the eighty-one illustrations are, the English (56), German (8), Italian (8), Belgian (3), American (1), etc. With the exception of three or four, the English works are almost beneath criticism, the only man in the school who is more than a servile imitator not being represented, and Flaxman and Gibson, whose best work was only something which an unlearned critic might have taken for late Greek work, are the only artists represented who have even a shadowy individuality. Some of the Continental works have, if not intelligent and individual aims, at least technical power and academic knowledge, but beyond this no modern sculpture ever goes, and the only work done today which is worth the doing is the portraiture of Rauch and two or three others in Germany, that of Woolner in England, and that of three or four of our own sculptors. The French school has greater knowledge, and in two or three cases has shown great sculpturesque power, but with motives either trivial or fantastic, and utterly deficient in repose; and, in general, one may say that (besides portraits) there is no modern sculpture which will have a name in the future, and that, in fact, great sculpture is to us impossible. And of the best, even of the time, this book has left out almost everything. People who have been weak or wicked enough to like the *Art Journal* will be pleased, or the reverse, to find the ghosts of their sins against taste resuscitated in this re-collection of engravings of sculpture originally published in that periodical, and ought to be punished by being compelled to read the doggerel and wishy-washy (white-washy) eulogy by Messrs. Dafforne, Hervey, etc., with which the engravings are set off.

To save the book from utter reprobation, an essay on sculpture historically considered is prefixed to the work. This essay is exhaustive, and, so far as historical matter is concerned, exceedingly instructive—a résumé, in fact, of all that history records, with something too much of what history does not substantiate and of what is pure conjecture at first or second hand; for example, the numerous identifications of ancient works of art by means of commentaries by Pliny and other ancient writers. Pliny may have a value as a geographer, but his comments on art are worth about as much as those of an average member of the Royal Geographical Society, or a prosperous New York merchant who knows that a Meissonnier costs $4,000 gold, and never heard of Delacroix or Millet. Mingled with these classical old woman's stories are some of those data from Scripture which, whatever may be their theological value, are not things to quote seriously as evidences on the development of the fine arts, with all the hypothetical latitude and longitude assigned by the school of critics who may still be disputing which of the Ararats the ark descended on. When our essayist says: "And as Chaldea was the first region of the earth which was peopled after the flood, . . . the probability seems, for all the reasons we have given, very strong that that people derived their knowledge of the rudiments of sculpture from their antediluvian progenitors and transmitted the art to their Egyptian neighbors." Again, in that peculiarly assuming style of argument more known to the schools of dogmatic theology than to those of severer literature: "It is impossible to conceive (even were there none of what may be called secondary evidence to the contrary) that man should have lived between sixteen and seventeen hundred years from the Mosaic era of creation to the flood of Noah without inventing some method for the perpetuation or transmission of his thoughts," etc. It is satisfactory to find that when the author gets to historical epochs he is minute and comprehensive in collation of the data for history, though in crediting the tale of the origin of sculpture in the outline of her lover's profile traced by the Sicyonian potter's daughter on the wall, he would seem to dispense with much history and much common sense.

One mistake which the essayist makes in common with many other writers on art is that in which he ascribes the origin of Greek art to Egypt. Though the early Greek historians, their imagination filled with the fables of the Nile, were too glad to acknowledge the supposed mother of civilization as their schoolmistress, the evidence of the early works of Grecian art proves clearly enough that there was no sense in common as there is no common motive in the work of the two nations, but that they are independent developments. The early work of Greece, unmistakably Pelasgic in character, is done without the knowledge of cutting-tools, by concussion and attrition, while that of Egypt from its early stages shows complete possession of the art of stone-cutting. If these sculptors came from Egypt into Greece they would have brought the implements and knowledge of their craft with them, which it is clear they did not do.

The essay dwells longer comparatively on the Italian schools of sculpture than they merit. What there was of ideal work in the thirteenth, fourteenth, and fifteenth centuries was a nervous and sometimes intensely imaginative emulation of Greek art, without its intellectual or moral characteristics or more than the suggestion of its perfection, without any indication even of the supreme control which it had of the artistic intellect of the time. The ideal of the epoch was utterly different, and though the discovery of the Greek statues excited enthusiasm and imitation, it was a flash only, and the genuine Italian sculpture is of a character imaginatively higher, it may be, but technically of no comparative value—deeper as symbolism, but many stages lower as art. And what authority there may be for a comparison between the Jupiter at Elis and Michael Angelo's Moses we cannot say, or whether it be true that, "as a work of mere power, the former will admit of no comparison with the latter." We must, however, question the comparative judgments of the writer when we read, in his discussion of the English school to which he finally descends, the following flattering tribute: "Sculptors have arisen amongst ourselves and in our own day second only to the very greatest masters of the art in all time, and works have been produced, in its various kinds, which we dare almost place beside their best in the same." We fear that the school of which the essayist can inscribe such eulogium must exist only in his fancy. To commonplace critics and those who see with cold and impartial eyes, there is no school worth stopping to criticise. The tamest, most inane, and utterly profitless work of modern times is assuredly English sculpture. To discuss it is wasted ink. One can only repeat with Viardot, "Il n'existe pas"; and those who look over this magnificent book (as far as book-making goes) will certainly wonder why a school of so much attributed promise should not have contributed to its pages a tolerable example of art.

THE MAGAZINES FOR JUNE.

THE most readable article that we find in this number of the *Atlantic* is Mr. Parton's "Jefferson," which is very readable. Among other good things that it contains are some remarks about the troublesome subject of criticism, which we commend to the attention of two or three other *Atlantic* contributors as being sensible. What Mr. Parton says is not of great consequence, but it is free from a curious childishness which may be noted in many American authors, and which consists in believing firmly and sincerely that any one who tells them that they are poor workmen, or poorer workmen than their friends have been accustomed to think them, must be either a personal enemy or a professional rival, or perhaps both. We think that in time past this view has been to a great extent a true one; most of our criticism has been extravagant, good-natured praise, honest and dishonest, or else abuse more or less ignorant, malicious, and personal. But the day of both these kinds of criticism we take to be done, or nearly done, and we believe those persons who think otherwise to be living in their recollections rather than with their eyes open to what is about them. Still, it must be admitted that for critics as well as for the rest of mankind adverse criticism is sanitary, and if we may advise, we exhort writers to whom we have referred to make it as hot as they can for all their adversaries, villanous and otherwise.

Another good article besides Mr. Parton's is that upon our collection of Dutch and Flemish paintings in Fifth Avenue. We have nowhere seen in print any comment upon these pictures which we have thought so good when confronted with the pictures themselves. To write vividly and pictorially about such things is far easier than to write with truthful exactness, and we think we are safe in recommending our readers who intend a visit to the gallery to take as a companion this *Atlantic* essay in preference to any other which they may have seen. We have not found ourselves agreeing with it in all its statements, but it is evidently the work of a person who has fitted himself by study to give an opinion having authority. We should say, for example, that the spectator will be even more pleased than this writer expresses himself with the two landscapes by Huysmann, which alone would clear the collection of a charge which perhaps might be brought against it of being on the whole rather oppressive than otherwise, and having interest for the artist as artisan and student rather than as artist and lover of beauty. But the "lift" which in these two pictures is given by the "Italianating" of the Dutch artist is very noticeable and very pleasing. His native fidelity he appears to have retained in its fulness; but there is an elevation and largeness in his pictures which the other men mainly lack, and he appears to have learned it in Italy. In the other pages of the *Atlantic*, besides the usual excellent criticism, the Hawthorne and so forth, there are several pieces of poetry of nearly equal excellence, Mrs. Thaxter's being perhaps the best, and that by "A. W." to our mind not so good as the others. It surely is not a peculiarly poetic impulse that leads "A. W." to tell us that Queen Guinevere began her tricks when she was "a little wench"—was a little hussey, in fact, and false to Arthur while the two were children. We must mention also the story by Mr. Harney, and Mr. Wilson Flagg's essay entitled "Simples and Simplers." Mr. Harney's story has a pleasant fresh flavor and will please story-readers who like to be pleased. Mr. Flagg's essay treats sketchily of the kind of medicine known to New Englanders as "yarb" medicine. We should call it but a doubtful assertion which Mr. Flagg makes when he speaks of the popular belief in plantain leaves as if it were confined to their efficacy in curing the bites of snakes, and assigns as the foundation for this notion the fact that the seeds of the plantain are "borne on the extremity of a long stem so as to resemble the rattles of a rattlesnake." The curious doctrine of "signatures" we take to be not responsible, or not thus responsible, for the favor in which the plantain is held. At any rate, we have known it to be in esteem among old women who never had heard of the rattlesnake, and who used the plantain leaves for wounds of various kinds and for the pustules produced by vegetable poisons.

The *Galaxy's* public will be well pleased with their June magazine, which is of the familiar sort and of very good quality. The closing chapters of a really fine love-story by Turgenef; an account of Sir Charles Dilke by Mr. Justin McCarthy, who throws in some London gossip; a history, very rosy, of Wyoming's experience with her jurywomen and female voters; an essay on "Swells" in American society, and another on the study of modern languages in American colleges; novels and novelettes and poetry by novelists and ladies; a description of the English at home, as seen by an American; sensible talk from "Philip Quilibet"—all these fill up the hundred and forty pages with matter which may very well satisfy the subscriber. "The English at Home" has, we suppose, a little of the exaggeration which will get into such essays. This, for instance, with all the easy inferences from it, we suppose no Briton is bound to believe: "'Get up, you nasty brute, out of that beastly walk, or I'll knock your bloody head off,' is a common form of speech." Nothing was more common, M. Jules Janin wrote to the editor who employed him as London correspondent, than to be startled as you walked along the streets of that dreary metropolis by seeing a man thrust his head out of an upper window, expose a face filled with depression and anger, say "Goddam!" then, instantly, by a swift stroke of a razor cut his throat from ear to ear and fall back dead, while his dying imprecation still rang in the ears of the spectators. In fact, it was inaccurate to call this a startling thing; it startled not the islander, only the French onlooker. Thus the habitual gloom of the Londoner and his proclivity to profanity and suicide were portrayed by this faithful observer of national peculiarities. The truth is that there is no work more difficult to do well than such observation and record. A very little of it everybody can do, and do very badly; a good deal of it a few can do, though everybody attempts it; but to do it in perfection must be the result of gifts extremely rare and fortunate opportunities. Mr. Rhodes appears to be among the few, though readers of Mr. Emerson's "English Traits" will perhaps not need him, and seems to us to talk intelligently.

In the discussion of the question about modern languages the conclusion is reached that French and German should be taught to the children in preparatory schools, the learning of Greek and Latin being put off till somewhat later. The author argues with fairness and cogency, and appears to have given the matter much practical thought. "Philip Quilibet," in "Driftwood," admonishes various journals, and this journal among the rest, to be on their guard during the next few months against personalities in politics and want of candor in the treatment of antagonists. No such sermons ever get into our pew; but we feel compelled to call the careful attention of our neighbors to the preacher's remarks. We already see signs of an extravagantly bitter contest during the coming summer, and there are certain contingencies, easy to imagine, in which it may come to be one of the most uncandid and vituperative ever known in our politics. We see that one of our most dignified journals has begun, even at this early day, to enquire if the people think that a person is fit to be President who on one occasion abetted the petty larceny of a gentleman's private letters. Another journal, whose editorial page is equally dignified, implies that a certain candidate, in order that he may convey the impression of his personal guilelessness and honesty, carefully disorders his apparel when he makes an appearance in public. Another, we see, is putting the word "Honest" into quotation marks whenever it has occasion to use that term in connection with a certain other term, and what that means everybody knows. It is much to be hoped that the summer will not be a hot one.

In *Old and New* there are three good sonnets, one of the three being more than commonly good. It is by "T. G. A.," and is upon the well-worn subject of Pompeii:

> ". . . . . . To left and right
> Gay colonnades and courts—beyond, the glee,
> Heartless, of that forgetful pagan sea.
> . . . .
> . . . .
> . . . . The wreath
> Indolent hags on far Vesuvius' crest."

"Living in Germany" is for the information of persons who meditate a sojourn abroad and wish to know about the cost of living. "The Brahmo Somaj" we have found instructive as giving an account of Mr. Chunder Sen's sect. The editor, in that part of the magazine called "The Old and the New," discusses the *Alabama* question and the Treaty, and does it in a tone which has always been injurious to the best interests of both nations. It seems to us to be time for some of us to consider whether we do a dignified thing and one worthy of a nation of forty millions of people, which is soon to be, if indeed not now, the most powerful on the face of the earth, when we condescend to complain of any other power because it "refused us its sympathies." It is England's misfortune that her sympathies were foolishly misdirected when we were at war, but it was not our misfortune in any sense that makes it otherwise than undignified in us to keep up passionate complaints about it. For whatever injury she did us which it is becoming in grown men to consider, she will have to pay roundly when her wrongdoing is proved in court. Meantime, we can live without her sympathy, and we may even afford to sympathize with her should that become necessary.

The *Catholic World* has a vigorous article which urges the inadequacy of the Roman Catholic press of this country, and asks for daily and weekly newspapers as rich and enterprising as the Protestant papers which never weary of spreading abroad lies about the seven millions of souls who hold to the true faith. It also contains a learned review of Mr. Bryant's "Iliad," more of Mrs. Craven's story, "Fleurange"; a review of Dr. Albert Stöckl's book on philosophy; the last of Mr. De Vere's legends of "Oisin," who is now finally converted by St. Patrick; some good book reviews, and several other papers.

In *Scribner's* there is Mr. Whitelaw Reid's lecture on journalism; a sketch of Mr. Madox Brown by Mr. W. J. Stillman; Mr. Warner's "Backlog Studies"; a careful article on the advance of population in the United States; a second instalment of a good article, descriptive of travel in this State and Pennsylvania, by Mr. James Richardson; and half a dozen other papers, besides the editorial departments. Mr. Warner's article with its comments on the theatre and the legitimate drama shows more plainly than usual that streak of cheapness, so to say, which, genuine as his talent is, will perhaps prevent his doing much that shall have permanent value; but he makes a suggestive essay with a good deal in it that is both pleasant and wise.

Dictionary of American Biography, including Men of the Time; containing nearly ten thousand notices of persons of both sexes, of native and foreign birth, who have been remarkable or prominently connected with the Arts, Sciences, Literature, Politics, or History of the American Continent. Giving also the Pronunciation of many of the foreign and peculiar American Names of Writers, and a Supplement. By Francis S. Drake. (Boston: James R. Osgood & Co. 1872.)—This rather long title gives a clear statement of what the reader has to look for in this volume. The preface completes it in these words: "The design of this work is to give in a single volume, and at a moderate cost, a manual of reference containing, in a condensed form, all the more important data of American biography, including that of persons still living. Its scope . . . is *continental,* and it aims to include within the prescribed limits as many facts and dates as possible, while, at the same time, ample reference is made to fuller sources of information." To the execution of this design the author has evidently devoted a great deal of labor, and he has succeeded in making a useful and convenient compilation of larger comprehensiveness than dimensions. To achieve this, however, he has sacrificed almost everything that could render it readable, the condensation aimed at demanding constant verbal omissions and abbreviations, some of which disfigure many notices not a little. Witness the following: "Grant, Ulysses Simpson, Pres. of the U. S., b. Point Pleasant, Ohio, Apr. 27, 1822. West Point, 1843. Son of Jesse R. and Hannah Simpson Grant, of Pa." Occasionally the omissions are much more serious, not only words but facts biographically essential being sacrificed. Thus in the same notice, the last so eventful year of Grant's career in the Civil War is strangely condensed into the following part of a sentence: "In the Richmond campaign, May 4, 1864, to Apr. 9, 1865, the date of Lee's surrender"—so that in the whole notice there is not a mention of the Wilderness, Spottsylvania Court House, Cold Harbor, the Chickahominy, the James, Petersburg, or Appomattox Court House. Seven Pines, Fair Oaks, Malvern Hill, are names ignored under "McClellan." Nor are the dates given revised everywhere with that accuracy which is the more necessary the greater the importance attached to the dry chronological record, intended for reference merely; for, as the author justly remarks, "the utility of such a work must depend mainly upon its correctness." Different dates, for instance, are assigned, under "Stevens" (Isaac Ingalls) and "Kearny," to the engagement of Chantilly, Va., in which both those generals fell; different dates also, under "Johnston" and "Sherman," to the battle of Bentonville, N. C., in which these commanders fought against each other. We could easily multiply the number of similar instances of omission and inaccuracy, but the specimens cited may suffice. On the other hand, the fulness of the work as to names noticed becomes evident on the comparison of a few pages chosen at random with the corresponding parts of similar works devoted to or embracing American biography. For this purpose we may best take the Dictionary of Dr. Wm. Allen, of which the third edition, published in 1857, numbers over 900 pages. Under "Cole," Drake gives Thomas, the artist of "The Voyage of Life"; J. Foxcroft, a distinguished living artist; and Samuel, a writer on agriculture. Allen gives Thomas, as above; James L., a poet of Canandaigua; Dr. N. W., a physician of Burlington; Thomas, a teacher at Salem; and Coletta, "a colored woman died at New London alms-house in 1844, aged 110"! "Percy": Drake mentions Earl Hugh, of Lexington renown; Allen gives William, rector of St. Paul's, Charleston, S. C. "Pemberton": both chronicle the two Ebenezers, Boston ministers, and Thomas; Allen adds a third Ebenezer, whose only qualifications were those of a tutor. Drake adds notices of an entire family of the name, philanthropists, and also General John C., who had the painful task of surrendering Vicksburg. Although Allen professes to notice "the most eminent persons deceased in North America," his work is confined to the English settlements and, possibly, Canada. Drake's list really embraces all the Western hemisphere, and gives us the prominent names in South American and Mexican history. Page 4, for instance, contains, among others, "Acosta, Joaquin," an officer in the service of Colombia and author of a "History of New Granada"; "Acosta, Joseph D'," the Spanish missionary, author of the "History of the Indies"; and "Acuña," the explorer of the Amazon—the Spanish title of whose book on that river, however, is unfortunately disfigured in the notice by three mistakes. Among men distinguished in the revolutionary history of South America, we have noticed the absence of one of the most prominent, O'Higgins. It is only fair to Allen to say that where his subjects furnished sufficient material he wrote copiously of them, and that in many such cases his elaborate articles will be far more serviceable to the enquirer than Drake's succinct paragraphs. He used little discrimination, as the above extracts show, in admitting names to his list, and he was exceedingly partial to clergymen, however local their reputation. But, then, in the matter of "perspective," what shall we say of Drake, who takes no account of so eminent a scholar and editor as Professor Child, of Harvard, and yet makes room in his supplement for the late F. W. Loring, "journalist"?

China's Place in Philology: An Attempt to show that the Languages of Europe and Asia have a Common Origin. By Joseph Edkins, B.A. (London: Trübner & Co. 1871. 12mo, pp. xxiii., 403.)—This book is a blunder and an anachronism. Its aim is "to show that the languages of Europe and Asia may be conveniently referred to one origin in the Mesopotamian and Armenian region." It is founded on a little superficial knowledge and a great deal of fundamental ignorance; and its method exhibits an ingenious enhancement of the errors of the old school of philology by means of the appliances furnished by the new. Men used to go about from language to language, picking out those chance resemblances which are to be found everywhere, between unrelated languages as well as related, and drawing from them inferences of common descent; and now that linguistic science has proved the almost unlimited alterability of both sound and meaning in words, the field of occurrence of such resemblances is indefinitely widened and their traceable number multiplied. In this field Mr. Edkins revels, and his comparisons and identifications are of the most extraordinary character. If his way of working can get itself approved, there is no need of his taking the trouble to work in it; all that he claims may be granted without dispute—English and Choctaw are as incontestably related as English and German. It is useless to quote instances; the whole volume is a tissue of examples of philological absurdity. The Polynesians borrowed the post-position of the genitive and adjective from the Semitic. The Greek is "especially founded on the Chinese in regard to tones; for what are the acute, grave, and circumflex accents but Chinese tones? The relation of Greek *αὐτός*, Latin *idem,* and Mongol *adeli,* 'same,' is pregnant enough with meaning to show that the Turanians were next neighbors of the Ionian Greeks in Asia Minor;" and so on *ad nauseam.*

Mr. Edkins has been a missionary in China for twenty-five years. So far as we can judge, he has attained a really profound knowledge of Chinese, and his researches into the history of changes of phonetic form in Chinese words have notably advanced Chinese philology and are worthy of grateful acknowledgment. So much the more is the pity that he should turn away and enter upon investigations for which he is fitted neither by nature nor by training, wasting his time and effort, and merely adding his pile to the immense existing heap of philological rubbish. The trained linguistic scholar will pick out of the work, here and there, items of valuable knowledge respecting matters where the author is an authority; but to the general reader it is much worse than worthless, because its gloss of real learning will make it more misleading than simple unadulterated nonsense could be. The responsibility, in our opinion, lies in part with Max Müller. If this writer had not, in his lecture on the "Stratification of Language," patted on the back Mr. Edkins and a Mr. Chalmers (a worthy *confrère* of his), encouraging them to go on by pointing out that, even if they made occasional errors, Bopp himself had done the same—if he had frankly assured them that they were on the wrong track, and must necessarily blunder, not occasionally and by accident, but normally and regularly, the world might, perhaps, have been spared the present volume.

TALMAGE'S SERMONS. Sermons by the Rev. T. DE WITT TALMAGE, delivered in the Brooklyn Tabernacle. 12mo, cloth, $2.

"These sermons, as printed in the Methodist, I regard as among the best specimens of the simple, earnest, pungent presentation of the solemn and precious truths of the Gospel that I have ever read, and having a fertility of illustration that is marvellous. I feel earnestly desirous that they should be in a form to preach to ministers of the Gospel, and so help them to preach to others."—Rev. E. D. G. Prime, D.D., of the N. Y. Observer.

"Mr. Talmage's discourses lay hold of my inmost soul."—Mr. Spurgeon, of London.

"Mr. Talmage does wide and great good by the force with which he preaches common-sense to the multitudes who throng his huge Tabernacle. The qualities which give his sermons hold upon the people have the same influence in his books."—Evening Mail, N. Y.

"Mr. Talmage is a pulpit phenomenon. His conceptions of men and things are so vivid that he cannot be said to possess them; they possess him. He is dramatic, and cannot describe without acting. He has a clear, incisive mind, a broad and genial humor, a high and exacting conscientiousness, kindly sympathy, a vivid imagination, and vehement passion. He is in dead earnest, and every blow tells."—N. Y. Independent.

"Mr. Talmage has great powers of description, and his pictures are graphic and startling."—Presbyterian, Philadelphia.

"Over four thousand people crowded the vast building. Every one could see and hear the preacher as he stood upon his broad platform, without pulpit, desk, or even a table before him. The great audience were spell-bound, and at times the stillness under the preacher's solemn appeals was oppressive. Surely 'the great trumpet' was blown that night with no uncertain sound, and if any who listened to its blast never heard Christ's Gospel before, they heard it then with fulness and sweetness and power."—Christian Intelligencer, N. Y.

HARPER'S HOUSEHOLD DICKENS. Elegant and Cheap. With Characteristic Illustrations.

OLIVER TWIST. With 28 illustrations by J. Mahoney. 8vo, paper, 50 cents; cloth, $1.

MARTIN CHUZZLEWIT. With 59 Illustrations by J. Barnard. 8vo, paper, $1; cloth, $1 50.

Other Volumes in preparation.

"This new 'Household Edition' of Dickens is one of the handsomest we have ever seen. It is issued in Harper & Brothers' best style, with uniquely gilt binding that strikes and attracts the eye at once; with illustrations that are new, spirited, and excellently designed; and with paper and type that are elegant, clear, and readable. We do not know any other edition yet issued, either in this country or Europe, that can match it in beauty and cheapness."—Keystone, Phila.

M'CLINTOCK AND STRONG'S CYCLOPÆDIA. Cyclopædia of Biblical, Theological, and Ecclesiastical Literature. By the late Rev. JOHN M'CLINTOCK, D.D., and JAMES STRONG, S.T.D. With Maps and numerous Illustrations. To be completed in about Seven Volumes royal 8vo, of about one thousand pages each. The first four volumes, comprising the letters A to J, are now ready. The remaining volumes are in progress, and will appear at short intervals. Price per volume, cloth, $5; sheep, $6; half-morocco, $8. (Sold by Subscription.)

This Cyclopædia is a manual of religious literature for the use of ministers, students, Sunday-school teachers, and general readers, so complete in itself that no other work will be necessary for ordinary purposes of reference in these branches of knowledge. It is scientific and scholarly, yet not repulsive to the mere English reader by an unnecessary display of technical learning. It will be found that the substance of all the valuable dictionaries of the Bible and of theology in its various branches, recently issued, is contained in this work.

THE DESERT OF THE EXODUS. Journeys on Foot in the Wilderness of the Forty Years' Wanderings: undertaken in connection with the Ordnance Survey of Sinai and the Palestine Exploration Fund. By E. H. PALMER, M.A., Lord Almoner's Professor of Arabic, and Fellow of St. John's College, Cambridge. With Maps and numerous Illustrations from Photographs and Drawings taken on the spot by the Sinai Survey Expedition and C. F. Tyrwhitt Drake. Crown 8vo, cloth, $3.

"In these remarkable travels—for such they were—Mr. Palmer seems to have made a better use of his legs than any traveller who has preceded him in the same field. He claims, and we believe justly, to have wandered over a greater portion of the Desert of the Exodus than had ever been previously explored; and he is certainly the first to give from personal observation anything like a complete and consecutive account of the scenes of Israel's wanderings."—Morning Post, London.

ANNUAL RECORD OF SCIENCE AND INDUSTRY FOR 1871. Edited by SPENCER F. BAIRD, with the Assistance of Eminent Men of Science. 12mo, cloth, $2.

SONG LIFE. Illustrating the Journey of Christiana and her Children from Earth to the Celestial City. For the Sunday-school and Family Circle. By PHILIP PHILLIPS, Author of "Singing Pilgrim," "Hallowed Songs," etc. 4to. (Nearly ready.)

TYERMAN'S WESLEY. The Life and Times of the Rev. John Wesley, M.A., Founder of the Methodists. By the Rev. LUKE TYERMAN, Author of "The Life of Rev. Samuel Wesley." Portraits. Complete in 3 vols. crown 8vo, cloth, $2 50 per vol.

"The 'Life and Times of the Rev. John Wesley,' by Tyerman, is, if we may judge of the whole from the first volume, the most satisfactory exhibit of that good and great man with which I am acquainted. It is impartial and exhaustive. It gives all the known facts, and, in difficult questions, leaves the reader to form his own opinions. The portrait, therefore, is full, round, and life-like. With all his rare and, in many respects, unrivalled excellences, Mr. Wesley was a man with like passions with other men. The work reminds one of the 'Life and Epistles of St. Paul,' by Conybeare & Howson. It will, I doubt not, have a wide circulation. It merits it."—Rev. Levi Scott, D.D., Bishop M. E. Church.

"I have examined the volume carefully, and consider it vastly superior to any biography of Mr. Wesley which has heretofore appeared."—Rev. M. Simpson, D.D., Bishop M. E. Church.

"I have read the volume with pleasure and profit. It is by far the best work that has as yet been written on that subject. I trust it will have an extensive circulation."—Rev. E. R. Ames, D.D., Bishop M. E. Church.

"I prize the volume very highly indeed, for the sake of the author and the subject."—Rev. E. S. Janes, D.D., Bishop M. E. Church.

"An indispensable standard of Methodist literature, and you confer an important favor upon the denomination by its publication."—Rev. Abel Stevens, LL.D.

"I am fully convinced that it far excels any other biography of the founder of Methodism. The candor of the author, his critical and correct taste, his laborious research, which has been rewarded with the discovery of much unpublished matter, his shunning of fulsome adulation, and yet ardent sympathy with his subject and profound appreciation of the mission of the son of the Epworth rector, conspire to place his work in the front rank of ecclesiastical biography."—Rev. J. F. Hurst, D.D., Drew Theological Seminary.

"The time had fairly come for a new and original life of Wesley. . . . The changes wrought by the lapse of time have prepared the way for fuller, fairer, and more appreciative examination and statement of the subject, and it is well that the execution of that task has devolved upon one so competent. Mr. Tyerman is thoroughly a Wesleyan, and yet he is able to discuss the subject taken in hand with judicial calmness. A ripe scholar—having made Methodist history a specialty—and a practised writer, he possessed peculiar fitness for that kind of work, and viewing his subject from so great a distance of time, and in the softened light of a hundred years ago, he was better situated than any of his predecessors in the same field to see the subject in its true relations and circumstances. He has been charged with injustice to the good name of Wesley, but to us it seems quite otherwise. Time and its changes have removed the halo in which it was once encircled and its real character hidden. Some of this false glory having passed away, its unreality is recognized; but as all true greatness appears greatest when set in the clearest light, so nowhere else are the character and the works of Wesley shown to so great advantage as in these pages."—N. Y. Christian Advocate.

THE AMERICAN TRAVELLER'S GUIDE. Harper's Handbook for Travellers in Europe and the East: being a Guide through Great Britain and Ireland, France, Belgium, Holland, Germany, Italy, Egypt, Syria, Turkey, Greece, Switzerland, Tyrol, Spain, Russia, Denmark, and Sweden. By W. PEMBROKE FETRIDGE, Author of "Harper's Phrase-Book," "History of the Paris Commune," etc. With numerous Maps and Plans of Cities. Eleventh Year. Large 12mo, leather, tucks, $5.

"It gives the best routes of travel, names the places of interest, tells how much money certain trips cost, and furnishes the traveller with all the necessary advice and full information for a trip to any or all parts of the Old

[OVER.]

World. We do not see how a person crossing the Atlantic can afford to do without it."—Home Journal.

AROUND THE WORLD. By Edward D. G. Prime, D.D. With numerous Illustrations. Crown 8vo, cloth, $3.

"It is a delightful book of travel. Its interest does not depend upon adventure or novelty of scene; its charm lies rather in the freshness, the geniality, the shrewd insight, and quick, intelligent perceptions that are evident in every chapter. For those who are fortunate enough to possess the money and inclination for foreign travel, and who desire to go beyond the ordinary limit of a summer tour, the book will be a valuable and entertaining guide; while those whose travels are confined to books and pictures will find a rich source of pleasure and instruction in following the author and his friends in their wanderings around the world, through the many lands and over the many seas which he describes."—Evening Post, N. Y.

"Dr. Prime is a pleasant and a fluent writer. He leads his reader from scene to scene of a traveller's experience, and tells his story so agreeably that we must follow him whether or no. . . . Dr. Prime never proses. What he has to say he says directly and to the point, never boring us with too abstruse reflections, but always holding our attention and riveting our interest. Books of travel such as this are acceptable to the last degree, and the more of them that are published, the better for the intelligence and the education of the people who read them."—N. Y. Evening Express.

"His book is interesting throughout. He knows how to travel, what to describe, and what to leave undescribed. We are glad to receive this volume, and glad that so long and pleasant a journey has been so well described." —Presbyterian, Philadelphia.

"All parts of this volume are most pleasing to read, because of the clearness and vigor of the author's style. A third of a century ago no man could have made so extensive a tour in less than three years; but now steam has done much toward the annihilation of time and space to make tourists happy, whatever it may have done for lovers. Dr. Prime saw as much in a year as another man could have seen in thrice that time in earlier days; and then he is so sagacious and quick an observer that he could obtain more knowledge than most men in a very short time. So we can conscientiously commend his volume as one that should be read by all who are in search of information, and who would have that information cleverly conveyed into their minds. The publishers have made the book one of the handsomest of productions; and the illustrations are not only numerous, but exceedingly beautiful."—Boston Traveller.

"It conveys a pleasing general impression, interspersed all the way with objects of special interest and facts which we are glad to learn. It combines interest and entertainment in quite equal proportions, and gives the tired lounger at home the cream of an expensive and wearisome though somewhat exciting tour."—Golden Age.

"Dr. Prime is an admirable traveller for himself and for others. A quick and thoughtful observer, a ready and pleasing writer, with excellent judgment in avoiding tedious details and in presenting the most interesting facts and features of countries traversed, and, withal, a disposition to ignore the minor inconveniences of travel, and to make the best of everything. The result of this combination of rare qualifications of an interesting traveller is that Dr. Prime's readers, whose name is legion, will enjoy his book with a zest like that of being an actual companion in his journeys."—Lutheran Observer, Philadelphia.

LORD KILGOBBIN. A Novel. By Charles Lever, Author of "Charles O'Malley," etc. Illustrated. 8vo, paper, $1; cloth, $1 50.

"'Lord Kilgobbin' is a book that will be relished by grown men as well as by lads; for while it is quite as diverting as 'Harry Lorrequer' or 'Charles O'Malley,' it at the same time has a higher aim and purpose than the amusement of the reader. . . . 'Lord Kilgobbin' is, in our opinion, the best work of fiction that its author has written."—Examiner, London.

BOOKS FOR GIRLS. Written or Edited by the Author of "John Halifax, Gentleman." Illustrated. 16mo, cloth, 90 cents per vol.

Little Sunshine's Holiday.—The Cousin from India.—Twenty Years Ago.—Is it True? (*In Press.*)

LORD BROUGHAM'S AUTOBIOGRAPHY. Life and Times of Henry, Lord Brougham. Written by Himself. Complete in 3 vols. 12mo, cloth, $2 per vol.

"In every point of view Lord Brougham was a most extraordinary man. He manifested his intellectual precocity in earliest childhood, and maintained his mental vigor until after the age of fourscore. For more than two entire generations he occupied a large space in the literature, science, jurisprudence, and politics of Great Britain. His agency in the establishment of the Edinburgh Review, and his efforts in Parliament to secure the abolition of the slave-trade and emancipation in the West Indies, brought him prominently before the world as a genius and a scholar, and as an eloquent advocate of human rights. From that time forward his life was one of the most active on record; and there is scarcely any department of literature, science, art, or politics which he has not enriched with valuable contributions. . . . The style is always lively—sometimes dashing, and very enjoyable."—Lutheran Observer.

"Brougham is a striking proof that precocity of intellect is not always premature and prophetic of early decay. He was a marvellous boy and a marvellous octogenarian. He was made on a large scale, a natural great man, yet not so symmetrically great as to be free from depreciating eccentricities. As a very young writer on the profoundest topics of science, as one of the brilliant set of young madcaps who founded the Edinburgh Review, as a Parliamentary orator, as the great counsel of Queen Caroline in her state trial, as an illustrious leader in the cause of freedom in an age of High Toryism, he filled a large space in the public notice. He was endowed with magnetic power over the public mind; and, especially to those whose memories embrace a large share of his career, his memories written by himself will possess a fascinating interest."—Methodist Quarterly Review.

"Some persons may have expected to find in Brougham's personal reminiscences strong expressions of feeling against those who had been his opponents. But, on the contrary, there is throughout this volume a genial good humor, a judicial desire to be impartial, and a calmness in referring to those with whom he had contended, that places him on a higher pedestal of Christian character than he has ever before occupied. Throughout, he is revealed to us as what his mother said he was in boyhood—an Admirable Crichton. No wonder that in the days of his greatest triumphs the mention of his name was sufficient to drive multitudes frantic with enthusiasm for 'Brave Brougham.'"—Independent, N. Y.

"The story of this remarkable man's life will be read with interest, extending, as it does, through nearly the whole of a century freighted with the most important events that have ever transpired; nor will the book lose in interest because of the attractive style in which it is written—a pleasant, gossiping, but withal shrewd and sensible story of an eventful life. It is an old man that sits in his arm-chair and lives over, in memory, the days of his youth, his manhood, and his age, and draws from his stores of wisdom sound comments on the events which he narrates."—Philadelphia Evening Bulletin.

BROUGHAM'S ALBERT LUNEL. Albert Lunel. A Novel. By Lord Brougham. 8vo, paper, 75 cents.

"Albert Lunel" was written by the late Lord Brougham in 1844, but for private reasons of the author was not published.

MUNSON'S PHONOGRAPHY. The Complete Phonographer: being an Inductive Exposition of Phonography, with its Application to all branches of Reporting, and affording the Fullest Instruction to those who have not the Assistance of an Oral Teacher; also intended as a School-Book. By James E. Munson, Official Stenographer to the Surrogate's Court of New York. 12mo, cloth, $2.

This work is a complete instruction-book in the most modern and efficient system of short-hand writing. There is now a great and increasing demand for phonography, both for professional and business use, and Munson's system is the most popular. It has recently been fully adopted and introduced in the College of the City of New York.

BALDWIN'S ANCIENT AMERICA. Ancient America, in Notes on American Archæology. By John D. Baldwin, A.M., Author of "Prehistoric Nations," etc. With Illustrations. 12mo, cloth, $2.

"The records of American archæology are a sealed book to most people, and we must all consider ourselves under a debt of great obligation to Mr. Baldwin for gathering together in 'Ancient America' the fruits of much and varied investigation on this subject. It will surprise not a few intelligent people to learn that evidences are abundant to show that long before Columbus sailed upon his westward voyage there existed in North and South America civilized races of men who have left behind them monuments of their intelligence, skill, and power such as cannot be mistaken. These monuments are chiefly the ruins of cities, palaces, and temples, ranging from the curious mounds of Ohio and the Mississippi Valley to the stately monoliths of Peru. Mr. Baldwin's aim has been to collect and arrange full descriptions of these remains, and to digest and review the various theories concerning their origin and history; and the result is a volume fairly within the reach of the ordinary reader, and one of surpassing interest. Whoever undertakes its perusal will gain a mass of very valuable information, and find opened to him, it is quite likely, an entirely new field of knowledge."—Congregationalist, Boston.

"A strange interest attaches itself to the enquiry, Who were the mound-builders of this continent, and the architects of the mysterious cities whose ruins have been discovered in the forests of Central America? The present volume reveals enough to show that America was, in ages long past, the abode of races far advanced in progress toward civilization; and it also sadly shows how entirely the history of these unknown toilers has perished."—Presbyterian Banner, Pittsburg.

"Mr. Baldwin, in taking upon himself the task of gathering from a large number of volumes in several different languages the authentic facts relating to these antiquities, and so grouping and arranging them as to show their proper significance, has rendered a service which is worthy of cordial appreciation. His discussion of the probable origin of the remains, and the civilization of which they furnish unmistakable trace, will be read with great interest."—Boston Journal.

"'Ancient America' is essentially a manual embodying within a moderate compass the substance of what is fairly known respecting the civilized races which occupied a large part of the American continent long before its discovery by Columbus. The author, however, does not limit himself to a mere description of the remains which the people—or perhaps peoples—left behind them. He endeavors from these and other sources to give an idea of the history and civilization of the constructors of these remains. . . . However far the reader may agree with or dissent from the opinions and theories of this work, no one will fail to recognize its calm and philosophic spirit. It is a valuable addition to our information upon a most interesting department of human knowledge."—N. Y. Evening Post.

A BRIDGE OF GLASS. A Novel. By F. W. Robinson, Author of "True to Herself," "For Her Sake," "Carry's Confession," etc. 8vo, paper, 50 cents.

"Mr. Robinson's story possesses the first qualification of a good novel—a well sustained and interesting plot." Athenæum, London.

"The leading idea of this novel is very well worked out. There is plenty of incident. The personages introduced are life-like."—Pall Mall Gazette, London.

"A thoroughly good and well-told story."—Observer, London.

"This novel is intensely interesting. It is a book of exceptional merit, containing passages of surpassing beauty."—John Bull.

BARNES'S NOTES ON THE NEW TESTAMENT. New Edition. Revised, with Maps and Illustrations. The following volumes are now ready: *Gospels*, 2 vols.; *Acts*, 1 vol.; *Romans*, 1 vol.; *First Corinthians*, 1 vol.; *Second Corinthians and Galatians*, 1 vol. 12mo, cloth, $1 50 per vol.

MUSIC AND MORALS. By Rev. H. R. Haweis, M.A. With Illustrations and Diagrams. 12mo, cloth, $1 75.

"He has produced a book which is full of interest, and may be of great use to a large class of readers. He has grasped his subject with much width and clearness of conception. 'Music and Morals' is a comprehensive term; and it is made here to convey an elaborate analysis of the connection of music with emotion, as well as some critical comment on its position with reference to individual morality, and to its influence and significance in society at large. We cannot commend too highly Mr. Haweis's general exposition of the theory of music as the most profound and subtle artistic instrument for expressing emotion. . . . We cannot part from him without an expression of sincere thanks for his sound exposition of principle, and his wholesome criticism, often conveyed with great force, sometimes with real beauty as well."—Saturday Review, London.

"One of the most entertaining and pleasing works on musical subjects that we have read for many a day. . . . The charming little biographical sketches he gives us of the great composers. They are delightfully written, and bring the leading points of the lives of Handel, Gluck, Haydn, Schubert, Chopin, Mozart, Beethoven, and Mendelssohn before us with no less vividness than grace. The sketch of Schubert, in particular, is a delightful piece of literary work, and as the writer is evidently a lover of music and of musicians, he brings to his task all the fervor of faith and enthusiasm. The style of the work throughout is very captivating, and its various subjects cover a large ground of interesting knowledge. . . . It is one of those fresh, gossipy, and companionable books that one reads through with unalloyed pleasure, and, on arriving at the end, is sorry that there is no more. The work will amply repay reading, and will become a favorite. Independently of its power to afford amusement, it is an excellent book of reference on many important matters connected with the art upon which it treats."—Saturday Evening Gazette, Boston.

MAUD MOHAN. A Novel. By Annie Thomas, Author of "Denis Donne," "On Guard," "Playing for High Stakes," etc. 8vo, paper, 25 cents.

"One of the most pleasing stories that has come to our notice of late. It is not composed of trashy matter which, when read, had best be forgotten, but it describes in fine language the varied joys, sorrows, petty jealousies, etc., which are incident to life, and more particularly to the lives of lovers. It details the checkered career of that most lovable of all beings, a true woman, and, with the true science of fiction, terminates altogether differently than the reader would naturally conclude having arrived at the middle of the work."—Democrat and Chronicle, Rochester.

"'Maud Mohan,' a novel by Annie Thomas, whose stories have a keen edge and almost fascinating brightness."—Golden Age, N. Y.

"'Maud Mohan' displays the same vigor, earnestness, and freshness that mark the previous works of fiction from the pen of this versatile and prolific writer. . . . The story is bright, absorbing in interest, spirited in diction, and, in many respects, the best the fair author has as yet produced."—Saturday Evening Gazette, Boston.

THE LAND OF DESOLATION: being a Personal Narrative of Observation and Adventure in Greenland. By ISAAC I. HAYES, M.D., Author of "The Open Polar Sea," etc. With Illustrations. 12mo, cloth, $1 75.

FARJEON'S GRIF. Grif: a Story of Australian Life. By B. L. FARJEON, Author of "Joshua Marvel," "Blade-o'-Grass," etc. 8vo, paper, 40 cents.

"Mr. Farjeon has been compared to Dickens—he has been considered to belong to the same school of writers, and to take Dickens for his master; but by no critic has he been charged with being an imitator, though, had such been the fact, a high authority in criticism has said that successfully to imitate Dickens is no mean praise."—Dublin University Magazine.

ROLFE'S EDITIONS OF SHAKESPEARE'S PLAYS. The Plays of Shakespeare, edited, with Notes, by W. J. ROLFE, M.A., formerly Head Master of the High-School, Cambridge, Mass. Illustrated. 16mo, cloth, flexible, 90 cents per vol.

MERCHANT OF VENICE.
THE TEMPEST.
HENRY THE EIGHTH.
JULIUS CÆSAR.

☞ The above four Plays, bound in one volume, price $3.

"This work has been done so well that it could hardly have been done better. It shows throughout knowledge, taste, discriminating judgment, and, what is rarer and of yet higher value, a sympathetic appreciation of the poet's moods and purposes. . . . Mr. Rolle's notes are numerous but brief, and are generally well adapted to their purpose, which is that of explanation, instruction, and suggestion without discussion. The peculiarities of Shakespeare's style—which, rarely obscure, is often involved, and in which the main thought is sometimes suspended, and even for a moment lost sight of amid the crowd of others that itself has called up—are pointed out and elucidated; his allusions are explained; his singular use of words and moods and tenses and cases is remarked upon; and the archaic and transitional phraseology which is found in many passages of his plays (positively many, but comparatively very few) are made the occasion of instructive but unpedantic comment."—N. Y. Times.

MISS MULOCK'S WORKS. Library Edition of Works by the Author of "John Halifax, Gentleman." 12mo, cloth, $1 50 per vol. The complete set, 17 vols., in neat case, price $25.

Hannah—Olive—Ogilvies—The Head of the Family—John Halifax—Agatha's Husband—A Life for a Life—Two Marriages—Christian's Mistake—A Noble Life—A Hero—Studies from Life—The Fairy Book—Unkind Word—Mistress and Maid—The Woman's Kingdom—A Brave Lady.

"Harper's new edition of Mrs. Mulock-Craik's works is so desirable for the library that it must have a general circulation among families. Her stories are so genuinely good, so free from gilt-edge vice and namby-pamby goodness, so noble and whitely pure, yet so fresh and interesting, that it is cause for gratitude they are published by the house which ensures their most general distribution throughout the country."—Correspondence Cincinnati Times and Chronicle.

WILKIE COLLINS'S POOR MISS FINCH. Poor Miss Finch. A Novel. By WILKIE COLLINS, Author of "The Woman in White," "Moonstone," "Man and Wife," "Armadale," etc. Illustrated. 8vo, paper, $1; cloth, $1 50.

"It is in his best style; told in his simple, natural style, but with great power. The characters are boldly defined, and the interest is unflagging throughout the book."—Brooklyn Union.

"A story to be absorbed in and for ever after to remember."—Boston Commonwealth.

"'Poor Miss Finch' is as vigorous, exciting, and characteristic as Wilkie Collins's previous works."—Keystone, Philadelphia.

CECIL'S TRYST. A Novel. By the Author of "Carlyon's Year," "Gwendoline's Harvest," "Won—not Wooed," "Bred in the Bone," "One of the Family," etc. 8vo, paper, 50 cts.

"No other author possesses in a greater degree the happy gift of compelling a laugh to follow a humorous sally as infallibly as the tinkling of a bell results from pulling it."—Pall Mall Gazette, London.

VANITY FAIR.

A WEEKLY SHOW OF

POLITICAL, SOCIAL, AND LITERARY WARES.

Containing 12 Pages of Letterpress, with which is given
each week a Chromo-Lithographed Cartoon of
a Living Sovereign, Statesman, or
Man of the Day.

"Political Portraits.—The public has long been familiar with Vanity Fair, and its weekly portraits of eminent men, and has never, we should imagine, been unable to recognize at a glance the original of each portrait."—The Times (London).

"The Vanity Fair caricatures—to call them so—have been of a high order of artistic excellence, and have made the paper in which they appeared more desirable than 'Punch.'"—The Nation.

Published every Saturday, price 6d. Terms of Subscription, post-free, to the United States: One Year, £1 10s. 4d.; Six Months, 15s. 2d.; Three months, 7s. 7d.; payable in advance.

Now Ready,

VANITY FAIR ALBUM FOR 1871.

Containing all the Cartoons (52) published during 1871, with the letterpress notices thereto relating. Price 2 Guineas. The Albums for 1869-70 can also be had, price 2 Guineas each Volume.

PAPER MONEY,

THE ROOT OF EVIL.

An Examination of the Currency of the United States,
with Practical Suggestions for restoring
Specie Payments, without robbing
Debtors.

By CHARLES A. MANN.

1 vol. 12mo, cloth, 374 pages, price $2.

"The view of the functions of money here given is the exact opposite of that announced by the Supreme Court of the United States in its latest decision on the legal-tender act. If any apology is needed for the publication of this volume, it is to be found in the series of decisions of which that is the culmination. When the judges of America are so deplorably ignorant that hardly a dozen among them know what a dollar is, any attempt, however feeble, to furnish an antidote to the black-letter political economy taught in our courts, cannot be wholly wasted."—Extract from Preface.

D. APPLETON & CO., Publishers,
549 and 551 Broadway, N. Y.

THE UNDERGROUND RAILROAD.

AMESBURY, 10th 3d mo., 1872.

I have looked over the advance sheets of my friend William Sill's History of the "Underground Railroad," and judge, from a hasty examination, that he has done justice to his deeply interesting subject. The story of the escaped fugitives—the perils, the terrors of pursuit and recapture—the shrewdness which baffled the human blood-hounds—the untiring zeal and devotion of the friends of the slave in the free States, are well described.

The book is more interesting than any romance. It will be of permanent value to the historian of the country during the anti-slavery struggle.

I cheerfully commend it to the public favor.

JOHN G. WHITTIER.

CRITICAL AND SOCIAL ESSAYS. Reprinted from THE NATION, and in some measure supplying the place of the first two volumes of the paper, now somewhat scarce. Price $1 50. Address, Publisher of THE NATION, Box 6732, N. Y.

MACMILLAN & CO.'S

NEW BOOKS.

ESSAYS AND LECTURES ON POLITICAL and Social Subjects. By Prof. Fawcett, M.P., and Millicent Garrett Fawcett. 8vo, $3 50.

Contents: Modern Socialism—Free Education in its Economic Aspects—Regulation of Hours of Labor by the State—National Debts and National Prosperity—Education of Women—Why Women require the Suffrage, etc.

New work by the author of the "History of the Norman Conquest in England."

*THE GROWTH OF THE ENGLISH CONSTI*tution from the Earliest Times. By Edward A. Freeman, D.C.L. Crown 8vo, cloth, $2.

*THE HISTORY OF THE NORMAN CON*quest of England: its Causes and its Results. By Edward A. Freeman M.A., Hon. D.C.L. Vols. I. to III. 8vo, $18; Vol. IV., The Reign of William the Conqueror, $8.

"The present volume (Vol. IV.) is superior to any other in smoothness and evenness of style, and is inferior to none in sustained interest. There are some most graphic passages. The special point in which Mr. Freeman is pre-eminent as a historian is his power of presenting the age of which he treats vividly and distinctly before the eye."—*The Nation.*

By J. C. SHAIRP, Principal of St. Andrews.

1 vol. 16mo, $1 50.

The main topics of the volume of Wordsworth, Coleridge, and Keble.

"The Riverside Press has rarely issued a volume that deserved a heartier welcome from the cultivated, refined, and religious portion of the community."—Philadelphia Bulletin.

II.

THE LORD'S PRAYER.

BY F. D. MAURICE,

Late Professor in Cambridge University.

With an Introductory Sketch of Maurice and His Writings. 1 vol. 16mo, $1 25.

"As a theologian, he was of the Hebrew type—bearing witness to what he saw and felt of truth. He had little sympathy with the philosophical forms with which men seem to think it necessary to clothe the Gospel. The fact that it was of God and fitted for the consciousness of men furnished all the ground he needed to stand upon. . . . As a commentary upon the Lord's Prayer it perhaps is the most critical and exhaustive to be found."—Congregationalist.

A DICTIONARY OF ENGLISH ETYMOLOGY.

BY HENSLEIGH WEDGWOOD.

Second Edition, thoroughly revised and corrected by the Author, and extended to the Classical Roots of the Language (with the assistance of the Rev. J. C. ATKINSON, Author of the Glossary of the Cleveland Dialect).

With an Introduction on the Formation of Language.

In preparing this Edition the Author has had the benefit of the learned and very judicious annotations of Mr. George P. Marsh in the American Edition of the First Volume of the Dictionary, which have in many cases led to the adoption of his views. Attention has also been given to the criticisms in the Etymological Dictionary of G. Müller (Köthen, 1865-7), and to the scattered suggestions on the derivations of words which occur in various periodicals. Wherever the etymology of the First Edition has been materially altered, the word is marked with an asterisk. In deference to the judgment of respected friends, the etymology of words of classic derivation, which in general were omitted in the First Edition, has been concisely inserted in the present work.

Copies will be sent to any address, on receipt of the price ($8), by

CHEAPER AND BETTER THAN FROM LOCAL GREENHOUSES.

The Nation.

NEW YORK, THURSDAY, JUNE 6, 1872.

The Week.

THE condition of the Washington Treaty at this writing we take to be this: The Senate has made alterations, the nature of which has not been made public, in the Supplemental Article, which lessen the force of the American abandonment of the indirect claims, by making it uncertain whether they may not be brought up at some future time, but we do not know enough of what has happened to speak on this point with any positiveness. At all events, the modification seems to be of a kind which, like the Treaty itself, still leaves something to "understanding," and on this point the English are just now in a state of morbid sensitiveness, which makes hope of accommodation almost idle. They will hardly be content with anything short of a naked and flat disavowal, and this the President and Senate can hardly agree to make. The mismanagement on both sides has been disgraceful; on our side, we are sorry to say, it looks as if there had been worse than mismanagement. We have never, our readers will bear witness, been hopeful about the Treaty, and shall not be very sorry if it is now at last dropped. Every word of discussion there has been about it, since the appearance of the American Case, has helped to excite discord and revive old hates and animosities. The best thing to do, and the only technically proper thing to do, when the parties, having appeared before the arbitrators, found they were not agreed as to the points to be submitted, was to retire and begin to negotiate again. *A court of arbitration is not competent to define the extent of its own jurisdiction.* It is not, like a court of law, created by statute; it exists by the agreement of the parties; and outside of or in default of this agreement, has no existence and no powers. One party cannot drag another before such a court; either party has always the right to withdraw on any ground before the case is heard or the decision reached. If such a court can take up matters which either party declares he never meant it to take up, it can take up all or any other matters; and as between nations, might be converted into an abominable engine of oppression and injustice. Perhaps the best thing to be done now is throw the Washington Treaty aside, and by-and-by meet again, and begin the negotiations by a fresh discussion of the "indirect claims," but we doubt whether General Grant's Administration will ever be in a position to do so with any prospect of success.

Mr. Gratz Brown has written his letter of acceptance to the Committee of the Cincinnati Convention, and it is certainly a great improvement on Mr. Greeley's, both in its English, its taste, and its temper. He reprobates the use of offices for party purposes, deplores the omnipotence of party organizations, commiserates the condition of the South, and commends amnesty, following the lead of the platform in a moderate key. The curious and original part of the letter is that which relates to the treatment of the tariff by the Cincinnati platform. We had always supposed the relegation of the tariff "to the people in the Congress districts" was a simple, frank, and bold confession of the inability of the Convention to agree on this matter, and of the determination of the delegates to pass it by, so as to be able to unite in conclusions on other matters which, collectively, were held to be of greater importance. Mr. Greeley, however, attempted to give it a loftier character by treating it as a magnanimous attempt to restore to the people a power of which they had previously been deprived, viz., that of regulating the tariff to suit themselves.

But Mr. Brown outdoes Mr. Greeley completely. According to him, the relegation of the tariff to the people in the Congress districts is a novel and happy mode of dealing with a very knotty question. The tariff, it would appear from his letter, has been heretofore regulated by the Electoral College; but the Cincinnati Convention has opened a new era, by letting the people and Congress have their say about it. "It was a bold as well as admirable policy," he says, "in the interest of present as well as of future tranquillity, to withdraw the decision of industrial and revenue matters from the virtual arbitration of an electoral college, chosen with the single animating purpose of party ascendancy, and refer them for a more direct popular expression to each Congress district." This great reform, we would suggest to Mr. Brown, ought surely not to be confined to the tariff. Why not also withdraw the questions of amnesty, civil-service reform, and equality before the law from the jurisdiction of the Electoral College? Is it not an offence against popular sovereignty to leave *anything* to that body? The patience with which the people have waited these long years for the appearance of the Greeley and Brown ticket to give them a voice on the question of import duties has been, it must be admitted, almost asinine in its stolidity. On one point Mr. Brown is suspiciously silent. Is he, or is he not, in favor of the punctual payment of the pensions of the soldiers and sailors? Let us have no juggling or evasion about this, but a plain answer. These pensions are, and long have been, menaced from some quarter or other. Greeley expresses his willingness to see them paid; the country waits to hear from Brown.

The Greeley ratification meeting in this city on Monday evening was a success. The *Tribune's* report that "scarcely a public meeting in New York since the war has equalled it in the magnitude of the numbers present and the enthusiasm of the demonstrations," is not much of an exaggeration, if an exaggeration at all; while the *Times'* account, that "it was not the success anticipated, though the hall was well filled," though a safe statement, is not altogether accurate. The hall was crowded, but the outside meetings were a failure, owing to the violence of "the wind," the *Tribune* says. As to the "enthusiasm," there is no doubt the demonstrations were very noisy, but what feeling prompted them, or whether they were in all respects complimentary to Mr. Greeley, nobody can tell. The truth is that, in the public eye, Mr. Greeley, whether deservedly or not, is surrounded with an atmosphere of low comedy. There is consequently a touch of buffoonery in all celebrations of which he is the central figure. Moreover, the adhesion of the Democrats to him is bringing "the boys" to his support in great numbers, and they will during the canvass fill his "halls" with the exultant yells and other evidences of homage and rejoicing such as simple natures are accustomed to offer, and that used to make the rafters of Tammany ring.

We wish we could speak respectfully of the vice-presidents and of the speakers. But when we find the name of "Ben. Wood" first on a long list of vice-presidents at a "refor meeting," we can do nothing better than laugh. Among the speakers the only man of note was Senator Doolittle, and he predicted that the Baltimore Convention would adopt Mr. Greeley, but asserted, with authority, that whether it did or not he would not withdraw. Mr. Doolittle took the Cincinnati platform for his text, and eulogized it highly, particularly its mode of dealing with the tariff question, which he called "a new invention," and said it "merited a patent." He appears to be as deeply impressed as Mr. Gratz Brown with the plan of letting the people fix the mode of raising the revenue, instead of leaving it to that band of irresponsible despots who have so long usurped it—the Electoral College. He discussed the possibility of Mr. Greeley's being "imposed on." He admitted "there was some danger of this," but took a cheerful view of it on the whole; said that even if he was, his surroundings at the White House could hardly be worse than those of General Grant, but he thought that the steadying and solemnizing influence of the office was such that any man, no matter what his antecedents may be, "if he is honest and intelligent," has "his very mode of thought changed," and becomes "cautious and conservative" as soon as he takes it. Among the other speakers were Senator Tipton, General Kilpatrick, Mr. R. B. Roosevelt, and Colonel McClure of Pennsylvania; the rest were either totally unknown to fame or "more widely known for blame than praise." A palpable fraud was perpetrated by "the managers" in announcing in their posters that Carl Schurz would speak. They *knew* he would not. This is a bad beginning for "reformers." They also announced Mr. Dorsheimer, who did not appear, and had nothing from Mr. Trumbull but a vague letter.

A curious incident has been brought up during the week, which, trifling though it be, helps to confirm what we have more than once said as to the great source of danger in letting Mr. Greeley into the Presidency—his weakness with regard to his "friends." He has been accused frequently during the past six months of having gone into a company for the manufacture of tobacco, within the past year, with Bill Tweed and other members of the Ring. Now he abhors tobacco, and preaches against it vigorously, almost as vigorously as against alcoholic drinks. He has also denounced Tom Murphy severely for going into real-estate speculations with Bill Tweed and his kind. Consequently, when we are told, and told truly, that he has himself been concerned with them in a cigar enterprise, it seems on the surface as if he was a dreadfully wicked and deceitful old fellow. But the truth appears to be that, in this as in so many other cases, he is simply weak. A Mr. Charles C. Eaton writes to the *Tribune*, declaring that Mr. Greeley went into the tobacco business, or rather lent his name for use in it, simply to "oblige a friend" who had neither credit nor money, and had, or thought he had, got hold of a good cigar machine. In our opinion, the number of needy "friends" who would be found in Washington during Mr. Greeley's Administration would be more than the nation could stand, unless population and resources grew more rapidly than they do now.

The majority in the Senate having resolutely refused to give Mr. Sumner and Mr. Schurz an opportunity formally to discuss the report of the French Arms Committee, the former on Friday made a motion to postpone indefinitely the Apportionment Bill, and on this hung an attack on the President, which is shortly to appear in a pamphlet, which it is safe to say has no parallel in parliamentary annals for ferocity. In fact, it is rather a treatise on General Grant than a speech, and sums up, and embellishes, and amplifies all the charges, innuendoes, and insinuations ever made against him, constituting an indictment which, whatever may be said of its fairness or good taste, must have a sensible effect on public opinion. Mr. Sumner shows, with his usual profuseness of quotation, that a soldier is unlikely ever to make a good civil ruler, especially when he turns to civil affairs after forty; that Grant was less likely to make a good civilian than most successful soldiers, owing to the unusual narrowness of his social and political experience in early life. He quotes the dying testimony of Stanton, uttered to him (Sumner), that "Grant could not govern this country," to which Grant might fairly reply that neither could Stanton himself, and that a worse judgment than Stanton's on any such subject could hardly be cited, and that it was no better on his death-bed than at any time previously, and was probably worse. Indeed, for whatever arbitrariness and disregard of law there have been in the administration of our affairs since the war, few persons are more to blame than Mr. Stanton.

Mr. Sumner traces the history of nepotism from the fifteenth century down, showing its baneful operation in Papal Rome, from "twenty-one years before the discovery of America by Christopher Columbus" (the well-known Genoese navigator) down to our day; then cites American testimony against it, including that of Washington, Jefferson, John Adams, and others; clearly establishing, indeed, that it is a culpable practice. He then takes up, and savagely reprobates, the President's practice of giving high office to persons who have made gifts to him, and his receipt of gifts at all, fortifying his position by Deut. xvi. 19, by Plutarch, Lord Brougham, Washington, St. Louis of France, John Quincy Adams, and Count Romantzoff of Russia. He also attacks his mode of selecting his Cabinet among obscure persons from whom he had received gifts; his use of the offices of the Government for the reward of personal favorites; his employment of military officers in civil offices at the White House, contrary to law and usage; his attempt when he first took office to throw aside the Secretary of War, and transfer his powers and functions to the Commander-in-Chief of the Army; his subsequent attempt to do the same thing, *mutatis mutandis*, at the Navy Department for the benefit of Mr. Borie, who was too sickly to perform the duties, and was appointed solely as a "Greek bearing gifts"; his interference in local politics in Missouri and New York; his violations of the constitutional and international law, and contempt for the African race in the case of San Domingo; his proving the "greatest Presidential quarreller" in history, violating in this the "Eleventh Commandment" added by Mr. Sumner himself to the Decalogue, and which, according to him, runs as follows, "A President of the United States shall never quarrel"; and supports this position by citing Juvenal (Dryden's translation), the example of Tancred, and that of Louis X. of France, neither of whom "quarrelled" in affairs of State, but whose peaceable demeanor seems to have made no impression on General Grant's mind. Mr. Sumner also says that the President has not reduced the public debt, and has muddled all our foreign relations, prefers palace-cars, "fast horses, and seaside villas to duty," has grown rich on gifts, and ought not to be renominated.

The attack would be more damaging if it were one-half as long, and were shorn of most of its epithets and quotations. Many parts of it will create great amusement, and thus help Grant instead of injuring him. The long passage about nepotism at Rome is evidently due to the discovery of "that able historical work in two volumes" to which the orator expresses his acknowledgments, *Il nipotismo di Roma;* and there is something very diverting in the praises he lavishes on the administrative reforms, and good intentions of popes who only reigned twenty, and thirteen days, and two months, etc. Stanton's ante-mortem testimony will hardly produce any effect, seeing that it was clearly inaccurate. Mr. Sumner says he told him, at that melodramatic leave-taking, that he (Stanton) had never mentioned Grant in his stump-speeches during the campaign. The newspaper reports show that either Mr. Stanton erred in this point or Mr. Sumner has erred in retailing the conversation. The greatest defect in the speech is, however, that it does not account for Grant. If he is a frivolous man, more devoted to fast horses and seaside villas than to duty, it is difficult to understand the shrewdness, persistence, and success with which, according to the same authority, he has managed to pervert the power of offices of Government to his personal advantage.

The political situation has at this writing undergone no material change, and probably will undergo none till after the Baltimore Convention. The renomination of Grant at Philadelphia seems to be a foregone conclusion, and the only controversy in the ranks of the regular Republicans is over the Vice-Presidency, but it will be decided too before this meets the eyes of our readers. Greeley unquestionably grows in strength among the Democrats, particularly at the South, but makes no perceptible gains among the Republicans at the North. Even the doubting hesitate and wait for something better to turn up. The movement in favor of the nomination of Mr. Adams gains ground, and will probably produce results within a few days. If he takes the field also, there will be "wigs on the green," as the old song says. The canvass has been fairly opened by Mr. Sumner's speech, and we are afraid he has furnished the key-note of it also, and that it will be savagely bitter. The newspapers will have need of all their old "personalities," and some new ones. "Indecency," "mendacity," "impudence," rage unchecked on every side. There are rumors of scarcity of money at the Greeley headquarters, the "capitalists," as a rule, not taking kindly to him, and his list of vice-presidents was not likely to inspire confidence in "moneyed circles." Carl Schurz's refusal to speak, and the engagement of Demosthenes by the Woodhull Committee, are also discouraging circumstances. The latter orator has, nevertheless, an opportunity to use his old Philippics, such as may never offer itself again. The bloody and sensual tyrant in the White House is surely a tempting mark.

One of the good signs of the times, and not the least important, as showing that even democratic politicians begin to be conscious of the change which is coming over the public mind, is the nomination of Mr. Buckalew for the governorship by the Pennsylvania Democrats. Mr. Buckalew is not "magnetic," and he is a learned, thoughtful, sagacious man of the highest character, with much experience of public life, and to whom rowdies and blatherskites may make the objection which one of their number made to Mr. Adams at Cincinnati—"that you can't slap him on the back, and ask him to take a drink." The enthusiasm with which he was received at the convention *after* his nomination was also an example which Republican quacks would do well to note as the proper use of enthusiasm on such occasions. The nomination has struck such terror into the ranks of the Administration that Colonel Forney has again "cried halt," and solemnly warns his brethren that they had better throw overboard the "regular" Hartranft ticket while there is yet time, for it is becoming pretty plain that its own outrageous badness, combined with the goodness of the Democratic one, will render its success impossible. Mr. Buckalew, it is well to mention, is the author of one scheme of minority representation which has attracted great attention, and has been often described in these columns.

Two curious things appear in the English weeklies received by the last mail. One is a long elaborate article in the *Spectator* on the convention at New York which nominated Victoria C. Woodhull for the Presidency, a performance which will, in the estimation of that paper, give a blow to the Woman's-Rights cause not only in this country, but in England. The *Spectator* thinks the Woman's Rights party in this country have chosen Woodhull for their official representative. This is the unkindest thing that has been said of them yet. We have charged them with having produced Woodhull, or to use a slang phrase "given her a chance," but to put upon them the responsibility of the "convention" which nominated her is a little too bad. The other curious thing is an expression of opinion by the *Saturday Review* that Horace Greeley was "elected at Cincinnati by the votes of the Protestant members of the body." We think this is strictly correct; the Catholics in the convention were literally nowhere on any of the six ballots, and we think that though Horace is not much of a theologian, he will be found sound as a bell on all the great points of distinctively Protestant doctrine, though we admit that as a Calvinist he is nothing to boast of.

The dispute between M. Thiers and the National Assembly over the Councils of State is in course of solution by a compromise under which the Assembly presents the President with fifty-six nominees, from whom he selects the twenty-eight members. The only other important work on which the Assembly is engaged is the reorganization of the judiciary, and here again it is curious to see the weight with which either old traditions or party selfishness affects the whole question. During the Empire, nothing was heard from members of the opposition of all shades of opinion but abuse of the judges, their timidity, ferocity, subservience, and corruptibility. It was therefore incumbent on all, after the Revolution, for the sake of decency and consistency, to make some attempt at purification. But when the time came to say what the attempt should be, there was found to be the usual difference of opinion between the Left, Centre, and Right, and each now declares, when it sees danger of its opponents' plan of reform being adopted, that the judges are not so very bad after all, might be worse, and perhaps on the whole were better let alone. The extreme Right is anxious to have the judges empowered to fill vacancies in their ranks themselves, thus making the judiciary a close corporation like the old parliaments; the Left wants to have the judges elected by "the people"; while the Centre adheres to the system of appointment. But none are heartily in favor of making the judges independent, each party desiring to have this weapon of offence and defence in its own hands whenever it gets hold of the reins of power. The importance of the question may be inferred from the fact that there are in France 11,000 paid judges appointed by the Government, and, though not dismissible by it except for cause, dependent on it for promotion—a means of corruption probably unparalleled. Judging in France is a profession, into the lower grades of which a man enters in his youth as in the army, and every step upwards he owes to the Minister of Justice. When we combine with this the liberty of active participation in the conduct of the cause allowed to the judge by French procedure, it is easy to see why French judges are subservient and zealous, and why even Gambetta dislikes the idea of raising them into independence.

The Swiss have just voted on a revision of their constitution of 1848, and rejected it by 257,444 to 252,477, thirteen cantons voting aye and nine no. The changes proposed emanated mainly from the Protestant and German cantons, and were in the direction of greater centralization, the federal bond being now what we should consider loose. The cantons levy their own taxes, have their own police and judiciary, as our States, but they have also their arsenals, fortresses, and armies, the federal government instructing the militia, but the cantons simply furnish contingents, like allies, in time of war. The amendments to the constitution proposed to give the federal government supreme control of the army, and the possession of all arsenals and fortresses, under an organization which would have enabled Switzerland to put 200,000 hardy troops in the field. To this there is said to be little popular objection. The position of Switzerland has been greatly changed by the unification of Germany and Italy, and the passage of Savoy into the hands of France. Her neutrality is no longer as well assured as it was in 1848, and she feels the necessity of having a force which, if not large enough to give her complete security, would be large enough to make her alliance worth courting. But it was also proposed to give the federal government the complete control of all departments of education except the primary schools, and to give it the right of inspecting private schools. This has caused the rejection of the revised constitution, the Catholics, who have grown greatly in numbers within a few years, uniting with the states-rights party, as we should call them, in resisting a measure which would probably exclude the clergy from all share in popular instruction. The government now talks of trying a separate vote on the army amendment.

PARTY MORALITY.

We publish elsewhere the letter of a converted "Liberal Republican" who has given in his adhesion to Mr. Greeley, not only as an instrument of reunion, which we acknowledge he may be made, but as a revenue and civil-service reformer. To accept Mr. Greeley as the champion of revenue reform would be, to our mind, destructive of what little morality there is left in party politics, and would on the part of professed reformers be not only an unprincipled but a positively absurd performance. Mr. Greeley is not, and ought not by anybody to be accepted as, a mere machine with certain powers, which any party is entitled to use who can get hold of him. A certain class of politicians are glad to be so regarded; but if Mr. Greeley chooses to count himself in it, it is his affair and ought not to be ours. Mr. Greeley is a *man* with certain deeply rooted convictions on the subject of the tariff, which he has preached for thirty years with the greatest vehemence, and has always treated as of paramount importance. He has moreover set down all persons in public life who openly opposed them as scoundrels. He has insisted that Mr. Wells was a base man bribed by foreigners to win his countrymen over to free trade; the members of the Free-Trade League he has put down in the same category. The Missouri movement which led to the Cincinnati Convention, and was essentially of the same nature and composed of the same elements as that by which he seeks to be elected, he has little more than a year ago denounced as an unholy alliance between rebels and free-traders; and he has stigmatized Mr. Grosvenor, the chairman of the Missouri Committee, as an "inherent villain." In fact, he either has the lowest possible opinion of the revenue-reform element in the Liberal Republican movement, in which case his own offering to suppress his convictions in order to procure their support would show him to be totally unworthy of the confidence of honest men; or, he has *not* a low opinion of them, in which case his course in the *Tribune* towards Mr. Wells, Mr. Atkinson, and others has been that of a reckless and unscrupulous slanderer, who is certainly hardly qualified for the Presidency. More than this, if he agrees "to surrender his personal preferences" on this subject while in the Presidential chair, he agrees to neglect or refrain from what the Constitution prescribes as his duty, namely, the recommendation to "the consideration of Congress of such measures as he shall judge necessary and expedient." He either considers a high tariff more necessary and expedient than any other thing to the prosperity of his country, or he does not. If he does, a failure to recommend it to Congress would be a neglect of duty which no reformer ought to connive at; if he does not, what are we to think of his career as an editor?

The Liberal Republican movement owed its origin also to a profound conviction of the impolicy of the Ku-klux legislation as likely to introduce into our government practices in the highest degree dangerous, shake the hold of constitutional principles on the popular mind, familiarize the people with arbitrary processes, inspire a general disregard of the forms of law, and precipitate the centralization of power at Washington. We ourselves opposed it from first to last; we opposed, in particular, that most audacious and scandalous provision which gave General Grant the right to suspend the habeas corpus whenever he saw fit in time of peace. Our objections to it, and the objection of the originators of the Liberal Republican movement to it, were not objections of time or place, but of principle. It was bad, not because it gave General Grant certain powers and gave them this year, but because it gave him powers which no free people ought to give to any man, which the Constitution did not authorize Congress to give to any man, which are in their very nature destructive of the Constitution, and which cannot give any American community even temporary relief from any evils without sowing the seeds of others still graver. Now, what was Horace Greeley doing when we were fighting against this legislation which the Cincinnati Convention met to repress and punish? Why, clamoring for it with all his might. How long ago was this? One year or thereabouts. Did he maintain that it was constitutional legislation? No, he did not bother his head about its constitutionality; he said it was good, useful legislation, too good for the communities for which it was intended. What opinion did he express of the men who opposed it? He said they were rebels in disguise, and that there was no need to mind what they thought. He is now filled with horror of it. Congress is to adjourn, say, on the 10th of June; up to that date he thinks it is just and wise legislation, but he declares that if maintained any longer our liberties will be in danger; that is, we can stand it on the 10th, but if we have it on the 11th, there is no knowing what may happen. It is true there is now the additional objection to it that General Grant is a candidate for re-election and may use his extraordinary powers to help his re-election, and it is true that his supporters are violently urging an extension of those powers, and probably for this very purpose; but the probability that this would happen was one of the reasons why Mr. Greeley should never have defended this legislation at all. He ought to have foreseen what is now taking place, and not have waited to blow his trumpet till these nefarious acts had begun to endanger his own personal prospects. His blowing it now stirs no man's blood; it only excites aversion or amusement. Strong as is our hostility to the Force Act, we confess that not only will the old Adam within us be gratified by seeing it used to harass Greeley's voters on the way to the polls, but we profoundly doubt whether a sound and wholesome lesson in constitutional government would not be taught in this way. We may forgive Mr. Greeley for his folly in this matter, but for decency's sake do not ask us to make him President as a protest against military rule.

Next, as regards Civil-service Reform. We do not look for any zeal in this cause at his hands, for reasons found partly in his character and partly in his history. He has had no training of any kind, and does not believe very much in its value. His own knowledge has never been subjected to any tests, and he looks with contempt on all the machinery provided by colleges and similar institutions for testing other people's knowledge. He abhors discipline, and indeed all system of any kind. He is, moreover, one of those intense and hearty haters who believe that anybody who differs with them on any important matter is either a knave or a fool. We can no more imagine his leaving a free-trader in office than we can imagine Archbishop McCloskey employing Satan as a private secretary. He has been for nearly twenty years an active office-seeking politician, dickering, "compromising," "combining," using offices like all the rest of them to effect his objects, and giving recommendations with more than ordinary lavishness. He has, too, been associated in the politics of this State with men who, whatever else they may be, are politicians *par excellence*, to whom the whole idea of civil-service reform is simply an amiable delusion. He could not shake these men off if he would, and in our opinion he would not try; nor could he, nor would he, rid himself of the habits, or prejudices, with regard to party obligations which he has contracted in their company. In fact, to those who know Mr. Greeley, the notion that he thinks of civil-service reform as anything but the substitution of men whom he likes for men whom he hates, is little short of ludicrous. We do not believe he is personally dishonest, or is capable of keeping in office a man whom he sees to be a rogue, but the difficulty of getting him to see that any of his friends, or anybody who thinks highly of Horace Greeley, is a rogue, is all but insuperable.

To sum up: parties have their code of morality as well as individuals, and party morality, as we understand it, without which parties are nothing but gangs of marauders, requires that every party have, first of all, ideas which it seeks to embody in legislation; and, secondly, that it choose its candidates from amongst the men who have been prominently associated with the conception and propagation of its ideas, and whose character and career warrant the belief that they sincerely hold with them. To select the candidates among the most notorious opponents of its ideas, and treat their willingness to take the place as a mark of magnanimity, is to be guilty of nearly all the baseness and folly of which a party is capable. Our advice to the reformers would be, above all things, not to throw away their moral influence. The knaves are not all going to die or quit the country after the next Presidential election. Whether Grant or Greeley is elected, it is quite certain there will be no marked change for the better in our administrative system; in the latter case, we may be thankful if there is no change for the worse. That Greeley will throw aside the Hanks, Rufes, and Charleys, and take unto himself pure and upright statesmen, after he gets to Washington, is something that no rational man is warranted in expecting. There is danger, too, in Greeley's case that we may have to contend with financial confusion of his making, for unlike Grant, who is careless and ignorant about financial questions, Greeley thinks he knows more about them than any man living, and will hardly die happy without having tried to embody in practice some of the long-cherished dreams of his "sanctum."

Under these circumstances, it is of the last importance that those men who have been offering themselves to the country as reformers during the last two or three years should still retain the confidence of the country. Not one of them who, having gone out to Cincinnati to create a political revolution, now engages in the business of persuading the community that Greeley is a great statesman, will ever be able to appear again as a political evangelist without exciting laughter and derision. Gentlemen must not deceive themselves on this point. The Greeley eulogies in the "independent papers" may be read and relished by many, but they make no converts and they produce much disgust. To have tried to nominate the right man at Cincinnati and have failed is a misfortune; to accept the failure as a blessing in disguise is a fatal blunder. For those who wish still to fight for "the good old cause," still to try to bring the mind and character of the nation to the work of governing it, to rid politics of its degrading associations, and make it a pursuit in which honorable men can engage with clean hands, there is but one course to follow, and that is to put forward no candidate who does not honestly represent their principles. In voting they may, by force of circumstances, have to choose the less of two evils, but whatever they originate must have some better title than this to popular support.

"REFORM" IN THE CHURCH.

We do not now propose to discuss the facts of fraud and mismanagement in the Methodist Book Concern brought to light by Dr. Lanahan. They are pretty well understood by the public. The charges have been in the main sustained by the committee appointed to examine them, and the report of the committee has been unanimously adopted by the governing council of the Methodist Church, lately sitting in Brooklyn. The conviction of the persons accused by Dr. Lanahan is, of course, his own vindication. We wish now to consider the great inconsistency between the action of the Conference on these charges and their treatment of Dr. Lanahan. The accusations may or may not have been true; but, if true, it was certainly their duty not only to continue him in office, but to express in some way their sense of the distinguished services he had rendered them. As the case stands, we see that it is a warning to rogues, but we see also that it is quite as much of a warning to reformers. There is no other man known to us who has stood quite in the position of Dr. Lanahan. He has made a most gallant and unselfish attack upon roguery, and has fought a bitter fight against great odds. It has been a thankless battle all along. The wicked city of New York tried Mayor Hall for failing to do what Dr. Lanahan did; the authorities of the Methodist Church have tried Dr. Lanahan for doing what Mayor Hall failed to do. We have watched with some interest to see whether the one practical reformer of his day would "find virtue its own reward," or "look for his recompense hereafter," or would receive some tangible mark of approval and gratitude. We were doubtful of our power to punish knaves, but we did think we might praise and reward a faithful public servant. The Conference has done itself credit by an investigation of the case which we presume to have been a thorough one, but it omitted to distinguish Dr. Lanahan in any way: he was not re-elected; his services, so far as we can see, were ignored.

Dr. Lanahan, it will be remembered, entered upon his office in June, 1868, and discovered the condition of the Concern during the first six months of his administration. In November, 1869, he laid the facts before the Book Committee of the Methodist Church at their annual meeting. After investigation, the Book Committee decided that there had been "great mismanagement" and "serious losses." The Book Committee again met in January, 1870, and reversed its former decision, asserting that there had been no frauds, no mismanagement, and no losses proved. From this time on the man really upon trial was neither Porter nor Hoffman nor Goodenough, who were charged with malfeasance, but Dr. Lanahan. Goodenough sued him for slander, and Lanahan asked leave of Dr. Carlton to take the books into court. This was refused him, and he then proceeded to obtain them through his counsel. For this he was tried by the Book Committee, and removed from office, but was saved from ejection by the action of one of the bishops, who had the right of veto. The church journal, of which he was the junior publisher, was of course used in sustaining the opinions of the editor and senior publisher, and he was not permitted to present his own case in its columns. The Methodist clergy all over the country came to think Dr. Lanahan a disturber of the peace. In that opinion they assembled at Brooklyn; but so soon as he had an opportunity to speak, they found his case to be so strong that they were obliged to weigh and consider it. The charges, as we have stated, were referred to a special committee, which sustained them, and the report of this committee was unanimously adopted by the Conference. A ballot for book agents was then held, and Dr. Lanahan was nominated, but withdrew his name. Had he consented to run, there was no possibility of his election. Dr. Carlton was an able business man, and for that reason was long retained in his position; yet the frauds which Dr. Lanahan had brought to light in the first six months of his administration had gone on under his eyes for years. The failure to censure him cannot be justified, but it may be easily explained; it is only another symptom of the uneducated virtue, the lax sense of duty, and the enervated justice of the community: "Oh! no, we won't censure him; that would make him unhappy."

The reasons assigned by members of Conference for not re-electing Dr. Lanahan are worth study. They are that his charges have been extravagant and his general behavior "violent." He has been, it is said, "too violent for his own good"; his conduct has been "impolitic, to say the least," and so on. These phrases explain the spirit in which the whole investigation into these frauds has been carried on, and the nature of the difficulties with which Dr. Lanahan has had to contend. As we pointed out when we commented on this matter over a year ago, the feeling which his charges have excited in the body seems to have been not so much horror or disgust or anxiety to learn whether they were true, as grief and indignation over the "scandal" they were sure to cause; and Dr. Lanahan has evidently, from first to last, been judged not as an investigator, but as a stirrer-up of strife. In fact, it is impossible for anybody who has followed the history of the affair from the beginning to resist the conclusion that the ideal church of most of those who have taken part in these proceedings is not a church of unquestioned purity, but a church in which there would be no dissension, and that they would rather bear with the thefts, frauds, false entries, and erasures in the Book Concern, than with the violence and uproar attendant on bringing them to light. We venture to say that nothing more discouraging has turned up in "politics" within the last five years, and this is saying a good deal. For it must be remembered that the Methodist Church is the one Protestant denomination in this country and in England which can be said to retain any firm hold on what is called the masses. It is the only Protestant denomination which, in any country, enters into anything like real competition with the Church of Rome in bringing religion home to the common run of men as a rule of daily conduct. It is said to muster over 12,000,000 members, and it grows apace. The spirit by which such a body is animated is, in our day, of the last importance. It must, of course, have its vices, like all organizations made up of men, but it is rather disheartening to find that they are the very vices of the society which it is expected to reform.

The great vice of our time is not licentiousness, as was that of ancient Rome, or highway robbery, as was that of the Middle Ages. It is simply cheating and stealing, and the necessary accompaniment of lying. The business world is acknowledged to be in a bad way in this particular field of iniquity; and if we are not mistaken, the weaknesses, base compliances, rascalities, and frauds of business men are a favorite pulpit topic at Christmas, Thanksgiving, and other great Christian feasts and anniversaries. One would, therefore, naturally expect that when the Church undertook to do business—that is, to buy and sell and manufacture commodities—it would do it in a way that would furnish business men with a model. The Catholic Church has, of late years at least, been on this point purity itself. It gets money in some queer ways, but its accounts will bear examination. The quarters of the servant girls go where they were intended to go without sticking to anybody's palms. Doubtless rogues sometimes turn up among the administrators, but they disappear under swift and savage condemnation. There is a careful avoidance of scandal and prodigious mystery about the machinery, but there is no tenderness for a thief. People thought they might expect the same spirit from the Methodists, but they have been disappointed. The Church went into business in the Book Concern, and achieved a prodigious success, but Satan got hold of the books, and falsified the entries, stole goods and sold them on his own account, pocketed commissions to which he was not entitled, and, in fact, reproduced on a small scale the very operations he was carrying on in the City Hall. When Dr. Lanahan got in, he found him out and collared him, and was trying to drag him to the police-station, but the old culprit was actually able to get the clergy and laity about him, persuade them not to examine his books or the contents of his bag, and to give his accuser into custody on a charge of brawling and disorderly conduct.

ENGLAND.

LONDON, May 17, 1872.

We are at the present moment waiting with some anxiety to know what will be the action of the United States Senate upon the Supplemental Article to the Treaty. Its ratification would of course give general satisfaction, for everybody of common sense desires that so troublesome a question should not be kept open, and everybody possessed of no more than human powers of patience is beginning to get considerably bored by the discussion. Of more exalted motives for desiring to avoid the breakdown of what seemed to be so promising an experiment in international politics, I need not speak. In fact, all that can be said is too obvious to be worth saying. The general feeling is that both countries really wish for a settlement, and that under such circumstances the settlement is probable if only the statesmen on both sides show common sense and ability. Unluckily, that "if" is considered to be a very large one.

Meanwhile, we are trying to amuse ourselves during the Whitsuntide recess; and except that a steady cold drizzle has been descending for the last fortnight, we are as happy as we can expect to be under that melancholy process. The inferior topics which are ordinarily lost in the blaze of politics will now begin to attract attention. The claimant to the Tichborne estates, for example, has been trying again to earn sympathy in the character of the rightful heir, kept out of his estates by the devilish designs of his relatives. He has been stumping the country in the neighborhood of his ancestral hall, where the tenantry all religiously believe in him, and raising funds for his defence against the charge of perjury. The case bids fair in one shape or other to outlast the litigation about the *Alabama*. Most people, however, require fresher topics of interest from their newspapers. Just at the present moment, to take a subject at random, we are having a little excitement from a vigorous artistic skirmish which is raging in the *Times*. The mediævalists and the renaissance architects are at open war. The discussion about the new law courts brought out the fact that English architects at large are agreed only in considering their art to be in a thoroughly unsatisfactory state. Unluckily, they differ radically as to the remedy to be adopted, and the proposed completion of St. Paul's Cathedral has given them a very pretty ground of quarrel. The committee who are endeavoring to raise funds to complete the internal decorations in accordance with Sir Christopher Wren's original designs, have decided by a majority of one to entrust the task to Mr. Burges, one of our best-known revivalists of mediæval architecture, and who is reported to have said that he regarded Wren's works as an abomination. The architectural merit of St. Paul's is a disputed point, although most Englishmen feel that they are more or less bound to stand up for it on patriotic grounds. But good or bad, it does not seem to be a promising plan to entrust it to a man who has been accustomed to work all his life on entirely different principles of art. It is something like requesting Wordsworth to put the finishing touches to an incomplete poem of Pope's. In one way or another, I presume that the committee will succeed in making a mess of the affair. That is only to be expected from a committee. Meanwhile, the warmth of feeling which they have excited is in one sense characteristic. It is remarked that all the clergymen on the committee were in favor of Mr. Burges, and that they only got just enough laymen to join them to turn the balance against the opposite opinion. The two or three exceptions to the general run of lay opinion were of the kind who are more ecclesiastical than the clergy themselves. The clergy have made up their mind to mediævalize not only our churches but society in general; and the further they carry out their plans, the more radically opposed they find themselves to the general run of lay opinion.

A rather curious set of lectures is now in course of delivery by Monsignor Capel. His name, as you may perhaps remember, occurs in the admirable romance of "Lothair," Mr. Disraeli having by an oversight accidentally dropped the *alias* under which he generally passed. He is held to be the best hand just now in helping Romanizing young ladies and gentlemen to climb over the wall into the true fold, and he is therefore a considerable authority in the matter of which he treats—the movement towards Rome in the Church of England. Some of his statements illustrate curiously the remark which I have just made as to the degree to which the Ritualistic clergy have diverged from the general sentiments of their countrymen. Like boys challenging each other to venture upon thin ice, they have gone further step by step until they have blundered into extremes which scandalize even the party whom they are imitating. Monsignor Capel declares, for example, that the Ritualist clergy pretend to an authority over the behavior of their flocks even in purely indifferent matters, as to the company they shall keep or the dress they shall wear, to which the Roman Catholic priesthood make no pretensions. They strain sacerdotal discipline so far, he says, that their victims find the bonds imposed upon them by Archbishop Manning far more tolerable than those to which they submitted from Anglican priests. Such statements are, of course, to be taken after making allowance for the position of the speaker. The number of persons who are weak enough to prostrate themselves to this extent before a Ritualist clergyman must be singularly small. Probably it is only true of a few hysterical young ladies or a lad who has devoted himself to rowing during his academical career to the entire ruin of his brains—for, oddly enough, the extreme High Church clergy seem to be a good deal recruited from the young men who, in the matter of athletic sport, may be regarded as disciples of Tom Brown. In one way or another these enthusiastic persons have arrived at a state of mind which it is very difficult for the laity even dimly to comprehend.

Convocation has just given an interesting illustration of the purely clerical view of things, by discussing at great length the Athanasian Creed. The discussion was, of course, bitter enough, and poor Dean Stanley had to enact his usual part of the Abdiel of the liberal cause. He, indeed, has attacked the Creed so vigorously that some people rather wonder that he can consent to remain in the Church which sanctions its use. The country clergy regard him as an atheist, and, what is worse, as an atheist in disguise, and, worst of all, in the disguise of a thorough gentleman and scholar. His remonstrances, however, appear to have produced a certain effect upon the minds of the clergy. They have not, it is true, encouraged the hope that the Creed might be modified or omitted; they have not even accepted the motion that a remark might be added at the end stating that the damnatory clause don't mean anything in particular; but they have not pronounced so emphatically that any change whatever was altogether out of the question as might have been naturally expected. Indeed, the Archbishop of Canterbury made the rather remarkable avowal, which required afterwards a certain amount of what is called "explanation," that none of the clergy themselves believed the Creed in its literal sense. In short, it is clear from various symptoms that the clergy are beginning to awake to a due perception that the Athanasian Creed, and especially its damnatory parts, are not altogether free from objection. The bulk of the laity reached that conclusion about a hundred and fifty years ago; and it is not without a certain mixture of contempt and amusement that they watch Convocation gradually working itself up to look a little more closely at the subject which terrifies it so much. If it does not hasten the process a little, it will probably find that the world has drifted away from all interest in the matter of any kind whatever.

And yet it would be grossly unjust to deny that the clergy contains not only many hard-working men, but many men of high intellectual distinction. Dean Stanley himself is only a representative of a large number of liberal and enlightened men who would do honor to any persuasion. The peculiarity of the situation is that the Ritualist party have taken advantage of the great latitude of opinion and practice permitted to the clergy to push their extravagance beyond all limits. The party does not contain one man of intellectual eminence, though it has a fair preacher or two; and probably it makes more noise than its numbers would justify. To every proposal, however, to put any restriction on its peculiarities, it replies by threatening disestablishment, and that is a threat which has great terrors for the liberal part of the clergy. Disestablishment can no longer be regarded as a danger existing only in the dim distance; and if any large party within the Church insisted upon it, there can be no doubt of the result. Thus the Ritualists can secure very delicate handling from the party which is most thoroughly opposed to them on principle; and the consequence is that they go on playing fresh pranks, each new leader trumping his predecessor's cards, till their position becomes not a little anomalous. It is impossible to consider them seriously as an important element in English public opinion; but, after the manner of hot-headed people deterred by no considerations of prudence, they may very probably succeed in bringing about a catastrophe in spite of the more sensible majority.

I have strayed pretty widely from the question of the decorations of St. Paul's; and yet it is not perhaps an inappropriate text. The mania for making our buildings and ourselves masquerade in mediæval costume affords a great deal of innocent amusement to those who are infected by it; but both the cathedral and the church are likely to be denationalized in the process.

BISMARCK AND THE POPE.

BERLIN, May 17, 1872.

"IN Germany there can be, and must be, but one Sovereignty, and that uniform and absolute—*The Sovereignty of the Laws.*" This utterance of Prince Bismarck's on the 14th of May, in the Parliament of the Empire, will stand by the side of his declaration in the Prussian Parliament, "This is a *constitutional,* not *confessional,* government," as a waymark of history for this new era of Europe. The doctrine to which the *Nation* is endeavoring to recall the Republican party in the United States—of the supreme and undivided sovereignty of the laws—is proclaimed in an Imperial Parliament made up of deputies from kingdoms and dukedoms, by the Chancellor speaking in the name of the Emperor, and is received with tumults of applause. And when Prince Bismarck went on to say that "whoever regards the laws of his country as not binding upon him personally, puts himself without the pale of the laws and declares himself free from law," and that "the Government would use all the powers committed to it to suppress such audacity against the complete sovereignty of the nation," the loud and long acclamation showed how deep a chord he had struck in the hearts of the people.

For this declaration of the sovereignty of the nation through the laws made by its own legislature, we have to thank the Pope for his rejection of Cardinal Hohenlohe as the ambassador of the German Empire. This question of the Roman Embassy, as it stands, is a pretty game upon the political chess-board of Europe, and looks just now very like a drawn game. One naturally asks himself, Why should the new German Empire, which has accredited an ambassador to the court of Victor Emanuel at Rome, desire to open diplomatic relations with the Pope, whose political sovereignty Germany would hardly care to recognize? The answer is given in the complications that arise from the religious constituents of the Empire and their traditional policy. The Empire is compounded of Protestant and Catholic states, some of which have heretofore sustained very close relations with the Holy See. Bavaria, for instance, still maintains a separate ambassador at the Vatican, and receives a Papal nuncio at Munich. In population, the Empire has, in round numbers, 14,500,000 Catholics to 25,000,000 Protestants, being a percentage of Catholics, 36; in Prussia the Catholic percentage is 33, or 8,000,000 Catholics to 16,000,000 Protestants. So large a Catholic element must be conciliated by a Protestant government; and the policy of Prussia has been to treat the Roman Catholic Church as an organized institution—just as the United States Government persists in dealing with the Indians as a treaty-making power—and to maintain a good understanding with its head at Rome. Thus the remarkable liberty of conscience and of worship which Catholics have hitherto enjoyed in this most Protestant state, though due to the enlightened and liberal spirit of the Government, has also been secured to them by guarantees given to the Pope in exchange for certain concessions or pledges on his part concerning the administration of the Church in Prussia.

But the new order of things has unhinged these arrangements. A great Germanic Empire has sprung into being, under the lead of Protestant Prussia, leaving the old supports of the Papacy dismantled upon either side, and filling the Pope with dismay. To sow discord within that Empire; to prevent its consolidation; to thwart Prussian influence; to embarrass the state with religious controversies, was now the cue of the Jesuits into whose hands the Pope has surrendered his infallible powers. Unfortunately, the immediate effect of what some style "the Idealism of the Liberals" in the constitutional provision for the freedom of the Church, has been to enable the Jesuits to use the Roman Church organization as an instrument of their ends against the state; that is to say, certain state checks having been withdrawn, the Church has precipitated itself with accelerating momentum against the state, and there is no such organized Protestantism to be used as a countervailing force. Hence the problem is, whether to withdraw the state entirely from the reach of the Church, and to keep the Church strictly to its own line, or to compel the Pope to restrain the party that is urging on the collision of the two. In the Prussian Parliament Bismarck declared war upon the Jesuits, and carried measures to their defeat. But it was important not to alienate the Roman Catholic population, nor suffer them to become organized as a political party against the state; and to show that he was not making war upon the Church nor upon the Pope, but only upon the Ultramontane party, which is the avowed enemy of German unity, the Chancellor selected, and the Emperor appointed, a Cardinal of the Roman Catholic Church to represent the German Empire at the Papal See. For popular effect, this was an admirable stroke. Cardinal Hohenlohe is of a noble family; one of his brothers is the Duke of Ratibor, another holds a high military office under the crown. He is a man of ordinary ability, reputed to be liberal or moderate in his Churchism; but no one here believes that the Government would have trusted him with its secrets, or have committed any delicate negotiations to his care. It was the name of the thing; the popular effect of appointing a cardinal to such a post; the appearance of being on good terms with the Pope—this and nothing more. And this has been substantially gained by the nomination, while the *onus* of discord is thrown upon the Pope by his rejection.

It looks as though Pius IX. had counted upon provoking Bismarck to some rash measure of retaliation, for the very terms of his rejection mean war: "In the present circumstances of the Holy See, it is impossible to authorize a cardinal of the Church to accept a charge of so much delicacy and responsibility." These "circumstances" are that the Pope has openly denounced the German Government as an enemy to the Church, and is stimulating his own followers in Germany to revolt against its authority. Of course it would be a "delicate" affair to recognize and so virtually authorize a cardinal as the representative of this hostile power. Not a few in the Reichstag would have resented the Pope's rejection of the ambassador by abolishing the office and refusing any longer to recognize the Pope as a power to be consulted in public affairs. In the end it must come to this issue; but Bismarck is in no hurry. His present policy is conciliation or persuasion, though in recommending this he at the same time lays down principles that must exclude the Pope from further meddling with the inner economy of the German Empire. The new dogma of Infallibility renders it impossible for any temporal power to enter into a concordat with the Pope, unless that power will consent to a position of humiliation which the German Empire at least could never assume. Neither can it be endured that a foreign sovereign should interfere with the internal legislation of the Empire. Henceforth not concordats nor treaties, but the laws, must be sovereign; and while the laws will secure to Roman Catholic subjects every right of conscience, they must in turn obey the laws of the country, to which they in turn owe their first allegiance. The Government will seek to find an ambassador acceptable to the Pope, but upon such a declaration of principles his appointment can only be a formal courtesy toward the Holy See, and his function that of watching against any new mischief which may be plotting at the Vatican.

I saw the other day a photograph of the Pope which, though made in Rome, was evidently taken without his privity. The sacred seat, the pontifical robes, the tiara, the hands outstretched in benediction—all were true to the life; but the face was that of our Wilhelm, King of Prussia and Emperor of Germany, with his white moustache bristling as if for a fight, and the title read: "The German Pope." As a device of Italian wit, it shows also the tone of Italian feeling, which is quite with Germany; and that such a picture is manufactured and widely sold in Rome is no mean index of the situation.

The day following this interpellation upon the case of Hohenlohe was devoted to a discussion upon the Jesuits. Just now the Germans are amusing themselves with that child's play with petitions in which "the American citizen" asserted his "right" so lustily some thirty years ago. The American has bravely outgrown that, and now instructs his Congressman through the mass-meeting and the press, and this failing, he petitions through the polls. But the German citizen is yet in the petitioning stage; he petitioned for and against the school law, and now he is petitioning against and for the Jesuits; for no sooner were petitions started for their expulsion from Germany than the Order got up counter-petitions, and to 38 petitions against them they have secured 333 petitions in their favor! Thus far the good sense of Parliament has refused to countenance measures of proscription, which would only give new life and power to these impalpable and invulnerable enemies of the state; but more than once in the course of the debate was the complete separation of church and state set forth as the only way to rid the state of these religious broils, and to deprive their instigators of the power of mischief to the body politic. The debate continued through two days, and closed with the adoption of the following resolutions:

1. That a *status* (Zustand) of public right should be established within the Empire, which shall ensure religious peace, the parity of confessions, and the protection of citizens against the sequestration of their rights by ecclesiastical or clerical power.

2. That upon the basis of the preamble and Sections 13 and 16 of Article 4 of the Constitution of the Empire, a bill be set forth which shall define the proper standing of religious orders, congregations, and societies, shall determine the question of their allowance and the conditions of their existence, and shall bring within its penalties the "Society of Jesus," so far forth as the doings of that order are dangerous to the state.

3. Finally, to concert with the several governments united in the Empire simultaneous measures for the separation of church and state, as well as of church and school; and thus to prepare the way for removing for ever all religious disturbances from the domain of the state.

These declarative resolutions, adopted by a vote of 205 to 84, are an emphatic endorsement of the policy laid down by Prince Bismarck in his speech on the Hohenlohe case, and practically commit to his hands the solution of the whole problem of church and state, according to opportunities and events.

The dead-lock caused by the strike of the masons and carpenters on the one hand, and the lock-out of the masters on the other, has been brought to an end by mutual concessions; the workmen accepting a moderate advance of wages (one thaler and twenty groschen, or $1 30 gold, being the maximum), and the masters agreeing to employ none but members of the Berlin Unions, and to grant certain privileges on Saturdays and festivals. Upon several buildings, relays of hands are now working by night to make up for lost time. May the multiplication of houses bring us the wished-for reduction in rent!

AUSWANDERER.

Correspondence.

THE PROS AND CONS OF GREELEY.

TO THE EDITOR OF THE NATION:

SIR: While, in common with many others, I was both surprised and disappointed when Mr. Greeley was nominated at Cincinnati, yet, knowing that the sober second thought to which you refer in your issue of May 23 has led a large proportion of us out West to an entirely different conclusion from that indicated by you, I will, with your permission, state as briefly as possible the reasons why so many in this section accept Mr. Greeley and are working heartily for him. I premise that during the past three eventful weeks I have travelled extensively through Illinois and Iowa, and have had many opportunities (not unimproved) of discussing the political situation with the mercantile and farming classes in these States; furthermore, that I am not a sentimentalist, and do not "go for" Mr. Greeley because he is a "philosopher," because he wears a white hat, because he is the "Sage of Chappaqua," or because he is anything else than an honest citizen, fairly (I think) nominated for a very responsible office. In common with many radical Republicans and equally radical Democrats, I accept him as a Presidential candidate—1st, because I place no confidence in the promises of reform made by the present Administration with a view to obtaining a new lease of power.

2d, Because Mr. Greeley is unquestionably a vigorous embodiment of the intense wish of thoughtful men North and South to bury the past and work together in harmony hereafter for the promotion of the common weal.

3d, Because I am a Revenue Reformer, and accept Mr. Greeley's surrender of his personal preferences (deeply rooted as we know them to be) as at once practical and sensible; a surrender gracefully made and entitled to a courteous acceptance.

4th, Because Civil-service Reform *must in the nature of things precede Revenue Reform*; and I believe Mr. Greeley the Editor knows too much of the rottenness pervading all branches of our Civil Service not to realize the need there is for its thorough and speedy purification, and that Mr. Greeley as President, frankly and manfully accepting the Cincinnati platform as his "rule of faith and manners," would prove a more trustworthy reformer than Mr. Grant if re-elected, or than any "statesman" or "gentleman" (and I hope I respect both classes) whom the Baltimore Convention is likely to nominate.

5th, While I would prefer Mr. Greeley's withdrawal and the nomination of a less objectionable candidate by a convention supplementary alike to Cincinnati, Philadelphia, and Baltimore, yet I see no reasonable probability of any such action, far less any reasonable ground to hope that, if taken, it would result more harmoniously than the Cincinnati Convention did. In the event of such action we should certainly have three, probably four, Presidential candidates, and the present incumbent would be sure to retain his seat. Aiming to be a practical reformer, I am willing to waive some of my pet preferences in order to advance the general welfare, and regard any course eminently unwise that tends at this critical moment to divide the friends of reform. Baltimore *must* supplement Cincinnati, in order to give the ideas that brought about the Cincinnati Convention a chance to operate in our national politics. Baltimore assuredly *will not*, if the truest friends of those ideas "go back on" Cincinnati because it was not in all respects what they hoped for, or because in some respects it was as low in tone as Philadelphia or Baltimore can be.

Let me add that I think you take a rather narrow view of the Cincinnati meeting. True, it was called together on the basis of the Missouri "Liberal Republican" platform. But as many earnest Protectionists are equally earnest in behalf of Civil-service Reform (or at least regard the latter as only second in importance to the former), and as, I fear, some ardent Revenue Reformers are not equally ardent in behalf of Civil-service Reform, would it not have been most unwise to repel the one in order to retain the other? Must the party of reform in nowise go beyond the limits of the "few paternal acres" where it first saw the light? Must the growing chicken for ever continue cribbed in the shell?

My letter already is unconscionably long, but I differ so seldom with the *Nation* that when I do differ it seems as if I *must* try and keep it in the right way.

Will you also allow me to add that you are not quite fair in ascribing "heaviness of soul and bitterness of spirit" to the *Chicago Tribune* in its support of Mr. Greeley. Mr. Horace White, I have reason to believe, was among the "surprised and disappointed" referred to above. He has, however, frankly accepted the action of the Cincinnati Convention, and is "working like a beaver" with most encouraging results to ensure the triumph of its candidate. The *Tribune* has too much at stake, both in prestige and capital, to make so stupendous a blunder as the halting support of a dubious Presidential candidate would be; and its cheerful, hearty, and effective endorsement of the Cincinnati nominations, after recovering from its first surprise, is a striking illustration of the manner in which "the sober second thought" is operating throughout the President-making section of our country—the West.

C. J. I.

CHICAGO, May 28, 1872.

Notes.

AS campaign documents we are promised new editions of Greeley's "Recollections of a Busy Life" (E. B. Treat) and Parton's "Life of Greeley" (Osgood & Co.); "A Representative Life of Horace Greeley," by that representative blatherskite, L. U. Reavis, with an introduction by Cassius M. Clay (G. W. Carleton & Co.); and "The Political Record of General Grant," by Nelson Cross (J. S. Redfield).——Among the publications announced by Osgood & Co. are the following: "Woods and By-ways of New England," by Wilson Flagg; "Fifine at the Fair, and Other Poems," by Robert Browning; "Mrs. Scagg's Husband, and Other Pieces," by Bret Harte; Eastlake's "Hints on Household Taste," edited for American readers by Charles C. Perkins; "Art Education, Scholastic and Industrial," by Walter Smith; and "Boston Illustrated."

—The Executive Committee of the Metropolitan Museum of Art desire us to say that the statement which has appeared in the foreign correspondence of the *Nation* and other papers, that the Museum had bought certain paintings at the Gillott sale in London, is entirely incorrect. The mistake arose from the fact that the gentleman who made these purchases has acted as the agent of the Museum in Europe. He made no purchases whatever on behalf of the Museum on that occasion.

—Mr. James Gordon Bennett died at his residence in Fifth Avenue in this city on the afternoon of Saturday last. If amid the conflicting statements made we may take for true the one contained in his own journal, he had reached the age of seventy-seven; but if we measure his age by his labors, he had lived half as long again, for a more devoted and indefatigable worker than he has been for most of his days is seldom seen even in America. He was born of respectable parents, resident in the town of Keith in Banffshire, a poor county of the Scottish Highlands on the shore of the German Ocean. Young Bennett's father resolved on making him a priest, and the boy received the beginnings of an education, first at school in his native village, and next, for two or three years, at a Romanist seminary in Aberdeen, where he learned some Latin and mathematics, and more Spanish, the latter acquisition being destined to be of service to him later, and its influence being even to-day traceable in the screeds of South American telegrams in which the *Herald* still "surpasses all its competitors"—if indeed any of them compete. For some reason or other, probably because he did not recognize in himself much spiritual-mindedness, Mr. Bennett left the seminary, and in 1819, for still other reasons, none of which seems to be known to his many obituary biographers, he set sail for this country, or rather for the Provinces, and landed at Halifax, Nova Scotia. There he gave lessons in book-keeping, service in some shop having perhaps employed part of the time unaccounted for between his majority and his twenty-third year. From Halifax he went almost immediately to Boston, where he was soon in such poverty that for a night or two, if report speaks truth, the Common was his bedroom, and a chance-found shilling gave him the first meal he had tasted in two days. At the end of two years spent in Boston in the bookseller's shop of a countryman of his, Bennett had saved a little money, for he was as canny and thrifty as the proverbial Scot, had none of the almost proverbial Scotch habits of intemperance and social wrangling by the half-day together, and was saving of pennies. From this city he went directly to Charleston, to which city he was taken by a publisher who met him here, and by whom he was employed in translating for a Charleston journal the principal news of Spanish and French journals, which at that time—1823—were full of wars and rumors of wars. Thus far his preparation for journalism, if it had been desultory, had been good. He knew several countries and several parts of his adopted country; he was well up in several languages; he had had a wide personal experience, had undergone several disenchantments, and had developed an enormous self-reliance and a very great readiness with his pen. It is a popular error which our fathers would have wondered at to suppose that he could not write; before the *Herald* had "formed" a set of men who could servilely do a kind of writing which Mr. Bennett did by the natural bent of his talent, he was its most voluminous and effective contributor. In Boston he had seen his employers in bankruptcy because they made books too good for the public to buy; in Charleston he had learned that slavery was to be let alone; and further, had taken a news-gathering hint from his employer of the *Courier*, who kept a fast yacht for getting early news from incoming vessels, in imitation of which Bennett in after-days had his pony expresses and pilot-boats, then his courier-pigeons, and at last his steam yachts and telegraphs; he never made a paper which, as Wills and Lilly's books were, was too good for the meanest intelligence; and he never afterwards did as he did in Boston—sacrifice business to the muses. To get all the news into a newspaper which should thoroughly suit the vulgar mind, and which yet should have so much news in it as to be indispensable to the respectable reader, was by this time pretty clearly before his mind as the object at which the journalist should aim. One more illusion, however, he was to discard. He was not a man of political convictions based on perception or love of any truths of any kind which it was his desire to see established; he was for himself always; but he was not yet rid of the notion, then everywhere accepted, that a newspaper must be an unequivocal party organ. It took some years, some very severe rebuffs, some overthrows which would have been fatal to most men, before this indomitable Scotch free-lance discovered that the only way to be free was to be perfectly free, even to the point of injudicious license and impudent self-assertion; but once having learned it, and being now too old to learn much else, he never forgot it; and from 1835, when at the age of forty he established the *Herald*, no one but he could say that it was to do so and so, and refrain from doing this and that. He made it an independent, impudent news-gatherer, and kept it such.

—That Mr. Bennett did journalism a great service, every one must admit. That he did not render it this service without at the same time doing it great injury, and that the stage in which he left it is not to be forsaken and left behind, no one, we suppose, can rightly deny. Indeed, Mr. Bennett lived to see—or lived so long that he had the opportunity of seeing—that the *Herald* order of journalism is already in great part superseded. If to buy the news and sell it were all of journalism, the *Herald* would not now be held in contempt by all men—and they are an increasing number—who believe that the true province of a great journal is to buy and sell not news alone but news accompanied by such comments as shall help the general public to understand the intelligence each morning spread before it, and shall be of a character to assist "right reason and the will of God to prevail." "The *Herald's* method in journalism," says one of our generalizers, "is to lay before the people all that happens: this is God's teaching." God, however, is not his own interpreter, and the best journalist is not he who dumps most facts before his public, nor yet he who by his comments aims to acquire to himself power and influence in politics or in the gold market, but he who, exercising power in virtue of intelligence and right feeling, uses it to advance the general good with no thought of his own aggrandizement, or even of his journal's, and with much thought for the public. The lesson of Mr. Bennett's career, laborious and successful as it was, is not in the most important respects a good one. In his domestic life and in his relations with his co-workers on the paper which he idolized, he was greatly liked, even loved. We have known of many instances of his great and thoughtful kindness to those who had served him. But he has left behind him a bad example as well as a good one; and to-day, men who can imitate his scurrility and audacity and shamelessness, but not his acuteness, his generosity, his enterprise, his genius for finding out not only the bad and mean things, but also the good things about which the people wanted to know immediately, are doing much to make our profession a disgraceful one, and to give us an impish press as he gave us the Satanic.

—After a long delay, caused by the outbreak of the rebellion, Mr. Quincy Ward's statue of Shakespeare has been put in its place in Central Park. It stands at the southern end of the Mall, and at no great distance from another of Mr. Ward's pieces of statuary, The Indian Hunter. The exercises attending the formal presentation of the work to the Park Commissioners were various and for the most part pleasing, and attracted a large assemblage, some thousands strong, composed of all classes of people, but, on the whole, best representing the great body of the community. It was, for example, an assembly which gave to Mr. Bryant, the orator of the day, such a reception as it must have been pleasant to him to receive, as being honorable to himself and to his fellow-citizens; but it was an assembly which also gave to Mr. Edwin Booth a reception quite as demonstrative as was given to the Nestor of American poets and one of the foremost of American citizens. It is a good deal to say of a miscellaneous representative body that, to its respect for a man and an author, to its confidence in the character of a citizen, to its recognition of a lifelong right employment of eminent abilities, to its pride in a poet whose reputation is a national honor, it gives as warm and hearty an expression as it gives to its liking for a popular favorite, whose name is synonymous with amusement and with such indulgence in romance as the average man can most easily and agreeably allow himself. The exercises consisted of speech-making by Judge Daly and Colonel Stebbins, who recounted the history of the plan to give the Park a monument of Shakespeare; the unveiling of the statue by Mr. Ward and Mr. Wrey Mould, who flung off the American flag which concealed the figure; an oration by Mr. Bryant, who lauded the poet in simple language, and, for a wonder, made a speech with something fresh in it; some of Mr. Theodore Thomas's admirable orchestral music; some singing by the Arion Musical Society, who gave their audience much pleasure; and the recitation by Mr. Booth of a poem by Mr. R. H. Stoddard. The exigency of the recitation may have required the selection of these verses rather than the far better ones by Mr. Bayard Taylor which were printed the same morning in the *Tribune*, and which have a desirable ingenuity, some eloquence, and some elevation, as well as some newness of ideas. It is doing no injustice to the poem which was recited to say that some of its stanzas are too much like some with which childhood made us all acquainted:

> "A gentleman of good account
> In Norfolk lived of late,
> Whose wealth and riches did amount
> To most of his estate."

Literary simplicity is a good thing; but unless it has sound sense and good thought behind it, the work which it produces is rightly described when it is called trivial. This, plain a matter as it is at all times, appears to be now and again forgotten by some of our writers engaged in reacting against the American tendency to fine writing and to intensity of subject and treatment.

—The weather and the Park on the occasion of the giving of Mr. Ward's statue to the city both did their best to promote the enjoyment of the thousands who gathered together on the grass. The weather was nothing less than charming, the sun's heat being tempered by clouds which not only had all the beauty of form and color which have "commendably distinguished the sunsets of the last few days," as we heard a gentleman remark, but which came and went with a changing, checkering effect of sunshine and shadow which added greatly to the life of the scene, whether as exhibited in the foliage and grass or in the gay-colored throng of men, women, and children. It was perhaps an inordinately favorable specimen of Shakespeare's April weather—

> "The uncertain glory of an April day,
> Which now shows all the beauty of the sun
> And by-and-by a cloud takes all away' —

but it recalled the verses to mind as the parasols went up and then down again, and as once in a while there would come a fear of rain which would in a moment or two be driven away by a flash of sunshine brightening every bud and leaf into new and vivid green. The audience was of course orderly and attentive, and it was possible for more people than one would have supposed to hear the speakers, talking as they were in the open air. Mr. Bryant spoke at some length, making his principal point when he remarked upon those philosophers who have thought, or thought that they thought, Lord Bacon or somebody else to have been the man "who wrote Shakespeare." The substance of what the orator had to say on this head was that he had often reflected on the Bacon who was lost to philosophy when this philosopher, Shakespeare, turned his attention to poetry, on the Jeremy Taylor and the Hooker lost to the Church when Shakespeare decided, or circumstances decided, that Shakespeare's preaching was to be done in sock and buskin instead of gown and bands. The ease with which the list might be lengthened—if we leave out of view certain obvious considerations, and if we do not insist too much upon the literal truth of what we say—will strike everybody who thinks of it for a moment, and indicates the real cogency of the argument. Miracles of men we should have indeed, should writing some dozens of "Lears," "Hamlets," "Tempests," and similar trifles turn out to be the amusement of English Lord Chancellors in their leisure moments. We suppose any one in the audience who recollected Bacon's acknowledged verses, weighty but crabbed, while the Arion was singing "Where, oh! where is Fancy bred?" must have marvelled to think that any man could entertain such a theory. Shakespeare, even if he had written no dramas, might have turned a penny by the sale of lyrical poetry, for which, to borrow the language of Sir Andrew, he had the back trick simply as well as most Illyrians, and we can all fancy what a fist of it the Lord Chancellor would have made in trying at the songs; yet a leading professor in a famous law-school imagines himself to have shown that Lord Bacon wrote "Take, oh! take those lips away," and "Full fathom five thy father lies." The explanation may, perhaps, lie in the fact that grave students of the law, tied down more than most other men to strictness of reasoning, yet tempted more than most other men to subtlety and ingenuity, have to be allowed an opportunity to get away once in so often into some region where they can be as far as possible from fact, and may play at will with the faculties which their real work has tasked—where they may be acute visionaries and innocent sophists, with no man to molest them or make them afraid. Thus, perhaps, it is that an able lawyer may be a Swedenborgian in religion; or a Baconian as regards the authorship of the "Midsummer-Night's Dream," or a believer in Monboddo's man. Or shall we give up and say that it is the sane men who do the insanest things? They it is, at all events, who develop most of the insanity.

—A remarkable instance of literary integrity has just been furnished by M. Gabriel Gravier, of Rouen, author of a life of his illustrious townsman, La Salle, which in 1869 took the prize offered by the Société Libre d'Emulation du Commerce et de l'Industrie de la Seine Inférieure. A few months later appeared Mr. Francis Parkman's "Discovery of the Great West," an exhaustive and masterly history of La Salle's career, based not only on documents obtainable in this country alone, but also on researches made by Mr. Parkman personally in France, and—another point on which competition on the part of a foreigner was almost impossible—on a careful and sympathetic reconnoissance of the various scenes of La Salle's activity. This volume fell into the hands of M. Gravier when his own work was nearly off the press, so that he could profit by it only for his final chapters; and he might have contented himself, in the interest of his amour propre, with a brief abstract of Mr. Parkman's narrative that should add little or nothing to what he had himself written. He preferred, however, the more manly and, as he says, the more loyal and patriotic course of publishing a sort of supplement, in which he reviews his own work, comparing it step by step with Mr. Parkman's and doing full justice to the skill and successful perseverance of his literary rival. He prefaces it with a letter addressed to the author of the "Discovery of the Great West," and the French language was never more gracefully employed than in this acknowledgment of the superiority of the American history. M. Gravier exercises an independent judgment in matters not susceptible of demonstration, as, for instance, the extent to which La Salle's misfortunes were attributable directly to the machinations of the Jesuits; M. Gravier being less tolerant of these gentry than Mr. Parkman, and rather disposed to justify La Salle's habitual suspicions of the Jesuit Fathers. In a single point only does he discover an error of fact in Mr. Parkman's work, and that due to an error on the part of M. Margry, Mr. Parkman's informant. La Salle was *baptized*, not born, November 22, 1643. M. Gravier's supplement makes 105 octavo pages, besides nearly 20 more of bibliography, cartography, iconography, etc., pertaining to his subject. We may properly notice here that the Abbé H. R. Casgrain, of Quebec, has published a small pamphlet of 90 pages, entitled "Francis Parkman," in which, with some abatement of praise on account of his want of sympathy with the Jesuits, he says of Mr. Parkman that "Canada owes him a public testimonial of gratitude," and suggests "that the Federal Government cause his portrait to be painted and placed in the Library of Parliament at Ottawa."

—Since Mr. Bright rediscovered the Cave of Adullam, the metaphor-hunters who have taken refuge in it must have quite equalled, both in numbers and variety, its original tenants. In fact, within the past few months they have so overcrowded it that some measure of relief is earnestly to be desired. Its likeness to the Cincinnati Convention ended, as everybody knows, with the mustering of the forces; and a Scriptural parallel for the subsequent action of the Convention has yet to be suggested. Till something better is found, the parable of Jotham (Judges ix. 8–20) may serve, with such interpretation as each reader chooses to put upon it. Slightly abridged, it runs as follows:

> "The trees went forth on a time to anoint a king over them; and they said unto the olive-tree, Reign thou over us. But the olive-tree said unto them, Should I leave my fatness? . . . And the fig-tree said unto them, Should I forsake my sweetness and my good fruit? . . . And the vine said unto them, Should I leave my vine? . . .
>
> "Then said all the trees unto the bramble, Come thou, and reign over us. And the bramble said unto the trees, If in truth ye anoint me king over you, then come and put your trust in my shadow; and if not, let fire come out of the bramble, and devour the cedars of Lebanon.
>
> "'Now therefore,' continues Jotham, 'if ye have done truly and sincerely in that ye have made Abimelech king, and if ye have dealt well with Jerubbaal and his house, and have done unto him according to the deserving of his hands . . . if ye then have dealt truly and sincerely with Jerubbaal and with his house this day, then rejoice ye in Abimelech, and let him also rejoice in you.
>
> "'But if not, let fire come out from Abimelech, and devour the men of Shechem and the house of Millo; and let fire come out from the men of Shechem and from the house of Millo, and devour Abimelech.'"

—A correspondent of the London *Times*, writing from Rome, discredits the popular belief in the archæological and other treasures hidden in the bed of the Tiber, which it is proposed to bring to light by dredging, and even by turning the river into a new channel behind St. Angelo, as part of the municipal plan for expanding the habitable portions of the city. "I am told," he says, "that many old ladies in England are on the look-out for a telegram announcing the disinterment of a seven-branched candlestick from the river's bed; and one of my London correspondents rather irreverently expresses an opinion that the Brazen Serpent would be an acceptable find. I believe there is just as much chance in finding the one as the other." In the first place, he thinks it much more natural for persons wishing to conceal their property from invaders or other foes, to bury it in the earth rather than to fling it almost irrecoverably into a river. That Gregory the Great did not, as has been charged, obstruct the Tiber with statues of the gods and other pagan marbles, seems probable from the fact that this would have invited an overflow of the Tiber, whose inconveniencies were not courted, and which had even, by breeding a pestilence, caused the death of one of Gregory's predecessors. Moreover, the Tiber's bottom has had a good deal of practical investigation. Nothing was discovered by Sixtus IV. when he rebuilt the Ponte Sisto from its foundations. The Ponte Rotto was in like manner three times rebuilt (1549–1598). Water-mills and net-fishing have produced no discoveries, and the baring of the bed in some places in summer has thus far revealed nothing. The disappearance of the enormous amount of statuary known to have existed in Rome in the sixth century after Christ—of which Zaccharia wrote that there were nearly 4,000 bronze statues of emperors and generals, 80 golden and 66 ivory statues of the gods, and innumerable marble statues, not to speak of a host of private possessions of this description—is accounted for by the value of the metal for other purposes and of the marble for making lime. Shocking as it may appear, thousands of statues were broken up to be burnt in kilns, some of which have been discovered since the middle of the last century with sculptured fragments lying about them; and this vandalism was not checked till Pope Paul III., passed a law that condemned to death without pardons persons guilty of throwing torsos or fragments of marble into lime-kilns (A.D. 1534). Finally, says the *Times'* correspondent, there is plenty of evidence that the spoils of the Temple of Jerusalem were removed from Rome, being taken by Genseric, King of the Vandals, to Carthage, and thence by Belisarius to Constantinople. Justinian sent them back to Jerusalem, where they were distributed among various churches.

—No doubt the taste for gardening is rapidly extending in this country and particularly among our women; or rather we may say that their innate taste for flowers and other natural objects small enough to come fully within their comprehension, our American women are now suffered to indulge with a freedom formerly not allowed them. Life in this country has not lost all its material hardness; probably there is no country in the world better fitted by Providence for causing the acute misery and the speedy extirpation of such poets, artists, and persons of like temperament as feel the need of regular rations in the way of aged traditions, and who go into a decline and die for want of ruins—with ivy on them, or "on to them" as we say in the dialect of our own noble land—the vigorous young giant, etc., etc. But some of our grinding utilitarianism we clearly are losing. The honest old farmer of New England who, whenever he had got cross enough over his hard cider, used to call for "bilin water," which having obtained he proceeded to pour over any geraniums or other useless "derned things" which his wife had been cherishing, is a much rarer old gentleman than he used to be, and less "moross." The Western home where a "passel o' dogs" was the principal ornament of the door-yard is not the common sight that it has been in comparatively recent memory. We fear that few of us are building such houses as the average critic of art matters can look at long and remain capable of enjoying his meals—few, indeed, such houses as he can look upon and continue to live; it is but too true, we fear, that nobody could kiss the book and say that the pictures we buy to put upon our walls are not monumental testimony of the moral turpitude, intellectual feebleness, and physical deformity of the miscreant who painted them, the abandoned outcast who bought them, and the miserable liar and thief who acted as the go-between in the infamous transaction. To hear some of the critics in art matters one must fear that the houses and the artists and the architects and the pictures—both the chromo-pictures and those manufactured by the old process—are indeed open to these objections. But our horticulture flourishes, and we imagine we should have to go far enough westward to find the prairie itself in blossom before we should find that the place of the natural flowers has not latterly been much more than made up, in mere number, by those which the cultivator, with his orchards and gardens, has brought in his train. But there is perhaps something to criticise even in so good a movement as this one, which takes our women out into the open air, and sets flowers upon all our tables and about all door-yards, and even dresses in "gay garniture of bud and bloom" the wicked haunts of the office-seekers. They have actually taken "flora"—as a certain contemporary of ours said on Decoration Day—and with them, or it, have decorated the hall of the Convention now in session at Philadelphia. In making our criticism we shall not use the violent language of the art critics, but rather the temperate tone of a late English author who has written a book called "Flowers and Gardens," which Messrs. Strahan & Co. publish, and which is sold by Messrs. Routledge of this city. The writer was a doctor who had a fondness for horticulture, and the criticism which he makes upon his countrywomen is that they are too fond of taking from the florists the elegant and beautiful varieties of flowers which those dealers are unnaturally fond of producing; that they have all gone astray from nature. Why make a garden a theatrical display? he asks. Why in the pursuit of "double" flowers give up the old favorites which have not indeed the charm that a bunch of colored ribbons might have, but which have their own charm of simple beauty in color, of individual expressiveness, and of associations with early memories and with the poetic literature of the language? His view seems to us very sound, and his protest worth making in these evil days, when beyond question we are all going to the dogs together, and when we let the nurserymen make our roses for us, while it is only our aged men who know what a sweetbrier rose looks like. What, we would ask, will be the moral and religious character and what the future in the next world of children who know only of azaleas and the double-poppy of all colors, and never have associated with the gilly-flower and the red single poppy? The dog-rose we may expect to see take care of itself and descend to our posterity, but we suppose the last child has been born who will ever see a sweet-william or look up to a single-hollyhock, or smell southernwood. "Something ought to be done about it."

—The guardians of the municipal library of Bordeaux, which has long had a collection of twenty-one volumes bearing the signature of Montaigne, have lately discovered another on its shelves, a copy of the "Historia Regni Hungarici" of Bonfinius, a large folio, in fine preservation. Apropos to this discovery, *La Gironde* recalls the sale of a copy of Cæsar's "Commentaries," with autograph annotations by Montaigne, to the Duc d'Aumale for 5,650 francs. It had cost its previous possessor 1 franc. Perhaps no book ever yielded a greater percentage of profit.

—The French press still teems with publications relating to the dolorous campaigns of 1870–71, but they begin now to offer a somewhat greater variety than hitherto. By the side of works by such prominent commanders as Bazaine ("L'Armée du Rhin") and Des Pallières ("Orléans"), we have a new *genre* in such memoirs as these: "Réflexions d'un Prisonnier de Guerre;" "La Captivité à Ulm," by the Rev. Père Joseph, who adds a list of the deceased, and two lithographic illustrations; "Six Mois de Captivité à Koenigsberg," by the Abbé Camille Rambaud; "Six Mois en Bavière," by the Abbé Landau; and "Les Prisonniers Français à Kalk et au Gremberg, près Cologne," by the Abbé Deblaye, Professor at the Seminary of Pont-à-Mousson. Some of these chaplains had endured sieges, at Metz and Strasbourg, with the troops whom they afterwards accompanied into captivity, and mingle reminiscences with their narrative; the Abbé Rambaud improved his sojourn in Eastern Prussia to study the manners of the people, and particularly their system of education. Then we have "La Garde Mobile de l'Hérault" at the sieges of Langres and of Paris, and in Algeria during the Kabyle insurrection of 1871; "Histoire Médicale du Blocus de Metz;" "Souvenirs d'un Chirurgien d'Ambulance" at Sedan, Balan, Bazeilles; "Travaux d'Investissement exécutés par les Armées Allemandes autour de Paris;" and the malicious "Mémoires d'une Pendule, Prisonnière de Guerre en 1870–71." Of Victor Hugo's "L'Année Terrible," we intend speaking at some length hereafter. More thoughtful and valuable than any of the works yet mentioned is Valfrey's "Histoire de la Diplomatie du Gouvernement de la Défense Nationale," in two volumes, constituting Parts I. and II. He calls attention to the fact that the Government of National Defence made fewer innovations in the diplomatic service than in any other department, and in spite of the pressure of the clubs and Radical journals left the diplomatic *personnel* substantially unaltered. The credit of this he gives to the Minister of Foreign Affairs, but especially to his representative at Tours, M. de Chaudordy, who succeeded in retaining the support of Gambetta. As a consequence, he says that on this side the Government did little but what was sensible, correct, and patriotic. He blames Trochu for preventing Favre from accepting Moltke's overtures on the 5th of December, immediately after the French disaster at Orleans. To be sure, Trochu was not alone in his opposition, though he was most urgent; but his subsequent assertion that he never had any faith in the siege of Paris as a military operation contrasts singularly with his protestations at that time that victory was certain for the Army of Paris. M. Valfrey's third volume will embrace the capitulation, the armistice, the Treaty of Versailles, the insurrection of March 18, and the Treaty of Frankfort.

—The *Historische Zeitschrift* pronounces Fontane's "Der Deutsche Krieg von 1866" the best library history of that war. A similar compliment cannot in conscience be paid by the Italians to D. Homberger's historical studies on the same event, which have lately appeared in the *Preussische Annalen.* Senator Jacini at least has thought it worth his while to refute them in the same periodical (for April), so far as they concern the Prusso-Italian alliance. It would appear that Homberger's long residence in Italy has not preserved him against errors of fact and misconceptions, which Jacini rectifies with the courtesy and self-restraint characteristic of the cultivated Italian. The Brazilians, on the other hand, give the palm to a German history of their war with Paraguay, over English, French, and American competitors. The first volume of L. Schneider's "Der Krieg der Tripple-Allianz gegen der Republik Paraguay," gives promise of being the fullest and most authentic account of the contest on the River Plate that has yet been attempted. Unlike Minister Washburn, it is no part of the author's object in writing to defend himself, for he was never at the seat of war, and obtained all his knowledge of what took place there from close study and observation in another hemisphere. During the progress of hostilities he was a frequent contributor on the subject of them to the *Militärische Blätter*, *Neue Preussische Zeitung*, *Unsere Zeit*, and other German reviews, and was led by the success which attended a French translation of his articles from the periodical last named to undertake the complete history now begun to be issued. The present volume traces the cause of the war in the history of Uruguay since its independence in 1811, and extends to the passage of the Paraná. Considering the distance at which he wrote, Herr Schneider's accuracy and minuteness of detail are remarkable.

HENRY DUNSTER.*

AS the author of this little biography himself observes, it may seem rather late in the day to be writing the life of a man who has been dead more than two hundred years. But no one who reads his work will think the time and pains Dr. Chaplin has expended upon it thrown away. To all intelligent students of the early history of New England, the lives and characters of the men who laid the foundations of her states will grow more and more interesting as time goes on, and special attempts to set them forth fully and justly will be more and more frequently made. This tribute to the memory of Henry Dunster is an excellent example of the spirit and manner in which such monography should be written. It is justly eulogistic of the admirable qualities of its subject, and rationally indignant at the harsh treatment he received because of his religious opinions, and yet not unfair to those who conscientiously administered it, looking at their conduct as nearly as may be in the light of the days in which they lived rather than in that of our own. We infer that the author is a minister of the Baptist denomination, who was naturally moved to put in a popular form adapted to the use of the general reader the virtues and sufferings of one of the early confessors of the faith he holds. This task he has done in no sectarian spirit, and the result is a work which persons of all religious opinions may read with interest and profit.

---

* "Life of Henry Dunster, First President of Harvard College. By Rev. Jeremiah Chaplin, D.D." Boston: J. R. Osgood & Co. 1872.

The time and place of the birth of Dunster are not ascertained with absolute certainty. It is probable, however, that he was born in or near Bury, in Lancashire, about 1612. He came of a Puritan stock, and the religious element of his nature was very early developed in him—so early, indeed, if he really began to concern himself with religious matters at four years of age, that it is singular he did not share the early doom of those good children whose fate is regarded as a warning rather than an example by impenitent infants with a vocation to play rather than piety; but his boyhood and youth naturally felt the influence of the religious atmosphere in which he grew up, and his mind was easily directed to the contemplation of serious things. One of his greatest temptations was "an inordinate desire of humane learning," which he apparently regarded as coming from the adversary, and doubted whether he should not pray not to be led into it. We know that some of the Fathers of the church considered that the heathen poets were possessed of devils who spoke through them harmonious oracles, with malice intent towards mankind. Undismayed by this patristic warning, the late Thomas Moore, in an article on "Boyd's Father" in the *Edinburgh Review*, ventured to long for the vision of "the ample wings of fire on which the demon of Pindar soared aloft, or the laughing eyes of Horace's familiar, or even the sardonic grin and pointed tail of the short devil of Martial." And he even went so far as to promise them, if they only would return and possess contemporary poets, that, for fear of accidents, not a saint should be allowed to come near them! Dunster, doubtless, encountered those seductive imps in a more reverend spirit, and compelled them to serve him instead of being carried away by them. This conflict, if such it were, was had chiefly in the halls of Magdalen, on the banks of the Cam, which he entered when about fourteen. Milton was his contemporary at Cambridge, though as he was of another college and four years his elder in age, and two in academic standing, it is to be feared that there was no personal intercourse between them. Still the freshman may have seen his handsome senior meditating the muse under the old trees or by the riverside, though without discovering the halo of immortality encircling that beautiful head.

After graduating Dunster probably took orders and preached awhile in England. The condition of ecclesiastical and political matters there, however, was not such as to make it a desirable if a safe residence for ministers who were unwilling to take their complexion from Lambeth and Whitehall. He accordingly emigrated to New England, and landed in Boston in the summer of 1640, and lived for awhile "on his own estate at the Northeast corner of Court and Washington Streets." He must have found a house ready built, as he was called to the presidency of the college almost immediately after his removal. Boston must have been a large place at that time, with its three hills "feathering to the top," the circumambient Charles with the beautiful heights beyond it, and the bay studded with wooded islands in the distance. It was but a village of thirty or forty houses, but never was there a village of such size which had such a society of able and learned men, many of them graduates of Cambridge and Oxford, who had come into the wilderness that they might worship God according to their consciences. John Harvard had just before been the occasion of erecting a college upon the foundation of the school established at the first emigration. The gentle and polished Dunster was at once selected as the first president of the infant university, and a blessed successor of the brutal Eaton, the "plagosus Orbilius" of the grammar school, who carried his cruelty to such an extent in those days when the Rod was a part of religion, that he was fined a hundred marks besides damages to the injured lad for one of his punishments. The use of corporal punishment, however, remained in force for all the rest of the seventeenth century and lingered along a good way into the eighteenth. President Dunster organized the instruction of the college into the system which continued in force for more than half a century. A large part of the actual instruction doubtless fell to the share of the President, with the assistance of the resident Fellows. The number of students, however, was not very large in these early days. The whole number of graduates during the presidency of Dunster of fourteen years was but about seventy-five, and the number under instruction in any one year varied from about fifteen to thirty. The teaching was very thorough, according to the ideas of those times, and probably no better scholars were made at either of the English universities. Besides his duties as a teacher, he had to see that the students had their meat in due season, and to look after the steward, butler, and cook. Moreover, the college printing-press, the only one in the country for many years, was set up in his house, and he had the charge of superintending it. He therefore certainly did not eat the bread of idleness, though he had trouble enough at times to get the wherewithal to provide any bread at all. Evidently he had some private means of his own, which he did not spare in the service of the college. His salary was often in arrear, once for two years together, and when paid it was by transfers of town-rates which he had the trouble and expense of collecting. The obligation which the college is under to the self-denying devotion of President Dunster to its interests during these first struggling years of its infancy can hardly be overstated.

His singleness of mind and unhesitating obedience to the dictates of conscience were soon put to the severest test. He had worked out for himself the question as to the proper mode of administering the rite of baptism, and arrived at a conclusion diametrically opposed to the doctrine held by the New England churches. His studies and meditations convinced him that this rite should be administered only to adults, which was then regarded as a heresy of the most dangerous if not the most damnable description. Anabaptism, as it was called by its adversaries, was associated in the minds of that generation with the seditious excesses and frightful immoralities of John of Leyden and the Anabaptists of Münster. Though even the most rigid of the Puritans could hardly have apprehended any such designs on the part of Henry Dunster or Roger Williams, they knew not whereunto this thing might grow, if suffered to take root in common minds.

Besides, the doctrine was in contradiction of a fundamental tenet of their faith, and an essential part of the reform of the Reformation which they had come into the wilderness to enjoy and promote. It was like denying the sacrament of the Last Supper or the divine ordination of the ministry. It was knocking away one of the corner-stones of their temple, and they knew not how soon the fabric might come tumbling down about their ears. As the integrity of President Dunster's nature compelled him to declare the faith that was in him as soon as he had reached it, first the college and afterwards the colony became too hot to hold him. We have not space to go into all the particulars of his case. After an ecclesiastical conference had failed to convince him of his errors, and he had subsequently preached in Cambridge against infant baptism, though he might have purchased peace at the price of silence, his resignation of his office became inevitable. Moreover, he was presented at the county court for disturbing the ordinances of Christ on the Lord's Day at Cambridge by the sermon just mentioned, and sentenced to receive a public admonition at the next Lecture Day, and to give bond for his good behavior. He was afterwards prosecuted for not presenting his infant child for baptism, though it does not appear that it proceeded to conviction and sentence. He was treated with great harshness and illiberality by the General Court in the matter of the balance due him, which, indeed—and then but in part—was only paid after his death to his widow. Soon after his compulsory resignation of the presidency, Dunster removed to Scituate, within the limits of the Old Colony, where a milder spirit of toleration prevailed. There he found a very excellent society of more liberal emigrants than those he had left, and there he spent the rest of his life, refusing an invitation from Henry Cromwell, then Lord Deputy of Ireland, to remove to Dublin; and there he died in February, 1659. He was removed to Cambridge, by his own desire, and buried under the shadow of the college he had helped to establish and which he loved so well. His grave, which had been forgotten in the lapse of time, was rediscovered about twenty-five years ago, the skull, covered with an abundance of auburn hair, still remaining entire. The remains were reverently reinterred, and a simple monument, with a new Latin inscription by Mr. Charles Folsom, placed over them by the President and Fellows of the University.

Dr. Chaplin has judiciously compressed his materials within the space of one small volume, easy to hold and pleasant to read, which will reach many more minds than one of more ambitious dimensions. It will do a good work in bringing so admirable a character and so great a benefactor of our oldest university to the knowledge of many persons who would otherwise have known little or nothing about him. Whatever degree of importance they may attach to the particular doctrine for which Dunster endured persecution and loss, they cannot withhold their meed of admiration from the fidelity to conscience which made him encounter them with courage and cheerfulness. To the upholders of that dogma, however, the world is indebted in the past for much help in the vindication of freedom of thought and opinion; and it would ill become the modesty that belongs to true liberality to disparage a religious tenet which is regarded as vitally important by scholars and thinkers of the eminence of Dr. Wayland, Dr. Hackett, and Dr. Sears. But Dunster is not to be claimed as its confessor by any one communion of Christianity. His name and example belong to mankind.

TICKNOR'S SPANISH LITERATURE.*

SPANISH literature, prior to 1849, was known generally only by one masterpiece, "Don Quijote," a book universally talked about, little read, and not at all understood, whose merits were underrated, and whose defects were exaggerated in the poor translations palmed off on an ignorant public. The Spaniards themselves were responsible to some extent for this ignorance of their literature. They had not the fortune, it is true, to number among their modern writers such names as Goethe and Schiller, but they possessed in their older literature treasures equal to any produced in modern times, and which they suffered to lie hidden in rare books, or locked up in mouldering manuscripts. Spanish books, always rare, became doubly so after the French invasion, a part of whose ravages reprints have only lately begun to repair. With the loss of political power Spain dropped back into the isolation of the Middle Ages, rarely visited even by the curious tourist, who of course magnified his own courage by exaggerating the perils through which he had been called to pass in that semi-barbarous land. There is a poetic appropriateness in the fact that it has been reserved for Americans to rediscover Spain, and to display the treasures of a great national literature to an admiring world. We will not dwell on what Irving and Prescott have done—their labors are recognized everywhere—but hasten to the subject of this notice. To appreciate the full value of Mr. Ticknor's "History of Spanish Literature," it will be necessary to consider what had been done in that department before him, and to what extent he is indebted to others in his great work.

The only complete history of Spanish literature by a Spaniard was the "Bibliotheca Vetus et Nova" (Madrid, 4 vols., 1787–1788) of Nicolas Antonio, a learned Benedictine monk, a work of immense erudition, but ill digested, and valuable only for reference. Several incomplete histories of particular periods or departments also existed: Casiri for Arabic, and Castro for the Jewish literature of Spain; Andres in his "Stato actuale d'ogni Litteratura" (written in Italian) gives an incomplete general view of Spanish literature. Poetry had an apology for a history in the worthless work of Velasquez, a beginning of something better in Sarmiento (who never got beyond a first volume), and owes a great debt of gratitude to Sanchez, who rescued the poem of the "Cid," and other works written before the fifteenth century, from oblivion, and gave the first impulse to the study of early Spanish literature. Italy had a defence of Spanish literature written by Lampillas (a Catalonian, however), which served in its day to remove prejudices against an almost unknown literature, while Signorelli, in his "Storia Critica dei Teatri" (Naples, 1787), gives a careful and tolerably correct history of the Spanish drama. In Germany, prior to 1804, the only work containing more than disjointed notices of separate authors was a translation, with annotations, by J. A. Dieze of Velasquez' "History of Spanish Poetry" (Göttingen, 1769). Velasquez, as we have said above, is utterly worthless, and even the notes of Dieze, which show for that time an immense reading and research, could impart but little value to an incomplete, ill-arranged, and absolutely uncritical work.

The impulse to the study of Spanish literature in Europe was given in 1804 by a German, Friedrich Bouterwek, in his "Geschichte der Spanischen Poesie," which forms part of the great work planned by Eichorn, the "History of Arts and Sciences from the Renaissance." Bouterwek was a man of large views, correct taste, and great learning, the faults of his work being almost entirely "sins of omission." He was unable to procure the large number of rare Spanish books necessary for his work, and consequently either omitted many important authors or gave incorrect views of them based on incomplete extracts from their works. In 1811, Sismondi delivered at Geneva a course of lectures on the literature of the South of Europe, resting entirely as regards Spain on the work of Bouterwek, and consequently sharing all its imperfections while lacking its fulness. Both Bouterwek and Sismondi were translated into Spanish with important additions, and also into other languages. Augustus Schlegel, in his lectures on dramatic art (Vienna, 1808), bestowed the most extravagant praise on Calderon, whom he exalted to the side of Shakespeare. The romantic school found food for their feverish minds in the gorgeous romanticism of Spain, which resembles that of the Schlegels much as Raphael resembles Overbeck. The mine had now been fairly opened, and ever since the German press has teemed with works relating to Spanish literature and written by such scholars as Ferdinand Wolf, Lembke, Hoffmann, Brinckmeier, etc., etc.

Great as were the services rendered by Bouterwek, his glory was destined to be eclipsed by the greater good fortune of an American scholar, who was enabled to avoid all the faults of his predecessors, and produce a work which will always be a monument of scholarship, good taste, and industry. Mr. George Ticknor, with the details of whose life we are all familiar, became in 1820 Professor of French and Spanish at Harvard College, which chair he filled for fifteen years. He went abroad for the second time in 1835 for the purpose of collecting Spanish books. On his return, three years later, he began his history of Spanish literature, which occupied him eleven years, and was published by the Harpers in 1849. Its success abroad was immediate and great; it was translated into Spanish, German, and French, and was reprinted in England. It has, without opposition, been received as the standard work upon the subject, and probably will remain such; for the great work by Amador de los Rios ("Historia Critica de la Literatura Española, Madrid, 1861-70," nine vols. so far published) can never take its place, and will only be regarded as a work valuable for reference in minute investigations. Mr. Ticknor's success at home has not been less brilliant. A second edition was called for in 1854, a third was issued in 1864, and the fourth, "corrected and enlarged," is now before us.

That there should be faults in a work so extensive is natural and unavoidable; but the faults, with scarcely an exception, may be referred to the peculiar disposition of the author. He is seen at his best in his treatment of such literary magnates as Cervantes, Lope de Vega, Calderon, etc. His defects are most apparent in his treatment of purely poetic subjects—Gongora, for instance, a true poetic nature, whose ballads are unrivalled for simplicity and tenderness, and should temper the harsh judgment of his later works. The little good Mr. Ticknor sees in him he coldly praises, and overwhelms him with ridicule for falling into the bad taste which reigned at that day, not only in Spain but also in Italy, where it produced Marini. A more striking example of insufficient justice is Ruiz de Alarcon, the great dramatist, who was ridiculed by his contemporaries for a personal deformity, neglected in his lifetime, but imitated by Corneille and enthusiastically praised by the critics of to-day. Mr. Ticknor can devote but four pages to one whom he ranks "with the very best Spanish dramatists during the best period of the national theatre," and eight lines only are given to "How to gain Friends" ("Ganar Amigos"), one of the most remarkable plays in the whole Spanish drama. These remarks are not made in a carping spirit, but as a hint to the student of what is comparatively the weak point of a great and valuable work.

The new edition, announced as "enlarged and revised," is in some respects no improvement on the edition of 1864 (the third), which was beautifully printed on excellent paper, and of most convenient size. By the use of larger type and coarser paper, the former three duodecimo volumes have been swelled to octavos, while in order to avoid the task of re-indexing the whole, the pagination of the third edition has been preserved by the awkward device of marginal numbers. The editor states that "the present edition is a reprint of the third, with such corrections as were made by Mr. Ticknor during the last eight years of his life." This is followed by the extraordinary statement that "the present edition brings the history of Spanish literature down to the present date, containing all that the most careful and vigilant research could gather in aid of the subject." The date attached to the note from which the above is extracted is September, 1871. The reader will be disappointed to find that the present edition leaves Spanish literature precisely where all previous editions have left it, where Mr. Ticknor himself intended to leave it, at the close of the reign of Ferdinand VII. (1833). If the editor means all that relates to the *history* of Spanish literature, results of recent investigations, etc., he is not more correct. For instance, the "Historia Critica de la Literatura Española," by Amador de los Rios, would, we think, be generally regarded as a work worth mentioning, and Mr. Ticknor in the third edition devoted nearly a page to it (vol. iii. p. 460). On referring to the last edition, we find in the index a reference to the "Historia Critica" same page as above. But on turning to the new edition, the reader is perplexed to find that it has only four hundred and fifty-five pages. If he owns the third edition, however, he will find it on the right page, together with other information respecting recent publications relating to Spanish literature, information only partially transferred to the fourth edition, and erroneously indexed. A number of other valuable works are omitted in like manner and for the same reason.

Such carelessness is to be regretted in a work on which the author spent such minute care. Mr. Ticknor, we are told, always kept a copy of the book on his study table, and noted on the margin such improvements and changes as his constant reading suggested. It is from this copy that the present edition has been prepared, and it is interesting to examine the changes made down almost to the last years of his life. A careful examination reveals fifty-seven additions to the notes of the first volume, and about the same in each of the others. Sometimes only a word has been changed, as on page 394 (vol. i.), where "a copy of the edition of 1535" (as it stood in the third edition) is altered to "*my* copy of the edition of 1535"; sometimes a whole page of notes has been added, as vol. i. 71, in regard to the poem of Alfonso Onceno; vol. ii. 20, on the Valdes brothers; and same volume, page 132, an interesting discussion of the various portraits of Cervantes. The new notes are always interesting and often valuable, especially the historical ones relating to the Inquisition (vol. i. p. 418 *et seq.*) The proofs appear to have been carefully read, although several errors of the third edition have been copied. A bad misprint is vol. i. p. 68, "Libro de los Gabos" for "Libro de los Gatos."

---

* "History of Spanish Literature. By George Ticknor." Fourth American edition, corrected and enlarged. 3 vols. 8vo. Boston: J. R. Osgood & Co. 1872.

In taking leave of this history, we are inspired with two earnest hopes: one, that it may be the means of reviving in this country some slight measure at least of interest in a literature so brilliant and full of instructive lessons; the other, that the patient research and exhaustive study of a lifetime, as embodied in this work, may exercise a due influence on the rising generation of American scholars.

WEST POINT UNDERGRADUATE LITERATURE.*

WHOEVER will look over a large collection of the literature produced by undergraduates in our American college publications, will find a principal note of it to be the expression of a great deal of moral aspiration and of enthusiasm not only for the True and the Good, but genuine enthusiasm for right action and the performance of duty. It is all a little vague, to be sure, as it appears in the orations and essays and poems, but it gives a sound as of sincerity, and there is little doubt that, in a majority of cases, the honest intention is realized in the practice of after-life. But side by side with the essays and verses which urge the reader towards good citizenship, towards the justification of Alma Mater by a life which shall reflect honor upon the instruction she has given him, towards playing the man in the battle of life, the investigator in this field of literature will discover a great deal of boyishness, less creditable by far than a puerility of intellectual commonplace, which morally considered is better than a vast deal of the wisdom which, later on in life, the world will have taught the young men. He will discover much of the worse boyishness which consists in thoughtless cruelty, or rather in a deliberate cruelty which takes no thought of the victim. He will discover also a tendency to record the most sentimental friendship; an acute sense, sometimes veiled by a dark cynicism, of the immense importance of the female sex; a frequent keen appreciation of the delight of sumptuous banquets of un-"Attic taste," but "with wine," in the shape of grocery-store liquors; a full belief in the tyrannical character of the teachers set over them; a sacred joy in going as far as possible in the direction of rebellion; and, finally, some lively fun and chaff, some of it vulgar and tasteless, but some of it redolent of the season of youth and high spirits. In some of the periodical literature of our colleges the better sort of these qualities is most fully expressed, in others the worse; but those undergraduate journals which have most of the moral earnestness are apt to have most too of the wooden jokes and *gaucheries*, and, on the whole, the description which we have given may be permitted to stand as a fair general description, allowance of course being made for an occasional really clever thing in verse or prose by some exceptional writer in an exceptional moment. Allowance should be made, too, for the fact that, once in a while, some older person, instead of leaving the magazine to the boys, contributes an article more mature than they could produce.

To a great part of this "West Point Scrap-Book," our general description is applicable. There is plenty of a firm purpose to behave so well in the army as never to disgrace The Point; there is much asseveration that every classmate will be true to every other and that the class shall live in immortal memory; the work of examinations and recitations the reader would imagine to be the one thing which the young men were at The Point to avoid; the regulation musing before the fire is done in the regulation way; Memory and Hope and the third "not impossible she"—the, in fact, "inevitable, irrepressible she"—make due appearance; slang abounds; to prepare suppers in private and wash them nobly down with shaving-mugs full of gin and water seems to be a delightful thing; to be absent without leave, to trick the doctor by lying to him and the faculty by evasion of the statutory penalties, is proper; nothing is commoner than to smoke fearfully at pipes and dream of vacation and of "spooning," which is to say flirting with the inevitable one again, or courting some second inevitable one as a punitive measure directed against the first, or as a means of securing oblivion for a hopeless passion; there is an eager patriotism, a high pride in the future soldier's calling, a confident belief in our army and navy, which it would indeed be strange not to find, but which it is, nevertheless, good to find; and there is—to end our enumeration—an honest faith in the most execrable jokes and a healthy unabashed talent for gushing writing which will go far to reconcile the reader to the bullying and ruffianism, the vulgarity and low tone, upon the traces of which he will now and again come.

Here, for instance, is a brand-new joke which Lieutenant Wood describes as "A Keen from the Mess, Christmas Eve, 1866." A "keen" is a joke:

> [SCENE: Officers' Mess.—"Dad" and "Bobby" "taking a smile."]
>
> *Dad.*—"Did you call for water, Bobby?"
>
> *Bobby.*—"No; just the contrary. By the way, 'Dad,' do you 'savoir' why Mr. Gifford is like necessity?"
>
> *Dad.*—"Why? Because—because—great Scott! I could not guess if I should try till—till—Mr. Swigert should graduate."
>
> *Bobby.*—"Well, because he knows *no law!*"
>
> [*Collapse of "Dad."*]

Quite as refreshing is this passage from an essay entitled "The Last Night in Barracks." "The story is not new," the writer says, "but it has always had, and perhaps will ever retain, a personal interest for one of a high order." This seems probable, as it is the history of the complete blighting of young love, the "priestess of my destiny" being much better fitted to inspire affection than to keep her plighted troth, which in fact she is very far from keeping:

> "Time took to himself cruel wings, and she passed from me, a dream of loveliness. Her picture, once I had; I have it not now, save in my heart, where it is drawn in colors, fadeless and enduring. She passed over the seas, and it were better had she gone before. She might not then have taken with her a richness from the sunlight it has never had since. Many of my heart-friends went with her; Hope and Faith, hand in hand, went out across the world with those little feet, and they came not back again. She was far from me, and I learned, after months of intense toil, that change and silence could divide us by a distance great in comparison with the great circle arcs of our poor sphere. I thought in my musings of the many winter nights, when my light burned into the midnight hours, and when, tired and exhausted, I would look out of my window at the silent, gloomy buildings, and watch the great white stars sweep on in their circles, asking them questions which were answered not. It was well; the stars were kind and—silent! Ah! how that last six months dragged away! The quiet hours of the last night in barracks impressed me; I thought of the wide world with its infinity of pathetic tragedies of everyday life, beside which the tinselled unrealities of the drama are poor and mean. I was soon to take an active part in the affairs of that world beyond the hills that had imprisoned me so long. Memory, looking at the path whence went away from me that beloved and never returning wanderer, told me I should be in the arena of life, alone and without aid. Surely, my musings tended only to bring out the dark shades of sorrow and trouble. Sad-eyed Memory went from my side. I heard the silver voice of Friendship, clear and strong, as the song of the morning lark, 'Look up!' I did so; my eyes rested on Damon. 'Alone!' said I—'never! while I have his hearty honest love.'"

A joke, as we have explained, is called a "keen" at the Academy, and the "Scrap-Book" affords the usual amount of slang, and it is of about the usual credit to the good taste and good sense of those who employ the petty language of the various college yards. "Gutsey" as a name for the fattest man in a class is perhaps rather below the usual level of coarseness, and "Tubs" is not much better in reality, though more decent in appearance; but in general the slang vocabulary of the Point is in only one particular indicative of a worse condition of taste and good feeling than is to be observed at other respectable colleges. That one particular is the violence of epithet which is applied to the "Plebe." Like the Freshman elsewhere, the plebe is the butt of every jester, fatuous or witty, and the victim of every bully, only his treatment would appear to be more systematically rough than that of his civilian brethren. "Animal" is one of his names; "beast" is another; "reptile" another; when "impertinent" he is a "rabid beast"; when "imposed upon, tormented," he is a "devilled beast." We do not know how much of this exaggeration is playful, and how much of it corresponds to the actual facts, but we imagine "hazing" as practised at Yale or Harvard is as much less thorough, constant, and severe than the ill treatment of the Plebes at West Point, as these opprobrious terms which we have quoted are harsher than "Freshy" or "Fresh." At all events their violence is a coarseness.

But after all it would be dangerous to infer much from publications such as this. The good work going on in the undergraduate world is never at all fairly represented by the undergraduate literature in which the lazy and the idle play, if not a large part, a larger proportionate part than their laborious comrades. Still less is the representative likely to be a true one when the production is not a contemporaneous publication, but rather a record of the follies, sentimental and mischievous, of which men, who have now for some time left their college, are more likely to remind each other when they meet, than of the tasks, toils, and discipline which made up nine-tenths of their academic activity. Working for "The Scrap Book," the young man or the old boy remembers to tell of the "run out" to Benny Havens's for a convivial evening, and the narrow escape in getting back to quarters, and forgets the guard-mounts, horse-riding, mathematics, and company drill which transformed him from a raw boy into a well-accomplished young man—not too refined perhaps, nor too well informed, nor too much disposed to become a scientific and accomplished officer, but an undoubtedly good young officer so far as the trade can be taught.

---

* "The West Point Scrap-Book. By Lieut. Oliver E. Wood, U.S.A." New York: D. Van Nostrand. 1871.

Specimens of English Literature, from the "Ploughmans Crede" to the "Shepheardes Calender," A.D. 1394—A.D. 1579. With Introduction, Notes, and Glossarial Index. By the Rev. Walter W. Skeat, M.A., late Fellow of Christ's College, Cambridge. (New York: Macmillan & Co.)—This is one of a series which is issued from the Clarendon Press as school-books primarily, but is well fitted to interest everybody who is interested in the English language and its early literature. It begins where Morris's "Specimens of English" leaves off, and comes down to Kitchin's edition of the first two books of the "Faërie Queene," serving as a sort of guide-book through the great desert that lies between Chaucer and Spenser.

The "Specimens" consists of 356 pages of extracts from 28 authors. They are very well chosen. None of them, to be sure, are of the highest rank, as works of art or genius. There are no diamonds to be found in this desert, little but dry bones. But modern science makes fossil bones more interesting than gems, unless they are of the first water; and these extracts are wisely chosen as being illustrative of the manners and character of the people, their modes of life and thought. The notes are prepared in the same spirit, and direct the attention to historical facts and inferences, so as to enable us to make out from these fragments what sort of a being the Englishman of that day was, and what sort of life he led. This on the whole is a great improvement on the pretty love songs to which the explorers of this period have too often treated us heretofore. There are 120 pages of notes and 60 pages of glossary, all very well prepared, and an introduction of miscellaneous matters for the most part worth treating and well treated. The book is a valuable addition to the series, and will help on the good cause of thorough study of English. We hope it may speedily come into general use, and run through many editions.

There are some changes which would improve it. The text is printed with literal fidelity to early copies, the old irregular spelling conscientiously followed, so that the same word may be spelt in half a dozen different ways on the same page. Now there was nothing which English scholars were more imperatively bound to do than to give the world faithful copies, of just this photographic minuteness, of the remains of Anglo-Saxon and Early English. The importance of the labors of the Early English Text Society cannot be overstated. They furnish the data for all truly scientific and scholarly knowledge of the language. And something may be said in favor of putting such texts in school-books just now to give them wider circulation, and to avoid the adoption of uniform spelling till we know more about the language. But for popular use, and for school-books, a uniform spelling is surely desirable. It requires a new set of habits to read easily in fluctuating spelling. A lad will find one of these pages a heap of stumbling-stones, when he can glide over the same extracts with ease and pleasure in the modern spelling of Ellis. And from a scholarly point of view the perfect editing of a classic implies a well-considered uniform orthography.

The foundation of the thorough mastery of a poem is to be found in accurate knowledge of the metre in which it is written, and the common pronunciation of the words which the poet has woven into the metre. There are few students who do not need help on these points in reading old English poetry. In this volume, Piers Ploughman, Wallace, Chevy Chase, The Nut-brown Maid, and other less familiar selections are worth study as poems, and need for that end notes on the pronunciation and metre as well as uniform orthography.

Some of the remarks in the introduction might mislead. Mr. Skeat, like some other English scholars, makes it a great point to identify Anglo-Saxon and English. It is certainly well to insist that it is necessary to study Anglo-Saxon in order to understand English. The Semi-Saxon is a chaos to one who knows nothing of the older speech, and he must either flounder helplessly about in it, or let his editor lead him at his pleasure. But when it is insisted that there is no break in our literature from Alfred to Victoria, that is too much. All changes come through minor changes, and are gradual; but language seldom falls into a more chaotic state than we find between Anglo-Saxon and English. A new creative era in literature seldom differs as much from the last before it as that of Chaucer from that of Caedmon. Italian does not differ so much from Latin. Chaucer, in everything but blood and the traits that go with it, was much more a literary child of Italy or France than of Anglo-Saxon England.

Mr. Skeat tells us that *th* in *thin* and *thine* was, in the earliest times, probably sounded alike, and as in *thine*. But it was much more likely sounded as in *thin*, since *thine* is the weaker sound, and the regular shifting is from surds to sonants.

He says that French nouns derived from Latin are invariably formed from the *accusative case* of Latin nouns. It is not easy to find *fonds* (from *fondus*) in the accusative *fundum*, *rets* (from *retis*) in the accusative *retem*, *fils* (*filius*) in *filium*, *genre* (*genus*, *generis*) in the accusative *genus*; and when he urges that the etymological dictionaries should cite words by the accusative case as the best to exhibit the form of the stem, he seems to forget that the neuters have the accusative and nominative alike.

A Comparative History of Religions. By James C. Moffat, D.D., Professor in the Theological Seminary in Princeton. Part I. Ancient Scriptures. (New York: Dodd & Mead. 1871. 12mo, pp. viii., 250.)—Not many words will be needed to characterize Professor Moffat's work. He writes from the distinctive point of view of the Christian theologian. His production belongs in one class with the attempts to reconcile Scripture and geology; and as there has grown up in the last fifty years a great crop of the latter, so the next fifty will doubtless call out a host of these reconciliations of the results of the study of religions with current Christian doctrine. Such books have their uses certainly. But as no good manual of geology can be written by one who is thinking more of the first chapter of Genesis and the story of the flood than of the facts themselves of the science; so no good account of the Gentile religions can proceed from one who is all the time trying them by Christian standards, and making them square with Jewish and Christian records. Mr. Moffat nowhere conveys the impression that he is conducting a dispassionate scientific investigation; he is both discursive and fanciful, and his judgments seem strongly tinctured, if not dictated, by prepossession. He sets out with the declaration that "man could not grow into the capacity of apprehending God; he must have had it by creation to begin with"; and he concludes with asserting that "heathenism seems to be the degeneracy, in various ways and degrees, of one primitive religion." There is logical consistency here, at any rate. By an argument, drawn chiefly from the absence of any testimony in Scripture to the contrary, he conceives himself to prove that monotheism and uniformity of worship prevailed among all nations, the civilized world over, as late as between 1500 and 2000 B.C. We can hardly call this less than an astounding misinterpretation and perversion of the facts of history. The tone of his treatment of Jewish Scripture can be gathered from his belief that "such was the length of life among the patriarchs that tradition had but few hands to pass through between Adam and Moses."

It is evident that Professor Moffat's spirit is by no means in harmony with that of the men whose researches in history and ancient literature and anthropology are revolutionizing the hitherto prevalent way of regarding the religious aberrations of mankind. And we think that his presentation of the subject is calculated to satisfy but a small class of readers; most of those who are interested in pursuing it will prefer to take the facts in a purer form, and make their inferences and reconciliations for themselves. To such, Clarke's "Ten Great Religions" will commend itself, as well by its superior freedom of treatment as by its greater fulness.

POPULAR SCIENCE BOOKS.

ASTRONOMY WITHOUT MATHEMATICS. By Edmund B. Denison, F.R.A.S. 12mo, cloth, Pp. 338. With numerous diagrams. Fourth Edition, enlarged. Price, $1 50.

A Series of Books by EDMUND B. DENISON, F.R.A.S., Lecturer on Science at King's College, London, illustrative of the

PHENOMENA OF THE ATMOSPHERE In various parts of the World. 16mo, cloth, price $1 50 each Vol.

I. THE TEMPEST. An Account of the Origin and Phenomena of Wind. Pp. 398. With 79 Illustrations.

II. THE RAIN-CLOUD AND SNOW-STORM. An Account of the Nature, Formation, Properties, Dangers, and Uses of Snow and Rain. Pp. 416. With 62 Illustrations.

III. THE FROZEN STREAM. An Account of the Formation and Properties of Ice. Pp. 270. With 54 Illustrations.

IV. THE DEW-DROP AND THE MIST. An Account of the Phenomena and Properties of Atmospheric Vapor. Pp. 358. With 65 Illustrations.

Any of the above sent post-free on receipt of price to any part of the United States.

POTT, YOUNG & CO.,
Cooper Union, New York.

JUST PUBLISHED.

ELEONORE.

A Romance. After the German of E. VON ROTHENFELS, author of "On the Vistula," "Heathflower," etc. 12mo, fine cloth, ornamented. $1 50.

A NEW COMMENTARY,

CRITICAL, EXPERIMENTAL, AND PRACTICAL,
ON THE
OLD AND NEW TESTAMENTS.

By Rev. Drs. Robert Jamieson, A. R. Fausset, and David Brown. To be completed in six volumes. Royal 8vo, With 14 Colored Maps. Per volume: extra cloth, $5; sheep, $6. Each volume sold separately. Volume II. Joshua—Esther. 650 pages. With Two Maps. A new volume will be issued every other month until completed.

"I regard it as the best upon the entire Bible which is known to me."—Rev. W. H. Green, Professor of Theology, Princeton.

PHILADELPHIA

AND
ITS ENVIRONS.

A Profusely Illustrated Description of the City and its Surrounding Points of Interest, embracing Fairmount Park. With nearly One Hundred Engravings. Beautifully printed on toned paper. 8vo, paper cover, 50 cents.

"We know no work that gives so full and so accurate an account of the advantages offered by Philadelphia, both as a residence and as a seat of manufacturing industry. Its illustrations are engraved in the highest style of art."—Philadelphia Ledger.

RECENTLY PUBLISHED.

"IT IS THE FASHION." A Novel. From the German of Adelheid von Auer. By the translator of "Over Yonder," etc. 12mo, fine cloth, $1 50.

"A more natural and graceful book of its kind we have never read."—Richmond Dispatch.

MINNA MONTE. A Novel. By "Stella." 12mo, extra cloth, $1 25.

THE VOICE IN SINGING. By Emma Seiler. A New Edition, Revised and Enlarged. 12mo, extra cloth, ornamented, $1 50.

COMING TO CHRIST. A Poem. By William S. Green. 12mo, fine cloth, 75 cents.

SCIENCE OF WEALTH. A Manual of Political Economy. By Hon. Amasa Walker, LL.D. Student's Edition. 12mo, extra cloth, $1 50

"Our country has produced no work on the subject that is better worth reading."—The Nation.

For sale by Booksellers generally, or will be sent by mail, postage paid, upon receipt of the price by

J. B. LIPPINCOTT & CO., Publishers,
715 and 717 Market Street, Philadelphia.

THE GREAT ITALIAN,

JOSEPH MAZZINI.

His Life, Writings, and Political Principles; chiefly from autobiographic sources; with a Portrait, and an Introduction by William Lloyd Garrison. Crown 8vo, pp. 400, cloth, extra, $1 75.

This is a new book, prepared since Mazzini's death, and will attract wide attention by its brilliancy and vivid picture of revolutionary scenes and its noble ideas. Eighty thousand people followed Mazzini to his grave, and the newspapers are having frequent reminiscences of him. Every one is enquiring who this man was who is pronounced by some the greatest man of the age.

A SATCHEL GUIDE.

A SATCHEL GUIDE, for the Vacation Tourist in Europe. 16mo, pp. 200, flexible full roan, red, $1 50.

This Guide has been prepared with great care for those who wish a handy book for reference on a short trip to Europe. It contains everything that one can require, that a guide can give, for a tour through Ireland, England, Scotland, Belgium, Germany, Switzerland, and France. It has memoranda pages and expense account pages, and will be an invaluable *vade mecum*. It is the cheapest and most thorough general guide in the market.

For sale by all booksellers. Sent free of postage on receipt of price, by the Publishers.

THE UNDERGROUND RAILROAD.

AMESBURY, 10th 3d mo., 1872.

I have looked over the advance sheets of my friend William Sill's History of the "Underground Railroad," and judge, from a hasty examination, that he has done justice to his deeply interesting subject. The story of the escaped fugitives—the perils, the terrors of pursuit and recapture—the shrewdness which baffled the human blood-hounds—the untiring zeal and devotion of the friends of the slave in the free States, are well described.

The book is more interesting than any romance. It will be of permanent value to the historian of the country during the anti-slavery struggle.

I cheerfully commend it to the public favor.

In imperial 8vo, double columns, price $8, handsomely printed in a new, clear, old-faced type,

A DICTIONARY OF ENGLISH ETYMOLOGY.

BY HENSLEIGH WEDGWOOD.

Second Edition, thoroughly revised and corrected by the Author, and extended to the Classical Roots of the Language (with the assistance of the Rev. J. C. ATKINSON, Author of the Glossary of the Cleveland Dialect).

With an Introduction on the Formation of Language.

In preparing this Edition the Author has had the benefit of the learned and very judicious annotations of Mr. George P. Marsh in the American Edition of the First Volume of the Dictionary, which have in many cases led to the adoption of his views. Attention has also been given to the criticisms in the Etymological Dictionary of G. Müller (Köthen, 1865-7), and to the scattered suggestions on the derivations of words which occur in various periodicals. Wherever the etymology of the First Edition has been materially altered, the word is marked with an asterisk. In deference to the judgment of respected friends, the etymology of words of classic derivation, which in general were omitted in the First Edition, has been concisely inserted in the present work.

The Nation.

NEW YORK, THURSDAY, JUNE 13, 1872.

The Week.

THE Philadelphia Convention did what everybody knew it would do in renominating General Grant, and did it with much elaborate "enthusiasm" on the first ballot. There was, however, a contest over the Vice-Presidency, the mind of the party not having been made up on that point, and Mr. Colfax having lost "his hold on the masses" by declaring he was going into business, and giving up political life, and afterwards letting it be understood that he was not sure that he was going into business after all, and that he did not know but that he might be induced to stay in political life a little longer. The platform is a most extraordinary production, on which we have commented elsewhere, and, if it was not for Greeley's presence in the field, would surely be visited with severe punishment. The basis of it, it is said, was furnished by Mr. G. W. Curtis and Dr. G. B. Loring, but afterwards Wendell Phillips, S. B. Cummings, and Henry Blackwell, husband of Lucy Stone, got a chance at it, and made it the wonderful thing that it is. Wendell Phillips and Cummings supplied the Labor Plank, and Mr. Blackwell the Woman Suffrage Plank. The dupes especially aimed at by the whole document are thirteen in number: 1. Man. 2. Colored man. 3. The Irishman. 4. The German man. 5. The Free-Trader. 6. The Protectionist. 7. The States-Rights man. 8. The Centralizer. 9. The Capitalist. 10. The Laborer. 11. The Moderate Drinker. 12. Woman. 13. The Opponent of Female Suffrage. 14. The Advocate of the Female Suffrage. The President has accepted the nomination in a modest and sensible letter, which was probably written by himself, but which contains nothing worthy of note except the confession that "past experience may guide him in avoiding mistakes inevitable with novices in all professions and occupations."

The nomination of Mr. Wilson at Philadelphia was one for which he has worked hard, and we do not know that many people will begrudge it to him. He has been, all things considered, better than the majority of our public men with whom he has so long been associated. Circumstances also worked for him at the very last, for no doubt the Natick cobbler was strengthened as a candidate by the labor movement in this city, by the candidacy of the woodchopper and practical printer of Chappaqua, and by Mr. Sumner's speech. A desire to rebuke Mr. Sumner and, at the same time, compliment Massachusetts and New England, was no doubt influential in securing a majority of the delegates. The only objections that we see urged against him are on the general ground that he is purely a politician, no statesman, and given to time-serving, and on the special ground that he ought to be odious to the Germans, as having been a leader among the Know-Nothings. The Germans, however, probably know that Mr. Wilson was a Know-Nothing for strictly personal reasons, and has not, and never had, any fiercer hatred of the foreign-born citizen than was requisite for a struggling young politician with his way to make in the world. Besides, the Know-Nothing escapade the Germans are intelligent to rate at its true value in the history of our parties, and, furthermore, the intelligent among them know that it is not so small a thing to be an American citizen that a slight apprenticeship may not be perfectly fair and perfectly desirable. The demagogues who, above all things, want voters, and the more ignorant and untaught the better, are much more concerned in mind about the American naturalization laws than either the native American or the respectable and honest foreigner. As to the general objection to Mr. Wilson on the score of statesmanship, the pity is that there are so few men of Mr. Wilson's political standing who are not open to it. In our opinion, Mr. Wilson's name will be found to strengthen the ticket appreciably. It should be recollected in his favor that after twenty years of public life he is a poor man, and he has had very great opportunities to enrich himself had he not been a man of probity. Loftier professions than his have not seldom been accompanied by a practice inferior to his in honesty and honor. We can imagine, by the bye, with what sincere pleasure Dr. Loring seconded Mr. Wilson's nomination. We hope we shall have the pleasure of recording the Doctor's defeat when he and Mr. Butler and Mr. Dawes contend for that seat, or for any other which may be in the market next winter.

The effect of Mr. Sumner's speech has, there can be no doubt, been on the whole highly serviceable to Grant, which makes the circulation of it by the Greeleyites a mistake. They might better reprint a campaign edition of "that able historical work in two volumes," "Il Nipotismo di Roma," showing up the bad behavior of the fifteenth-century Popes. The speech has impressed the graver portion of the Republican party as too labored, heated, rancorous, and exaggerated a production to be of any value as an indictment, while the younger and more vivacious portion have laughed over it till their sides ache. We think it even did much to arouse and stimulate a certain amount of enthusiasm for Grant at Philadelphia. One thing more; to quote, for the purpose of damaging a living man's character, the words of a dead man, uttered to yourself alone, and of which you can offer no proof but your own report, is an offence against good morals as well as against sound rules of evidence. It is an act which ought to be execrable, and would be execrable if it ever seriously injured anybody. In this case it has been singularly harmless, because Stanton's speeches tend to upset Mr. Sumner's statements, and because, although people think highly of Stanton as an administrator, and as a devoted Union man during the war, nobody, or next to nobody, attaches any importance to his judgments on men, for all who had ever any dealings with him know that a more passionate, prejudiced, and, when prejudiced, unscrupulous person in his dealings with others, does not exist. Justice was a quality of which he had hardly a conception; perhaps he was, for that reason, all the better Secretary of War; but do not let us have him called up from his grave as the final judge of anybody's fitness for a great office. One of the curious accompaniments of this incident has been the flutter into which it has thrown the Grant politicians. They have heard the President charged with various serious offences, and seen the charges supported by plain proof, without showing the slightest concern, but, when Mr. Sumner's ridiculous story of the death-bed scene was produced, they flooded the press with contradictions and explanations.

The meeting of dissatisfied revenue reformers at Steinway Hall, the week before last, which resulted in the appointment of a committee of ten to take into consideration the best mode of retrieving the mistakes of the Cincinnati Convention, will probably lead to a conference, about the 20th of June, of leading men of all the elements of opposition to the present Administration. What will come of it, of course, it is impossible to say. Whether anything will come will probably depend a good deal on the indications of the drift of public sentiment during the coming ten days. In these there is, as far as our observation goes, only one change to report, but that is a somewhat important one. There are some decided signs of a reaction against Greeley in some parts of the South, such as Tennessee and Virginia, which may grow rapidly, and may, if stimulated by another nomination at the North, enable the Democratic leaders, who are all at heart opposed to Greeley, to stem the tide at Baltimore. The New York chiefs, such as Belmont and Tilden, who are the most cast down and most disposed to accept the Sage, have been so long accustomed to rely on the Irish vote that its adhesion to Greeley seems to them conclusive. Mr. Belmont has published or permitted to be published, during the week, a letter deploring and "deprecating Greeley," as the reporters say, but accepting him as an inevitable necessity. Mr. Tilden is reported to be in the same frame of mind, and even the redoubtable and valiant Voorhees is said to be greatly prostrated by the result of his speech in Indiana. But there is at the North no visible accession to the Greeley ranks of any men of weight and prominence of any party, on the distinct ground that they consider him, on his own merits, a desirable man for the Presidency; and there is no doubt that the canvass is seriously damaging him in the eyes of the silent mass who do not write to the papers or send telegrams. His "record" is positively horrible, and no man of mark as yet seems willing to go on the stump and defend or explain it. The Springfield *Republican*, which is very friendly to Greeley, acknowledges that he could not explain it himself.

The Senate, the Administration Ring in which was determined to secure some kind of "force" legislation before adjournment, proceeded on Saturday to violate one of its own plain rules, which forbids the amendment of any appropriation bill by any provision not directly relating to the subject of the bill, by attaching a rider to the Sundry Civil Service Appropriation Bill, making the Federal elective law, which is now only applicable to cities of over twenty thousand inhabitants, applicable to all parts of the country on the request of ten respectable inhabitants of the locality. Mr. Anthony, who was in the chair, ruled that this was no violation of the rules, just as the majority of the Robeson Committee declared that the construction of the wording of the act, which was plain as the sun at noon, was something on which lawyers might differ. The result was that the opposition were placed in the position of having either to submit to the rider, or defeat the Appropriation Bill, and they accordingly "filibustered" for hours until a compromise was effected, which sent the bill to the House. Nothing more high-handed has yet been attempted by the majority in either House, and its occurrence so soon after General Grant's nomination by acclamation is not a favorable indication.

The amendment which has created all this uproar was at last passed by both Houses, but is likely to prove in practice of such very trifling value either to the Administration or anybody else, that it is a little difficult to understand the intense and reckless eagerness with which the majority have pushed it. It simply provides that on the demand of ten citizens of good standing, in any parish, county, or Congressional district, prior to any registration of voters, or election of members of Congress, the judge of the United States Circuit Court shall appoint two supervisors of election, who are to receive no pay except in cities of over twenty thousand inhabitants, whose business it shall be to be present at the voting and counting, but who shall have no powers of challenge or arrest. The restriction of their function to simple observation constitutes the concession of the majority which finally secured the passage of the amendment. The proceedings attendant on the attempt of the majority to force it on the House were so outrageous, that Mr. Kelley, of Pennsylvania, himself an ardent Republican, if there be one in the country, rose in his place and denounced them as "conduct such as he had more than a score of times sentenced men to solitary confinement and penal servitude for" when he was on the bench.

The new Tariff Bill reduces the taxes about $54,000,000, enormously increases the free list, and does not renew the income tax. Among the more important reductions are—bituminous coal from $1 25 to 75 cents per ton; salt in bulk, from 18 cents to 8 cents per 100 lbs., and in sacks and barrels, 24 cents to 12 cents; leather of various kinds is reduced on an average from 30 cents to 22. Lumber comes in largely free. Among the articles on which ten per cent. reduction is made are cotton, woollen, and hair goods, on iron and steel, and manufactures of them except cotton machinery; paper and glass and glassware. On the free list are, first, books which have been printed more than twenty years before the date of importation; books, maps, and charts imported not more than two in any one invoice, for literary or scientific societies or colleges; the libraries of professional men arriving here, and the books of persons and families from foreign countries which have been in use one year before being brought here. Shipbuilding materials are admitted duty free also for ships to be engaged in the foreign trade and not to be employed in the coasting trade more than two months in any one year. The stamps are reduced to one, that on checks, and the collection districts are reduced to sixty in number, sending about 280 collectors and assessors adrift, and "informers" are no longer to have their "moieties."

The eight-hour movement in this city culminated in a procession on Monday which was to have consisted of 35,000 men and to have seriously menaced the public peace, and the whole police force was turned out to keep order. The procession actually consisted of 4,000 men or thereabouts, very orderly, peaceable, respectable, and indeed somewhat sheepish-looking also, and a slight touch of the ridiculous was lent to it by the appearance in it of a delegation from the "International," carrying a red flag, on which was the dread inscription, "Eight Hours' Labor—peaceably if we can, forcibly if we must." The fact is that the three most important bodies concerned in the strike, the piano-makers, cabinet-makers, and sewing-machine makers, are just beginning their dull season, during which in ordinary times employers keep their works going merely to keep their hands together. It suits them therefore well enough to have their men go off of their own accord and live for a month or two on their own savings. Moreover, as regards the piano-makers, those of New York *cannot* add twenty per cent. to their prices without totally losing their business. With the great houses, therefore, like Steinway, the eight-hour question is one of simple calculation; they cannot give way to it, and, if it be insisted on, will have to transfer their capital to some other place or some other field of industry. The men who really have the employers at their mercy are the masons, bricklayers, and house-carpenters. This is their busy season, and the bosses are mostly working under contracts. But the whole affair is a valuable illustration of the shortsightedness of the workingmen, of the extent to which they live from day to day, and rely for bettering their condition on extorting something from somebody.

The foreign news of the week is of trifling moment. In England, the main preoccupation is still the Treaty, which at this writing is again "in danger," owing to Earl Granville's proposal that the arbitration be adjourned for eight months, to enable everybody to get his mind clear as to the meaning of the Supplemental Article. The Ballot Bill has passed to a second reading in the House of Lords, which ensures its success, but, though months of discussion have been expended on it, it does not satisfy the Liberals, inasmuch as it does not provide what is in England the great object of the ballot, perfect secresy. It makes it an offence punishable with six months' imprisonment to ask anybody how he voted, or try to find out how he voted, but it does not prohibit the voter from showing his ticket if he pleases, which, in the opinion of the *Economist*, will go far to make it nugatory. But it is very doubtful whether secresy of this kind could be secured without a change in human nature, and yet without it, says that paper, there will be "intimidation" as of old.

The Treaty negotiations entered on a new phase towards the end of last week. The fears that were expressed in the House of Lords that the American disavowals of the indirect claims were not explicit enough drew from Mr. Schenck, by authorization from Washington, a letter which expressly declared that, in consideration of the agreement of the British Government to bind itself never to make indirect claims under similar circumstances, they were completely and for ever abandoned. This seems to have satisfied even Earl Russell, who looks on the whole Treaty as a condemnation of himself, a betrayal of British interests and honor, and who had moved an address to the Crown asking for withdrawal from the arbitration. On hearing Mr. Schenck's letter, he proposed that the motion be dropped, and at this writing it looks as if things were taking a favorable turn, but we are not rash enough to predict anything about the matter. The last proposal of Earl Granville is that the meeting of the Board of Arbitrators shall be postponed for eight months, to afford time for still further consideration. The ministry have evidently grown terribly cautious.

In the meantime, Mr. Bancroft Davis's troubles have been increased by the appearance of two reports in England, made by direction of the Government, on the direct claims. One is by a committee appointed by the Board of Trade on the losses caused to American shipping, and the other by a committee appointed by the Board of Admiralty on the expenses incurred by our Navy Department in pursuing the cruisers. The report of the first declares that Mr. Davis has made "double claims for single losses" in the case of vessels to the amount of $1,000,000, and in the case of freights to a very considerable amount; in the case of reinsurances to the amount of $217,865. The claims for prospective earnings and freight, which he has put in to the amount of $5,000,000, it pronounces "illusory and inadmissible," and finds that the sum total of $17,763,910 ought to be cut down to $8,039,685. The Admiralty report is made by Admirals Milne and Dunlop, and Admiral Richards, the hydrographer to the Admiralty, and finds that the only expenses chargeable are those incurred in actual pursuit; that much of what is claimed they cannot understand; and that even if Great Britain is held liable, under this head, for the four Confederate cruisers, they do not see how she can be called on to pay more than $1,509,300, instead of $7,080,478. Of course all this has to pass the arbitrators, but it proves that there is a chance for a vigorous fight over the items. And, in the interest of peace, it is sincerely to be hoped that the arbitrators, if they ever arbitrate, will award a gross sum.

There has been another "international boat race," in which a crew of Americans has gone over to England, to row in a strange climate, on a foreign river, under a million foreign and hostile eyes, against competitors of whose powers as compared to their own they apparently knew little or nothing, and the result is, they were beaten with ease. We do not believe matches of this sort serve any good purpose. They illustrate nothing American but the national want of caution, and they produce enough chagrin to make them anything but promoters of international good-will. The best thing for all American athletes who want to try conclusions with Englishmen to do now, is to wait until they can have the trial of strength in their own country, under conditions as favorable to them as those under which the two last boat-races that have taken place were to the English. It seems a pity that there should not be somebody among the trainers on both sides whose powers of observation and comparison would enable him to tell a crew whether it had any chance of winning before it crossed the water. The Atalanta crew, we are now told, are all small, light men, while the English crew were heavy and powerful men; but this fact was surely ascertainable months ago; and everybody has always known that the size of muscles and the capacity of the lungs have much to do with strength, and that the muscles of the loins and back and the width of the chest have everything to do with rowing. It has surely not begun to be the fashion in sporting circles as yet to get up "mills" between "light-weights" and "heavy weights."

The Roumanian Jews are again exciting the sympathy of the world by the odious persecutions to which they are subjected, and Earl Granville proposes pressure in their favor on the Roumanian Government by a conference, in which all the Great Powers should take part. Russia declines, and Prussia concurs with her, on the ground that a conference might bring up the whole Eastern question, and thus create new complications, but proposes a joint note to the Roumanian Government. When news of a similar character reached this country two years ago, we adopted the sage plan of despatching a Jew as American consul to Bucharest. This piece of folly will not be repeated; but why should we not join in the note? There is much reason to fear that after everything has been done that can be done, the Jews will continue to suffer, until the Principalities have made greater advances in material civilization. At present and for ages past, the Jews have absolutely monopolized all the trade, commerce, and banking of the country, and they consequently occupy the position they occupied all over Europe during the Middle Ages of everybody's creditors and extortioners. Until the natives begin to share with them the burdens, responsibilities, and odium of trade and banking, they will only get very imperfect relief. The law cannot protect men from universal hate, even where it is better administered than there is the least chance of its being in Wallachia and Moldavia.

M. Thiers has achieved another victory over the Assembly on the Army Bill, by resisting the proposal to make military service compulsory for three or four years in the regular army, instead of five. On this point the Assembly, which is strongly in favor of the modern or Prussian system, has given way under a threat of resignation. This is another illustration of the mischief done by M. Thiers's great age and attachment to old ideas. There is no division of sentiment among the younger military men and politicians in France as to the propriety of putting the whole male population through the army for a short term, as the best plan both for industrial and military interests, but M. Thiers refuses to believe in any system with which he was not himself familiar in early life.

The Lower House of the Italian Parliament has passed an act abolishing the theological faculties of the state universities, and the government has given notice of its intention to sustain the measure in the Senate. There were several well-grounded objections to this policy on the part of deputies who cannot be suspected of clericalism. They contended, in the first place, that the proposed change, if advisable in any case, ought to be deferred till an attempt could be made to reorganize the whole system of public instruction. The reform, if it was a reform, would be more effective as part of a general scheme than as a solitary amendment. In the next place, it was questioned if the proper idea of a university permitted the exclusion of one of the foremost branches of human knowledge and enquiry; at least, whether Italy should be the first European country to wrest religion from the circle of the sciences. Finally, there was the practical consideration, peculiar to the new kingdom, whether, in face of a church hostile to the state and on the watch for weak points to assail and neglected positions to occupy, it was prudent to take away the support of the state from the nurseries of resistance to priestcraft—the schools of such Protestants as Döllinger, and of a national religion in opposition to the supremacy of the Vatican. Of these three arguments, the first seems to be the most defensible, and it was sufficiently strong, when brought up on a subordinate issue (as to the so-called "spiritual directors"), to give occasion to the retirement of Correnti, the Minister of Public Instruction. The reply to the second would be that whenever theology is pursued as chemistry and anatomy and geology are pursued, its professors may without scruple be maintained at the cost of a state which wishes to be divorced from the church; and it is pretty certain that the Infallibilists would rather contest the field with men like Döllinger and his disciples, than with the products of such a training as Huxley and Darwin would pronounce scientific.

GRANT, GREELEY, AND ADAMS.

GENERAL GRANT has now been nominated, as everybody knew he would be, after his supporters and the country at large had had a month to think over Greeley's nomination. One of Greeley's ablest, most prominent, influential, and valuable supporters, Mr. Samuel Bowles, who managed after the Cincinnati Convention to work himself into a state of placid and even joyous acquiescence in the result, and was somewhat shocked at the *Nation's* unwillingness to hail the Sage of Chappaqua as the harbinger of a "beneficent revolution" in American politics, has been at Philadelphia, has seen and heard what happened, has thought over it, and promulgated his conclusions in this fashion in the Springfield *Republican:*

> "Now that his renomination is an accomplished fact, Gen. Grant is doubtless scanning the political heavens with increased interest, and he finds them undeniably propitious to his candidacy. To begin with, it has the prestige of regularity. His friends claim to be the only orthodox Republicans in the country, and they are in possession of the party premises and furniture. This counts for a good deal more than some persons seem to think. 'That strange power, a name,' is still potent, even with the most intelligent of us. Old Republicans shrink back from the thought of leaving the party for which they have labored and of which they have been so proud. General Grant has also the prestige of great military services. The passions excited by the war are subsiding, but they are still capable of being utilized for the purposes of his canvass. Judging from present appearances, the great bulk of the negro vote will be thrown for him. He can count upon the active support of the huge railroad corporations and the other monopolies—an element which is playing a more important part in our politics at present than many suspect. Finally, he has on his side that natural and powerful instinct in the nature of the capitalist and the tradesman which deprecates change and clings to the existing status. Money-bags are always and everywhere conservative. When you have proved to the busy wealth-seekers that the President has shown an indecent fondness for gifts, that he has appointed rascally or incapable kinsmen to office, that he has cracked, if not broken, the laws, what have you accomplished by your demonstration? They will reply to you: 'General Grant is a safe man. The country has prospered and its credit improved under his administration. We know him, and know that he can be trusted not to smash things. It would be folly in us to take the risks of a change. Let well enough alone.' This *laissez-faire* party is one of the oldest in the world, and it always has full ranks. It stood for twenty years between Louis Napoleon and his enemies, the French Republicans. The *vis inertiæ* plays at least as large a rôle in politics as in physics. It is a force which no politician who understands his business will underrate. Supplemented by the other forces we have mentioned, it may very well put General Grant at the head of the poll next November.
>
> "It is true that there are powerful forces at work against his candidacy. The personal aversion which he has inspired in some of our oldest and strongest Republicans; the dissatisfaction—often shading into disgust—with many of his official performances; the instinct of progress, demanding something higher and better in administration than he has given us; the instinct of national unity, demanding the final burial of war issues and disuse of war methods—all these are against him. If the opposition were united and manageable, they would defeat him. If Mr. Adams had been nominated at Cincinnati, the outlook to-day would have been very different. A larger or smaller portion of the Irish vote would have gone over to Grant. Some few native-born Democrats of the Chicago *Times* school might have kept the Irishmen company. But the loss would have been insignificant by the side of the gain. Such a candidacy would have appealed to the best instincts and the most critical judgments of our people, Democrats and Republicans alike. Here at the North it would have grown stronger and more irresistible with every month of the canvass, while if it had failed to excite so much personal enthusiasm at the South, it would have commanded in the end a no less hearty support."

Now, this is perfectly true. The only exception that can be taken to it is that it is not new. All the originators of the Cincinnati movement knew it just as well on the first of last May as they know it now; and being true, the inference from it, that Mr. Greeley's nomination was an atrocious blunder, only to be surpassed by the other blunder of supporting him after his nomination, is irresistible.

If we stop "swinging our hats" for a moment, and consider the situation as it appeared last spring, the full depth of the absurdity into which some of the Liberal Republicans have plunged themselves will be apparent enough. In the first place, numerous as were the causes of dissatisfaction with Grant, this dissatisfaction was never strong enough with the mass of the people to make *any* change acceptable. The cry, "Anything to beat Grant," was therefore from the first a ridiculous cry. The person selected to beat Grant would, it was plain to be seen, have to be somebody whom the sober, sensible people who compose the mass of the nation would acknowledge to be, on the whole, better than Grant, if he were in Grant's place. The opposition would then have had nothing to contend against but that constitutional dislike of change which Mr. Bowles well describes, and which is one of the most valuable traits in the political character of the American people. To form an adequate idea of what kind of person he should be who would plainly commend himself as Grant's superior, supposing him to be in Grant's place, we have to consider of what elements the opposition to Grant was made up. We shall not attempt to assign them their relative importance, we shall simply enumerate them; and we shall confine our enumeration to the Republican party. The objections to him personally were that, while attempting to reform the civil service, with the help of a hostile or indifferent Congress, he kept in office worthless men, some of them his own relatives, whom he might have removed in his discretion; that he displayed in his conduct of affairs very great ignorance of the nature and objects of civil government; that he showed in his messages gross ignorance of economical questions; that he was over-greedy about money and over-eager to take presents; that he broke or disregarded the law on various occasions; that he "lobbied" for the promotion of his pet schemes; that he used the Federal patronage to interfere in local elections and promote his own renomination; and, finally, that he kept company with men whom the common people did not consider proper associates for their chief magistrate.

Now, whether these objections were well founded or not, they influenced a great many minds, and they were the minds of men who, though they make no great show at conventions, have through the long months of the canvass a powerful influence on public opinion. The objections to General Grant as the representative of the Republican party, or rather as the favorite of the managing rings of the Republican party, we need hardly go over; everybody is familiar with them. They may be said to be included in the great and growing objection to the prolongation of the military rule at the South; to the exclusion of the intelligence and property of the South from participation in its government; and to the generally centralizing and corrupting tendencies of the last ten years.

Who was and is the man, and the only man, whom this heterogeneous mass of discontent could unite on as its candidate, and who could, at the same time, be relied on to inspire such confidence as to overcome the *vis inertiæ* of a prosperous and cautious community? Why, Charles Francis Adams, of course. Everybody thought so; most persons said so. Mr. Adams has had the experience of a lifetime in civil affairs; he understands this government, and all government, if any man understands them; he has a character on which no breath of suspicion or stain has ever fallen; his tastes and habits are those of a gentleman; his associates are and would be those Americans of whom the United States is most proud, and whom all other nations most delight to honor. These are his personal qualifications. His political qualifications are equally strong. He is an original Free-soiler, and has never been anything else; although a Republican from the very beginning, he has never worn party harness. He has never either "dickered," or "combined," or "compromised," or "bargained." No politicians have any "claims" on him of any sort whatever; he is absolutely free from the degrading alliances, and entanglements, and traditions which have ruined so many Presidents; and his character and temperament are a sufficient guarantee that he would never contract any. Moreover, he is not in any way responsible for whatever is objectionable in the legislation of the last ten years. He was out of the country during seven of those ten years, and engaged on foreign soil in that same defence of the national unity and national honor which General Grant was carrying on at home. Of the nature of that defence—of its vigor, brilliancy, learning, and success, we do not need to speak; it is one of the great chapters in American history. In short, if a man had been created expressly to concentrate and lead the opposition to Grant, he would have had to be a man like Adams.

Mr. Adams, it is true, would in all probability have had to be elected, if elected, by the help of the Democrats; but the Democrats would, in his following, have been relegated to a secondary position. He would have drawn to his support at once a large and respectable and influential body of the Republican party. Surrounded by them, he would have entered on his canvass and his administration. The chairman of his committee in this State would not have been General John Cochrane, nor his chief fugleman Mr. Theodore Tilton, nor the first vice-president at his ratification meeting the notorious Ben Wood. Moreover, his appearance would have been hailed all over the country as the sign of a real revolution in politics, and would for that reason have excited real enthusiasm in thousands of breasts in which enthusiasm burns deep and long. Last of all, he would not have alarmed the capitalists and business men as Greeley does; he would have carried them with him, almost to a man. His very name would have been a guarantee of stability, order, and economy in the administration of the government, which is what the financial world above all things desires. Greeley, on the other hand, associates with even more rascally politicians, and has more of the habits and training of a politician himself, than Grant; he has warmly supported, except the San Domingo scheme, every objectionable feature in the legislation of the last seven years. He is neither revenue reformer, civil-service reformer, nor any other kind of reformer that people now care about; and, as to uncertainty, the very wind has, since the establishment of the Weather Bureau, become more reliable than he. The result is, and the history of the last month shows it, he has not only not drawn to himself any of the *reputable* discontent of the Republican party, but he has driven it back into the ranks repentant and humiliated. He stands surrounded, as far as the Republican North is concerned, in the main by "soreheads" and blatherskites. His great and indeed only reliance is the Democrats of the North and South, but especially of the South, and he therefore presents himself to the Republican party as simply the visible sign of a renewed attempt on the part of the old Copperheads and rebels to get possession of the government. No wonder there was a revival of the old military enthusiasm at Philadelphia, that the picture of "the man on horseback" was let down from the ceiling, and worshipped, with old camp cheers, and that the old songs of the war were heard again, giving vent to passions which every patriotic man must wish from his heart were for ever extinguished. What is offered us to cover up this catastrophe? Why, the deliverance of the people from the tyranny of the Electoral College on the tariff question!

What are honest men to do now? Well, if there is nothing else offered, if the Democratic Convention commits the absurdity of raising "the old white hat" as its standard at Baltimore, the only thing for Republicans of our way of thinking to do is to choose the less of two evils, and vote for General Grant. We expect no improvement in the Administration from him; we do not look at his hands for the removal of any of the existing abuses; we know of no answer to any of the weighty and reasonable objections made to his Administration; but we do know, as near as may be, what he will do; we know, at least, the worst he will do. The probabilities are that, the temptations connected with renomination over, he will on many points change for the better. Moreover—and this is the most important point of all—if he is re-elected, there will be no general redistribution of offices and no financial disturbance. What Greeley will do, and what the motley crew whom he would lead to Washington would do, nobody knows.

A MODEL PLATFORM.

WE believe the members of the committees on resolutions at nominating conventions generally transact their business with a fair show of gravity, but those of them who are endowed with any sense of humor must find it very difficult "to keep their faces straight," to use the popular phrase. The meetings ought to be scenes of boisterous mirth. The ostensible business of one of these committees is, and originally its real business was, to put into words the deliberate convictions of the convention on the principal political questions of the day. At present, this is probably the last thing it thinks of. What it occupies itself with is not what the convention thinks, but how much the convention will have to say in order to secure votes, or avoid losing any. There is no longer the shadow of a pretence that the majority of the convention believes in the platform, and there could hardly be a more striking illustration of the extent to which nominating conventions have been converted into machines, with no more mind or morals than force-pumps, than the bits of unreasoning declamation which they lay before the world as "declarations of principles." We make bold to affirm that in a resolution on any delicate question, it is to the committee a fatal defect that even one member sees, or thinks he sees, that it has a definite and distinct meaning, and is capable of only one meaning. Two meanings are the very least which a good plank must now have; and a man who is capable of drawing a plank with three or four meanings, or no meaning at all, may fairly count on a foreign mission, and look forward to the Senate.

Take, as an illustration, the handiwork of our "enthusiastic" friends at Philadelphia the other day. The first resolution in the platform is designed to meet the views of those who are opposed to the Ku-klux Act, so the use of that act is spoken of as "decreasing with a firm hand the resultant disorders of a great war"; and it is affirmed, in order still further to soften this phrase, that "peace and plenty prevail throughout the land." It must be remembered, in order to appreciate this resolution thoroughly, that hundreds of those who voted for it, and some of those who passed it, have within the last week been eagerly advocating the re-enactment of the most offensive part of the Ku-klux Act, on the ground that a state of war still prevails at the South. To get at the whole mind of the committee on the subject, however, we have to go down to the other end of the platform—to Plank No. 12—where, as it would not do to be both pro-Ku-klux Act and anti-Ku-klux Act in the same resolution, we are informed, for the pacification of those who like this sort of legislation, "that Congress and the President fulfilled their imperative duty in their measures for the suppression of violent and treasonable organizations in several lately rebellious regions and for the protection of the ballot-box." This separation of the two planks by a wide interval is only resorted to when the contradiction between them is too plain to admit of their being embodied in one, and when the nature of the subject is such as to make the use of cloudy phraseology inexpedient.

Plank No. 7 is, however, a masterpiece, which we recommend to all young politicians as a model. This deals with the vexed and dangerous question of the tariff, which the Cincinnati Convention got over by frankly saying it could not agree about it, and that the people might do as they pleased about it at the election of members of Congress. Our Philadelphia brethren, however, were too ambitious and too 'cute to pass it by in this way, so they drew what we may call a double-action plank, the composition of which must have caused much merriment in the committee. Our readers doubtless all know that if we asked Horace Greeley or Henry C. Carey how the tariff should be adjusted, he would reply, in the very words of the resolution, that "it should be so adjusted as to aid in securing remunerative wages to labor and promote the industries, growth, and prosperity of the whole country." If we asked Mr. Wells or Mr. Atkinson, he would reply in exactly the same terms; so that the plank, as far as words go, would suit protectionists and free-traders equally well. But if you asked Mr. Greeley or Mr. Carey how, under this plank, a tariff should be drawn, he would tell you a heavy duty should be put on all articles capable of being produced in this country; whereas, if you asked Mr. Wells or Mr. Atkinson, he would tell you duties should only be imposed on a few articles, either pure luxuries or incapable of being produced in this country; so that the committee has judiciously drawn a plank which suits equally well men of diametrically opposite opinions. The joyous wagging of Satan's tail must have been distinctly audible in the committee-room when the final touches were put to this choice production of his favorite art.

The relation of labor and capital is also a delicate subject, and on this the committee has furnished a specimen of its powers which, though differing in kind from the Tariff Plank, is of an equally high order of excellence. The Tariff Plank is a fine specimen, as we have pointed out, of a plank with two meanings. The Labor and Capital Plank is an equally fine specimen of a plank without any meaning at all. When you say to a capitalist that you "are in favor of so shaping legislation as to secure full protection and the amplest field for capital," he can make no better reply than shake hands with you and tell you he is much obliged to you. He sees you are a good fellow and mean well, but what you are going to do by way of favoring capital, he has no idea whatever. In like manner, when you tell the laborer that he is "the creator of capital," and that you mean to give him "the largest opportunities and a just share of the mutual profits [*'common'* profits the committee no doubt meant to say] of these two great servants of civilization," he can in reply only give you three cheers. What are "the largest opportunities and the just share of mutual profits of a servant of civilization" he does not know, any more than his innocent babe; and the worst of it is, the committee did not know themselves, and never meant that anybody else should find out if they could help it. They meant to construct a funny jingle of words, which would get them or prevent them from losing the votes of the simple-minded; the jingle they have made; whether it will answer their purpose remains to be seen.

The Woman Plank is also worthy of attentive consideration. The object is to bid against the Democrats for the support of the active female politicians of the day, and, at the same time, avoid alarming the opponents of female suffrage. So the plank does not say that the Convention is in favor of female suffrage; far from it. It says that "the Republican party is grateful to the loyal women of the North," and "that the honest demands of any class of citizens for additional rights should be treated with respectful consideration." In this way a hint is given that suffrage is coming to Woman, if she presses for it, though nothing whatever is pledged or promised, by means of a proposition as barren and as flat as a statement that every citizen is entitled to the quiet, undisturbed reading of his own newspaper, subject to the Constitution of the United States. Plank No. 16 is also admirably drawn, and surpasses them all in meaninglessness. The object of it is to catch the German vote, by leading the Germans to believe that the Republican party is opposed to temperance and Sunday legislation. So the resolution does not say that it is opposed to such legislation; far from it. It propounds the theory, of which nobody has ever heard before, that there are certain rights "not surrendered by the people to either the State or National Government," and alleges that "the Republican party disapproves of the resort to unconstitutional laws for the purpose of removing evils by interference with these rights." What these "rights" are the committee are careful not to mention, and it is therefore as safe to disapprove of "unconstitutional laws for the purpose of interfering with them" as to allege that the Republican party is firmly opposed to all false doctrine, heresy, and schism, and likewise to infanticide.

The laughter with which the resolution with regard to the "encouragement of American commerce and shipbuilding" will be read will ring from the glades of Chappaqua along the shores of the Sound, *via* Norwich, to Boston, the protectionist Sage transmitting it to Mr. Wells and Mr. Atkinson. The committee recommend "the adoption of measures that will tend to encourage the American commerce and shipbuilding." This has at least six meanings, and therefore is a worthy termination to as remarkable a piece of jugglery as we have seen for a long time. We do not criticise this platform in the interest of any party or candidate; but we call the earnest and patriotic attention of the honest men and women of all parties to it, as an illustration of the mode in which the machinery of conventions is used in governing them.

LABOR AND POLITICS.

THE strike in New York has assumed sufficiently formidable dimensions, and is creating sufficient interference with industry, and is making the future of industry in this city sufficiently uncertain, to warrant the belief that it will seriously influence the plans of manufacturers, and to raise the hope that it will attract more of the attention of voters than has hitherto been bestowed upon it, to the politicians' way of dealing with the labor question. The small success the "Labor Reform" party has hitherto achieved in the political field has been mainly due to the fact that they either don't know, or are unable to state clearly, what it is they want. All the Labor Reform platforms which have thus far been put forward have had only one well-defined remedy to propose for the various ills which afflict the working-classes, and that is the issue of plenty of money by the Government to all needy men. This is, of course, on the face so ridiculous a demand that it attracts little or no attention; and, as a separate political organization, the reformers make poor progress. But they are not by any means so unsuccessful in working within the party lines, and especially within the Republican party as the party in power, and that which is the more distinctively philanthropic in its composition and aims. All the party platforms now contain a "labor plank," which, it is true, affirms nothing that anybody can understand, and promises nothing that anybody can take hold of, but it nevertheless keeps alive the idea in the minds of workingmen that there is something which the Government leaves undone which would, if tried, greatly improve the laborer's condition. Now, if this thing were described—if, instead of declaring, to use the unmeaning fustian of the Philadelphia platform, that "the servant of civilization" should have "his just share of mutual profits," the party politicians would say in distinct language what the workingman's share of profits was, and in what manner it could be secured for him by legislation, those friends of the workingman who believe in the possibility and propriety of enlightening him by discussion would have a tangible proposition to meet, and a fair opportunity of stating, with a chance of being listened to, their view of the relations of labor and capital. As matters stand, the whole question is enveloped in a cloud which honest men cannot dissipate, and which affords the labor-reform agitators just the kind of material they need to sow discord between class and class, and keep the industry of the country in a state of permanent derangement, by exciting wild and unreasoning expectations.

The politicians have, however, at Washington done something, in which the present Republican candidate for the Vice-Presidency, Mr. Wilson, was the chief mover, to throw some light on their views with regard to the laborer's rights, though it is that kind of light which only makes the darkness visible. They got a bill passed a year ago, directing that eight hours should be regarded in all Government workshops and arsenals as a legal day's labor, and for this they compelled the Government to pay as much as other employers only paid for ten hours' labor, or, in other words, twenty per cent. more than the market rate.

Now the effect of this on the less intelligent portion of the working-class mind has been to create the belief that the theory that there is such a thing as a market rate of wages is a mere invention of the capitalists; that the proper rate of wages is what will provide a man and his family with "a comfortable subsistence," and that this rate, be it much or be it little, all employers ought to pay and be made to pay; that the government does it as an act of simple justice, and that individuals ought to follow its example, or, in other words, that the reward of labor is something wholly regulated by an abstract rule of right, and in no way dependent on the laws of the physical universe—that is, on the cost of material and transportation or on demand and supply. This idea has, as might be expected, obtained a firmer foothold in this city than elsewhere, owing to the great concentration of foreign mechanics and the strong infiltration among them of decidedly socialistic ideas, and the thorough baseness and corruption of the city and State Government. It is the experience of all the departments of the city government which have to employ labor, that both the workingmen and their political patrons hold and firmly maintain the belief that the rate of wages ought to be what a workingman needs to make him "comfortable," let his habits and the size of his family or his views of "comfort" be what they may; and we venture to assert that in all of these departments either more than the market rate of wages is paid, or the market rate is paid to more laborers than are needed; and that all do acquiesce in the doctrine boldly preached by politicians, that it is the duty of the city and State—that is, of the taxpayers—to provide poor men with regular work and high pay. This, disguise it as we may, is communism, doubtless imperfectly developed and unorganized, but still communism, and it is at the bottom of the movement which is now forcing the eight-hour system on both the capitalists and the soberer and more peaceable and industrious workmen—a movement the character of which is illustrated by the fact that the men employed by the Messrs. Brewster, who have for some time shared the profits of the firm,and those of a greatpattern-maker in Long Island, who have always been paid by the hour and left to work as many hours as they please, have been bullied into joining it.

Now, we do not, as we have often said, believe that anything can be done thoroughly to enlighten the workingmen as to the conditions under which production can be carried on, except by making them producers themselves—that is, capitalists as well as laborers—by co-operation. We doubt greatly the value for this purpose of books and lectures expounding economical theories, because the average workingman is neither much of a reader nor much of a thinker, and is not likely ever to be gifted with the amount of trained imagination necessary to work out an economical problem to its remote results. If he had himself to find out a market for the pianos he makes, he would in one month acquire more economical wisdom than he can get in a year from the explanations of the Messrs. Steinway and Haines; for, it must be remembered, he distrusts the teachings of all employers, and he believes that authors and lecturers all belong to or sympathize with the employing class. But in the meantime the intelligent people of the United States can put a stop to the mischievous tricks of politicians about the labor problem. They can either make them cease talking about it, or make them say something which rational men can either concur in or contradict. It can and ought to be made dangerous and impolitic for the most ardent blatherskite to be guilty, with a grave face, of such an attempt to darken counsel on one of the most serious problems of the day as that which we have just witnessed in Philadelphia.

THE PHILADELPHIA CONVENTION.

PHILADELPHIA, June 7, 1872.

WHOEVER yesterday, or the day before, looked for a "stately and brilliant parliament" in this city, such as met in Cincinnati last month, unless the *Tribune* is mistaken, must have been disappointed. And equally disappointed must have been anybody who came here in the confident expectation of seeing seven hundred and fifty-two postmasters and collectors fraudulently pretending to be the American people and really engaged in making an emperor. The Convention did, undeniably, look much more like a body of men who were thoroughly conversant with the running of political machinery than like anything particularly brilliant and stately; but it would have been anywhere accepted as an assemblage fairly representative of the ordinary American voter, white and black. The black voter was if anything rather more efficiently represented than the white one, for the negro delegates made a better impression than most of their audience had been expecting, and certainly lost nothing in the comparison between them and the Southern white Republicans. Their eloquence got to be very tiresome to be sure, for they were somewhat petted by their Northern friends, and, having an inch given them, took an ell; but there was none of them who had to be so severely choked into silence as some of their white brethren. Indeed, it fell to the lot of one of the colored men to make an energetic protest against the summary suppression and extinction of a fellow-orator of the superior race. The Convention had become exceedingly weary of speech-making, of which it had, for various reasons, been compelled to listen to a great deal. The committee on resolutions had kept it waiting while the innumerable planks were being put together into something like a platform; there was a rumor that if it were not for the hotel-keepers and their interests, the whole business of the Convention might have been finished in one day; and altogether the delegates were very impatient and anxious to begin voting for Mr. Wilson and Mr. Colfax, when a member from Virginia got the floor and proceeded to make an old-fashioned "effort" in favor of the nomination of a Mr. Lewis. Very short work was made of him, and he was obliged to take his seat, speechless from his attempt to make head against the uproar, and in high dudgeon. When, a few minutes afterward, the platform was unexpectedly brought in, and the question was whether or not it should be adopted, everybody was taken aback by one of the delegations crying out "No." Apparently no one was caring anything in the world about the document; almost no attention was paid to the reading of it; I, for my part, gave up trying to hear it, and listened to a sister of the quill, a Greeley woman, who was chattering at a great rate to a brother reporter on the bench in front of me, and who, I learn, has read "The Swiss Family Robinson," but has never yet finished "Robinson Crusoe" nor "Bunyan's Pilgrim's Progress." The negative votes were explained by a negro delegate, who, as I understood him, said that they were cast because Virginia wanted an opportunity to say to the Convention that she considered herself very ill-treated. She was pretty flatly insulted, but it was her spokesman's want of tact and good sense that brought his misfortune upon him; and she had less reason to complain than some of the other States. Delaware was hissed by the Wilson men because she gave her vote to Mr. Colfax; Mr. Gerrit Smith, of New York, was assailed with shouts of "time"; and Mr. McMichael, of this city, whose voice is not strong enough for so large a hall, was clamorously interrupted in a way that was really discreditable to the delegates. The fact was that the Convention was a renominating Convention, was perfectly well aware that it could do its work in three hours as well as in three days, and was determined that while it would consent to stay in session two days for decency's sake, it would not stay later than Friday afternoon.

The weather on Wednesday was rainy and disagreeable, and as the Convention was not yet welded into a homogeneous mass, and, taken man by man, was not exorbitantly enthusiastic for anybody, the first day was rather depressing. The hall was not completely filled, although a great crowd was present, and the voices of the orators echoed dismally from the empty upper gallery. The audience, however, was more than patient, and illustrated thoroughly the American fondness for ornate speech-making. "I've heard that speech on the floor of the Senate twice a week all winter," said one of the reporters, while a distinguished senator was declaiming sonorously, with much wagging of the head; and certainly, what the senator was saying had a very familiar sound, and must for ten years have been well known to most of his hearers, but they listened hard, receiving it all gladly and with frequent applause. As for the reporters, I may say that they were throughout irreverent, and for the most part indifferent, and behaved more like the Sapeur in the French song, to whom nothing was sacred, than like citizens in convention assembled, and occupied in securing the results of the war, protecting American industry, reviving our commerce, and providing for the widows of our soldiers. While, for instance, the pit and galleries were applauding one of the speakers, his journalistic young friends behind him were informing each other that he had been "dead broke" within the week, and had been obliged to borrow two hundred dollars from a well-known Massachusetts legislator to get home on; and that he was no such sharp as a certain distinguished minister plenipotentiary, formerly a member of Congress, who "always knew enough to borrow of parties that had bills to job through, and never recollected to pay." This mode of looking at public men and matters was however replaced by another when the nomination of a candidate for the Vice-Presidency was in order. So far as I make out, Mr. Colfax has, for some reason or other, become obnoxious to a number of gentlemen connected with the press in the capacity of Washington correspondents, and has been indebted to them for some months of hostility to his pretensions and ardent advocacy of Mr. Wilson's. At all events, there was unsubdued excitement in the press-gallery when it became evident that Mr. Wilson would be nominated on the first ballot, and several correspondents were to be seen swinging their hats, exchanging congratulations, asking each other, How about the Syndicate now? and How that was for Schuyler? and in general manifesting a great deal of contentment at the result and a happy satisfaction, as over a good act well accomplished. And I believe that the Convention outside the press-gallery was far more sincerely interested and genuinely enthusiastic at this moment than at any other. It is a question very difficult to settle, whether or not a given body of men is really enthusiastic, or for its own evil purposes is simulating enthusiasm and joy; but I should say that in spite of the great cheering when General Grant was put in nomination, and the hat-swinging and prolonged shouting when he was declared the nominee and a picture of him on horseback was exposed to view, there was, nevertheless, more real feeling when Wilson slowly forged ahead of Colfax than at any other time. The Convention never came to order after Virginia, changing her vote, gave him the nomination. Very sincere, too, was the applause given to the negro orators when they, one after another, competing with each other for applause as it seemed, promised that the negro vote should be cast solidly against Greeley and Brown. Nobody was so loudly cheered on the first day as a colored delegate called Grey, from Alabama, I believe, who compared Greeley to Abraham, and reprobated the patriarch for being so good to his legitimate son that the bondwoman and her child were forced out into the wilderness, and "the old lady had to hunt for water." The ingenuity and fun of the comparison were sufficient to please any favorably-disposed audience, but it was unmistakable, too, that the Convention welcomed any assurance that the South was safe for the candidates on the Philadelphia ticket.

It is, of course, open to anybody to say that the tremendous uproar which followed the nomination of the Presidential candidate was all in earnest; but it is true, too, that as much pains was taken to elicit it as if there had been fear that it might not be forthcoming of its own accord, and some of the devices for securing it were rather ludicrous. Thus, the device of the picture was somewhat cheap; and it was rather funny, when the shouts had partly subsided, to see a gentleman standing up and singing a ditty to the effect that

> "Grant shall win the victoree
> For Presi*dent again*."

This song, however, set off the Convention and the galleries, which on the second day were all crowded, and for the next half-hour nothing was done but singing and music by the band, the whole house, and even some of the reporters, joining in the choruses, and making a din not free from dissonance, and in all kinds of time, but pleasant enough to hear, and offering to the eye a striking spectacle. I do not know how many thousand people were present, but the hall is very large, and it was packed with humanity from the floor to the lofty ceiling, and to see the crowd under one and another wave of excitement, now mirthful, now serious, now silent, and now shouting at the top of their lungs, was something worth remembering. I doubt if there ever was a noisier political convention in this or any other country.

It was, on the whole, a very good-natured body and reasonably full of fun, though it became somewhat intolerant at the end, and after its patience had been very much tried by a set of speakers who, if I have any notion of what constitutes good public speaking, were decidedly poor, Governor Noyes of Ohio doing more sensible talk in five minutes, and with better effect upon the Convention, than a dozen or more of the professed orators. Yet the Convention was lavish of applause to the "great magnetic war Governor," Oglesby, Senator Morton, Senator Logan, the Hon. Mr. Lynch, and others, who inflicted on us the regulation brass-band speech, of which it is a hoary and current superstition that American audiences are very fond. In its fun as well as in its seriousness, the Greeley apostasy appeared to be quite as interesting to the Convention as anything else, and the heartiest applause was given to Mr. Townsend of New York when he announced that New York cast her unanimous vote "for the man who, as Horace Greeley said, never had been beaten and never would be—Ulysses S. Grant." A New Hampshire speaker also pleased the delegates, though it was a moment or two before they took his joke, when, in casting the vote of his State, he described it, *sotto voce*, in the words, "and the birthplace of Horace Greeley," and then gave all the votes to General Grant. Most of this kind of jocoseness appeared during the balloting for the Vice-Presidential candidacy.

On the whole, it cannot be said that the assemblage was very interesting. Its work, confessedly, was so thoroughly cut and dried that it was impossible to be in any way excited over its progress to completion, and I paid rather more attention, so far as my opportunities went, to the drift of political opinion among the Pennsylvanians, and their estimate of the result in this State of the October and November elections. I do not feel that I have learned anything certain, but the gist of what I have heard from a number of leading men, none of whom is a Democrat, is about as follows: From a gentleman who was very prominent in the Convention, and is an old and experienced Republican politician, I got the remark that "the Democracy is talking of carrying Pennsylvania by thirty thousand majority; but I shall believe it when I see it." To my enquiry whether his incredulity was in regard to the Democratic victory or to the size of the Democratic majority, he replied that he was sure Buckalew could not beat Hartranft by thirty thousand, but that Pennsylvania politics were in a dreadful muddle. Mr. Forney's dissatisfaction counted for very little, this gentleman said, and there would be no serious split in the party. Another gentleman whom I questioned about Hartranft and his chances said that, as he understood the matter, Hartranft could not show a clean record; if nothing more could be said against him, this could be said, that he, while holding an office which made it incumbent on him to watch State agents and other officials, had borrowed a considerable sum of money from the defaulting State agent, Evans, and returned it only after the exposure of that person had been made. As for Hartranft's chances of election, this gentleman said that he had just been talking with a friend who knows thoroughly his own county, and the two or three adjacent, and is familiar with many men in various regions of the State, and who tells him that Buckalew is certain to be elected; but, added my informant, "this friend of mine says he told the same thing to the Hartranft men here in this city, and they said they did not care a damn who was elected, they were going to count Hartranft in." That there is an easy possibility of doing this I am assured, and a certain office-holder in Philadelphia who some three or four years ago was forced out of politics for corruption and has only recently come back, was pointed out to me as having recently been elected in this irregular way. His managers did not dare to give him as many votes as the other candidates received, so they counted him some four thousand less, but they counted him in.

Of interest in the original Liberal Reform movement or in the Greeley-Brown movement I have found, I may say, not a vestige. One gentleman said to me: "If we had cared anything about the Cincinnati movement that you New York men got up, do you suppose we should have let McClure and that crowd represent us in that Convention? Nobody here cared anything for it. And as for Greeley and Brown, the Democrats may be thinking of them, but nobody else is." How much the Democrats are thinking of them, I do not know; but two Republican editors from different parts of the State said that all the Democrats they knew would go for Greeley if the Baltimore Convention so ordered.

I judge that with their addiction to protection and the slowness, to call it so, of the average Pennsylvania mind, and the strength of the Philadelphia municipal reformers, it may be quite within the possibilities that a Democratic victory in October may nevertheless be followed by a Grant victory in November; and I am much inclined to the opinion that there may be a great deal in what is said to me about the count of votes in the gubernatorial election.

A GREAT DEBATE IN THE FRENCH ASSEMBLY.

PARIS, May 19, 1872.

THE sittings of the French Assembly at Versailles have something theatrical. They take place in a real theatre, which is perhaps one of the finest in the world, as it is in the purest Louis XIV. style. The gilding is so perfect that it has never been found necessary to touch it since the days of the Grand Roi. This theatre was already historically famous for the great banquet of the Gardes Françaises, when Marie Antoinette appeared and inflamed the enthusiasm of the Guards. Alas! a few days afterwards she was obliged to return to Paris, the prisoner of the populace. This week there have been two sittings, which deserve to be noticed, as it is the first time that the fallen Empire has found an advocate in the French Assembly. M. Rouher, the ex-minister of State—the vice-emperor, as Ollivier once called him—had announced an interpellation on a very dry subject, the contracts of the Minister of War. But this subject had already furnished to the Duc d'Audiffret-Pasquier a theme for an attack on the corruption of the Empire, and M. Rouher meant to answer this attack. I will not go into the details of this technical subject, and would rather describe to you the scene in its dramatic features. There is a parliamentary train which leaves Paris at one o'clock for Versailles. Last Tuesday it was crowded to excess. It contained, besides five hundred deputies, about as many ladies and gentlemen who had procured tickets for the Chamber. The deputies all occupy the pit of the chamber; the boxes are all filled with strangers. There is the diplomatic box, where ambassadors and ministers make room for the most elegant ladies. Madame Thiers has a box to herself, so has the President of the Chamber for his friends. There is also the vice-president's box, the secretaries' box, the ex-deputies' box, as every Chamber pays this compliment to its predecessors; the army box, for the officers of the garrison of Versailles, and so on. The list of the persons whom I saw in the boxes of the theatre last Tuesday would not have much interest for you; it is enough to say that it would comprise almost every name of importance in Paris, in a social or a political sense. It was something like a first representation of the opera. The Figaresque papers had all announced that the famous actor, Rouher, who had not been heard since two years, would make his first appearance. The rôle of Rouher was indeed a difficult one. For the last twenty years he had never appeared except before a Chamber composed of official candidates hanging on his lips. He bore the orders of an absolute sovereign, one may almost say of Providence. He had the attitude of a king, of a judge. He held in his hands all the threads of diplomacy. He knew when war was to break out; he was in the secrets of the gods. He was a party to the treaties with Cavour, with Lord Palmerston, with Cobden, with Bismarck. He had left the Corps Législatif to go to the Senate, as the

President of the Upper Chamber, and thought he could there enjoy for the rest of his life *otium cum dignitate.* And now the Empire, which had made him so great, was no more! And old, broken, with the weight of the national misfortune on him, he had to come forward, like an humble lawyer, to argue a case before a Chamber where he had not a single friend, and where on both sides he was looked upon with sentiments of horror, of hatred, and of distrust.

There was a tragic character in such a scene which would have moved anybody. So hostile did the Chamber feel to Rouher that, by a natural reaction of generosity, it had been agreed in all the clubs that the parties should give a hearing to Rouher, and remain "calm and silent." This promise was kept the first day. For three hours Rouher was allowed to plead, to enter into the most minute details of the contracts passed by the Imperial Government, to criticise and attack every line of the Duc d'Audiffret-Pasquier's speech. It is only fair to say that he was as lucid, as clear as possible; that he showed himself a complete master of the subject; and he succeeded in finding the Duke very often in error. The Duke had given the impression to the public that the Empire had no arms, no guns, in sufficient quantity at the beginning of the war; that the money which was to be spent in the arsenals had been squandered elsewhere, chiefly in the Mexican war. There is probably some truth in this statement, but the numbers given by the Duke were inaccurate, and Rouher proved it with official documents. He proved also that the last contracts passed by the last ministry of the Empire, in great haste, after the first defeats, had not been cancelled as they might have been by the Government of the 4th of September; that the contracts of the Government of National Defence were quite as objectionable as those of the Empire. After a long exposition of this painful subject, he ended by attacking Gambetta, in the hope of securing the sympathies of a portion of the Chamber. Gambetta has been canvassing lately for a dissolution of the Chamber. "This dissolution," said Rouher, "would now be the dissolution of the country." After this long and powerful speech, Rouher had succeeded so far that the Duc d'Audiffret asked permission only to answer him the next day. He passed a very nervous night. Was he to follow Rouher into all these details of the contracts, to attempt to divide equally the responsibilities between the Empire and the 4th of September? No; if he did that, Rouher was too good a lawyer to leave him the victory; the public would get disgusted; and the general impression would be that Rouher had had the best of the discussion. D'Audiffret, with the keen eye of a politician, felt that the whole tone of the discussion must be changed. The next day, the audience was quite as impatient and as excited as the first day. The Duke, after wandering for a little while through the contracts, at last quitted the tone of the lawyer and attacked directly Rouher and the Empire. "You say that you were ready; you say that your arsenals were full; then, you are all the more to blame for not having used your materials and for having brought disaster after disaster on your country." On the very day when the war was proclaimed, the Senate, with Rouher at its head, went to St. Cloud, and thanked the Emperor for his vindication of the honor of France. Rouher, speaking in the name of the Senate, congratulated the Emperor on having for four years prepared the war in secret, and announced that victory would follow the glorious conqueror of Solferino to the Rhine and to Berlin. A more impudent declaration was perhaps never made; for, at the time when the French Government was trying to prove that the Hohenzollern affair had forced the war on France, here was the President of the French Senate thanking the Emperor for his long preparation of it. D'Audiffret did not miss using this terrible weapon on his adversary. "When you now attend your Emperor in the walks of Chislehurst, do you never hear a voice screaming: 'Vare, Vare, reddite legiones'—Give us back, give us back our provinces?" The harsh and thrilling voice of the Duke here filled the whole theatre. It was a moment of almost sublime horror. Many deputies wept, especially those of the eastern frontier of France.

What could Rouher do after that? The contracts were forgotten; he had stood at the tribune as the advocate of the Empire, and d'Audiffret silenced the Empire by his apostrophe: "Give us back our provinces." He attempted, however, to speak again, and, in justice to him, it must be said that he was not quite overpowered by the weight he had to bear. With tears in his eyes he said that he also was a patriot; that he had never wished anything but the greatness of France; he had no responsibility in the declaration of war (which is true); he even attempted to explain his speech at St. Cloud, and screened his words behind similar patriotic declarations made afterwards by Thiers, by Jules Favre, by Gambetta. He attacked Gambetta again, and at last finally brought him to the tribune. Gambetta was quite beside himself; he has sometimes been compared to a roaring lion; he roared, and shook his fist at Rouher; called him and his friends all possible names, cowards, liars, traitors; he threatened him with that justice which had already smitten his accomplices in the Mexican war, Morny and Jecker the banker (shot by the Communists), Napoleon III., and which now had Bazaine in its grasp. Gambetta has been trying lately to become less of a Rabagas, and more of a statesman; he has been canvassing the departments, and assuring the Frenchmen, in easy after-dinner speeches, that he and his party represented order, decency, morality, moderation, and all that was respectable and delightful; but Rouher had driven him almost mad; his fiery Italian blood was boiling, and even his friends of the Left could restrain him no more.

The Duc de Broglie offered an order of the day which expressed confidence in the Parliamentary Commission of Contracts, and the hope that it would continue to elucidate all facts before and after the 4th of September. Gambetta and the Left felt that it was better to adopt this order of the day than to divide the House, and it was unanimously adopted. The hope of Rouher was, therefore, not realized; he had worked in order to set the Right against the Left, the Monarchical party against the Republicans, but he found them all united against the Empire. As for M. Thiers, he preserved a complete silence during the whole fight; he is no friend of the Duc d'Audiffret, and did not approve of his first speech against the contractors and the Ministry of War; but Rouher had sufficiently exposed the administrative errors of the Duke; it could only be agreeable to M. Thiers to see the Empire attacked and condemned solemnly once more by the verdict of the Chamber. The great oratorical triumph of the Duke is perhaps not much to his taste, as the Duke has won a great name now in the country, and has been always known as a strong monarchist; he was the leader of the movement for the *fusion* between the Orléans family and the Comte de Chambord, which came to an end by the intemperate and absurd manifestoes of the Count; he is a personal friend of the Orléans, and has so far been in opposition to M. Thiers's policy; but M. Thiers has for the present nothing to fear from any party, and the Duke found it politic to say some words in praise of him in his speech. He said that the Empire had always persecuted M. Thiers; that at the time of the declaration of war, M. Thiers's house was surrounded by the Imperial mob, which hissed and threatened him—that house which afterwards was demolished by the Commune. "The Commune," said he, "achieved what you had begun."

Practically, it is difficult to say what will be the consequence of this parliamentary fight. The enemies of the Empire are elated by the result; but I cannot help remembering the sitting at Bordeaux, when the *déchéance* of the Empire was pronounced. On that day Rouher, if he had appeared, would have been torn to pieces. Now he speaks for three hours in a French Assembly, and comes out openly as the representative of the Empire.

THE UNIFICATION OF ITALY.

FLORENCE, May 15, 1872.

A PREJUDICE is widely spread throughout the world with regard to the two European nations which have been the last to constitute their unity: that the unification of Italy was a more spontaneous and voluntary act than that of Germany; that Piedmontese laws and institutions were wished for by all the provinces of the Peninsula, while Prussia imposed hers by force on the disarmed German states; in a word, that Cavour was Italy's liberator, Bismarck Germany's enslaver—a conqueror whose success alone has induced his servile victims, always kneeling before power, to pardon him. This whole view of things is constantly meeting with contradiction in facts, however plausible it may appear to superficial lookers-on. Indeed, whilst Prussia has respected the laws and institutions not only of all the confederate states, but of each of her own provinces, and the tendency towards unification is represented in the *Reichstag* precisely by representatives of minor states and recently annexed provinces, the introduction of Sardinian legislation was decreed peremptorily in 1860 throughout Italy, and the individual provinces are now in fact endeavoring to preserve the few autonomical institutions and privileges they have saved, or to regain some of those which were then taken from them. In a word, it is the centrifugal movement which paralyzes the legislation of the parliament of Rome, and the centripetal which facilitates that of the Berlin Reichstag.

One is constantly induced to make such reflections when one considers the sterile activity of the Italian parliament during this winter's session, and seeks for the causes of its failure in satisfactory results. In fact, we may say that this has been the case ever since the young kingdom existed, and that in these last thirteen years the legislative body of Italy has not voted one of those "organic" laws which were to have been its chief study and occupation immediately after the unification of the country. It was the fashion till lately to attribute this failure in serious legislation to the incomplete state of the kingdom and the all-engrossing interest of its foreign policy; but the two long sessions which have taken place since the taking of Rome must have converted even such as refused to be convinced by the four sessions which followed upon the annexation of Venice in 1866, that these were not the real obstacles to successful legislation in Italy. Nor can it be entirely accounted for by the indolence, apathy, and carelessness of the Italian ministers and deputies. Parliament meets, indeed, pretty regularly, and twenty or thirty members are always to be found ready to work, which number would be quite sufficient, even if all the others did nothing. The real cause of this undeniable fact must therefore be looked for elsewhere. I firmly believe it to consist in the unripe state of Italy when she suddenly improvised her unity at a time when she was totally unprepared for it. There had been neither a Zollverein, nor a national body of university professors, nor a constant commercial and scientific intercourse between state and state by rail and road, by correspondence and travelling, to prepare the way, as had been the case in Germany. Moreover, the idea of unity was by no means so mature here as there, where it was not one single Mazzini alone, but all cultivated minds, who inclined towards it for more than forty years before, however different may have been the definitive form they wished it to assume. The circumstance alone that the Prussians were able, on the morrow of their "conquests," to leave each conquered province its own *corps d'armée* without fear of strengthening the separatist tendencies, and that the Italians dare not yet, after twelve years, apply this so-called "territorial" system to Sicily, Tuscany, or in fact to any of their provinces, lest they should detach themselves from the mother-country—this fact, I say, goes far to prove how far less prepared for unity Italy was than Germany.

Thus the very first step of the Italian Government in 1859 and 1860, after having amalgamated all the separate armies in one, mixing up Lombards and Neapolitans, Sardinians and Romagnols, together in the same regiment, was peremptorily to decree the introduction of the Piedmontese statutes, as well as Piedmontese civil and criminal laws. It soon became evident that these laws, framed in the theoretical spirit of the Napoleonic legislation of 1802, but slightly modified by the exigencies of Piedmontese history, traditions, customs, and interests, were utterly unadapted to the rest of Italy. The French system of recruiting (the conscription) met with a bad reception, and was imperfectly carried out in several provinces. The juries, once the novelty of the thing had passed away, could not be induced to attend the assizes, or, when they came, to pronounce a condemnatory verdict. Schools were established everywhere, but the parents refused to send their children to them, etc. Comprehensive organic laws were promised, as we have said, and, indeed, the different ministers tried to keep the promise given. Laws organizing a whole system of public instruction, from the university down to the village school; the entire administration, remodelling of the arbitrary territorial divisions, as well as reform of the French system of prefects, combined with elective councils; the whole jurisdiction and magistracy, beginning with the court of cassation and ending with the *pretori* (justices of peace); the army and navy, the financial system, etc., were framed in the ministries. Unfortunately, the Chambers never succeeded in voting these pompous bills, and this simply because the different towns and provinces could not be brought to sacrifice the smallest particle of their rights or advantages to the common cause. The present administration had, like its predecessors, a certain number of such unificatory laws in its portfolios; yet they have no more been adopted during the expiring legislative session than they were in former periods.

A few examples will serve to illustrate the real cause of this chronic failure.

Everybody will easily understand that Italy is not rich enough, either in money, professors, or students, to keep up twenty universities; and it is not difficult to see that by reducing them to five, and concentrating on these five focuses of intellectual and scientific life the most eminent scholars and teachers whom they would be able to attract there by concentrating their pecuniary resources also, and offering them greater advantages, they would at the same time attract hundreds of students to those universities, full of real life and intellectual activity, now divided between twenty such establishments, fifteen of which are dying a natural death, and five others quite incomplete. But what everybody may confess the best is not always readily maintained when it comes to discussion and votes in parliament. Then the member for Catania, or Perugia, or Sienna, if he wishes to be re-elected, must needs stand up for the university of his constituency; and, as he promises to most of his colleagues his support on a similar occasion, is almost sure to obtain a majority. It is the same with the number of useless prefectures we have in this country: a prefect being a sort of petty autocrat, his presence in a town is considered to give it the splendor of a small court, and woe to the deputy who would contribute by his vote to deprive his native town of such a benefit! Again, in matters of justice we find the same contradictions which paralyze all Italian legislation: on the one side a desire to establish an external, symmetrical uniformity in the French style; on the other side, the wish to preserve and spare local and provincial privileges and prejudices; a great deal of small talk about decentralization and ultimate bringing in of centralizing laws; an eternal conflict, in short, between a rationalist legislation and real or imaginary interests. Nor is this conflict embodied in two distinct parties—it exists in every individual's brain. Every cultivated Italian may repeat with Faust:

> "Zwei Seelen wohnen, ach, in meiner Brust"
> (Two souls, alas, dwell within my breast)—

for every cultivated Italian has been brought up with the abstract passion for that abstract being called Italy, which had no other concrete system whatever beyond that of the language and literature; and, his thoughts not being deep, imagined that it would suffice to proclaim unity for it to exist. No sooner did he see it before him, proclaimed in this way, than he saw that behind names there must be things, and, as he had been brought up in the "modern" French-Revolution and First-Empire ideas, simply began to build up the thing by means of that system of architecture. It has now worked for twelve years, and the Italians see with terror that what they held to be a living organic body is, in fact, nothing but a skilfully-constructed, inanimate machine, which only moves as long as it is artificially wound up. On the other hand, they are beginning to feel that they may get tired of incessantly winding it up. It is a delicate thing which requires continual vigilance, and is very apt to be put out of order if neglected but for a single day, or knocked by a rough hand, as "the brilliant French organization" proved in 1870. Now, our modern Italian is an indolent being by nature; he is, moreover, attached to his native place and province; he is a man of habit—does not like being disturbed by innovation; finally, he is full of *riguardi* (considerations), and would never do harm to anybody were the greatest benefit to be obtained by it. The consequence is, that when a new law, like that discussed this week in the Senate about the Supreme Court of Justice, is to be voted, he cannot make up his mind to put his personal inclinations and interests in harmony with his theoretical convictions. The latter, in his utterly Frenchified mind, are for the system of cassation against the system of a third instance; but the system of cassation requires that there should be only one Supreme Court for the kingdom, established in Rome, which would be a great loss (in the Italian mind) for Turin, Milan, Florence, and Naples. Were he, on the contrary, to follow the example of the English and Germans, who make their laws according to the exigencies of their society, and do not pretend to remodel society after the pattern of their laws, he would easily conciliate the above said local interests with the national interest by leaving to the French their admirable court of cassation, and establishing four or five courts of third instance; by doing which he would at the same time avoid creating a body of which nobody knows whether it is a legislative, a judicial, or a didactic authority.

It is evident that it is no easy matter to eradicate this evil in Italy. Years employed in unlearning what they have learned from the French Revolution, and in acquiring practical science of government and administration, force of circumstances, accidents, a reform of the parliamentary system still in vigor, will alone allow them to overcome this essential difficulty. However, as New Italy has the inappreciable benefit of enjoying the most absolute liberty, there is no doubt that the legislation will in time profit by this vivifying element, as commerce, science, and industry already have done.

Correspondence.

REASONS FOR ELECTING GREELEY.

To the Editor of the Nation:

Sir: I submit the following reasons why Mr. Greeley should be elected and why he should be supported by those who participated in the Cincinnati Convention. Some of these reasons are not new, as you will perceive:

1. His election will dissolve existing parties, and enable the best men of both old parties to unite for needed reforms.

2. It promises to withdraw from the field all antagonisms growing out of slavery and the war.

3. It will establish the one-term principle as a political maxim, and thus take from the President the temptation to use the public offices to secure his own re-election; in short, will be the first step to real civil-service reform.

4. It will enable the revenue reformers of both old parties to work together, thus practically doubling their strength in every doubtful Congressional district.

5. The responsibility of putting Mr. Greeley in the field rests at last upon those who drew the Cincinnati Convention together, and they cannot avoid it. But for them there would have been no man of the name of Greeley available for the people's votes.

6. If elected, his advisers must be either those who drew the Cincinnati Convention together or those who jumped on after it started—either the soldiers or the camp-followers. If the soldiers go to the rear, the camp-followers will of course take possession of the field, and will not be chiefly to blame under the circumstances.

7. If those who drew the Cincinnati Convention together abandon Greeley, or even falter, they contribute to that extent to the election of Grant. Looking upon the question as a choice of evils, they must decide that Grant and old party tyranny are better than Greeley and emancipation.

8. To attempt to substitute anybody else for Greeley now is not only to undo the field-work that has already been done, but to cast the shadow of irresolution upon the whole movement, its authors and abettors. There will be no certainty in the minds of the public that, having made one change in the face of the enemy, we shall not make another. Voters will scatter, newspapers will slide back to the old grooves, leaders who are now waiting for Baltimore will conclude that this is boys' play and will cling to their accustomed allegiance. This applies to Democrats as well as Republicans.

9. Those who drew the Cincinnati Convention together will be the leaders and directors of Greeley's Administration, unless by their own acts they elect not to be so. Greeley must lean upon them for support, for they are the only ones who can give him support. He must lean upon those who can stand alone, and not upon those who need something else to lean upon. Since he has no organized party to look to, he must look to the foremost men of the mob for help. You know who those foremost men are.

10. Since Mr. Greeley is not looking to a second term, he has no motive but to make a high-toned Administration. What motive has he to run his ship on the very rock where Grant split? Is not that rock plainly visible? Is it likely that Mr. Greeley is the only one who has not seen it?

CURTIUS.

["Curtius," it is proper to mention, is a prominent promoter of the Greeley movement, and whatever he says is entitled to careful consideration; but his argument, in part at least, rests on assumptions for which Greeley's career, in our opinion, affords no warrant, and which we have recently fully discussed. We are surprised, by the way, that "Curtius" should make no mention, among the benefits to flow from Greeley's election, of the deliverance of the people from the usurpation of the Electoral College in the matter of the tariff. He surely has not overlooked this master-stroke of the Cincinnati Convention, which Mr. Gratz Brown and Senator Doolittle are evidently prepared to put in the same category as the Magna Charta, the Bill of Rights, the Declaration of Independence, and the Emancipation Proclamation.—ED. NATION.]

Notes.

MACMILLAN & CO. are about to publish the "Oxford Bampton Lectures for 1871," by the Rev. G. H. Curteis, who treats of Dissent in its relation to the Church of England.——"Concord Days," by A. Bronson Alcott, is on the list of Roberts Bros.——E. B. Treat, of this city, publishes by subscription "The National Political Manual for 1872," which, if it surpass Mr. McPherson's compilation of the same kind, will need no other *raison d'étre.*——Baring-Gould's "Lives of the Saints," in thirteen volumes, will shortly begin to be issued by Pott, Young & Co., each volume being complete in itself.——The remarkable series of lectures on Preaching, delivered last year at Yale College by Mr. Beecher, is announced in book-form by J. B. Ford & Co., who also have in press the Fifth and Sixth Series of Mr. Beecher's Sermons, and a "History of New York City," by Mrs. M. J. Lamb, member of the New York Historical Society.——An author who evidently has no idea of "clasping hands across the bloody gulf" is Mrs. Sallie F. Chapin, for whom Claxton, Remsen & Haffelfinger are to publish "Fitz-Hugh St. Clair, the South Carolina Rebel Boy; or, It is no Crime to be Born a Gentleman."——J. B. Lippincott & Co. announce "The Evolution of Life," by Henry C. Chapman, M.D., with numerous illustrations; "Theology for Children," by Mark Evans; "Guide-Book of the Lehigh Valley Railroad"; and the usual number of new novels.

—In the *Herald* of Monday last there is an essay, nine columns long, on the late Mr. Bennett, which, considering that it appears in his own paper, adds singularly little to our knowledge of him. Perhaps more than anything else that it does, it confirms by its extreme paucity of biographical details the correctness of the opinion that no one of our time whose name has been so widely familiar as his, can have lived a life of such isolation. Except for its tone of personal friendship, or, we may rather say, of *Herald* partisanship, there is in this essay almost nothing to make it different from the thousand-and-one obituary notices which have been printed in the various newspapers. Of eulogy based upon *Herald* partisanship, however, or upon personal friendship, there is an amount altogether unwarranted by the facts. We are told. for instance, that Mr. Bennett was the original deviser of Central Park and the neighboring boulevards, but of proof of this assertion nothing is offered, and in what sense the statement is true we are left in doubt. It is also asserted that while yet a boy, in Scotland, Mr. Bennett discerned clearly that the man who wished to lead a literary life, and at the same time exert an influence over his fellows, must make up his mind to emigrate to America, and must there become the owner and editor of a perfectly independent newspaper. Yet it was only after he had reached his twenty-seventh year, and after he had tried his hand at several employments, that Mr. Bennett found himself for the first time at work in a newspaper office; and how it happened that he came to this country at all no one seems to know certainly. It may perhaps be true, as another biographer tells us, that it was the perusal of Franklin's "Autobiography," a book which circulated extensively in Scotland when Mr. Bennett was a youth of fifteen or thereabouts, which at the same time directed the future New York editor to the country of his adoption, and pointed out to him his foreordained profession. This probably was the same edition of the famous "Autobiography" which was read so eagerly by other noted Scotchmen of that generation, and of which William Chambers relates that his first venture as a publisher consisted in his printing a small edition of it with a few pounds of battered type picked up at an auction, and on a press at which he was compositor, proof-reader, and pressman. Widely different, we may as well remind ourselves, were the subsequent careers of the two young Scotchmen, who sixty years ago, at Edinburgh and Aberdeen, were drinking in their inspiration from our Yankee philosopher's fountain of wisdom and worldly wisdom. The one was to be the reinventor of penny literature and to sow broadcast in "the huts where poor men lie" the best thought of the best minds of all ages; the other was to become the founder of a great journal which even while its parent lay dying displayed each morning in conspicuous columns the advertisements of prostitutes, abortionists, and professional seducers, male and female. Not only may we as well remind ourselves of this difference between the Edinburgh *Journal* and the New York *Herald;* it becomes evident that we do much better in reminding ourselves of it than we do in forgetting it, when almost everywhere we see loud praises of the *Herald's* success, and find its example held up for imitation. That it has been in some obvious respects worthy of imitation this *Herald* essay makes sufficiently plain. As we have said, it does ample justice to Mr. Bennett's admirable qualities, and that he had many such no one will deny who knows what he accomplished in his profession, and how great were the difficulties in his way. But he had faults as great, and very little did the *Herald* ever serve any good cause. That it has always been a consistent friend of virtue, as our author maintains, and a systematic, earnest denouncer of vice; that often in waiting upon public opinion this absolutely independent journal has not often been as stupid, heartless, and cruel as ignorance and moral callousness could make it; that its conductor never could withhold praise for a good act even though done by an enemy, nor condemnation for a bad act, though done by a friend; that of late years, at any rate, it has not been intellectually incompetent in its editorial department, and inferior to its contemporaries oftener than it has been superior to them in the fulness of its news—these things it requires an odd sort of impartial critic to maintain, and how our essayist can assert them we do not know. It is a fact, however, that a newspaper commands from its friends a species of idolatry curiously intense. There are plenty of men in this city, and Brooklyn, and Williamsburg who think of the *Herald* as an old sailor thinks of his "saucy *Arethusa*" or *Mary Ann,* or as a veteran soldier thinks of his regiment.

—By the death of Dr. William Stimpson, Secretary of the Chicago Academy of Sciences, Natural History loses one of its most distinguished American followers. His work was of a kind, and done with a spirit, which would not give renown outside the circle of his fellow-workers in the science, but among them his place was the highest ever attained by any American student of the same years of active labor. At the very outset of his studies it was his good fortune to come in contact with Professor Agassiz, then just established in Cambridge, and to get from him certain conceptions of method in zoölogical research which did much to determine the value of his subsequent investigations. A voyage around the world in the scientific corps of the Japan Expedition gave him the chance to get an extended view of organic life in its various conditions of development. Besides the large amount of work done upon the collections of this and other Government expeditions, during his long connection with the Smithsonian Institution, the greater part of which has been lost through fatal delays in publication, he contributed to science numerous memoirs on the marine invertebrate life of the coasts of North America. In the arduous studies on the sea and shore which furnished the materials for these works, he showed the full energy and devotion of a born naturalist. His blood, though of that old New England stock misnamed cold, was capable of a fever heat of enthusiasm. He brought to his work all the ardor of the Louisiana Audubon, as well as the spirit which made his work immortal. No hardship or danger could deter him. There is scarcely a seaport from Nova Scotia to Florida where the hardiest fishermen do not tell of the daring and skill of the delicate gentlemanly student who would placidly face the gravest danger of the sea in the pursuit of its inhabitants. His skill as a sailor and his profound knowledge of the ocean did a great deal to give science the respectability among seafaring people that Tyndall and Huxley and other vigorous students gave it among the mountaineers of the Alps. All that he had done for science was but a promise of what his riper years might have achieved. Under his able direction the Chicago Museum had come to rank fifth among the centres of research in this country. He had gathered around him, though but forty years of age, the ample store of more than twenty years' assiduous investigation. With a patience as admirable as it was singular in this land of haste, he was willing to forego the gain of honor which might have come from the publication of his results until the work was thoroughly done. All who knew his labors looked with the keenest interest to the time when his masterpieces should be given to the public. It was never to be. The Chicago fire devoured all his manuscripts, a great number of drawings and engraved plates, a valuable scientific library, a part of the invaluable collections of deep-sea dredgings of the United States Coast Survey, and much material from the Smithsonian Institution. Borne down by this great blow, he began rapidly to yield to a disease which for some years he had combated with native energy. After the first shock, the active help and encouragement of his brothers in science gave him some heart again. His old teacher, Agassiz, offered him all the resources of the Museum of Comparative Zoölogy to restore his losses; the Coast Survey gave him a place in charge of the deep-sea dredgings off Florida. But with all his old love for the work his strength was gone. Of all the lives that were wrecked by the hideous calamity at Chicago there was perhaps none more valuable than his.

—The statement, "Thou canst not tell whence it cometh or whither it goeth," has ceased to be true of the wind since the discovery of "Ballot's Law." The simple announcement of it threw a flood of light upon the wind-maps and gave the clue to their labyrinths. "The winds always blow nearly parallel to the isobarics" (lines connecting places where the atmosphere weighs alike, as measured by the barometer—a word analogous to isothermal)—"with the highest pressure on their right hand in the Northern Hemisphere" (but on their left in the Southern). To illustrate: suppose a nucleus of lowest pressure (say 29·3) to be central over Long Island, and stationary. Such was actually the case at midnight on the 4th inst. per weather report. A circle connecting Portland, Burlington, and Cape May would represent the isobaric of 29·60. Now, if the wind has the higher pressure at its right, it must blow around Long Island "backing"—*i. e.*, in a direction the reverse of watch-hands. Thus, at Portland and Boston it blew from the east; at Burlington, northeast; Cincinnati, north; Cape May, Washington, Lynchburg, etc., northwest; and at New London, southeast. Three facts contribute to confuse the simplicity of this law as applied to the interpretation of our weather-maps, exclusive of mistakes: first, the observers divide the compass into only eight points, making but one between each pair of cardinals; hence winds from north-northeast and north-northwest might both appear in one region recorded as north, and in another on the same map as northeast and northwest respectively. Secondly, the words "*nearly* parallel to the isobarics," explained more at length, mean that the wind blows across these parallels at a small angle from the higher to the lower pressure, thus producing an immense spiral whorl (which also ascends around its core). Thus, at the time of our illustration, the wind was reported northwest at several places due west of Long Island, indicating a centripetal as well as circular impulse. Thirdly, it is only when the area of low barometer is stationary that the wind blows around it with uniform velocity, and that the calm is at its centre. If the whole area moves, the *apparent* directions alter, though still uniform *relative to the moving centre.* Thus, if the nucleus is moving eastward, the wind to the south of it has double work to do; its velocity eastward equals its motion round the centre plus the speed of the centre. Conversely, the wind northward of the nucleus has its apparent westward velocity lessened by the amount of motion of the centre eastward. If the storm moves very rapidly, the wind may appear west under its whole extent, being lightest at the north and heaviest at the south. (In the tropics, storms move to the west, and hence it is the east winds there which have their speed supplemented by that of the centres, while the west winds are almost neutralized, "trade winds.") Where the pressure is lowest the air always moves in the same direction as the storm, thus preserving its position beneath the core, while the apparent calm is in the region where the opposing directions and velocities balance each other. (Hence the equatorial belt of calms and variable winds.) With these facts in mind, the wind records become a soluble enigma.

—The reading public will be defrauded if the papers on "French Home Life" which have for some months formed the most attractive portion of *Blackwood's Magazine* are not ultimately reprinted in a book. The subject is one which most of us are accustomed to regard as mythical, because so few of us in going abroad have the leisure or the opportunity to penetrate to the French hearthstone. The writer, however, has evidently studied the French most intimately, and his account of them is an agreeable corrective of the low opinion which now prevails, not unnaturally, of their character. At the same time, he discusses with candor all sides of a question, and gives the impression of a very fair-minded observer, whose judgment is entitled to a great deal of weight. His sixth paper, on the French language, in *Blackwood* for May, is an excellent example of analytical and original treatment of a fascinating theme. It is mainly occupied with an examination of evidence tending to establish the author's thesis that a language which has attained its full growth is no longer a mere product and index of the national character, but reacts upon and moulds it to such a degree that "the fate of nations may be influenced by the language which they speak." Thus he says of the catastrophe of 1870–71:

> "When history begins to dissect this modern decline and fall, will it take no note of the salient feature of French habits? will it acquit the people's ready tongues of all share of responsibility? That the incessant spelling of empty words must necessarily stimulate frivolity of thought seems to be a probable if not a certain proposition. That the cherished music of one's own voice ends by becoming particularly agreeable, is a fact of which we see examples even outside France. That the soothing vanity which springs from it should incline the self-approving speaker to believe in what he supposes to be the opinions he expresses, is a simple and natural transition. That these mental processes should result in a peculiar disposition to consider one's self very wise and decidedly worth listening to, appears to be mathematically demonstrable. It looks, then, as if the self-conceit, the impatience of observation and advice, the rejection of all unpleasant truths, the resolute credulity of their own fancies, which the war brought so glaringly into light amongst the mass of Frenchmen, may, not unreasonably, be partially explained by the accumulated effects of years of idle talking."

—Passing on to details, the writer adduces a number of interesting illustrations of the difference between the French and English character, as seen in the capacity of their respective languages for expressing certain ideas or sets of ideas. Thus:

> "A second odd example is the total absence, in French, of any word equivalent to 'listener.' It seems hardly credible that with thirty-seven millions of talkers, no provision, other than the cumbrous paraphrase *celui qui écoute,* should have been made for auditors. The only interpretation of so odd a blank lies in the supposition that each Frenchman chatters for himself, not for others; and that, not caring whether he is listened to or not, he has never recognized that he has no denomination for the person to whom he speaks. He has the verb *écouter,* but no corresponding substantive."

Not that the French have no word for 'hearer'; but neither the proverbial *bon entendeur* nor the formal *auditeur* answers exactly to the notion of listener. We are surprised that the writer, in enumerating other words in which the English tongue is decidedly superior, should omit so striking an example as the verb "to stand." To dispense with this strong and invaluable word would seem a great hardship, yet the French make shift without it, using an awkward circumlocution to indicate the upright position, and substituting a weaker verb to denote fixity. Those who like may draw from this omission the inference of instability and revolution, and those who can may refute them.

—The "Bibliothèque de l'Armée Française; publiée par ordre du Président de la République sous la direction du Ministre de la Guerre," is being diligently pushed forward, and enough volumes are already published to fill a respectable book-shelf. We find at Christern's all the books of the series thus far issued, and they offer very good reading in a handy shape and size, and well printed. We give the titles of the nine books, making seventeen volumes, now to be had: "Napoléon. Campagnes d'Italie, d'Egypte et de Syrie," 3 vols.; "Mémoires de Turenne, suivis du précis des campagnes du Maréchal de Turenne, par Napoléon," 1 vol.; "Frédéric. Œuvres Historiques (1740–1763), suivies du précis des guerres de Frédéric, par Napoléon," 3 vols.; "Xénophon. Expédition des Dix Milles," 1 vol. The translation is by M. Eugène Talbot, founded on that made by Luzerne, Minister of Marine under Louis XVI. "Salluste. Guerre de Jugurtha," translated by M. Croiset. "Flavius Josèphe. Siége de Jérusalem. Extrait de l'histoire de la guerre des Juifs contre les Romains." "Commentaires de César," with notes by Napoleon, 2 vols.; "Commentaires de Mortluc," 4 vols. Of this work Henry IV. is reported to have said that it deserved to be called the soldier's

Bible. ("Henri IV., bon juge, a dit qu'il mériterait d'être appelé la Bible des gens de guerre.") The editor of these little books, M. Camille Rousset, historiographer of the Ministry of War, has supplied each of them with a brief, well-written introduction, in which he tells something about the book and its author, and perhaps avoids oftener than would seem possible the temptation which he must be more than French-human not to have been under—to make flings at the fallen government, and to insult the Commune, and to glorify the so-called Republic of M. Thiers. The most striking of the instances in which he has let fly his darts against the late Emperor is the following, the closing sentence of the Introduction to the "Campagne d'Italie et d'Egypte":

> "It will be remarked, no doubt, with what insistance the author of this book has substituted, by an anachronism into which he has fallen with open eyes, to serve his own ends, the name of Napoleon for that of Bonaparte. We have allowed this singularity to remain, since there is no longer any chance of its being accepted or ratified by history. Men will always distinguish between a Bonaparte and a Napoleon, as they distinguish between an Octavius and an Augustus."

—M. Léon Heuzey, professor of archæology in the Ecole des Beaux Arts at Paris, concluded a course of lectures which he has lately delivered there by two informal talks, accompanied by illustrations, on the costume of the Greeks, to which were invited, besides the members of the Academy of Fine Arts, a number of professional men and art-critics. A long study of the works of Greek antiquity has convinced M. Heuzey that the dress both of men and women in Greece was composed simply of squares of cloth of varying dimensions. With squares of woollen stuff, chosen of Oriental manufacture, in order to get as near as possible to those woven by the women in the gyneceum, M. Heuzey reproduces upon the model the folds and way-of-falling, even the most complicated of the draperies of the statues, bas-reliefs, and vase-paintings of Greek antiquity. Among many others, he showed the horsemen of the Panathenaic frieze, clothed with the double-belted tunic; the maidens in procession of the same frieze; and even the statue of an orator dressed in the great square mantle, the glory of the museum of St. John Lateran, known as the "Sophocles." In the course of these illustrations, an interesting fact appeared. The folds which cover the body had been adjusted with some difficulty upon the model, who first changed the attitude and then took it again. The draperies immediately reproduced those of the antique statue which stood beside the model upon the platform. For the women's dress the results were the same, and obtained by means as simple—only the squares are larger, and made of richer and softer stuff. The reproduction of the Minerva of Velletri, clad in the Ionian tunic under the Dorian peplus, gave, among others, the same results of identity with the model as in the case of the Sophocles. Last year M. Heuzey finished his course by similar experiments with the costumes of the Assyrians and the Egyptians. Next year he will occupy himself with Roman archæology and the more complicated costumes of the Roman people.

—The rage for picture-buying in France and England, one of the most refined forms which speculation has taken in these days, would seem to continue with little abatement if we may judge by the reports of recent auction sales. The Gillott sale, with its astonishing result for four days of £130,322, has been much talked about. The sale of the Collection Carlin, which took place in Paris, April 29, was by no means so important in a money way, but the prices were such as to show that the pictures of certain modern French masters are still much better to stow spare money in than either the old stockings and honey-pots of a past generation, or than certain railroads and banks of our own day. Six pictures by old masters brought 31,250 francs, of which sum 10,300 is to be allotted to Rembrandt for a portrait of a woman, and 9,500 to D. Teniers for a smithy with horses. In contrast with this, we have 27 pictures by modern Frenchmen bringing 355,650 francs, and yet none of the pieces principal works. It is curious to observe that the two pictures by Gustave Courbet, "La Falaise d'Etretat après l'Orage" and "La Mer Orageuse," exhibited at the salon in 1870, brought good prices, probably as much as the painter sold them for; so that his expulsion from the salon of this year and the outcry raised against him for his doings during the Commune would seem to have made his powerful, original paintings no less worthy in the minds of people who can separate the man from his work. The former of these two pictures fetched 17,000 francs, the other 13,000 francs. Eight pictures and sketches by Delacroix were sold for 140,750. The first study by Ingres, for his Angelica, brought 70,000 francs; a fine Millet, "Clair de Lune," was sold for 20,000 and a picture by Th. Rousseau, "La Mare," for the same sum.

—The late Friedrich Gerstäcker, who died at Vienna at the age of fifty-six, belonged to the romantic school of travellers rather than to the serious and scientific, such as, for example—to name his countrymen and contemporaries—Schlagintweit, Rohlfs, Schweinfurth, and Mauch. What he furnished his readers was not the usual narrative of travel, with dates and circumstance and order of progress, but, as a French critic has aptly termed it, "une suite de récits romanesques, écrits toutefois par un homme qui a vu le pays." The United States Gerstäcker saw pretty thoroughly, from a great many points of view, in the period 1835–1843 (which covered, by the way, the visit of Dickens), and immediately on his return to Germany he began to contribute to the press the sketches of American life and manners which not only brought him into notice, but acted powerfully on the imagination of the emigrating classes of the population. In six years he wrote twenty-three works, making 103 volumes, and then, to renew his capital stock, he traversed South America, Australia, and the East Indies. Central America, Nubia, and Abyssinia afterwards gratified his fondness for adventure, and in 1869 Gerstäcker revisited this country. His works have not had the circulation here which their liveliness and picturesqueness deserve, not to speak of their historical value, which will grow with time. An English edition of his "Western Lands and Western Waters" appeared in 1864.

VICTOR HUGO'S "L'ANNÉE TERRIBLE."*

THE admirers of Victor Hugo may be compared to men fascinated by a beautiful and witty woman, whose daily life is a violation of all social proprieties and conventions. Judged by strict rules of criticism, at least half of what he writes is sheer rubbish. He is at the same time a quack and a pedant, throwing a slight bridge of spurious learning over stupendous depths of ignorance. It is hardly an exaggeration to say that whenever he ventures on a foreign quotation or an historical reference, the quotation and the reference are either imaginary or incorrect. If he has occasion to introduce four words of German, all ordinary particles, he must misspell one of them. If he attempts to cite two words of Plautus, he must distort one of them out of all possible Latinity. Spanish is supposed to be his war-horse; he introduces page after page of it to show his familiarity with the language; yet he writes *la alma,* which is about equivalent to *la âme* in French. As to history and ethnology, panting scholarship toils in vain after the swarm of his blunders and hallucinations. The English translator of "L'Homme qui Rit" rashly began with a purpose of rectifying all the little slips in the original. How far this design was carried out we cannot say, not having kept the run of the London version, but if any serious effort was made to fulfil the promise, the notes must have swelled to a commentary nearly as big as the text. Our American translator was wiser; he began by declaring explicitly that it was not his business to correct the author's history and archæology. Indeed, the perversions of the record were so gigantic, colossal, Titanic, so astounding and overwhelming to the ordinary well-regulated mind, that several English critics could only explain them on the hypothesis of the writer's insanity. We do not, however, believe Victor Hugo to be mad any more than Charles Reade or Algernon Swinburne, or any very conceited man of genius. If his eccentricities seem nearer madness than theirs, it is because both his genius and his conceit are greater. For, among all self-worshippers and self-believers, he must be assigned the foremost place. He belongs to a country of conceited authors: Chateaubriand, Lamartine, Dumas *père,* Emile de Girardin, are four names that naturally occur to us; but the conceit of all four together would hardly make Victor Hugo's. We believe that he has never altered a word of his composition after it was once printed, and we are certain that he has never acknowledged himself wrong on any point whatever, even when his errors have been demonstrated to him.

This egregious conceit, viewed in its proper connection with other mental characteristics, gives us the key to his wildest extravagances. Thus it is plain, notwithstanding his affected parade of recondite knowledge, that he not only is not a learned man, but never was a *learning* man (if we may be pardoned the adjective), never had the faculty of acquisition in any great degree—for proof and illustration of which we refer to the notorious fact, that despite all his opportunities and predilections, he is to this day ignorant of our language, and cannot read a common business letter in English. Now, of course, we do not expect a man of genius to be also a very learned man. Perhaps, on the whole, we should rather expect the contrary. But there is nothing to prevent genius from profiting by other men's learning, as Goethe used to do when he milked the German professors. Here it is, however, that the conceit of a man like Hugo comes in to do mischief. He is too proud to consult others, fancies he knows everything by some inspiration, and goes on blundering and inventing with a grand impudence.

Yet through all these tremendous drawbacks we feel the power of his genius. "L'Homme qui Rit" may be a huge chimæra, a nightmare in a No-mansland which has the audacity to call itself England; but the novel contains scenes (*e. g.*, the recognition of Gwynplaine as Lord Clancharlie by the sheriff) which are not surpassed in interest by any tableau that can be selected from the whole range of fictitious literature. The would-be philosopher and statesman may move our compassion by his inadequacy, but the lyric poet is one of the lyric poets of the world. Swinburne is no very safe critic in general, but he was right in mentioning three or four of Hugo's ballads as sufficient by themselves alone to make a great poetic reputation. Of these, "Le Chasseur Noir" (in "Les Châtimens") seems to us the *chef-d'œuvre*. It produces a great effect with simple means, a sure sign of genius. Even the gallop of "Lenore" is lumbering after the rapid fury of its short lines, all nouns and verbs. The refrain rhyme *noir* is one of the few adjectives; there is not a single adverb in the poem. Another ballad from "Les Châtimens" (the name of which Swinburne gives wrongly) is only a scrap of jingle, nearly all refrain, yet it bears the mark of a great man, like a pen-drawing by Raphael. "Gastibelza" is better known to the Anglo-Saxon public. It has been somewhat vulgarized as a parlor song, and *traduced* by Maginn into a quaint formal ballad, very fair verse, but very bad translation.

---

* "L'Année Terrible. Par Victor Hugo." Paris: Lévy Frères; New York: F. W. Christern. 1872.

The genius of French poetry (serious poetry) lies in its lyrics. French heroic at best is artificial and rhetorical. And pure French heroic unrelieved by the dramatic or the satiric element is very monotonous and cloying. Who ever felt any interest in "Les Contemplations"? Who remembers anything about them, except that some of the poems are elegiac? "La Légende des Siècles" was saved from a like fate by the bizarre and grotesque nature of its themes, which brought it nearer to the author's earlier dramas, though without their *quasi* humor.* Even in it we find an occasional dash of lyric (like "La Chanson des Aventuriers") a great relief. "Les Châtimens" is chiefly lyrical; not a little of it is cast into the form of songs, and some of these are among the most effective poems in the little volume; for instance, that audacious lampoon, to the tune of "Malbrouk," which represents the consecration and coronation of Louis Napoleon as that of all the historic bandits incarnated and united in the last usurper:

> "Regardez, le Saint Père,
> Portant sa grande croix,
> Nous sacre tous ensemble
> (O douleur! O mystère, Paris tremble!)
> Nous sacre tous ensemble
> Dans Napoléon trois."

When, therefore, we took up "L'Année Terrible," with some English rumors of its excellence in our minds, we naturally expected some brilliant exhibitions of the poet's forte. We looked for some swift arrows of song,

> "—feathered best for flight and yet that never flew,"

some epigrammatic darts that would smite Kaiser William through all his barriers, moral and physical. We hoped for some sadly sweet lays of lament over fallen France, for the *αἴλινον εἰπὲ* of Æschylus, reproduced and transmuted in the crucible of genius. And of all this we found nothing. The lyric element is hardly represented even in form; in spirit it is altogether absent. The nearest approach to it may be seen in the verses pp. 173 *sqq.* Even the invectives and execrations of the heroics are comparatively feeble. There is no hesitation about kicking the man who is down, no fear of defying the man who is up; but somehow the old *verve* and dash are no longer there in full force. A personality of Trochu's provokes a bad pun. Grim smiles, on different sides of the face, are elicited by the sight of Prussian corpses in the Seine, and the presentation of the Prussian bill for cutting your throat at so much a month; but the general impression conveyed is that of a lack of originality and power. Oddly enough, we come in for a large share of the abuse, considering our very small part in the action. Bancroft is like the obscene bird which defiles the head of the Colossus in the desert. Perhaps he deserved that for doing or saying something at Berlin. But Grant—we rather expected to hear him praised as the first potentate who acknowledged the new republic. It seems, however, that he has spit upon France and stabbed her and thrown mud on his own flag. How? Where? When? We suspect the poet himself would be puzzled to tell us. The very verse shows weakness; we are constantly stumbling upon lines like these,

> "Conquérant pingre, on pense à son petit ménage"—p. 108;
>
> "Ils sont le prêtre, ils sont le reitre, ils sont le scribe"—p. 387—

the latter of which reads like a prose sentence, and is as bad as the worst licenses of Tennyson.

To what shall we attribute this decadence? To the author's advanced age? Hardly. When the weight of years tells upon an eccentric genius, its effects are manifested not so much in a weakening of his power as in an exaggeration of his defects. Here "L'Homme qui Rit" is a case in point; and something of the same kind may be observed in Dickens, prematurely aged as to both body and mind by over-hard work and over-good living. The reason seems rather to be that the events of that truly "terrible year" have by their colossal magnitude subdued and broken down the writer, even without taking into account the additional burthen of his family affliction. "People will care very little for what we say," quoth wise Lincoln at Gettysburg, "but they will always care much for what these men did"; and the happy antithesis outweighed all Everett's classic reproduction of "Thucydides" and "Pericles." With at least equal truth may it be affirmed that what was done between those two Julys crushes into insignificance all that the most eloquent can say of it. Those events have made our poet almost modest; they have brought him nearer to that frame of mind than we could have supposed it possible for any combination of circumstances to do. In "Choix entre Deux Nations," he narrates, with no effort at detraction, the glories of the German race, and actually admits (wonderful condescension for a Frenchman!) that the Teutons have some claim to Charlemagne.

Perhaps another and a wider principle may also be in operation here. Christianity, political economy, various considerations, human and divine, are as yet unavailing to prevent war. Perhaps they will never be able to prevent it; but they have at any rate torn from it most of its fascinating attributes. In this respect we may perceive a kind of rough analogy between it and wine. We are probably a long way from the domination of temperance doctrines over the civilized world; but meanwhile the temperance movement has killed the poetry of drinking. When once the *latex Lyæus* was mixed up with police and medical reports, when it found itself in forced company with technical terms like *assimilation* and *narcosis*, it was unidealized for ever. The thing might still be necessary at some times, pleasant at others; but the *afflatus* was taken out of it. Similarly, however unavoidable, however profitable (to the winner) war may still be, its glories are sadly tarnished by statistics and figures. The funeral baked meats will obtrude themselves into the banqueting hall; the vision of an Alsatian Ireland clouds the triumph of the haughty Prussian. The hero will no longer fight for the mere sake of fighting; he can no more address his sword as his heart-gladdener and joy-giver, which, after being his favorite companion in life, shall follow him below the brown heath, shall rest on his bosom and with it decay, while harps shall be ringing and bards shall be singing the deeds they have done in their fearless old day. Hans Breitmann might have been a Viking once; now he is but a "bummer," thinking more of the tea-pots and spoons than of the rebel cavalry over whom he must ride before he can appropriate the silver. Nay, Kaiser William himself, for all his profuse piety, what is he but a Hans-Breitmann-Emperor with a large eye to the loot? Such is war in the light of modern philosophy to the victor. To the vanquished, what can it be but the abomination of desolation? Let us be thankful that Baudelaire has left no successor, and that no French Goya has arisen. We are spared those pen-and-pencil pictures of the charnel-house which were among the possible horrors of the position.

The reader must not infer from what we have said that "L'Année Terrible" is a complete failure, or even that it is not worth reading. It is below its author, but it takes a high place in contemporary verse. When we say that it is tame, we mean *for Hugo*; it would not be tame for Augier or Méry. There are good strong lines and couplets here and there in it, such as

> "J'ai vaincu, quoique lâche, et brillé, quoique infame."
>
> "Cet homme étant le crime, il etait nécessaire
> Que tout le misérable eût toute la misère."

Let us moreover note that, if lacking somewhat of the old fire, it also lacks much of the old extravagance. Hugo does not, like some defenders of the Commune on our side of the water, view the overthrow of the Vendôme Column as a "great practical joke"; he regards it as an historic crime, and asks, reasonably enough, "If the victorious Prussians had commanded you to do this, would you have done it under any menace?" Nor is he savage against the Conservatives, unless, like Trochu and some of the clergy, they have come into personal collision with him. Perhaps this is the secret of the book's favorable reception in England. The mad genius has been partially converted to the proprieties, the old lion has let his claws be pared and his mane trimmed just a little. He is now more conformable to the drawing-room standard, but his ancient friends still prefer his primitive unkempt style.

---

* The rudimentary traces of a great humorist in the young dramatic writer, and the total disappearance of the quality from his later works, form one of the strangest of the many paradoxes connected with Hugo. Here, again, we believe that his inordinate conceit affords the real key to the puzzle, but space and time are wanting to develop our views.

THE ANATOMY OF VERTEBRATES.*

THE public, to whom, through the "Lay Sermons" and other semi-popular works, Prof. Huxley is known as an advocate of scientific education; as a railer against theological intolerance; as a believer in the monkey ancestry of mankind, and a scoffer at such trivial bolsters of humanity as the *hippocampus minor;* as the victor on many a hard-fought field of anatomy, where he has earned a reputation as an intellectual very "hard hitter"; and, finally, as an author whose works are eagerly read even when treating of unfamiliar subjects—all such will be disappointed if they look for the above features in the present work. For theology is wholly ignored in it; no allusion is made to the descent of men from monkeys; the *posterior horn* is mentioned like any other detail of structure, and not an obvious challenge to any one can be found. Indeed, so completely has our author merged the man in the anatomist that the descriptions wholly intelligible to the general reader cover scarce a dozen pages, and the characteristic Huxleian similes are just two—one to a "nightcap," p. 107, the other to "bird-lime," p. 288. To the professional man, whether student or teacher, who has lost his way in the maze of ponderous words and intricate paragraphs which renders Owen's great work upon the same subject often a hindrance rather than a help, the present little volume will come like sunlight in a cloudy sky: for logic, for simplicity of style, for the use of but one term for the same subject, and, above all, for the judicious employment of diagrams in illustration of *ideas,* it deserves very high praise.

Yet a few criticisms must be made, and they shall precede the detailed encomiums. As stated in the preface, the author has "intentionally abstained from burdening the text with references"; but while beginners may safely accept most of the statements, and the more advanced may supply the deficiencies themselves, the omission seems to us unwarranted by the reason given, especially now that references are often made by *numbers* only to a list of works at the end of the volume; moreover, the general absence of reference makes the special and complimentary mention of the works of Darwin and Flower (336, 358, 388) appear invidious. Another defect is a glossary of technical terms, the number and nature of which are simply appalling to the general reader, since they are not found in the lexicons, and require some knowledge of the classics for their comprehension. Surely *atrial, hypural, perivisceral,* and *appendicular* require some definition; and a glossary is the proper place for such long and often superfluous definitions as are given in the text of *inguinal, cloaca, calcar, patagium, procœlous,* and *thalamencephalon.* A few of the new terms also manifest little of our author's characteristic simplicity; as, for instance, those proposed in the classification of birds. It is bad enough to be told that birds are only "sauropsidan vertebrates," just as are turtles and alligators; but we shrink from calling a hen an "*alectoromorph,*" or a pigeon a "*peristeromorph,*" both being "*schizognathous carinatæ.*" Indeed, aside from the artificial nature of a classification based chiefly upon the modifications of a few cranial bones, it is probable that the formidable names of the groups may account for the tardy introduction of the new arrangement of birds, which has been before the scientific public for several years. The characters of the provinces *Icthyopsida, Sauropsida,* and *Mammalia* could have been abridged and made more intelligible by a tabular presentation in parallel columns; indeed, owing in great measure to faulty typographical arrangements, the group-characters generally are rather confusing, and the beginner would often be in doubt as to the group to which a given definition referred. There is plenty of room, too, and urgent need, for the addition of names of familiar representatives of all the groups, as is done with those of the birds.

Coming now to details, we think that Owen could as justly find fault with our author's *placental* arrangement of mammals as Huxley has so often with Owen's *cerebral* classification; for the elephant is now closely followed by the cat and dog, and the bats are next to the monkeys. We are glad that our author regards the present arrangement as provisional, for it now seems to us to contain features as unnatural as would be the separation of the *Camelidæ* from all other mammals on the ground of their oval blood-disks; while Owen's system, though far from satisfactory, coincides closely with that of Dana, based upon wholly different considerations, and Gill seems to have improved in some respects on both of these. We think, too, that he who so decidedly objects (p. 92) to calling an "air-bladder" a lung, because its "blood comes from adjacent arteries instead of directly from the heart," should avoid giving the name *placenta* to the vascular communication between the fœtal shark and the parent (p. 120).

Of the 110 illustrations, about two-thirds are original; and of these the diagrams, especially those of the typical brain (figs. 19, 20) and of the Wolffian bodies, etc. (fig. 27), are of great value. Most of the borrowed figures are judiciously selected, but the cat's skeleton would be more useful as a type of *Carnivora* than the lion's, as would the same convenient feline's myology be more available than the dog's. It is generally agreed that the heads of animals should face to the *left,* but *Axolotl* (fig. 58), elephant (fig. 108), monkey (fig. 110), and *Lepidosiren* (fig. 51), face to the right, while in fig. 69, the entire skull of *Cyclodus* looks one way and the bisected skull the other; the horse's legs, also (fig. 94), are oddly placed, but there may have been a sufficient reason for that. The pike's brain (fig. 50) is copied from some figure which did not well show the olfactory lobes; and our author is inexcusably misled into speaking of the lobes *or* nerves, which is like calling the same part leg *or* foot. A cerebellum is credited to all the *Marsipobranchii,* whereas the same author (Müller) from whom the lamprey's brain is copied states that *Myxine* has no cerebellum. The brain of *Lepidosiren* is not mentioned, although four pages are given to the other characters upon which our author bases his opinion that the *Dipnoi* form a different order of fishes; and the omission is so notable that one reluctantly associates it with the fact that the only account of that brain is by Owen; the rather since, in the treating of the mammalian brain, no reference is made to the valuable and suggestive, though not wholly satisfactory, labors of the same anatomist towards homologizing the folds and fissures, which simple terms, by the way, our author inconsistently discards for *gyri* and *sulci.* The *Siredon* is spoken of as the *adult Axolotl,* though it is now several years since Marsh and others observed and recorded its transformation into *Amblystoma.*

The index is apparently full, but really very incomplete: on the first half-dozen pages of chap. viii. we note as omitted therefrom the words *interclavicle, marsupium, spur* (of ornithorhyncus) *acetabula* and *allantois.* Typographical errors are few; but the American editor seems not to know the distinction between *anti* and *ante,* for while the erroneous orthography *antibrachium* occurs but once or twice in the English edition, it is very frequent in the American. This word moves us to express the hope that the general employment of *manus, pes, brachium,* etc., may lead to the expurgation of such verbal plagues as *leg, forearm,* etc., from our anatomical nomenclature, which, while it contains them, is as incongruous as was zoölogical nomenclature prior to Linnæus.

So much for unfavorable criticism; it may seem considerable, but then it is all, excepting a few points the discussion of which would lead us too far into technicalities. But while approving all its other features, a few deserve especial mention. The title calls for only the *anatomy* of vertebrated animals (*vertebrates* is a shorter and equally correct term), but might justly have included *embryology,* so intimately are the results of the latest researches into development interwoven with the details of adult structure. The initial page bears evidence of this—the feature of all others which makes the present work unlike that of Owen, and able to supply a want which the latter really creates. A physiology the work is not and does not pretend to be; still, a few functions are described more clearly here than elsewhere, as, for instance, the mechanism of respiration (p. 93), of rumination (p. 324), and of "spouting" of whales (p. 348). The locomotion of the anthropoid apes is well described on p. 403, and doubtless the general reader will turn at once to this closing chapter for some signs of the author's views upon derivation (we do not say Darwinism, which is but a single species of derivative theory); but the only positive assertion upon this point is with reference to the remote ancestors of the horse. Still, the prurient hunters of irreligious passages will find enough to occupy their theological spleen in the "odious comparison" between old apes and infants, and in the locating of the human family (*Anthropidæ*) with the *Lemuridæ* and *Simiadæ* in the same order, *Primates.* And perhaps those who hold that slavery is sanctioned by the same Divine Word in which they contrive to find proof that man sprang out of the earth rather than from the animal form next below, may be dissatisfied with the explicit assertion that "there is no proof that the heel of negroes is longer in proportion to the foot than in other races" (p. 419). If the advocates of "woman's rights" are inclined to find fault with the statement that "when the peculiarities of the female sex are not connected with reproduction, they may be said to be infantile" (p. 418), let them read "Emancipation, Black and White," in the "Lay Sermons." But we fear that even those who fail to be startled by the above quotation will be somewhat taken aback by the opinion (p. 421)—one of the few individual opinions, by the way, which our author allows himself to express—that the "ancient Egyptians seem to me to be modifications of the Australioid group." Though, after all, what does it matter? Our own not very remote ancestors may have been "cave-dwellers," and the above theory will be a great encouragement to Digger Indians, Hottentots, and others, who have not yet taken their first steps towards civilization.

But our space is more than filled. The present work is well worth the cost to any thinking man; to the student it is a perfect mine of well-arranged information; to the teacher it is the best guide for lecture-room instruction that is known to us in this or any other language.

---

* "A Manual of the Anatomy of Vertebrated Animals. By Thomas H. Huxley, LL.D., F.R.S." New York: D. Appleton & Co. 1872. Pp. 431; 110 illustrations.

Le Dernier des Napoléon. (Paris: Librairie Internationale. New York: F. W. Christern. 1872.)—This is a remarkable book. Its key-note is struck in the dedication: "To his Majesty, Maximilian the First, Emperor of Mexico. Sire—This day seven years ago, seated alone with you on the terrace of Miramar, I strove with the despair of sinister forebodings to dissuade you from accepting the crown of Guatimozin, basing my strongest arguments on the bad character of Louis Napoleon. . . . I now lay upon your tomb this book which, for a moment, I thought of entitling 'The Justice of God.'" Published anonymously, the work was at first attributed to the pen of Comte de Kératry, but public opinion in Europe has more generally settled upon Count von Beust as its author. There is much in it, both of sentiment and diction, to confirm that supposition. Be the author who he may, he writes admirable French in a style at once compressed and incisive. His first chapter opens thus:

> "The cycle of the Napoleons is closed. Their legend, like unto all things which terminate dishonorably, will henceforth grow feebler day by day, between the contempt of the French people and the severities of history. For long time to come, the man of thought will pause before that strange apparition, unique, perhaps, in the annals of nations; a passing meteor, dazzling the world with its rays—Marengo, the Pyramids, Austerlitz, Jena, Moscow—to fall in the blood of Waterloo and be extinguished in the night of Sedan!"

Here follows a sketch of the Napoleonic family, in whose appearance and rôle in the history of France may be seen the incarnation of a new phase of the revolution. The first Napoleon was its child; so also was the third Napoleon—but a miserable, degenerate one. After Napoleon the Great, Napoleon the Little. The third and fourth chapters give us a frightful *chronique scandaleuse*—not in the vein of gossip, but in a tone that reminds one of Tacitus. The youth, character, and early career of Louis Napoleon are rapidly sketched, and another chapter paints for us "The Court of the Lower Empire," where we plainly discern the worst elements of moral and political dissolution actively at work under a brilliant exterior of power and repose. Even when his influence was at its height, Louis Napoleon was always the conspirator, never the statesman. The straight paths of frank negotiation he never entered. Said Cavour one day, walking arm-in-arm with a French diplomatist:

> "Your Emperor never changes; his weakness is to be always conspiring. Why so persistently seek to disguise his intention—turn to the right when he means to go to the left, and *vice versa?* Ah! what an admirable conspirator! Your Emperor, I tell you, will remain for ever incorrigible. I know him well. At this moment he might openly march forward straight to his object. But, no! He prefers to puzzle people, to follow another track; in fine, conspire, always conspire."

A singular illustration of this mania of Louis Napoleon is given in an incident which we might hesitate to credit, but that we find it confirmed in all its details by a French diplomatist, whose work was noticed in the *Nation* of May 23, and who was on official duty at Turin when it occurred. M. de la Tour d'Auvergne, Louis Napoleon's envoy to Victor Emanuel, received from his government an official despatch to the effect that he was "instructed" to warn Count Cavour that any attempt at annexation in Central Italy would be looked upon as an infraction of treaties, and that it was at his own risk and peril, and in contempt of the advice of the French Government, that the king of Sardinia threw himself into enterprises whose result might be fatal to him." The French Ambassador felt that his mission was both delicate and difficult, and prepared himself for it with no little care. Cavour listened in silence to the severe and menacing despatch, and, when the French minister had finished, he coolly handed him, for his edification, a letter from the Tuileries of the same date as the despatch, in which M. Mocquard assured him confidentially, and by the Emperor's order, that his projects of annexation were favorably viewed, and that he need give himself no anxiety as to any possible complications that might grow out from them. It was the frequency of such incidents as these that gave rise to the famous saying of Lord Cowley, in answer to the question, "Does the Emperor converse well?" "He talks but little, but he lies all the time." But Louis Napoleon's confidential qualifications of official instructions did not always jump with Victor Emanuel's interests. On one occasion he wrote privately, seeking to recall certain promises previously made. Victor Emanuel was furiously angry, but at a ball in the royal palace on the same evening, taking aside the French minister, he used the most grossly insulting language concerning the French Emperor. "What is he, after all—*cet homme, ce b——?* An intruder among us. Let him remember who he is and who I am." The unfortunate minister, with commendable prudence and presence of mind, replied: "Sire, your Majesty will kindly permit me not to have heard a single word of what you have just uttered." Later in the evening, Victor Emanuel accosted him pleasantly, saying: "It is not absolutely necessary, my dear Prince, to report to Paris our conversation of this evening. Besides, I think you said you did not hear my remarks."

Some interesting facts are developed touching the effective aid given by England to further the annexation schemes of Sardinia. Sir James Hudson was then British Ambassador at the Court of Turin, and his house was the rendezvous and the asylum of the associates of Mazzini and Garibaldi, Mazzini himself among them. Said an English secretary of legation one day to a friend at Turin: "I have just been dining with Sir James, we were twelve at table, and, with the exception of us two, the guests were all *galériens* and men condemned to death. It made me shudder to look at the fellows." The somewhat unscrupulous conduct of England in pushing forward Piedmont's acquisitive designs on the States of the Church is thus characterized by the author: "England recognizes all and any government. She would recognize Robespierre if it would secure her the sale of one more bale of cotton" (p. 119). The sketches of Cavour, Bismarck, and the diplomats of the Empire, the chapter on King William and the Prussian hegemony, and the revelations touching the secret moves on the diplomatic chess-board which influenced the origin and developments of the Crimean, Mexican, and German wars, are evidently from one who is well informed concerning the most intimate motives and projects of the different European courts.

Fireside Science. A Series of Popular Scientific Essays upon Subjects connected with Everyday Life. By James R. Nichols, A.M., M.D. (New York: Hurd & Houghton. 1872.)—If any one can read the short essays which make up this collection, and fail to find anything to interest him, it can be neither from lack of variety in the subjects, nor from an unentertaining, unpopular treatment of them. History, biography, organic and inorganic chemistry, physiology, geology, botany, agriculture—all furnish "subjects connected with everyday life," and concerning each may be found something readable and entertaining. It is to be regretted that what is entertaining is not always instructive, and that the author is not in every case trustworthy. No one, for example, who read the "Pint of Kerosene," without previous knowledge of the subject, would suppose that the volatile hydrocarbon oils obtained from the distillation of coal-tar and of our American petroleum are essentially different and distinct. The various products obtained from each are described together, and the only hint that we have of any difference is that "benzole from petroleum" cannot be used for making the aniline dyes. In a popular book like this, we can hardly hope to have much detail of experimental proof, and yet mere dogmatic assertion without support of some sort cannot be convincing. When, during his "Experiments with Air-furnaces," the author assures us that "at no time were carbonic acid and carbonic oxide absent from the library heated by the furnaces," and that "sulphurous acid was present whenever a new supply of fuel was added to the fire," we cannot help wishing to know something of the method in which his conclusive experiments were conducted, especially if we happen already to know something of the character and habits of his unwelcome visitors. Perhaps we are made overcautious in accepting these unsupported assertions by the closing sentences of the preceding essay "About Quicksilver." We are there told of the mysterious disappearance of a pair of gold spectacles. They were laid away for the night, wrapped up in a bit of chamois skin, which had been used for straining mercury. The next morning, the gold had disappeared, and nothing was left in the parcel but the glasses. This story is a presentation of the phenomenon of amalgamation, and is forcible, to say the least.

More serious criticism is invited by the author's feeble warning against the poisonous effects of lead. In the essay upon "The Human Hair," it is true, we are told that the frequent use of hair-dyes containing lead is attended with great danger, and yet two recipes are given for making the poisonous dyes, together with full directions for their use. Then again, the use of leaden water-pipe meets with but a qualified condemnation, and we are advised to protect ourselves by frequent analyses of the water which passes through the pipe. Of how much use will the caution against lead-pipe be, when on the same page follows the surprising assertion that "as service pipes for aqueducts lead pipes will under ordinary conditions deliver water free from lead contamination," and again that "in a majority of wells lead conducting-pipe can be used with safety"? It is very true that lead pipe is almost universally used in our great cities, and that well-marked cases of poisoning by lead are rare, and yet repeated analyses have shown that water passing through lead-pipe seldom escapes contamination, and the opinion of those who have most carefully investigated the matter is that a daily dose of lead cannot fail to be injurious, even though the ill effects may not manifest themselves in what has hitherto been considered a characteristic form. The essay entitled "Reminiscences of an Experimenter" is in very poor taste, to say the least, and the reader had much better form his judgment of the author's merits without reading it.

The Nation.

NEW YORK, THURSDAY, JUNE 20, 1872.

The Week.

THE Democrats in and out of Convention still continue to "go for Greeley," as far as electing delegates to Baltimore is concerned, by battalions, and with more or less show of enthusiasm. Within a week, the State Conventions of Louisiana, South Carolina, West Virginia, Missouri, Kansas, Iowa, Indiana, Wisconsin, and Vermont have either endorsed the Cincinnati platform, or instructed their delegates to vote for the adoption of Greeley and Brown or to oppose a "straight ticket," or have elected delegates known to be in favor of Greeley and Brown. Delaware alone has come out on the old ground of opposition to everything that has come to pass through, during, and since the war, justifying Mr. Bayard's recent prediction in Washington. In Indiana, one of the foremost men in the Democratic ranks, Mr. Hendricks, was nominated for the governorship, and made a speech in which he said he "would abide by the action of the Baltimore Convention," which was construed as a favorable allusion to the Cincinnati nominees. In the meantime, the *World* and the Chicago *Times* continue to swim manfully against the tide, but apparently with increasing difficulty; and, if conventions were not such very uncertain bodies, we should say that Greeley's nomination was as good as made. The *World* apparently prefers Greeley to Grant, if the choice has to be made, but now warns its fellow-Democrats that they will have no chance of a proper share of offices if Greeley is elected. It must be admitted that the nomination of Greeley by the Democrats will be, on the whole, the most ludicrous end which ever overtook a great organization. We know of nothing in sacred or profane literature to which it can be likened, except the rush of the swine, in the New Testament, "down a steep place into the sea," when the devils entered into them. It surpasses in absurdity, if that be possible, the nomination of Greeley by the Cincinnati Convention, because the party in electing Greeley *ipso facto* perishes, and perishes in the most ignoble way.

The *Tribune*, apropos of all this, has some very justifiable remarks on the jocose view which the organs of the Administration took of the Greeley nomination when it was first made. But to do full justice to the attitude of these papers, one has to go a little further back and recall the hilarious way in which they looked at the Cincinnati Convention when it was first called, and when it met. They treated the whole thing as "the best joke of the season," and seemed never to tire laughing over it. Yards of "editorial" were written showing the perfect likeness of the Convention to that which was called at Cleveland in 1864 to defeat Lincoln. The parallel, they declared, was perfect, and then they laughed again and again, and turned fondly to the dear old custom-houses, and nestled in the chairs, and looked over the list of clerks, and counted the "assessments." The idea of beating Grant seemed *too* preposterous. We believe the matter does not look so funny at present. Had some of the gentlemen who are now groaning over having to choose between Greeley and Grant, and who cannot any longer conceal from themselves the unpleasant truth that there is much danger that Greeley may be elected, faced in time the real defects of Grant's Administration, and, instead of abusing *him* privately, come out boldly in reprobation of *them* and lent a helping hand to the honest men who went to Cincinnati, instead of jeering at them or waiting to see what would come of it, the choice would not now be between Greeley and Grant. The Cincinnati Convention would either have made a nomination which no man would have been ashamed of and no man would have felt it necessary to defend, or else the Philadelphia brethren would have been brought to their senses before they met and began to cheer.

Mr. John Forsyth, the editor of the Mobile *Register*, and a leading Democrat of the Gulf States, makes a strong appeal through his paper to the brethren not to forget their principles and ruin their organization in the present mad rush for Greeley. He says it is not by any means too late to retrieve the mistake made at Cincinnati, and that the Baltimore Convention has only to take up the move made by the Reformers at the Fifth Avenue Hotel, in order to nominate a candidate worthy of the original inspiration of the Liberal Republican movement, and make Grant's defeat far more certain than he thinks possible under Greeley, and lays down the proposition: "Every step away from the Democratic organization is a step to kill Greeley and make Grant sure." But we fear the movement has gone too far for the sages of the party to control it. The Southern States, except South Carolina and Mississippi, where the negroes are in a majority, are pretty sure to go for Greeley, though *they would go with equal certainty* for any man who was put up in opposition to Grant, and had such a following at the North as to give a fair chance of success.

Orange S. Winans, the bad man who, in the New York Legislature of 1871, sold out to the Erie Ring before any of his Republican brethren got a chance to do so, and who, it was announced by the Republican papers, would be avoided by his kind for the rest of his life, have prayers "muttered" for him whenever he entered a church, and be used by injudicious mothers as a bogie to frighten their noisy children, has come out for Greeley. We should like very much to know from him what his experience during the last year has been—whether he found that his neighbors cut his acquaintance, how he fared in churches, and what the children think about him. It will puzzle Greeley to know what to do with him; but the first thing is to whitewash him. His objections to Grant will be looked for with some curiosity.

The *World* expresses its astonishment that the *Nation* can support Grant against Greeley, and it would be astonishing, if the *Nation* had ever cried "Anything to beat Grant," or, in other words, had said, "Cut off my nose, if you will only cure my catarrh; extract my eye, but rid me of my cataract; amputate my leg at the hip-joint, but deliver me from rheumatism in the knee." There is nothing in Greeley's career to lead the *Nation* to suppose that as either a civil-service reformer or revenue reformer he is any better than Grant; his political associates are, on the whole, worse than Grant's; his conceit and self-confidence and restlessness tenfold greater than Grant's; and so also is his gullibility. Therefore, knowing what Grant does, and not knowing what Greeley may do, we prefer and advise others to bear with Grant, and keep their courage up for four years more. We may add that we shall, should Grant be re-elected, let bygones be bygones, and hope for a reasonable period that he will turn over a new leaf, and put himself, as the *Evening Post* thinks he will, under new influences, though we confess we should find it hard to look for any such change in a mind in which the contemplation of Tom Murphy as Collector inspired a feeling of affectionate admiration. We shall, too, take up precisely the same position with regard to Mr. Greeley. If he is elected, we shall not prejudge him; he will be entitled to a fair and candid trial. Whatever we can contribute to his having it we shall contribute. He may prove a good President, and if he does we shall applaud him; but there is, in our opinion, nothing in his career to warrant a rational man in expecting him to prove a good President, or even as good as Grant, and, therefore, we shall oppose him, partly for his vanity, love of flattery, and liability to be imposed on, described by Mr. Samuel Bowles in the Cincinnati *Commercial*, and partly for his "Fentonism" or association with corrupt and intriguing politicians in this State, described by the Springfield *Republican*, and which it admits it can neither defend nor explain.

Our correspondent, "C. J. I.," who wrote to us in defence of Greeley a fortnight ago, now charges us with being "idealists" when we ought to be "practicalists," and with opposing Greeley because he is not a perfect man, though we know well that unscrupulous men and bad men, Bismarck for instance, frequently prove the instruments of beneficent revolutions; to which we reply that our objection to Greeley is not that he is bad, but that he is totally opposed to the principles he undertakes to represent. Taking him to head the reform movement is something which has no parallel in political history. It is like taking Satan as superintendent of a Sunday-school, or the Pope as the leader of the Old Catholic movement, or the Marquis of Bute as President of the International. Bismarck is an unscrupulous man, and has accomplished a great revolution; but he was not, when he began it, a frantic Separatist, and a determined and abusive enemy of the House of Hohenzollern. It is quite true that Providence sometimes chooses strange instruments to accomplish great ends, but we may safely let Providence make the selection itself. If Providence needs Greeley to redeem this nation from corruption and strife, it will certainly get hold of him without our calling a convention and nominating him. Providence makes up its own tickets.

It is reasonable to expect that Senators Cameron, Conkling, Morton, Spencer, Osborne, Kellogg, Poole, Sherman, Pomeroy, Nye, and Howe will not be returned to the Senate again, and they have been so conspicuous in what may be called the degradation of the Senate during the last few years, that their relegation to private life will be hailed with great satisfaction by all friends of good government. The smallness of the Senate and its influence on patronage are such that nothing but the highest character on the part of the members can prevent its being a very hotbed of corruption. With such men as have of late years ruled in it, it becomes a collection of persons quarrelling over perquisites of one sort or another, and viewing all legislation with reference to its influence on their personal fortunes. A seat in the Senate has become so profitable, too, that it now pays to buy up legislatures in order to secure it; and unless a cleansing process can be brought about in some way, people will begin to wish for one assembly only. One of the most notorious jobbers, Mr. Harlan, has recently been dismissed to make way for an excellent successor, Mr. Alison of Iowa; and one of the best senators, Mr. Ferry, has just been re-elected, so the process of improvement is going on. Mr. Cameron, who is, however, the head and front of all corruption, and is a "strong Grant man," comes up for re-election next winter in Pennsylvania; and this fact will doubtless exercise an important influence on the next State election and through it on the Presidential election, for unless he is greatly belied he will not allow considerations of expense to prevent his getting a legislature elected in his interest.

Last week, in the New Hampshire Republican senatorial caucus, Liberal Republicanism had another opportunity to show itself in New England, if it exists in that region; but it did not appear. Mr. E. H. Rollins, we are glad to say, failed of his election, although he has been so long a political manager, and an unscrupulous one, that he contrived to ruin the chances of Mr. Patterson also, who has been one of the best senators in Washington, and whose retirement is a loss. The great principle of "rotation," too, helped to kill Mr. Patterson, for New Hampshire still remains overstocked with able men and active politicians, each of whom wants his share of the honors. The successful candidate for the nomination was Mr. Bainbridge Wadleigh, who is said to be the best lawyer in his county of Hillsborough. It was known that Rollins would destroy Patterson if possible, and it was certain that the Patterson men would not vote for Rollins in any case, and those two candidates had each a strong party, Rollins's being the result of his own honest toil, and Patterson's being largely men connected closely with the regular party machinery, though he personally has been something less than a sound Administration senator—certainly has not been a slavish one, or rather a tyrannical rule-and-ruin Administrationist like Mr. Conkling. The main strength of the votes being thus divided, candidates for luck were numerous—ten or twelve—and Mr. Wadleigh turned out to be the man. We hope he will continue his predecessor's labors—investigate like him, and draft bills like his, and push his old ones. It is said the result of the caucus consolidates still further the Republican vote. Greeleyism, meantime, takes well among the New England Democracy; and States that can no more give him an electoral vote than they can give him the moon, will be loud for him in the Convention at Baltimore.

We are sorry to say we were in error in announcing the resignation of Casey, the collector at New Orleans. That eminent person keeps his place in spite of his misconduct, and we have to remind our readers that no paper friendly to General Grant has ever attempted to defend or explain his course in retaining Casey. His retention gives a slightly farcical air to the proceedings of the Board of Commissioners sitting in this city to draft rules for the appointment and promotion of clerks in the custom-house. We observe, by the way, that one of the rules they have drawn forbids the levying of "assessments" for political purposes on custom-house employees, "as voluntary contributions or otherwise." It is one of the curiosities of politics that the majority of the Congressional Committee which a week or two ago whitewashed the custom-house boldly justified the practice of levying assessments, and declared that they were purely "voluntary" contributions—probably one of the most impudent assertions ever made by a politician, and which *Harper's Weekly* in the President's interest felt bound to rebuke.

The eight-hour movement in this city has substantially failed. It has been broken down in the main by the desertion of Brewster's carriage men, who were in receipt of a share of the profits of the concern, and whose adhesion to the movement had, therefore, a touch of folly and absurdity in it which was difficult to explain; and that of Steinway's piano men, who are generally of a high order of intelligence and education, and live on excellent terms with their employers, and to whom it was, therefore, comparatively easy to explain the obstacles in the way of complying with their demands. The cabinet-makers are still partially on strike, though the main body have returned to their work. Getting lower down in the labor scale, strikes are still pretty general, and accompanied with threats of violence, and some attempts at rioting, requiring the presence of large bodies of police. For the great majority of the men engaged in these proceedings, it is easy to see that two hours' additional leisure would not be a blessing, but an injury. But it is useless to expect that the attempt will not be repeated. Efforts will undoubtedly be now made by the "labor reformers" to extend their organization all over the country, and have the next eight-hour strike made in concert. This employers ought certainly to anticipate, by initiating, not in a half-hearted, incredulous way, but with a hearty determination to make it succeed, some system of co-operation, such as is at work in Mr. Brewster's factory. It is idle to suppose that the simple wages system can be profitably carried on much longer.

The Bostonians are having what is called a "jubilee," and which consists in a series of monster concerts in an immense building. It is exciting an amount of enthusiasm in that city and in Massachusetts which, it is not disrespectful to say, the rest of the world finds it difficult to understand. The entire population of Massachusetts is said to be either in Boston or on its way thither, and popular feeling has been wrought up to a pitch of almost dangerous intensity by the appearance of three foreign military bands—that of the British Grenadier Guards being received with a positive frenzy of welcome, which must make Mr. Bancroft Davis feel more uncomfortable than ever. The mention of "consequential damages," in the Coliseum, would apparently elicit groans from thirty thousand trained performers, a roll of one thousand muffled drums, and a discharge of one hundred old cannon. We are sorry to learn, however, that the attendance at the performances, owing to the high price of admission—five dollars—is not what might be expected from the multitude which has gathered in the city.

The Board of Arbitration has met at Geneva, on the 15th, as appointed, and the main point of speculation, at this writing, is whether the British will or will not succeed in procuring the adjournment for eight months, which, they insist, is necessary to the proper adjustment of all the difficulties which have arisen in the negotiations. What the attitude of our Government on this point is, is not accurately known by the public; but the appearances indicate that it will consent to an adjournment for a shorter period—say one or two months—and there is a chance, but only a small one, that a compromise of this kind may be effected. The British have in the meantime lodged a protest, reserving the right to withdraw in case the indirect claims are in any manner pressed before the tribunal.

The trial of election petitions in England is, as our readers know, now handed over to judges of the common-law courts, who conduct the proceedings in all respects as a judicial trial, and have the power to unseat and award costs; and candidates convicted of bribery go to the penitentiary. One of the judges of the Irish Common Pleas, Mr. Justice Keogh, has recently given a decision in a contest arising out of the late Galway election which, in many of its features, is without parallel. The return of the successful candidate, Captain Nolan, was contested on the ground of clerical intimidation. The Archbishop of Tuam, two bishops, and fifty or sixty priests, took part in the canvass, and used all the terrors, spiritual and temporal, at their command to procure the return of the Catholic candidate. Judge Keogh is a Catholic himself, and spent fifty days taking evidence and hearing counsel, and passed nine days in giving judgment; and his denunciations of the clergy surpass anything to be found in judicial literature, in our day at least. One priest he denounced as "audacious and mendacious"; he proved another guilty of "deliberate perjury"; and he declared the evidence revealed "the most astonishing attempt at ecclesiastical tyranny which the whole history of priestly intolerance afforded." One priest was proved to have declared that he would use the confessional under the Ballot Bill. Captain Nolan, who was unseated, was condemned to pay the petitioner's costs, which amount to the nice little sum of $60,000. A popular subscription has been set on foot for his relief.

But then there is another side to the question. Captain Nolan is a landlord who, a few years ago, was guilty of making some very arbitrary and heartless-looking evictions among his tenantry, and, finding it had rendered his success in politics impossible, he submitted the question whether they were arbitrary to two arbitrators—one, Father Lavelle, a priest, and the other, Sir John Gray, a Dublin editor—who decided against him, and he at once reinstated the tenants amidst the wildest popular rejoicings. Since then he has been the most popular man in the country with the tenantry, and most thoroughly detested by the landlords, whose combination to defeat him at the late election was, his friends say, what led to the combination of the priests in his favor. Indeed, the Archbishop testified on the trial that the clergy would hail the ballot with delight, as, by shielding the voters from landlord intimidation, it would save the priests the necessity of taking part in the struggle. Judge Keogh, throughout his decision, made no scruple of recognizing landlord influence on the tenants with regard to their votes as "safe and legitimate," and disregarded all evidence, of which there was plenty, of landlord intimidation. The case is exciting great interest both as throwing some light on the prospective working of the ballot in Ireland, and as illustrating the curiously hostile attitude of some of the educated Irish Catholics towards the clergy.

Spain has just been going through another ministerial crisis, which Señor Castelar, the well-known orator, explains in the *Tribune*, with which he now corresponds regularly in that cloudy rhetoric which seems to have become habitual with all the politicians of his school. The secret of Spanish political troubles, as he describes it, is the secret of all the troubles of what is called "the Latin races," except the Italians, and that is, that things would go very well if some bad person—or set of bad persons—would only behave properly, which they never do, and which the majority are apparently powerless to make them do. But the details are that the King has hesitated too long about committing himself frankly and fairly to the Radicals, which, after the fall of the late Sagasta ministry, he tried to avoid doing by taking himself to a conservative cabinet, headed by the Duke de la Torre, which only lasted a fortnight. The new ministry has at its head Zorilla, and his colleagues are all men of the Progressive school. There is visible, however, among the Spanish republicans, of whom Señor Castelar is one of the chiefs, a growing tendency to practical views, which has its counterpart in France, and which promises, if it continues, to make the Republic a much nearer possibility in both countries than it has hitherto seemed. The Spanish "Republican Directory" issued a proclamation, on the outbreak of the Carlist insurrection, repudiating all connection with that movement, and shadowing forth a policy of patience, forbearance, conciliation, and peaceful agitation somewhat like that on which the Gambetta Radicals have entered or are trying to enter in France. The association of the Republic in people's minds with confusion and disorder and danger to property has had a strong influence, both in France and Spain, in retarding the growth of its influence. Its champions are now apparently about to try the steady presentation of it in a conservative and peaceful attitude. Señor Castelar's letters are interesting as expressive of his own ideas and those of his party, and it is impossible to doubt that both are strongly and favorably influenced by the continuance of order under republican auspices in France. But it is alleged by their enemies that their peaceable temper and love of moral suasion are in no small degree due to the revelation made by the campaign against the Carlists of the indifference of the army to politics, and of its unshaken fidelity to the powers that be.

A Cable despatch informs us that representatives of the American Presbyterians have congratulated the Synod of the Reformed Church (Protestant), now sitting in Paris, on the fact that they have assembled under a republic. Just how malapropos these congratulations are can only be understood in the light of a previous despatch stating that the Synod had "passed through an unusually animated discussion, which resulted in a schism of the church. M. Guizot, the leader of the Orthodox party, maintained the authority of the Scriptures, while the Rev. M. Coquerel, who is at the head of the Liberal party, justified certain divergencies relative to the divinity and resurrection of Christ. The Liberals, demurring at the action of the Orthodox majority, withdrew from the Synod." The point to be remarked is, that the Synod was called at the instance of M. Guizot, by means of his influence with M. Thiers's government, against the wishes, publicly manifested, of fully one-half the Protestant body in France; and that this republican government, as tenacious of the union of church and state as the two Napoleons, has surpassed them both by a piece of interference unprecedented under either empire. The manner, too, in which the Synod was ordered to be composed was adverse to equitable representation, and was the only way in which the Orthodox party could have secured a majority.

Their object in convoking a synod was openly avowed. It was to maintain the Orthodox ascendency in Paris, which each election was rendering more precarious, by imposing a creed on the church which would either constrain the Liberal party into acquiescence, or force the schism that has actually come about. Of this purpose the Government was fully informed after it had been persuaded to issue its decree of November 29, and in the contest over the Paris Presbytery it had an opportunity of judging somewhat of M. Guizot's unpopularity. Rejected at the first polling, he was barely elected at the second, but his ambition was satisfied and his dignity saved; and the Synod, like the Government, has followed his lead. It and he are probably pleased with the kind of republican government which has enabled them to excommunicate the majority of their coreligionists; but the Liberals can hardly help feeling that the best form of government for them was that which left the Protestants pretty much to themselves.

THE END OF PARTY PRESUMPTION.

WHATEVER may be the issue of the coming Presidential election as regards the candidates, one thing is certain—it will bring to an end what we may call the period of party presumption, which has now lasted eight years. Andrew Johnson was its best personification and its earliest result. Sober politics cannot be said to antedate the spring of 1865. The managers of the war had too grave a job upon their hands to leave them much leisure for the small triumphs of possession. Europe was sceptical and contemptuous; a mean and unprincipled minority watched every slip and profited by every necessary usurpation; an often despondent though determined people never withdrew their eyes from the capital. It was not given us to see Lincoln tested by what must have been his astonishing success during the years just following the close of the war. In the few happy days which intervened between Lee's surrender and the death of the President, the feeling everywhere had been that we "should let old Abe have his own way—that we should do just as he said." Johnson was no sooner in office than he felt at his back the whole moral support which would have been Lincoln's, only a little embittered and intensified. Johnson was forcible, persistent, able to some degree, but violent, without education either moral or mental, with no self-command, and very little knowledge of human nature. The arrogance which destroyed him was more our fault than his own. Without knowing anything about him, we began to "get him up" in the qualities which we thought he ought to possess. Because Lincoln had been gentle and wise, we concluded that Johnson must be just and inflexible. The statesmanship which would hang Jeff. Davis was just then believed to be the sort for the crisis, and Johnson's severe photograph chimed in very well with this mood. The press, the people, the clergy, the politicians everywhere flattered him. The poor man soon began to believe it all, and in a very short time came to think that he owned the country. Accordingly, when the first opposition began to define itself, his rage and consternation were in proportion to his astonishment. "My policy," exclaimed Johnson, opening wide his eyes; "where are the ingrates and traitors that would oppose me?" He soon found that there were plenty of them. It took but a few months of Thad. Stevens's insolence, Congressional thwarting, and tenure-of-office acts to teach him Solon's lesson, to call no man happy until he should see the end of his career.

The success, the prestige, and along with them the presumption, passed over into the hands of Congress. A few hundred gentlemen, responsible nominally to the people, but in reality to posterity, neither better nor worse, wiser nor more ignorant, than most Congressmen, for a year or two lorded it over the country without stint or limit. They did all sorts of high-handed things, and persuaded themselves and the people that their acts were necessary to save the country and to protect the Republic from the "man at the other end of the Avenue," as the late Thaddeus Stevens used courteously to designate the President. When at last Grant came into office, the people pretty much relegated all matters of politics into his hands, and betook themselves to business. The country was "settled," which meant that it must take care of itself while the people were permitted to make money. Had Grant's head been a giddy one, the first few months of his rule must have turned it. But he is not light-headed; he certainly possesses cool sense, and has all along kept a reasonable estimate of himself, upon which, we are glad to believe, his wretched flatterers have not to any degree imposed. He is of a turn too slow and phlegmatic to be in much danger from that vanity which overtakes temperaments more impulsive and vivacious. Moreover, even Grant, as we shall see, believes in history when he knows it. He had Johnson's "my policy" in his mind when he said, "I shall have a policy to recommend, but none to enforce against the will of the people." He does not quite think that he owns this country—which is an astonishing piece of modesty on his part, for until within a few months he very nearly did own it. The tone of presumption which he was too wary or too sensible to take himself, the military ring and the party managers and the party press were not slow to assume for him. When we were hardy enough to criticise him, and ungrateful enough to doubt his capacity, we were reminded of Appomattox and the Wilderness. The politicians were able to take up this position because for a time the people passively acquiesced in it. Divested of words, the principle was simply this, that to one who has done many things for the national advantage, it should be permitted to do many things for the national disadvantage. We in America do not like to confront our debts, and count out the payment in square coin. A hundred thousand or so, by way of recompense to Grant, would have been too lavish and superb; no, no, we would repay him by placing in his hands for the next eight years the entire financial, moral, and political interests of the country, and would permit him to perform his duties inefficiently. Such was very nearly the unconscious impression of the country during the first half of the present Administration.

Presumption has been so constant a peculiarity of our late politics, that it seems inevitable that the party in power shall always presume and bully; but parties hereafter will be more equal in numbers and in moral weight. The noble and perfect success of the Republican party gave to the organization called by that name a momentum which lasted long after it had left the hand that impelled it. That momentum is well-nigh exhausted, and the party falls to the ground like a spent shot. Presumption comes with success, and must go with success.

Whether or no Grant be re-elected, we do not believe that we shall again see a return of that party insolence and tyranny which has marked American politics for the last eight years. There was evident in the recent Convention at Philadelphia a tone of concession and deprecation addressed to some vague constituency, existing it hardly knew where. In a body so strong and apparently without a rival, this was not a little remarkable. The party which had so long been its great enemy was visibly touched with the finger of dissolution. Its new and more formidable competitor had nominated a candidate which itself could not support; but the Convention appeared to understand that its ostensible success was due quite as much to accident as to real strength with the people. Its members knew that a large body of their supporters, though not satisfied with the Administration, yet preferred Grant to Greeley. They knew that there were many others who did not think it worth while to supplant Grant even by Adams, yet whom it would take but very little to drive into opposition to the Government. Consciously to the thinking men of the party, and in a more indistinct way to the masses, Grant now holds a very different position from that occupied by him in 1868. Mr. O. P. Morton, who is the last man to tell the people a truth of which they are not already in pretty strong possession, said at the Convention, in presence of a brass-band and any quantity of flags: "He may have made mistakes; I do not say he has not." All this seems to us to show a spirit of concession on the part of the old managers to the rising party which they may for a time withstand, but which they can never again dare treat with contempt and presumption. We shall have a block upon the Government in a liberated public sentiment and a watchful minority in Congress, with whom the cant of "loyalty" will be thoroughly played out. The purity and the ideas of advance which the party had all on its side in 1856 will now be arrayed against it, and the more slothful and selfish it becomes, the more will it enlist the hostility of those elements. In any event, therefore, we may congratulate ourselves that the presumption of party is at an end, because that which is always the real reason of presumption no longer exists—the ability to presume with impunity.

PUBLIC OPINION ON THE TREATY.

AFTER a careful perusal of all the explanations and revelations called forth by the miscarriage of the Treaty of Washington on the question of the indirect claims, the conclusion at which we have arrived as to the nature of the "misunderstanding" is not that, according to the popular English theory, there was a tacit agreement to exclude these claims, which the American Government has violated; and not that, according to the London *Spectator's* theory, the Commissioners used a refined technical phraseology which would carry out their intention of excluding the claims before a tribunal of lawyers, but breaks down under merely popular examination; but something of this sort: The indirect claims had been brought before the public mind in America by Mr. Sumner's speech, as claims capable of legal appreciation, as well as of justification in the forum of morals, and it was very unlikely, or, at all events, it would be very dangerous, to suppose that they had not taken just hold of it. No treaty of peace would be satisfactory, or would put an end to the ill-feeling between the two countries, which did not deal with *all* the causes of this ill-feeling; and, therefore, it would be very imprudent, even if the indirect claims were not legally supportable, to pass them over without notice, or, at all events, to bar them in express terms. The British Commissioners had it, therefore, duly impressed upon them, that whatever was agreed upon must not only satisfy the American Commissioners, but satisfy the Senate and the people. The British Commissioners, on the other hand, maintained that under no circumstances could they agree to the submission of these claims to the arbitrators; so a compromise was found under which the claims were neither to be expressly provided for nor expressly excluded from the Treaty. When each side came to interpret this compromise, after the negotiators had separated, the British undoubtedly held that the Americans were bound to say no more about it. The Americans felt equally bound not to press for an award under it; but the Administration was either afraid to go before the people on this basis, or else was anxious to have the credit of making a cleaner sweep of international differences than the Treaty actually provided for. So it conceived the idea of claiming consequential damages in the Case, even to the extent of the cost of the war, and, indeed, everything for which the wildest imagination in the country ever dreamed of holding Great Britain liable, and bringing the claim before the tribunal in the full certainty that it would be rejected, and then, after it was rejected, turning round to the voters and saying, "You see, we demanded everything of Great Britain we could think of or that you ever thought of, but the tribunal has decided against us; there is, therefore, now no use in talking of it any further."

This theory of the matter will account in a creditable way—and it is the only one that will do so—for the policy pursued by the Administration after the outcry in England over the American Case began. First of all, it said it did not expect any award under the claims, referring back to the discussion of the Commissioners; then, the British continuing to be obstreperous, it said it fully expected the claims to be rejected; but, being still further pressed, said it presented them for the purpose of having them rejected, and thus establishing a rule of which the United States would have the benefit hereafter. Now, the most curious thing in the imbroglio has been the bewilderment with which the American public has watched the Administration going through this process. We believe not one man in a thousand understood what the State Department was driving at. When the people heard what the demand was that Mr. Bancroft Davis made of England, we think we describe correctly the state of public feeling when we say it was one of mingled surprise and amusement; but when they heard further that these demands were not seriously made, but were made merely to draw forth rejection, they were not only suprised but completely puzzled. Nevertheless, the Administration was, there is reason to believe, engaged the whole time in trying in a clumsy way to satisfy what it believed to be public opinion. How was it it did not know what public opinion about the matter was? The public, we assert with confidence, had no expectation of hearing one word more about consequential damages after the Treaty was published, and was perfectly satisfied with any disposition which the American Commissioners made of them. Those Commissioners were distinguished jurists, in whom the people had thorough confidence, and if they declared there was nothing to be said about indirect claims, nobody would have mentioned them or have expected them to be mentioned again. How came it that the Administration did not believe this?

This is a question of considerable importance, and a correct answer to it would throw considerable light on the relations of the press to the people and the Government. There is probably nothing more difficult to get at through the press than the exact state of the public mind on any question not of first-class importance and interest. On foreign questions, about which, as a general rule, the public does not feel much interest, the difficulty is almost insuperable. When the Administration of the day takes up any foreign question, the press looks on at first in perfect silence, watching the matter strictly with reference to home policy, and representing the people very much as the showman represented those two strange beasts, the "gyascutus" and the "proc." The house was crowded, waiting for their appearance, when a fearful noise was heard behind the scenes, and the proprietor appeared and informed the audience, with a trembling voice, that the gyascutus had got loose and killed the proc; that they *hoped* to be able to subdue him, and prevent his escape into the body of the house, but, of course, could not tell what might happen. In like manner, the press—and especially the opposition press—while a foreign question is pending, invariably assures the Secretary that the people is behind it, "smashing things," and longing to rend somebody, that the editors will keep it quiet if they can, but cannot hope to do so very long, and that on the subject of the existing controversy with England, France, or Spain, the animal is in a most dangerous temper. The result is that the poor Secretary is apt to get up all sorts of little theories intended to entrap the monster or distract his attention, and is often in the middle of them when the gyascutus makes his appearance in the guise of an honest farmer in his Sunday clothes, who, inspecting the apparatus prepared for him, and learning for what kind of beast the Secretary took him, sometimes laughs consumedly, but at others is very much disgusted.

We believe the feeling of disgust is that most prevalent just now, and that it arises from the want of a perfect understanding on the part of the State Department of what the public was thinking, and on the part of the public of what the Department was doing. In other words, there were faults on both sides. If we knew more of the facts of the foreign policy of the Government, and even two or three of the great newspapers got into the habit of discussing them, not for "the good of the party," but for the enlightenment of the nation, we should have no more imbroglios like the present one.

BERKELEY SPRINGS.

Berkeley Springs, W. Va., June 13, 1872.

WATERING-PLACES south of the Potomac are credited, not unjustly, with inaccessibility, to which, when overcome, succeeds general absence of creature comforts. Mr. Pollard—to the manor born—has in his book on the Virginia Springs an amusing chapter, in which he lectures landlords on their shortcomings, and advises them to get rid of the delusion, too generally nursed by them, that they are dignified hosts extending a generous hospitality to guests, who should, in common politeness, accept without murmur such entertainment as "gentlemanly proprietors" may condescend to vouchsafe. Coming here under medical edict somewhat against my will, I am agreeably surprised to find Berkeley easy of access—five hours from Baltimore by Baltimore and Ohio Railroad—and affording better than ordinary accommodation in comfort and luxury. A handsome hotel at the base of a wooded ridge, and on the edge of a charming grove of forest trees, laid out in walks and vocal with song of birds and rippling of pellucid waters; bubbling springs; and inviting baths of every size and variety, are the salient features.

The oldest of the thermal sisterhood in the United States, Berkeley has seen every period of American history, and gone through various phases of prosperity and adversity. Its earliest visitors were exclusively the really "first families" of Virginia—to wit: the Whonkenties, Ontponies, and Hassinungaes, who, according to Thomas Jefferson, owned large and valueless plantations of forest, and frequented these parts long before the advent of that virtuous princess Pocahontas in the lower counties. These distinguished visitors left no cards; but arrow-heads and hatchets found scattered over the adjacent hills testify their presence in pursuit of game to support those who came long distances to bathe in these healing waters. Innocent of iodine, and without suspicion of silicate or sulphate, they nevertheless knew from experience what cured their rheumatisms. Small ceremony and but little reserve were they troubled with. Their bathing-place was a pool scooped out of the white sand, without other screen or canopy than the forest trees.

Presently arrived the first recorded white visitor—a stripling of some sixteen years, employed by Baron Fairfax to survey wild lands, the name of him—George Washington. In default of register of fashionable hotel, he made this entry in his journal: "March 18, 1748.—We this day called to see the famous [warm springs; we camped out in the field this night." In course of years Indian and savage wigwam disappeared, colonial farmers and gentry came, and from early summer till late autumn lived in board or canvas tents, or in the wagons that brought them; some few wealthy aristocrats had log huts. Provisions they brought with them, eking out supplies with game on the hills and fish in the river. Decorous screens of pine bush now surrounded the bathing-place; and at certain hours feminine occupation and forbidding blast of tin horn exiled odious males from a certain prescribed circle. One day England wanted the French Fort Duquesne, where Pittsburg now stands, and the hills of Berkeley were vocal with sound of trumpet and drum, as Braddock's army in gallant array swept through these valleys to their graves on the banks of the Monongahela. It left no trace here but the name of Sir John (from Sir John Sinclair) to the little creek falling into the Potomac where is now the railroad station of the same name.

So high stood Berkeley's thermal virtues in the estimation of Virginia, that amid all the care and turmoil of the outbreak of the Revolution, the Commonwealth of Virginia placed upon its statute-book an enactment (October, 1776) vesting in trustees the title to these springs and securing their use for the benefit of the public for ever. Town-lots were laid out, and among the purchasers were George Washington, Charles Carroll of Carrollton, and General Horatio Gates. Washington mentions in his will "Two well-situated and handsome buildings to the amount of £150." People here point out the site of these houses, now covered with a handsome modern cottage. History of that period frequently refers to Berkeley. The charming Baroness de Riedesel, wife of the commander of the Hessian contingent in Burgoyne's army, speaks of it in her published journal (1779). Here it may be well to premise that the place has successively gone under the names of Frederick, Bath, and Berkeley—which last it retains. Says the Baroness:

> "We made, at the Frederick Springs, the acquaintance of General Washington's family and also of Madame Carroll and her husband. She was a most lovable woman and an ardent patriot, but reasonable, and we became great friends. She spent most of her forenoons with us. At such times Captain Geismar played the violin and I sang Italian airs, which gave her the greatest delight. One day, while thus engaged, a countryman from whom we had in vain endeavored, by many kind words, to obtain fresh butter, came in upon us. As the Americans are generally fond of music, he listened attentively, and, when I had finished, he asked me to sing again. I asked him sportively what he would give me for a song, as I would not sing gratis. 'Two pounds of butter,' he at once answered. The idea pleased me, and I forthwith began to sing. As soon as I had done he said: 'Play another tune, but give us something lively.' My acquiescence so pleased him that the next morning he brought me four or five pounds of fresh butter. He also brought his wife with him and entreated me to sing again for them. I thus succeeded in winning their good-will, and afterwards we lacked for nothing in the way of marketing. The best of the joke was that he fully believed I was in earnest with my bargain, and, having paid for my music with his butter, he was surprised and reluctant when I insisted on paying him the money for it."

June 13, 1784, James Rumsey and Robert Throckmorton advertise in the Maryland *Gazette* "a very commodious boarding-house at the sign of the Liberty-pole and Flag," where they purpose to "render the situation of those who honor them with their commands perfectly agreeable." Then comes the inevitable newspaper correspondent, even at that early day, with letters to the Maryland *Gazette*. Dr. Johnson still reigned supreme in literature, and, accordingly, we have a proclamation "In the name of the Prophet—figs!"

> "*Richmond, Va., June* 19, 1784.—The histories of the most eminent empires cannot produce more flattering or greater instances of the genius of a people proud to cultivate the arts and eloquencies of polite refinement in the infancy of its natural existence, that is, in a state of freedom, than in the United States of America. Among the various exertions of that legislative wisdom and well-directed policy pervading the whole for the permanent establishment of general good and national grandeur, we are happy to find that the convenience of a medicinal bath supported on a plan of propriety and decorum has engaged the attention of the public. Popular respect will determine whether this plan can have for its basis the uses of similar springs in Europe." . . .

Then, after enumerating all the special attractions of the place, the epistle closes:

> "The Muses follow freedom, said Socrates. From Greece and Rome they certainly fled when those mighty empires fell. Let us hail, therefore, their residence in America."

The Rumsey who advertised the boarding-house was none other than the James Rumsey who anticipated Fulton by fifteen years in the application of steam to boats. Plunged in various industrial speculations, he yet found time to perfect a model which he floated on the waters of a secluded little bay of the Potomac River, at the mouth of Sir John's Run. When completed, the guests at the Springs were invited to witness its trial trip. The result is recorded in a certificate given to Rumsey—a certificate worthy of preservation:

> "I have seen the model of Mr. Rumsey's boat, constructed to work against the stream; examined the powers upon which it acts; been eye-witness to an actual experiment in running waters of some rapidity; and give it as my opinion (although I had little faith before) that he has discovered the art of working boats by mechanism and small manual assistance against rapid currents; that this discovery is of vast importance, may be of the greatest usefulness in our inland navigation; and if it succeeds, of which I have no doubt, that the value of it is greatly enhanced by the simplicity of the work, which, when explained, may be executed by the most common mechanic. Given under my hand, in the town of Bath, County of Berkeley, in the State of Virginia, this 7th of September, 1784.
>
> "GEORGE WASHINGTON."

Fortified with this paper, Rumsey went to England, but died on the threshold of successful exhibition of a model boat on the Thames. His correspondence from London mentions his acquaintance with a young American, a student of engineering, by name Robert Fulton.

With facilities of travel, and increase of watering-places, Berkeley became comparatively inaccessible until, in 1843, Hancock, six miles off, was reached by the progressing Baltimore and Ohio Railroad. Again fashion and failing health began to rendezvous at Berkeley until the tocsin of rebellion sounded. Then came a blank of six years. In 1870, the principal hotel was purchased by a company of solid men, and is now admirably kept. From various springs the Berkeley waters are used both for drinking and bathing. Of the uniform temperature 74° Fahrenheit, they are light, sparkling, and tasteless. Taken internally, they are a good internal lubricator, beneficial for derangements of the stomach, impaired appetite, or feeble digestion. Externally used, they are efficacious in rheumatism, nervous disorders, and chronic affections of the mucous membrane. In most of the forms of bronchitis, too, these waters drunk and bathed in are said to afford certain relief. For the plunging and swimming invalid, Berkeley is a veritable watery paradise; private baths, twelve feet by five, a gentleman's swimming-bath five feet deep, and sixty feet by twenty in size, and a ladies' plunge-bath floored with white marble, thirty feet by sixteen.

ENGLAND.

LONDON, May 31, 1872.

THE most lively sensation of the last few weeks has been produced by the judgment delivered in the case of the Galway election. The whole proceeding is strikingly characteristic of the difficulties of government in Ireland. The election was contested by Captain Trench, who was put forward by the gentry of the district, and Captain Nolan, who was the nominee of the Catholic priesthood. It was not a question of Protestant against Catholic, for Captain Trench had a large number of Catholic supporters, but of ultramontanes against the moderate men of all parties. The priests strained their influence to the uttermost, animated chiefly by the desire to upset the non-sectarian system of education; and the nature of priestly influence in Ireland was most vividly illustrated by their performance. Mr. Justice Keogh, himself a Roman Catholic, and formerly a member of Parliament, indulged in a philippic which to English ears sounds, it must be admitted, scarcely in harmony with the calm judicial tone appropriate to the bench, but which may perhaps be, as we are assured it is, congenial to Irish tastes. He went out of his way, for example, to defend the character of Cromwell from imputations cast upon it by "the vile tongue of that audacious and mendacious priest, Father Conway." He seems to have described another person—perhaps in reference to words that had been used in the trial—as "that obscene monster, Pat Barrett." Pat Barrett may, for anything I know, be an obscene monster, but English judges do not habitually indulge in such flowers of rhetoric. However that may be, the said obscene monster and his friends, acting under the instigation of the priests, had established a reign of terror in Galway. The "ecclesiastical circumvallation" was complete, and Captain Trench was not put up by the landlords till "every avenue of the constitution had been held by ecclesiastical dictation." The result was, in short, so Judge Keogh declared, "the most astonishing attempt at ecclesiastical tyranny which the whole history of priestly intolerance afforded." The flocks themselves knew and cared as much about denominational education as they did about the squaring of the circle; but priests warned them from the altars that the finger of scorn should be pointed at all who voted for Captain Trench, that they would be considered as renegades, and, as we may infer, that they would meet with a very unpleasant reception in the next world. The notorious Father Lavelle spoke of the "political death-knell" of Captain Trench, and, as the Judge remarked, the fortunate possessor of a blunderbuss in Tipperary was not likely to distinguish accurately between a political and a physical death-knell. It had been announced that the priests would create such a panic that gentlemen would be afraid to wander beyond their own grounds. Shots had been fired into houses. The obscene monster had hunted gentlemen through the fields with a following of congenial rowdies. One gentleman had fought his way to the polls at the head of twenty-seven men, and several of them had been wounded. Priests had declared from the altar that voters might break promises to vote for Captain Trench. They had announced that, if the Ballot Bill passed, they would use the confessional to extort votes. One priest, who had denied having made some indecent observations about a lady, was proved to have committed perjury. And, in short, the people had generally become "mindless, brainless, coward instruments in the hands of ecclesiastical despots."

The judgment not only unseated Captain Nolan, but declared that the votes given to him in spite of warning had been thrown away, and that therefore his antagonist was duly elected. The Judge would report that the Archbishop of Tuam, two other Roman Catholic bishops, and a number of their clergy, had been guilty of an organized attempt to defeat the free franchise of the electors, and that Captain Nolan and his clerical supporters had been guilty of corrupt practices. I am not quite aware of the legal consequences of this report, whether it involves the necessity of a prosecution, or whether, as I think, it deprives the persons named of the franchise. The Judge concluded by saying that an attempt had been made to set up a more galling ascendancy than that which had recently been struck down, and that he was proud that his countrymen had had the intelligence and spirit to defeat it. The judgment, whether we consider it as trespassing beyond the borders of judicial propriety or not, has produced a profound impression. The Roman Catholic Church, as Judge Keogh observed, enjoys at least as much freedom in Ireland as in any country in the world. Its priests exercise an immense influence, not only upon the people, but upon the English Government, against which they are ready to form an alliance with all the elements of disorder in the country. Cardinal Cullen is one of the greatest powers in the country, and Mr. Gladstone's government have been generally suspected of carrying on a dangerous flirtation with the priestly power. Although the question of Irish education has been carefully kept out of sight, in spite of Mr. Fawcett's efforts, it is the subject of imperious demands from the priests. It must be prominent in the next session, and may not improbably involve a break-up of existing parties. The object of the priests in the Galway election was to prove that their demands were supported by the great body of the population, and the judgment now delivered is a curious comment upon the nature of the forces now at work. The next time that we are told that the Irish people insist on having their education committed to the hands of the priesthood, we shall know what to think of the spirit in which the demand is made. Other comments I must leave to you. I have been told that there are a good many Irishmen in New York, and you can probably judge of their fitness to carry on a satisfactory system of representative government. Ireland at any rate is not altogether edifying to the admirer of free institutions; and, though Mr. Justice Keogh has administered a severe rebuff for the moment to the priestly party, it remains to be seen whether similar disorders may not be reproduced in the future. Now that the Ballot Bill is on the point of being carried, it will be curious to see whether the spiritual machinery of the confessional will not be more than a match for the ingenious apparatus devised by our political theorists.

The Ballot Bill, as I come upon that dreary topic, has at last been sent up to the House of Lords by a fair majority. Government judiciously placed the third reading on a day when our legislators are wearied by their annual holiday at the Derby, and are looking forward to another day's relaxation at the Oaks. The debate was languid enough, as, indeed, the subject has been talked to death. The orthodox preachers of liberalism disagree as to whether the mutilations to which the measure has been subjected have really injured its efficacy. I do not presume to decide, and still less is it clear whether the House of Lords will muster up courage enough to reject it altogether and try the effect of adding a little more water to a concoction already too mild to satisfy ardent advocates of the cause. Of course, if they do, there will be a good deal of bluster, and it is possible that Government may force the measure through by staking their existence on its success, or that Conservatives may be glad to get rid of a question which has long been a nuisance and to which they probably attach no very great importance.

A much more vital matter for the Ministry, and indeed for the country generally, is the Washington Treaty. It has not yet come in any shape before Parliament. Mr. Disraeli put a very long question to Mr. Gladstone about it the other night, and Mr. Gladstone replied at equal length, and without throwing much light upon the question. Other members have been trying their luck at cross-questioning without any great success, and have been met by the usual appeals for forbearance. The general temper of the country seems to be a growing distrust of the value of the Treaty in any shape. The course of the discussion seems to show that there is a fundamental misunderstanding at bottom, which cannot be got out of the way by any quantity of judicious patching and tinkering. We have every day a set of contradictory telegrams, which leave us still in doubt as to the action of the United States Senate and the chance of saving the Treaty by some more or less skilful compromises. I can therefore only say at present that, if it falls through, the misfortune will not create the regret which would have been universally felt a short time ago. We have a suspicion that the whole Treaty was drawn up in such ambiguous terms that new misunderstandings would probably arise from the attempt to put it in action; every new patch makes more rents than it mends; and we had better, so we are apt to fancy, drop the whole concern, and be as we were before. The last light thrown upon the subject has come from a lecture delivered by Prof. Bernard. The main pith of his speech seemed to be that a treaty ought not to be drawn up with legal accuracy. He has more or less attempted to explain away his words, but, as it seems to me, with very indifferent success. The meaning of the Treaty, he thinks, is plain enough, and he holds that it was "carefully framed to embrace only specific claims"; but then he says that the punctilious self-respect of governments and voters has to be consulted, and that "in a treaty it is often necessary to accept a less finished or even a less accurate expression instead of a more finished or more accurate one; and it must be construed liberally and reasonably according to what appears to be the true relation of the contracting parties." If that is the best which one of the negotiators can say for himself, it requires little acuteness to explain the failure of the Treaty. We have respected each other's punctiliousness to such a degree that we rendered our meaning unintelligible, and have been a good deal more amiable than businesslike. We are now reaping the natural fruits of such a mode of doing business; and there is some plausibility in the suggestion that we had better make a clean sweep of the whole and try to begin over again with a clearer mutual understanding. It is a melancholy conclusion enough, and one to which I should come with great reluctance, but certainly the tendency so far is unmistakably in this direction. I fear that the negotiators must begin to feel that the honors bestowed upon them for their success were a trifle premature, and the Government must be growing sensible that their one great achievement of last year is ending in something like a fiasco. That, however, is comparatively a small consideration, in presence of the international difficulties. A greater disappointment could hardly have happened to those who regard the establishment of good feeling between England and the United States as a matter of growing importance. We can only console ourselves by throwing the blame as much as possible upon the bungling of our statesmen, and hoping that the two nations are at bottom wiser than their representatives.

Correspondence.

POST-OFFICIAL REDTAPERY.

To the Editor of the Nation:

Sir: Some weeks ago, while in the city of New York, I received from Hartford, Conn., sundry proofs, covered by a two-cent stamp and enclosed in an envelope marked "printed matter," and having the opposite corners cut open. I had already received several similar envelopes at Washington, D. C., and returned proofs in like manner from that place; so, naturally having no doubt about the propriety of what was allowed at headquarters, I undertook to do the same thing from New York. The proofs did not reach their destination. On enquiry, I was informed by the New York post-office that they were "held for postage," without further explanation. But I afterwards ascertained indirectly that the letter of the law excludes all regularly-made envelopes, however cut open at the ends or corners, and that, to be on the safe side, the sender must take the trouble to paste a piece of paper around his printed matter. Many postmasters, however, do not feel themselves bound to carry out this literal strictness. Hence the rule becomes oppressive by its uncertainty. It may be asked, "Why make a fuss about nine or twelve cents postage?" I answer, it is not *that* which I am concerned about; indeed, I shall always take good care hereafter to put my proofs into a regular envelope and pay letter postage on them. It is the false pretence and the disappointment. Besides, I do not pretend to make myself a standard. There certainly seem to be persons to whom the difference in postage *is* an object, or is supposed to be; else why pass such a law?

It may also be said that, as paternal government is looking up, especially since Greeley's nomination, these little technicalities are of service to the public, and teach us to be precise and conscientious, and not to violate the letter of an absurd law, even if some of the authorities connive at our violation. Leaving out all other objections to this plea, one sufficient answer is that the greater penalty usually falls on the party who did not commit the fault. Thus, in the present instance, while I did not escape entirely unscathed, being put to the trouble of writing several letters on the subject, the principal sufferer was the Philological Association, whose whole machinery was brought to a stand-still for ten days.

In short, the "printed matter" regulation seems to be a part of that carefully-arranged system by which our erudite government so sedulously discriminates *against* all the higher branches of literature and learning. Just look at the items. First, the denial of international copyright, owing to which, as one of the Harpers' own tools confesses, lexicons, critical editions of the classics, and learned commentaries generally, are almost unknown as native productions. Then our judicious tariff trebles, or more than trebles, the price of many books required in special subjects, and never by any possibility republished here. Then we have a supremely absurd law about manuscripts being postable at low rates, *provided* they are *book* manuscripts—which constitute perhaps *one per cent.* of the written matter despatched to editors and publishers, not to speak of the *impossibility* in many cases of deciding beforehand whether a manuscript is "book" or not. Finally, we have this petty, piddling legislation about printed matter. And all the while we brag and crow about our national encouragement of literature, which consists chiefly in plundering the foreign and snubbing the native author.

CARL BENSON.

LENOX, MASS., June 10, 1872.

GRANT OR GREELEY?

TO THE EDITOR OF THE NATION:

SIR: In company with thousands of young men in this section who desire to do their duty to the country, I have grave doubts what course to take in the coming campaign. The first vote I ever cast was for Grant in 1868. I do not feel that I can vote for him again. Mr. Greeley I can but regard as the most thoroughly unfit of all our public men for the office of President.

The chances now are that the Baltimore Convention will either endorse him or nominate some regular Old Line Democrat whom I should be equally unwilling to vote for.

Under these circumstances I have written to you, and I know that words from you upon this matter would be read thoughtfully and carefully by almost the entire body of young and educated Republicans throughout Massachusetts. I come in daily contact with a great number of young Republicans, and the same story is heard from all: "I can't vote for Greeley, and I don't want to vote for Grant, but what can I do?" We don't like to be outsiders and not vote at all, although I feel that such will be the only conscientious course unless new light is given.

BOSTON.

BOSTON, June 13.

[We have received a good many letters of this sort, and have in reply only to repeat what we have said in substance already—that in politics our ideal is never attainable; that after reaching as high as we can, we must after all take what we can touch; that whether one ought to abstain from voting altogether if no candidate in the field be acceptable, is a nice question in casuistry; but it is at all events "a probable opinion," as the Jesuit fathers say, that, your vote being a trust as well as a franchise, you owe it to your fellow-citizens to make a selection, and assist them in avoiding as much as possible whatever evil there is in the situation, however indifferent you may yourself be to the result; that our belief is that, except on the points of nepotism and "gift-taking" and ignorance, Greeley would be open to all the objections which have been raised against Grant, surpasses Grant in gullibility, and is far inferior to him in executive ability; that Greeley's advent would be marked by a redistribution of offices which would plunge the civil service into a far worse condition than that in which it is now, as he is surrounded by even a lower class of politicians than those who surround Grant, and is now *daily contracting obligations* to them which he will be forced to discharge by quartering them on the Treasury, and that among them would be found a swarm of Democrats hungry with the hunger of ten years' opposition and full of contempt for him; that he would, without his knowledge perhaps, be managed by these men and for their benefit; that his advent to power too would stimulate all the worst tendencies of the day, and those which make most strongly against reform—contempt for training and for experience of all kinds; faith in blatherskite and bawling as instruments of human regeneration; disregard of character as a social or political force; farcical views of government and legislation; recklessness and indifference to details in administration; and that subtle but nevertheless potent hindrance to civilization which consists in the cultivation of grossness and vulgarity of manners as things in themselves desirable.—ED. NATION.]

Notes.

D. APPLETON & CO. have in press "Healthy Houses," by Wm. Eassie, C.E.; and "The Physiology of Man," by Austin Flint, Jr., M.D.——The new "U. S. Internal Revenue and Tariff Law of 1872," edited by Horace E. Dresser, will be published by the Harpers.——W. Gifford Palgrave's "Hermann Agha," printed from advance sheets; "Fly Leaves," verses by C. S. Calverley; and D. D. Home's "Incidents of My Life," second series, are announced by Holt & Williams.——"A Juvenile Life of General Lee" and "A Memoir of Roger Brooke Taney" will shortly be published by Murphy & Co., Baltimore.

—Should any Japanese purpose visiting Boston at this mid-Jubilee season, they will learn what to expect by turning to page 361 of Arinori Mori's "Life and Resources in America"—a work prepared in Washington for circulation in Japan. "On the score of enterprise and culture," one is there told, "the inhabitants of Boston have no superiors, and that circumstance has tended to make them clannish, or exclusive in their manners and conversation and modes of doing business; hence it is that the outside world, especially the cosmopolitan citizens of New York, occasionally indulge in a little ridicule at the expense of the Bostonians." No hint of this, it is needless to say, will be found in Messrs. Osgood & Co.'s "Boston Illustrated." The loyalty of the compiler of this handy guide-book is above suspicion, and his concern is with the city's monuments rather than with its inhabitants. It is seldom that we meet with a work of this character more agreeably written or displaying such extensive and accurate information, especially in what pertains to the early history and antiquities of Boston. Nor have we noticed in the text anything unequivocally like an advertisement—no small merit, certainly. The only "exclusiveness" we have observed is in certain of the Boston graveyards, in which there is no longer admission for commoner clay than—in the Granary burying-ground, for example—that of the "nine governors of the Colony and the State; two of the signers of the Declaration of Independence [John Hancock and Sam. Adams being in both these categories]; Paul Revere, the patriotic merchant; Peter Faneuil, the donor of the market-house and hall that bear his name; Judge Samuel Sewall; six famous doctors of divinity; the first Mayor of Boston; and a great many others of whom every student of American history has read"—such as the victims of the Boston Massacre of 1770, the parents of Benjamin Franklin, etc. Perhaps we ought also to mention the clever and exclusive patent for naming streets in the new Boston—alphabetical in sequence, and alternating three syllables and two, *e.g.*, Arlington, Berkeley, Clarendon, Dartmouth, etc.—a high-stepping nomenclature, pleasing to the eye and ear. Pearl Street, again, is the greatest boot and shoe market in the world, and Boston leads the continent in American dry-goods and in wool. The Boston Music Hall is "one of the noblest public halls in the world, and the pride of every music-lover of Boston," we don't doubt; but are its acoustic properties just "perfect"? Dr. Holmes is cited as authority for this statement, but it has not been always true, though the organ may have made it so. The spelling of "Meionian" on page 62 accords with the vulgar pronunciation, but is it now the accepted orthography for the name of the Lesser Temple? The illustrations are fresh and true to the originals, and will serve occasionally to correct the compiler's notions of what is good architecture in his native city.

—The Spanish Academy having solicited the co-operation of Spanish-American men of letters in giving unity and harmony to the Castilian tongue, a distinguished Ecuadorian littérateur, Dr. Pedro Firmin Cevallos, author of "A History of Ecuador," has given, in the *Press* of Guayaquil, a hearty response to the invitation. As a practical means of attaining the object desired, he proposes the establishment of sixteen academies—one for each of the Spanish-American republics and for Cuba—which should unite with that of Madrid in forming a complete dictionary of the language. The Hon. Antonio Flores discusses this proposition and the general question in an interesting article in *La América Illustrada* of May 30. He recalls the spontaneous efforts of Vincent Salvá, more than a quarter of a century since, to bring about a literary reunion between the mother-country and the revolted provinces, and praises his undertaking, with this end in view, to collect the provincialisms of the New World. The enterprise, however, was unsuccessful, and it would remain, says Sr. Flores, for the seventeen academies (including San Domingo) to carry out Salvá's idea by preparing, each for itself, a dictionary of provincialisms, embracing the names of trees, fruits, animals, and other objects peculiar to the country, or known elsewhere under another appellation. He instances the fruit called *aguacate* in Ecuador, but in Peru and elsewhere *palta;* and the refuse of sugar in the boiler, *panela* (New Granada), *raspadura* (Ecuador), and *chancaca* (Peru). These diversities of speech point, of course, to the influence of the native element on the language of the conquerors, the Indian offering the same passive resistance to the Castilian tongue that the Castilian did to the Arabic during the conquest (so that—as the Spaniard is proud to remind us—in eight centuries of domination less than a hundred Moorish words were grafted on the Castilian idiom, and no one of these relating to the affections). On this side the proposed dictionaries would have an ethnological and historical value which would of itself repay the labor of compiling them. But in respect of idioms, they would have an immediate utility not to be despised by one who desires to pass from one South American country to another. It is a matter of great delicacy to avoid giving offence by the use of phrases quite Castilian, but in local disrepute; and, says Sr. Flores, the *nomenclatura vergonzante* would be the first thing for a traveller to turn to in studying his dictionary. The Babel is such that the misunderstanding which of old was produced by a confusion of tongues, would here be at its height if every one were to talk Spanish.

—Apropos of our recent allusion to the deleterious colors in some of Morris & Co.'s wall-papers, we learn, on the best authority, that Morris & Co. prepare the patterns and mix tints for the combination, but leave the actual composition of the colors for the manufacture to the house which does the printing. In the pattern tints furnished by Morris & Co., arsenical or any other poisonous color in no case enters; but in some cases they find that the printers, to facilitate getting the required tint, have used arsenical colors instead of those employed by the designers, who, not suspecting such a possibility, had taken no precautions against it. On the matter being brought to their attention, they analyzed samples of all their papers, and in two, where *blue* tints entered, found traces of arsenic. They at once forbade the use of any such material thereafter, and now take the precaution of testing chemically every lot of paper sent in from the printing works, so that no apprehension need be entertained as to the dangerous qualities of their later manufacture.

—Bernard Quaritch, in his catalogue of old English literature, just issued, has a list of five copies of the First folio of Shakespeare's plays in various degrees of perfection, ranging in price from £525 to £30—the last having twenty-eight leaves supplied in fac-simile; two of the Second folio; one of the very rare Third, of which most of the edition was destroyed in the great fire of London; and one of the Fourth; a Spenser of 1609; Caxton's "Game of Chess," first edition, lacking seven leaves, priced at £400; Higden's Polychronicon" and "Tom-Landry," also by Caxton; a Wotton's "Speculum Christiani," from the press of William of Mechlin; ten examples of the imprints of Wynkin de Worde, one of Peter of Treves, and one of Thomas Barthelet (1544).

—The *Gazette des Beaux-Arts* is publishing a series of articles written by M. Alfred Darcel on "Les Arts et les Musées sous la Commune," which are really valuable contributions to the history of the time. M. Darcel does not love the Communists, but he writes with a freedom from heat and with an abstention from exaggeration and accusation singular (shall we say?) in a Frenchman. He wastes no words, states his facts with an evident wish to keep them facts, and is careful to give dates and documents. In the *Gazette* for May we have a particular statement of the losses sustained by the arts in the burning of the Hôtel de Ville. Of these, the most important were the paintings by Eugène Delacroix, the ceiling painted by Ingres and another by Léon Coguiet, the voussures of the Salle des Fêtes painted by H. Lehmann, and unless, as M. Darcel suggests, it had been torn and destroyed long before the firing, the equestrian portrait of Napoleon III. by Horace Vernet. Other works by painters less known were utterly destroyed, as also the beautiful chimney-piece executed in 1608 by Biard, and the bas-reliefs in wood representing the twelve months, attributed to Jean Goujon. In one of the wings of the Hôtel de Ville was the cabinet of M. Ch. Read, which contained the drawings, engravings, plans, and manuscripts relating to the history of Paris; the collection of Parisian portraits bought by M. Solomon Lieutaud; and the books and engravings relating to manners and dress forming the collection of M. Jules Gailhabaud; all these were, of course, destroyed. A private loss which touches the public was that of M. E. Reiber, whose house in the Rue Vavin near the Luxembourg was blown up with gunpowder. M. Reiber had only sufficient warning to enable him to cram into a portfolio his most valuable papers, but a great number of drawings and notes collected in the course of long studies upon Japanese art, together with the manuscript of a book which he had been writing on that subject, were lost.

—Another loss in the same field of study, but more serious because it consisted of precious and rare objects of which, such are the spontaneity and individuality of the art of Japan and China, no duplicates can be in existence, was the fine collection of bronzes and porcelains of these two countries belonging to M. Edmond Taigny, formerly master-of-requests. This remarkable collection, not easily to be forgotten by those interested in such matters who saw it when it made a part of the Oriental Exposition of 1869, had been deposited in the Palace of the Conseil d'Etat for safe-keeping and was destroyed with the building. In the same palace a great number of important pictures by modern French masters were lost—the Justinian of Delacroix; the Napoleon I., a singular production by Flandrin; President Duranty, by P. Delaroche; and one of Eugène Isabey's finest marine pieces. Two important private libraries shared the fate of so much else that was precious destroyed by the incendiaries of the Rue de Lille. That of the Baron F. de Guilhermy was a collection of works on the archæology of the Middle Ages which he had formed and developed with the growth of that science—for it may be called a science—of which he was one of the founders. In the same street, on the corner of the Rue de Bac, was the apartment of the late Prosper Mérimée, containing the rich library he had bequeathed to the Institute—this was entirely destroyed; and, in the same building, an oratorio by Alonzo Cano, a rare Spanish master of whom not even the Louvre possesses a specimen. Speaking of the Sainte Chapelle, M. Darcel says that it escaped as by a miracle from the flames which enveloped it on all sides. Not a stone, not a pane of glass, not a bit of lead even, suffered. The same is true, however, of every part of the Palace of Justice, which either in its foundations or its restorations belonged to the Middle Age. The Tour d'Horloge and that part of the Conciergerie which joins the clock-tower on the quay have lost nothing, not even their picturesque physiognomy. Whoever crosses the Seine by either of the neighboring bridges can still enjoy the striking silhouette which the buildings on this corner of the quay make against the sky with their varied and dignified lines, and may still compare them with the heavy and monotonous public and private constructions of the opposite bank.

—Perhaps for literary men the story which M. Darcel tells of the experience of the Bibliothèque Nationale—to choose the one which we imagine most Frenchmen would prefer out of the many names which it has borne—and which is here told truly for the first time, will have the greatest interest. It is, of course, too long for us to reproduce, but in advising our readers to procure the *Gazette*, and read it for themselves, we call particular attention to what M. Darcel says about the part played in the affair by M. Elie Reclus, of which so much has been said, and so many stories told, most of them to the discredit of M. Reclus. The friends of this gentleman will be glad to learn that M. Darcel, with all his contempt for M. Reclus, has nothing more serious to lay to his charge than a superserviceable zeal in carrying out what he believed to be needed reforms in the management of the library. Certainly, M. Reclus was not alone in believing these reforms necessary; fault-finding had been rife, both in France and England, for some time before the war, and not only with regard to the Library, but with regard to the Louvre as well. The Louvre has found a wise, learned, and zealous director in the person of M. Charles Blanc, the brother of Louis Blanc. There is no question about the learning, the zeal, or the integrity of M. Elie Reclus. M. Darcel himself, who calls him a visionary (*songe-creux*), and ridicules him as a vegetarian (*légumiste*), has no charge to make which proves M. Reclus wanting in anything but discretion. And, painful as it may be to admit this serious want, it is one which, we suppose no friend of M. Reclus will deny, stood in the way of his doing all the good that a nature so pure of all selfishness, a spirit of such elevation, and a mind so cultivated, could have done for his native country, which no man loved better, or had nobler aspirations for, than he.

—Even in our days Germany, with its kingdoms, duchies, principalities, and sovereign cities, its Saxes, Lippes, Anhalts, Mecklenburgs, and Hohenzollerns, and numerous other divisions, and more numerous enclaves, has always been considered by foreigners a kind of labyrinthine country, through the intricacies of which only the long and strong thread of German geographical learning could safely guide. But what is the Germany of our days compared to the Germany of the past, the Holy Roman Empire? A glance at Dr. Carl Wolf's beautiful new wall map, entitled "Die mitteleuropäischen Staaten nach ihren geschichtlichen Bestandtheilen des ehemaligen römisch-deutschen Kaiserreichs" (Berlin: Carl Habel), which, of course, includes the Netherlands and Switzerland, will suffice to show the immense difference. Large, clear, and well-colored though the map is, some parts to be studied almost require the aid of a microscope. The list of the abbreviations used in it is as long as similar lists preceding dictionaries. For endless is the number of the Abteien, Baronien, Burggrafschaften, Domprobsteien, Fürstenthümer, Gau-Erbschaften, Grafschaften, Gefürstete Grafschaften, Herrschaften, Herzogthümer, Hochstifte, Landgrafschaften, Gefürstete Landgrafschaften, Markgrafschaften, Meisterthümer, Ordens-Commenthureien, Probsteien, Reichs-Baronien, Reichs-Dörfer, Reichs-Städte, and Ritterkreise, which formed the minor divisions of the vast dominions ruled over by the mediæval Kaisers. Few persons, not excluding the German professional geographers, are able to master the contents of this map, but for reference it will be found highly valuable by every student of history.

MR. WARD H. LAMON'S LIFE OF LINCOLN.[*]

MORE kinds of writing are autobiographical than most writers imagine, and Mr. Lamon's biography of Mr. Lincoln, while it tells us a vast deal about Mr. Lincoln, tells us a good deal also about Mr. Lamon, and leaves us with no very pleasant impression of him. He is, nevertheless, a perfectly well-intentioned man, with an evidently sincere desire to tell the truth and do his whole duty by his subject, and it is a pity that he has so imperfect an idea of what constitutes common decency. That anything is forbidden ground to a biographer he seems almost unable to conceive, and he lays before the public eye matters which surely are of no concern to any of us who are outside of Mr. Lincoln's family. Mr. Lamon has our respect for his motives, but it is proper to say to him that he has written indelicately and even impudently about Mr. Lincoln's domestic relations, in an ungentlemanly way and with amusing foolishness about Mr. Lincoln's love affairs, and with very unnecessary stress, and therefore offensively, about certain of Mr. Lincoln's habits and certain of his opinions. Why should a biographer make much of the fact that his subject, when a raw boy, "read Tom Paine and Volney's Ruins" and scoffed at religion and mimicked preachers? Of course, uneducated, intelligent, self-reliant boys are sure to do just that, if Volney's Ruins and the "Age of Reason" happen to come in their way and something else does not. And why make parade of the fact as a "painful" fact that Mr. Lincoln at various times thought he was in love when he was not, or when he was not so much in love as he was the first time? A spiritualistic "medium," with wise theories about "affinities" and "spheres" and the incalculable influence of love, and with a distinct dislike of some of the commandments and therefore of all the Bible, might contentedly have written some of Mr. Lamon's chapters, but why a man of sense should have written them is not evident. And why a man accustomed to the usages of either good society or bad should assert, directly or by implication, of any living woman, that the thought of marrying her made her husband wretched, and that she proved a very unsatisfactory wife, is something that we will leave Mr. Lamon to explain. Could he not have waited, if the world needs must have this valuable information, till the woman was dead? We believe we cannot recollect a greater piece of well-meaning, cruel underbreeding and impudence than Mr. Lamon has contrived to achieve in this matter, and his good intention and general satisfactoriness make it all the more desirable to tell him so, and call the fact to the notice of himself and his more ignorant admirers.

That the volume is to be pronounced generally satisfactory we think we may say, though we confess we say so with some reluctance, for it has not only the defects which we have noted, but others, literary and moral, and contrives to offend the reader about as often as it pleases him. But it is very copious and minute; it is the result of very much painstaking labor by persons intimately acquainted with the Lincoln of the ante-presidential days; it is very truthful, conscientious, and critically impartial, while, at the same time, it is full of respect and affectionate admiration for Mr. Lincoln; it gives, either at length or in skilful abstracts mixed with quotations, Mr. Lincoln's chief public utterances; it shows us the condition of the society which produced him; it is clear and interesting in its treatment of politics and prominent politicians; it enables us to see how he was educated for his position; and it leaves him, as we are sure it ought, holding our strong and admiring respect and a good share of our affection.

We Eastern people have little real knowledge of the difficulties and dangers amid which this extraordinary man made his career, and out of what degradation and ignorance and by what labors he rose to statesmanship and political eminence. The man who was to speak the most eloquent words of his time, who was to link his name to one of the great historical acts of all times, who was to become perhaps the most authoritative and powerful of contemporary rulers, and to die more regretted by friends and enemies than any man of this generation, was born in a condition which gave promise, or which in any other country in Christendom would have given promise, of no one of all these things. That he was born in lawful wedlock Mr. Lamon leaves in doubt, though we think needlessly, the absence of marriage record or license being, we fancy, not very exceptional in the case of contracts between Southern and Western "poor whites" and "low-downers." But whether or not he was legitimate, poor whites or "low flung people" his parents were, and that of nearly the lowest type. His mother appears to have been superior in native endowments to women of her class, and apparently this superiority to her sordid lot bred in her a deep melancholy, or rather an apathetic despair, which she transmitted to her son, and which to the end of his days darkened his mind and afflicted him with a frequent depression that at times was even insane and suicidal. This depression it was, acting upon a very sensitive disposition and a nervous system hereditarily enfeebled and morbid, from which Mr. Lincoln took refuge in a gaiety that was often unreal. To say, as some do, that his fondness for funny stories, of which not a few were very low, was altogether because of his desire to escape from his mental misery, is no doubt a mistake. The West of Mr. Lincoln's time was full of stories, old and new, and he was full of them because for one thing he was emphatically a man of the people, for another thing deliberately made himself a proficient in popular arts, and for another had in large measure the gift which consists in making things clear to plain men; and of this gift the ability to speak in homely parables is no small part. And the dirtiness of some of his stories is due to the fact that his childhood and youth were spent among incredibly coarse people, that he was of an impressible nature, that he never had the advantage of elevating education, and that among the men with whom his life was spent till he was fifty years old, coarse wit, and the coarser the better, was a principal passport to favor. The habit once formed was enduring, and we do not know that the society of many of the politicians in Washington is much fitted to eradicate ways of speech picked up among "gander parties" of "Hoosiers." That his failing in this respect was due to vice of nature there is no evidence; on the contrary, there is reason to suppose him a man of a naturally clean imagination, and his purity of life is not gainsaid by any one.

Lincoln's father, Thomas Lincoln, or Tom Lincoln, as he was called, was a shiftless good-for-nothing, who drank as hard as any of his neighbors, and could thrash almost any one of them who presumed too far upon his easy temper; but of their hard-working industry and their frequent clear-sightedness in business matters he had none. His wife taught him to write his name, but no one could teach him his duty to his family; and he spent his life as his father had before him, wandering towards the West, half clearing one miserable farm after another, having children born to him in one wretched log-hut after another, feeding upon corn-bread, whiskey, and what game he could kill, and contriving always to be on the wretched border-land between civilization and the wilderness. The "Western Country" was in his days what some portion of our mining region is now, the resort of all the most desperate ruffians anywhere to be found, and mingled with these were the wildest speculators in real or imaginary cities, and such debtors and incapables and born wanderers as well-regulated communities could not tolerate or retain. Dickens's "Eden" was no great exaggeration. Long after Tom Lincoln's time, it was said of Illinois that she exported nothing but lands and city lots—a little miserable agriculture, and an enormous amount of speculating, drinking, and politics, being the sole or the principal business of the new country; and of Louisville, Kentucky, not very long before Abraham Lincoln was born, it is related that "the whole population were so deeply engaged in drinking, card-playing, and selling town lots to each other, that they persistently refused to pay any attention to three men who were drowning in the river near by, although their dismal cries for help were distinctly heard throughout the 'city.'"

Buying and selling corner lots was never the occupation of Tom Lincoln. He was a representative of that class of poor whites who were not precisely the lowest, for they did not live by stealing from their richer neighbors;

---

[*] "The Life of Abraham Lincoln; from his Birth to his Inauguration as President. By Ward H. Lamon. With Illustrations." Boston: James R. Osgood & Co. 1872.

their women were usually virtuous after a fashion, and the men did some hard work, though intermittently. But they were miserably poor, very ignorant, very superstitious, leading sordid lives in squalid, wretched homes. This extract, perhaps, gives a favorable impression of them:

> “‘You wish me to tell you how the people used to go to meeting—how far they went. At that time we thought it nothing to go eight or ten miles. The old ladies did not stop for the want of a shawl, or cloak, or riding-dress, or two horses, in the winter-time; but they would put on their husbands' old overcoats, and wrap up their little ones, and take one or two of them up on their beasts, and their husbands would walk, and they would go to church, and stay in the neighborhood until the next day, and then go home. The old men would start out of their fields from their work, or out of the woods from hunting, with their guns on their shoulders, and go to church, some of them dressed in deer-skin pants and moccasins, hunting-shirts with a rope or leather strap around them. They would come in laughing, shake hands all around, sit down and talk about their game they had killed, or some other work they had done, and smoke their pipes together with the old ladies. If in warm weather, they would kindle up a little fire out in the meeting-house yard, to light their pipes. If in winter-time, they would hold their church in some of the neighbors' houses. At such times they were always treated with the utmost of kindness: a bottle of whiskey, a pitcher of water, sugar, and glass were set out, or a basket of apples, or turnips, or some pies and cakes. Apples were scarce them times. Sometimes potatoes were used as a treat. (I must tell you that the first treat I ever received in old Mr. Linkern's house, that was our President's father's house, was a plate of potatoes, washed and pared very nicely, and handed round. It was something new to me, for I never had seen a raw potato eaten before. I looked to see how they made use of them. They took off a potato, and ate them like apples.) Thus they spent the time till time for preaching to commence, then they would all take their seats: the preacher would take his stand, draw his coat, open his shirt-collar, commence service by singing and prayer, take his text, and preach till the sweat would roll off in great drops. Shaking hands and singing then ended the service. The people seemed to enjoy religion more in them days than they do now. They were glad to see each other, and enjoyed themselves better than they do now.'
>
> “Society about Gentryville was very little different from that of any other backwoods settlement of the same day. The houses were scattered far apart, but the inhabitants would travel long distances to a log-rolling, a house-raising, a wedding, or anything else that might be turned into a fast and furious frolic. On such occasions the young women carried their shoes in their hands, and only put them on when about to join the company. The ladies drank whiskey-toddy, while the men took it straight; and both sexes danced the livelong night, barefooted, on puncheon floors.
>
> “The fair sex wore ‘corn-field bonnets, scoop-shaped, flaring in front, and long, though narrow behind.’ Shoes were the mode when entering the ball-room, but it was not at all fashionable to scuff them out by walking or dancing in them. ‘Four yards of linsey-woolsey, a yard in width, made a dress for any woman.’ The waist was short, and terminated just under the arms, whilst the skirt was long and narrow. ‘Crimps and puckering frills’ it had none. The coats of the men were home-made; the materials, jeans or linsey-woolsey. The waists were short, like the frocks of the women, and the long, ‘claw-hammer’ tail was split up to the waist. This, however, was company dress, and the hunting-shirt did duty for every day. The breeches were of buckskin or jeans; the cap was of coon-skin, and the shoes of leather tanned at home. If no member of the family could make shoes, the leather was taken to some one who could, and the customer paid the maker a fair price in some other sort of labor.”

Among these people the future President grew up doing chores, butchering hogs, splitting rails, flatboating, fighting, drinking whiskey, but not much, telling stories, making stump speeches, writing indescribable “poetry,” and, in general, doing what the other young men did, but doing it better, and doing one thing more than most of them were doing—reading, as if for dear life, every printed scrap that he could find; writing down copy-books full of what he read, for most of his books were borrowed; ciphering by firelight till the wooden fire-shovel was covered with his chalk figures and then planing the wood and beginning again; and, good-natured and kind as he was to everybody about him, cherishing in his secret heart a devouring ambition which nothing could quench, which indeed his poverty, his consciousness of his ignorance, the lowness of his surroundings, his knowledge of his personal deformities, inflamed and stimulated, rather than quenched.

The reader of Mr. Lamon's extremely interesting book will follow with fascination the course of Mr. Lincoln's development into a backwoods surveyor, then a backwoods lawyer, then a cross-roads grocery politician, then a politician of experience and of great practical sagacity, then, at last, a patriotic statesman and a great President. His education he was getting every day, and always bitterly regretted his want of the training which would have saved him so much labor and so many mistakes. He and politicians like him, for want of half-a-dozen simple notions in political economy, brought their State into disgrace and temporary ruin. But his mind was singularly candid and open, and he never made the wrong-headed blunder of despising education. When elected President, his eldest son had been for years in New England receiving the most thorough training the country could afford.

That Mr. Lincoln was not a politician to the last no one would say; he had to be. But while this book will increase our opinion of his shrewdness and subtlety, it will also increase our opinion of his honesty and candor and of the comprehensive elevation of so practical an intellect. It will also leave undiminished the estimate of his kindness, though it will make plainer than before that his kindness was less the result of weak impulse than some have supposed. Indeed, strength and firmness of will and far-reaching shrewdness are perhaps the qualities which Mr. Lamon's book brings most clearly into view. We commend it to everybody as excellent reading, as captivating as a romance and of deep interest to every citizen.

SOME BOOKS OF TRAVEL.*

THEIR novelty, as well as their interest, demand that we should give our attention first of all to the three books at the head of the list. Respect, too, for the female sex requires that we should endeavor to make out from these records of their journeyings how well some women can travel in Europe without the aid of bundle-carrying man. That Europe is startled in its improprieties by the sight of unescorted English and American women who travel comfortably from London to Rome, is well known. English travellers in this country are accustomed to applaud the fact that women can travel safely from Maine to Texas, but that the wicked Continent should see such a sight is indeed new. The way in which this first struck the Frenchman may be gathered from this extract from a *Figaro* of some four or five years ago, apropos of the visit of half a dozen young American women:

> “Young America sent forth through Europe, some six months ago, the strangest caravan that was ever seen on the surface of the globe. One fine morning, seven young ladies of New York or New Orleans, with the independence that characterizes the maidens of across the sea, announced to their families that they had resolved to group themselves, to pass the ocean, and to visit London, Paris, Madrid, Stockholm, Vienna, Rome, Florence, Constantinople, St. Petersburg, Athens, etc. Seven young ladies would make in France this proposition to their papas, and immediately these would order a mad-doctor and have the petitioners douched at high pressure.
>
> “But down there things pass otherwise. The old Yankees approved the design of their heiresses, filled their sacks with dollars, and conducted them to the ships which deposed them upon our continent. The excursion commenced by England, which did not startle itself too much at the sight of this strange battalion of tourists in petticoats. But the France, but the Prussia, but the Austria regarded with stupefaction the young Americans passing, whom no suite, no valet de chambre, no gentleman accompanied.
>
> “One recounts to me that the cohort diminishes in proportion as it advances towards the Orient. Two from among these young ladies have married without drum or trumpet, and have contented themselves with writing to their parents, ‘I have found the husband of my choice in passing through X. I have established myself here. It is here that I pray you to direct my dowry and your blessing. My husband and I are counting on your speedy visit.’
>
> “Do you not find, dear readers, the thing really piquant? And you, young people, whom the flames of Hymen consume in vain, and who do not arrive to put yourselves *en ménage*, try to find yourselves on the itinerary followed by the nomadic adolescents. You may, perhaps, get one in the flight.
>
> “The latest advices mention their presence in Hungary. As to the description of these five Americans remaining, we only know it in a very vague fashion. Three are dark, two are fair; two tall, three short. They generally wear great sombre mantles of impermeable stuff, little microscopic caps, and carry umbrellas in a polished case.”

In these volumes we have given, with equal frankness and much more entertainingly, the other side of the story—the impression made upon apparently inexperienced travellers by the sights of Europe. The “Bits of Travel,” by “H. H.,” is an extremely readable book, and more especially entertaining in the first half. This contains a series of sketches which had already appeared in print in the *Atlantic*. The subjects are various. Generally, however, they give us an account of some rather out-of-the-way corner of Europe in a very bright and engaging manner. To our mind, the best is the one entitled “The Valley of Gastein.” The sketch, “A German Landlady,” seems hardly so good. One has doubts about the landlady's broken English—though we grant that a precise report of broken English, even were it made by a stenographer, would be a most difficult thing to undertake. The affecting life of the good lady is well told, though we hardly get so vivid an impression of her as the author desired. As a specimen of the brightness of “H. H.'s” style, we might open the book at random and take the first sentence that meets our eye. For instance, in the account of the Etruscan Museum in the Vatican, we find this:

> “After one more room of terra-cottas, urns, statues, and bas-reliefs, you come to the rooms of vases. There are four of these rooms, and the vases

> are arranged on pedestals and shelves. The first thing you do is to resolve that you will learn the names of the different objects. In a few minutes you persuade yourself that you know, and will remember which is an amphora, a pelice, a calpis, and a patera. For that one day you will; but in a week all that you will know will be that the amphora, and the calpis, and the pelice are all beautiful kinds of jars, and the pateras and pelices are the shapes which lucky people who have them use for card-receivers."

This is not convulsing humor; but there are many similar ingenious, feminine observations throughout the book. The last half, which is composed of what are called "Encyclical Letters," is by no means so good. These letters are almost spoiled by excessive vivacity. The public is apt to be colder about such exhibitions of the feelings than are one's personal friends. But in spite of this occasional rattling, the book will be found to be pleasant reading.

Miss Adeline Trafton's "American Girl Abroad" visits London, Paris, Belgium, Holland, the Rhine, and Switzerland, and, thanks to the feminine distaste—or shall we say incapacity?—for statistics, and to the naïvely honest record of her impressions, the author makes a very readable book, especially so when we consider the well-worn track she describes. There is a very proper exclusion of information stolen from the guide-book; but there is a very pleasant record of the writer's keen enjoyment of her trip. We quote from the beginning of the chapter on Paris:—

> "It may be the city of destruction, the very gateway to depths unknown; but with its fair, white streets, that gleamed almost like gold beneath a summer sun, it seemed much more a city celestial. It may be, as some affirm, that the devil here walks abroad at midday; but we saw neither the print of his hoofs upon the asphaltum, nor the shadow of his horns upon the cream-like Caen stone. We walked and rode and dwelt a time within its limits; and but for a certain reckless gaiety that gave to the Sabbath an air of Vanity Fair, but for the mallet of the workman that disturbed our Sunday worship, we should never have known that we were not in the most Christian of all Christian cities. It is by no means imperative to do in Rome as the Romans do, and one need not in Paris drink absinthe or visit the Jardin Mabille."

This seems to us charmingly innocent. Imagine the American girl in Paris sitting in front of a *café* on the boulevard sipping absinthe! As for Mabille, it is true one need not visit it; but if whispered scandal is to be believed, American ladies, who ought to know better, do. We wish that we had more space, that we might quote some other extracts that would exhibit our author's good-natured style. The illustrations of the book, be it said, are very bad. They might well be omitted in another edition.

Mrs. Wallace's "A Woman's Experience in Europe" is a book far inferior to those we have already mentioned. Mrs. Wallace travels with advanced views about women's rights and such matters, and she lugs into her book records of her conversations with French champions of temperance, fellow-boarders at London, and American sculptors at Rome. We are permitted to hear the names of the very good company she saw, and the result is that, in comparison say with "H. H.'s" "Bits of Travel," we are reminded of childhood's tale of "Eyes" and "No Eyes." It is not a book to be recommended.

We cannot pass from the women's books without calling the attention of the reader to their vivacity, not that it is not striking enough in itself, but it may be well to consider its prettiness, innocence, and occasionally artful simplicity. Very often they give us nothing very new about Europe; but unless we find traces of artificially good spirits, we cannot but be grateful for the humor we enjoy, and the personal interest we feel in their slight adventures.

One of the best things that can be said about Mr. Charles Warner's "Saunterings" is that it shows us that an amusing, humorous book—one, too, that is filled with what it is the fashion to call American humor — can be written which shall not reek with vulgarity. Mr. Warner does not always bow with slavish humiliation before every ancient ruin, but he manages to give us a very pleasant impression of travel in Europe without the gross flavor of bar-room jesting which, disfiguring some better things, made the "Innocents Abroad" a popular book among those people who hide their crass ignorance beneath a mask of indifferent superiority. The humor of this volume is genuine and pleasant. We find short chapters on Paris and London, the Low Countries and the Rhine, Switzerland, Bavaria, and Italy. They are almost all very superficial and hasty. They often represent but one point of view, that of the swift-moving traveller, who is always good-humored, but if taken for what they were meant to be, they will be found agreeable reading. To travel through Europe with only the books we must notice to-day would be extremely unsatisfactory, but in this one, for example, every traveller who remembers his inappropriate fatigue and consequent irreverence will find much to remind him of bygone days. This is not a great book on Europe, nor does it pretend to be. It is entertaining, and that is in itself a good deal.

Dr. E. D. G. Prime, after a voyage around the world, a trip that almost rivals in rarity what a journey to Europe was not so many years ago, has imitated those ancient travellers by writing a book. When we remember how many accounts there are already of this trip written by men who saw what there was about them less cursorily than was possible for the author of this volume, we cannot bring ourselves to recommend it to any save those who wish to find out what things they may see in exactly the same space of time. One learns nothing new about Japan, China, or India, except that his sense of their accessibility is quickened. It should be said, however, that the book contains a great deal of information on which it might not always be easy to lay one's hand. As a book of travels, it will be disappointing from its brevity both to those whom stern fate obliges to stay at home, as well as to those who have made the same trip or who intend making it. We suppose this to be one more result of a man's taking advantage of his having a special audience to make a book which would never have been made had the book to find friends instead of its author's having already found them. All this has its good side, no doubt, but it is not a side of the goodness of which the reviewer need make any praises.

THE TO-MORROW OF DEATH.[*]

FEW of those who find pleasure in frequenting book-stores can have failed to come across one or more of the profusely illustrated volumes in which M. Louis Figuier has sought to render dry science entertaining to the multitude. And of those who may have casually turned over their pages, there are probably none, competent to form an opinion, who have not speedily perceived that these pretentious books belong to the class of pests and unmitigated nuisances in literature. Antiquated views, utter lack of comprehension of the subjects treated, and shameless unscrupulousness as to accuracy of statement, are faults but ill atoned for by sensational pictures of the "dragons of the prime that tore each other in their slime," or of the Newton-like brow and silken curls of that primitive man in contrast with whom said dragons have been likened to "mellow music."

Nevertheless, the sort of scientific reputation which these discreditable performances have gained for M. Figuier among an uncritical public is such as to justify us in devoting a few paragraphs to a book which, on its own merits, is unworthy of any notice whatever. "The To-morrow of Death"—if one were to put his trust in the translator's prefatory note—discusses a grave question upon "purely scientific methods." We are glad to see this remark, because it shows what notions may be entertained by persons of average intelligence with reference to "scientific methods." Those—and they are many—who vaguely think that science is something different from common-sense, and that any book is scientific which talks about perihelia and asymptotes and cetacea, will find their vague notions here well corroborated. Quite different will be the impression made upon those—and they are yet too few—who have learned that the method of science is the common-sense method of cautiously weighing evidence and withholding judgment where evidence is not forthcoming. If talking about remote and difficult subjects suffice to make one scientific, then is M. Figuier scientific to a quite terrible degree. He writes about the starry heavens as if he had been present at the hour of creation, or had at least accompanied the Arabian prophet on his famous night-journey. Nor is his knowledge of physiology and other abstruse sciences at all less remarkable. But these things will cease to surprise us when we learn the sources, hitherto suspected only in mythology, from which favored mortals can obtain a knowledge of what is going on outside of our planet.

The four inner planets being nearly alike in size (?) and in length of day, M. Figuier infers, by strictly scientific methods, that whatever is true of one of them, as our earth, will be true of the others (p. 34). Hence, they are all inhabited by human beings. It is true that human beings must find Venus rather warm, and are not unlikely to be seriously incommoded by the tropical climate of Mercury. But we must remember that "the men of Venus and Mercury are made by nature to resist heat, as those of Jupiter and Saturn are made to endure cold, and those of the Earth and Mars to live in a mean temperature: *otherwise they could not exist*" (p. 72). In view of this charming specimen of a truly scientific inference, it is almost too bad to call attention to the fact that M. Figuier is quite behind the age in his statement of facts. So far from Jupiter and Saturn being cold, observation plainly indicates that they are prodigiously hot, if not even incandescent and partly self-luminous; the explanation being that, by reason of their huge bulk, they still retain much of the primitive heat which smaller planets have more quickly radiated away. As for M. Figuier's statement, that polar snows have been witnessed on these planets, it is simply untrue; no such thing has ever been seen there. Mars, on the other hand, has been observed to resemble in many important respects its near neighbor, the Earth; whence our author declares that if an aeronaut were to shoot clear of terrestrial gravitation and land upon Mars, he would unquestionably suppose himself to be still upon the earth. For aerolites, it seems, are somehow fired down upon our planet both from Mars and from Venus; and aerolites sometimes contain vegetable matter (?). Therefore, Mars has a vegetation, and very likely its red color is caused by its luxuriant autumnal foliage! (p. 47) To return to Jupiter: this planet, indeed, has inconveniently short days. "In his 'Picture of the Heavens,' the German astronomer, Littrow (*these Germans think of nothing but gormandizing*), asks how the people of Jupiter order their meals in the short interval of five hours." Nevertheless, says our author, the great planet is compensated for this inconvenience by its equable and delicious climate.

---

[*] "The To-morrow of Death; or, The Future Life According to Science. By Louis Figuier. Translated from the French by S. R. Crocker." Boston: Roberts Brothers. 1872.

In view, however, of our author's more striking and original disclosures, one would suppose that all this discussion of the physical conditions of existence on the various planets might have been passed over without detriment to the argument. After these efforts at proving (for M. Figuier presumably regards this rigmarole as proof) that all the members of our solar system are habitable, the interplanetary ether is forthwith peopled thickly with "souls," without any resort to argument. This, we suppose, is one of those scientific truths which, as M. Figuier tells us, precede and underlie demonstration. Upon this impregnable basis is reared the scientific theory of a future life. When we die our soul passes into some other terrestrial body, unless we have been very good, in which case we at once soar aloft and join the noble fraternity of the ether-folk. Bad men and young children, on dying, must undergo renewed probation here below, but ultimately all pass away into the interplanetary ether. The dweller in ether is chiefly distinguished from the mundane mortal by his acute senses and his ability to subsist without food. He can see as if through a telescope and microscope combined. His intelligence is so great that in comparison an Aristotle would seem idiotic. It should not be forgotten, too, that he possesses eighty-five per cent. of soul to fifteen per cent. of body, whereas in terrestrial man the two elements are mixed in equal proportions. There is no sex among the ether-folk, their numbers being kept up by the influx of souls from the various planets. "Alimentation, that necessity which tyrannizes over men and animals, is not imposed upon the inhabitants of ether. Their bodies must be repaired and sustained by the simple respiration of the fluid in which they are immersed, that is, of ether." Most likely, continues our scientific author, the physiological functions of the ether-folk are confined to respiration, and that it is possible to breathe "without numerous organs is proved by the fact that in all of a whole class of animals—the batrachians—the mere bare skin *constitutes the whole machinery of respiration*" (p. 95). Allowing for the unfortunate slip of the pen by which "batrachians" are substituted for "fresh-water polyps," how can we fail to admire the severity of the scientific method employed in reaching these interesting conclusions?

But the King of Serendib must die, nor will the relentless scythe of Time spare our Etherians, with all their exalted attributes. They will die repeatedly; and after having through sundry periods of probation attained spiritual perfection, they will all pour into the sun. Since it is the sun which originates life and feeling and thought upon the surface of our earth, "why may we not declare that the rays transmitted by the sun to the earth and the other planets are nothing more nor less than the emanations of these souls?" And now we may begin to form an adequate conception of the rigorously scientific character of our author's method. There have been many hypotheses by which to account for the supply of solar radiance. One of the most ingenious and probable of these hypotheses is that of Helmholtz, according to which the solar radiance is due to the arrested motion of the sun's constituent particles toward their common centre of gravity. But this is too fanciful to satisfy M. Figuier. The speculations of Helmholtz "have the disadvantage of resting on the idea of the sun's nebulosity—an hypothesis which would need to be more closely examined before serving as a basis for so important a deduction." Accordingly, M. Figuier propounds an explanation which possesses the signal advantage that there is nothing hypothetical in it. "In our opinion, the solar radiation is sustained by the continual influx of souls into the sun." This, as the reader will perceive, is the well-known theory of Mayer, that the solar heat is due to a perennial bombardment of the sun by meteors, save that, in place of gross materialistic meteors, M. Figuier puts ethereal souls. The ether-folk are daily raining into the solar orb in untold millions, and to the unceasing concussion is due the radiation which maintains life in the planets, and thus the circle is complete.

In spite of their exalted position, the ether-folk do not disdain to mingle with the affairs of terrestrial mortals. They give us counsel in dreams, and it is from this source, we presume, that our author has derived his rigid notions as to scientific method. In evidence of this dream-theory we have the usual array of cases, "a celebrated journalist, M. R——," "M. L——, a lawyer," etc., etc., as in most books of this kind.

M. Figuier is not a Darwinian: the derivation of our bodies from the bodies of apes is a conception too grossly materialistic for him. Our souls, however, he is quite willing to derive from the souls of lower animals. Obviously we have pre-existed; how are we to account for Mozart's precocity save by supposing his pre-existence? He brought with him the musical skill acquired in a previous life. In general, the souls of musical children come from nightingales, while the souls of great architects have passed into them from beavers (p. 247). We do not remember these past existences, it is true; but when we become ether-folk, we shall be able to look back in recollection over the whole series.

Amid these sublime enquiries, M. Figuier is sometimes notably oblivious of humbler truths, as might indeed be expected. Thus he repeatedly alludes to Locke as the author of the doctrine of innate ideas (pp. 251, 252, 287), and he informs us that Kepler never quitted Protestant England (p. 335), though we believe that the nearest Kepler ever came to living in England was the refusing of Sir Henry Wotton's request that he should move thither.

And lastly, we are treated to a real dialogue, with quite a dramatic *mise en scène*. The author's imaginary friend, Theophilus, enters, "seats himself in a comfortable chair, places an ottoman under his feet, a book under his elbow to support it, and a cigarette of Turkish tobacco between his lips, and sets himself to the task of listening with a grave air of collectedness, relieved by a certain touch of suspicious severity, as becomes the arbiter in a literary and philosophic matter." "And so," begins our author, "you wish to know, my dear Theophilus, *where I locate God?* I locate him in the centre of the universe, or, in better phrase, at the central focus, which must exist somewhere, of all the stars that make the universe, and which, borne onward in a common movement, gravitate together around this focus."

Much more, of an equally scientific character, follows; but as the reader is already justly blaming us for spending so much time over such idiotic drivelling, we may as well conclude our sketch of this new line of speculation, which, in default of a better term, we might call astro-mythology.

THE RECENT NOVELS.*

IT is, unfortunately, very seldom that one finds a novelist whose work, extending over so many years, shows only steady improvement, but such is the case with the novels of the late Charles Lever. His military novels, with the young dragoons ever ready for fighting, and for love or punch-making, were, and will be for a long time, the delights of youth, but in these novels of his later years there is the same brightness, a much acuter study of character, and the evidence of a much wider experience. "Sir Brooke Fosbrooke" is one of this sort that can be recommended. "That Boy of Norcott's," although of less merit, is very readable; but perhaps the best of all is his last, "Lord Kilgobbin." The scene of this story is in Ireland, and the author has drawn an admirable picture of the gloom and dulness of its country life, and of the interruptions to this dulness which Fenianism and Irish devotion to causeless brawling are capable of producing. The characters are numerous, and are all sharply sketched; there are many Irish, a Greek princess, young Englishmen, officers, adventurers—a motley and entertaining crowd. One of the most amusing of them all is one Atlee, who is simply a civilian successor to the soldierly heroes of the earlier novels. Instead of madly galloping in the charge, or jangling his spurs in the ballroom, he, while yet a young man in college, writes for all the best papers in Europe—instructing statesmen in their craft, taking up all sides of every political question, and playing at buffets with himself in discussions between the *Revue des Deux Mondes* and the *Edinburgh Review*. He shines in diplomacy; and, on the whole, in spite of the exaggeration which the cooler judgment detects, gives a good deal of life to the story. The two young women are well drawn; and, in a word, the interest we are made to feel in the characters, the skill shown in telling the story, the good-nature and refinement of the author, make this a very readable novel.

---

"It is the Fashion. From the German of Adelheid von Auer." Philadelphia: J. B. Lippincott & Co. 1872.

"Minna Monté. By 'Stella.'" Philadelphia: J. B. Lippincott & Co. 1872.

"The Doctor's Daughter. By Sophie May." Boston: Lee & Shepard. 1872.

"500 Majority; or, The Days of Tammany. By 'Wyllis Niles.'" New York: G. P. Putnam & Sons. 1872

'Good-bye, Sweetheart. By Rhoda Broughton." New York: D. Appleton & Co. 1872.

"Beauty and the Beast; and Tales of Home. By Bayard Taylor." New York: G. P. Putnam & Sons. 1872.

"Only Three Weeks. By the Author of Ereighda Castle." Boston: J. R. Osgood & Co. 1872.

"Cecil's Tryst. By the Author of 'Won, not Wooed,' etc." New York: Harper & Bros. 1872.

Mrs. Steele's new novel, "Broken Toys," is one that embarrasses the critic, and, we trust for their sake, will embarrass those readers who may take it up unwarned. The plot of the story is very unpleasant; in reality, it is nothing more than a coarse combination of adultery and drunkenness. The whole book reeks with sin. Every married woman in it is making love to some man who is not her husband; every man is neglecting his own wife, but loving his neighbor's, and, meanwhile, ruining himself with gambling or horse-racing, or killing himself by drink. The tone of the book is not relieved by a single breath of innocence; the author is as malignant as Juvenal, while she seems to try simply to represent life as she sees it, or thinks she sees it. That women should so often write novels of this sort is one of the problems that women can best explain; perhaps the most charitable reason that could be assigned would be that, in their emancipation from what they regard as unworthy prejudice, they mistake license of this sort for a glorious freedom from prudery. In this case, they would be like ambitious lads of sixteen who glorify themselves by boasts of dark depravity. But whatever the reason may be, they cannot make stories of this description anything but unpleasant reading.

A different sort of novel is Adelheid von Auer's "It is the Fashion." As its name implies, this is the record of a family given up to worldly ways—to extravagance, and to all manner of pomps and vanities. The story is told in letters from a young woman who is boarding with them, and who, having a very keen observation, and a fine talent for gossiping, covers many pages with descriptions of their ways of life, and the troubles it brings upon them. Naturally, this is not the sort of novel that will please the giddy, and even steadier-headed people may find it a trifle dull, but it is by no means unreadable. It is to be remembered that this is a German novel, and what German novels generally are.

"Stella's Minna Monté" is a very fair representative of what may be called the "Middle-State novel," as contrasted with that of New England or of the South. In New England we have the introspective heroine, who is tortured by unseasonable questionings about her duty in life, and who often contents herself by some grand sacrifice, and then seals her heart and lives on unrepining. In the South we have true sentiment, heart-agonies, the most luscious romance. In the Middle-State novel we find, too, a great deal of respect given to flirtation and the tender passion in general, but without the tropical fire of the South or the cooler intellectual self-analysis that bears witness to the nervousness of the New England heroine. But although this story is an example of its class, it has but little merit as a work of fiction. In its style it resembles the "Doings in Maryland" mentioned in these columns a few months ago. For example:—

> "Good evening, Madame Ruit. I flatter myself that I have the honor to find Madame and Colonel Ruit in the enjoyment of a sanitary state of health."
>
> "Thank you, sir, we are all quite well, except Minna, who——"
>
> "Miss Minna! is she sick? Oh, heavens, is she ill,—is she very ill? What is it? Is she suffering pain? Allow me to fly and get the 'Balm of Gilead.'"
>
> "Give yourself no trouble, sir; my niece has a slight headache, which is not unusual with her; she needs no remedies other than those that are in the house."
>
> "Pardon me, madame, I intended no intrusion, but was overcome by the intensity of my feelings at the idea of Miss Monté's suffering a moment's pain. I am fully alive to the fact that you have here everything that mortal could wish, to charm the eye and to alleviate mental or physical suffering. I again ask pardon."
>
> A stately bow was the only reply to this *flattering* speech; then, having entirely exhausted his vocabulary, he rose to depart, secretly hoping that he would be invited to remain to tea; but on this evening the customary invitation was ommitted.

He did well, we should say, to get away with his life.

"The Doctor's Daughter" is a little story of New England country people, written apparently for young girls. It does not call for rapturous applause, but we have no doubt that its readers will find it agreeable. It is certainly innocently and good-naturedly written.

As deserving prominence among the "consequential damages" of the work of the "Ring" in this city, we would mention Mr. "Wyllis Niles's" novel, "500 Majority; or, The Days of Tammany." It is a disgraceful record of a disgraceful time.

Miss Rhoda Broughton's "Good-bye. Sweetheart," is a characteristic specimen of the *genre* in which this young lady has made herself notorious. It is an extremely sentimental tale, told with much vividness of description, and a great deal of cleverness in the drawing of the characters, but spoiled by flippancy, slang, and wilful vulgarity. Miss Broughton's novels have a certain merit, but it is generally deeply hidden beneath more conspicuous faults.

In "Beauty and the Beast" Mr. Bayard Taylor has collected a few short tales of different degrees of excellence. None of them is deserving of very high praise, although they all compare favorably with the average of magazine stories.

"Only Three Weeks" is the very inappropriate title of a new novel of the romantic melodramatic order. It is a love story of the most aggravated type, and is a trifle fresher than many which it is our duty to read. The author has more imagination than skill, but the tale has charms for sentimental readers; they will find in it a rather pretty record of the main subject of novelists, told at too great length, to be sure, but yet with little touches of simplicity and humor that disarm hostile criticism.

"Cecil's Tryst" cannot be recommended. It is a most artificial story, bearing the same relation to life that wire-winking dolls do to human beings. The construction of a novel of this sort, as of a puppet, requires some skill, but is undeserving of mention outside of the Patent Office. The machinery creaks too loudly.

FAVORABLE REPORT ON THE NORTHERN PACIFIC RAILROAD.

WASHINGTON, June 11.

THE Committee on the Pacific Railroads of the House made a report yesterday, upon the resolution of February 13 to investigate and report upon the actual condition of the Northern Pacific railroad company. The statement is voluminous, embracing all the evidence adduced before the committee. The following is a brief synopsis:

There are no charges of any kind whatsoever made against the management of the company, and in order to meet the suggestions made in any communications referred to the committee or any of its members, as well as all questions of a general character, the committee put interrogatories to the company which were answered under oath. The range of the enquiries was designed to cover the actual condition of the Northern Pacific railroad company and to be exhaustive.

The evidence shows that the affairs of the company are in a sound and clean condition. Thus far the road has been constructed by contractors, to whom the work has been let after public competitive bidding. No director, officer, or engineer of the company has been in any way pecuniarily interested in the construction contracts or the purchase of material or supplies.

The building of the road has progressed as rapidly as prudent financial management and the permanent interest of the road permitted. The work throughout is shown to be of the best quality. The iron is all of American manufacture, and from American ores.

There will be in operation at the end of this year five hundred and seventeen (517) miles of the main road. Surveys entirely across the continent have developed an excellent route with easy grades and through a country of average fertility. In addition to the portion already completed, there is now under construction and preparing for contract, east and west of the Rocky Mountains, ten hundred and thirty-one (1031) miles of track. Grading is in progress in Dakota and Washington Territories.

The company has examined, platted, appraised, and prepared for market 1,578,890 acres of its lands in Minnesota and Washington Territory, at a cost of one per cent. per acre, and of these lands applications are on file for the purchase of 140,204 acres.

The company's policy is to sell its lands cheap to actual settlers. The lands are held by trustees as security for bonds sold by the company, and no portion of the grant can be diverted from this purpose.

Four million two hundred and forty-one thousand six hundred dollars' worth of capital stock has been issued, and is held by one hundred and seventy-four different shareholders, whose names are given.

LEISURE HOUR SERIES.

Now Ready:

MY LITTLE LADY. Price $1 25.

"Sure to make a great mark in fiction."—Evening Post.

"A story which alone will make its author famous."—Boston Post.

"A very charming story."—World.

NEW TEXT-BOOKS

FOR

COLLEGES, ACADEMIES, HIGH SCHOOLS, ETC.

BOTANY FOR YOUNG PEOPLE.

How Plants Behave; how they Move, Climb, Employ Insects to Work for them, etc. By Prof. Asa Gray, author of "Gray's Botanical Series." Beautifully illustrated, and printed on fine paper. 4to. Price 75 cents.

TAYLOR'S GRAMMAR OF THE GREEK LANGUAGE.

With Exercises and Vocabularies. By the late Samuel H. Taylor, LL.D. Based on the 25th edition of Kuhner's "Greek Grammar." Cloth. 400 pages. Price $1 60.

This volume was begun and carried considerably forward by the late Dr. Samuel H. Taylor, of Andover, Mass., and was completed by his son, George H. Taylor. The work has been done with great care and much practical skill, and has been completed as nearly as possible according to the plan of Dr. Taylor. Kuhner, as a basis, has been strictly adhered to, though no addition or change has been overlooked which long experience in teaching has suggested as valuable. The work is a very handsome specimen of typography.

ARS ORATORIA.

Selections from Cicero and Quintilian on Oratory. With Notes. By Martin Kellogg, Professor of Latin and Greek in the University of California. One vol., handsomely bound in cloth, 157 pages. Price $1 25.

This compilation offers to the student of Latin a choice collection from the great masters of oratory. In all mechanical respects it is a beautiful specimen of book-making. The type is large and clear, and the binding is exceptionally neat and attractive.

AN ELEMENTARY MANUAL OF CHEMISTRY.

For Common Schools, Academies, Normal Schools, etc.; abridged from Eliot and Storer's "Manual of Inorganic Chemistry." with the co-operation of the authors. By Wm. Ripley Nichols, Assistant Professor of Chemistry, Massachusetts Institute Technology. Fully illustrated with diagrams and other engravings. 300 pages. Price $1 50.

This work is up with the times in its scientific accuracy, nomenclature, etc., and will not fail to give the fullest satisfaction to those who are in want of such a book. The diagrams and other illustrations are very numerous, and add much to its beauty and utility.

Either or all of the above will be sent by mail on receipt of the price.

Our NEW DESCRIPTIVE CATALOGUE, containing full notices of our large list of Standard High-Class Books, including Dana's Geology, Gray's Botany, Fasquelle's French and Woodbury's German Course, Robinson's Higher Mathematics, etc., etc., will be forwarded, free of postage, to Professors or Principals, on application.

Price per PART, including MAPS and ILLUSTRATIONS, 60 cents.

PRICE PER VOLUME.

Extra cloth, bevelled boards, . . .	$5 50	Half Turkey Roxb., gilt top, . . .	$7 00
Library Sheep, marbled edges, . .	6 00	Half calf, gilt extra, marbled edges, .	7 50
Half Turkey morocco, ...	6 50	Half Russia, red edges, ...	8 00
Turkey antique, gilt edges, ...	$9 50		

TO TEACHERS, who are frequently called upon to give succinct explanations of topics in the various branches of education, often beyond the mere outline of information contained in the text-books, no other work will be found so useful; while the conciseness of the several articles has made it practicable to bring the whole work within the compass of a few volumes, which are afforded at a small cost compared with others of its class.

FOR SCHOOL LIBRARIES the work is peculiarly fitted, owing to its adaptation, as a "Dictionary of *Universal* Knowledge," to the wants of both teachers and pupils. Says the Rev. Dr. S. K. Talmage, President of Oglethorpe University, Ga., I have no hesitation in saying that the friends of education will do injustice to themselves, and to the cause of literature, science, and general knowledge, if they fail to reward the enterprising publishers with a liberal patronage."

FOR THE FAMILY.—Says the Rev. Dr. Finney, late President of Oberlin College, Ohio: "Chambers's Encyclopædia should find a place in every family. Should families deny themselves in other things and obtain and study such works, they would find themselves mentally much enriched."

FOR THE GENERAL READER.—"Upon its literary merits," says Dr. R. Shelton Mackenzie, "its completeness and accuracy, and the extent and variety of its information, there can be only one opinion. The work is worthy of the high aim and established reputation of its projectors. Art and science, theology and jurisprudence, natural history and metaphysics, topography and geography, medicine and antiquities, biography and belles-lettres, are all discussed here, not in long treatises, but to an extent sufficient to give requisite information at a glance, as it were. Sometimes, when the subject justifies it, more minute details are given. . . . Its fulness upon American subjects ought to recommend it especially in this country; and its low price makes it one of the cheapest and most accessible works ever published."

☞ THIS EDITION IS SOLD ONLY BY AGENTS. ☜

THE UNDERGROUND RAILROAD.

AMESBURY, 10th 3d mo., 1872.

I have looked over the advance sheets of my friend William Sill's History of the "Underground Railroad," and judge, from a hasty examination, that he has done justice to his deeply interesting subject. The story of the escaped fugitives—the perils, the terrors of pursuit and recapture—the shrewdness which baffled the human blood-hounds—the untiring zeal and devotion of the friends of the slave in the free States, are well described.

The book is more interesting than any romance. It will be of permanent value to the historian of the country during the anti-slavery struggle.

I cheerfully commend it to the public favor.

A CHARMING VACATION BOOK.

OLRIG GRANGE.

A STORY IN VERSE.

1 volume 16mo, $1 50.

"The story is very simple, but it is told in powerful and suggestive verse. The author sees with keen and clear insight into the vexed life of our time; he is acquainted with the problems of cultured speculation; he exhibits throughout an open and liberal nature; a fine and firm discrimination of character; a glowing and abundant fancy; a subtle eye to read the symbolism of nature; and great wealth and mastery of language. . . . The poem has genuine thought, creative imagination, and lyrical sweetness."—The Spectator (London).

"There is music in portions of the verse which is all but perfect; while for vigorous outline of description, raciness and pungency of phrase, and condensation of thought, we know no modern volume of poems that is its equal except it be George Eliot's 'Spanish Gipsy.'"—English Independent.

"The book is one to make men think on many themes, and one that will do much good as well as confer much pleasure."—Christian Register (Boston).

For sale by all Booksellers. Sent, post-paid, on receipt of price by the Publishers,

The Nation.

NEW YORK, THURSDAY, JUNE 27, 1872.

The Week.

THE event of the week in politics has been the "Conference" of persons opposed to General Grant's administration, at the Fifth Avenue Hotel, on Thursday. It was composed in the main of gentlemen originally shocked and disappointed by Mr. Greeley's nomination, but now very enthusiastic for him, owing to their discovery that the Democrats will take him up, and that he will probably be elected. We have commented on their performances elsewhere. Mr. Schurz closed the proceedings with an explanation of his own position, which is this: that he, more than any other man, was chagrined by the result at Cincinnati; that he does not consider Mr. Greeley a reformer, and has no expectation of any reforms at his hands, and will say so on the stump; that he believes him "to be surrounded by bad men"; that he (Mr. Schurz), however, is so satisfied of the necessity of defeating Grant and dissolving existing party organizations, that he is ready to use any instrument for this purpose, and will, therefore, support Greeley in the modified and guarded manner indicated above. He looks forward, with a hopefulness bordering on enthusiasm, to the good things which will grow out of the confusion following on Greeley's election, and is deeply touched by the Southern eagerness for Greeley.

Mr. Trumbull spoke in the same sense, and, owing to these respectable adhesions to the Greeley ranks, it is said that the candidate is making preparations "to cleanse his Augean stable," or, in other words, to dismiss some of the more notorious of "the bad men" who surround him. The Greeley following in this city and State, however, contains a large body of Tammany men and corrupt Republicans, headed by Senator Fenton, whom the Sage can no more get rid of than he can shed his skin. They are going to put "this thing through," and when they get "the old man" installed at Washington, we leave our reader to imagine the guffaw they will give when he tells them in the White House parlors that he is very much obliged to them, but they are such naughty fellows that they really must now go away and come near him no more; that he promised Mr. Schurz they should have no offices; and that he intends giving the New York Collectorship to a minister of the Gospel, and the Post-Office to some good Quaker.

The Conference having broken up without result, some of the anti-Greeley men, of whom it ought to have been exclusively composed, held a meeting the next day, though not over twenty-five in all, and drew up a platform which is the most respectable document of the kind we have seen for many years, and bears all the marks of having been drawn by honest men, and can be read from first to last without laughter. It contains ten resolutions, and each resolution has a meaning, and only one meaning. It accepts the results of the war, demands a return in administration to the methods of peace, protests against all use of executive patronage for party purposes; calls for a tariff for revenue only, and for a return to specie payments; protests against party tyranny; affirms that Horace Greeley represents none of these principles, and repudiates his nomination; and recommends Mr. W. S. Groesbeck, of Ohio, and Mr. Frederick Law Olmsted, of this city, to the voters for the Presidency and Vice-Presidency. This has been the one healthy and honorable incident thus far of the most shameful and paltry Presidential campaign in American history, and we recommend it to honest men of all parties, not as something likely to affect the election in November next, but as a sign that politics are not totally rotten. Mr. Olmsted appears to be made somewhat uncomfortable by being drawn out of the busy but useful obscurity in which he has now lived for some years; but we believe those who have made this use of his name and Mr. Groesbeck's count on being able, though they cannot elect their candidates, to prevent a large part of the German vote of the West from going to either Grant or Greeley.

The political news of the week, apart from the Conference, is neither interesting nor important. The public already begins to suffer seriously from the fact that the leading newspapers of this city are given over completely to the ardent support of one candidate or another. The *Tribune* is now almost completely devoted to the record of Greeley's amazing triumphs, while the *Times* is occupied mainly with exposing Greeley's amazing baseness and Grant's claims on popular gratitude. The result is, the public does not know what to believe, and most sensible and patriotic men begin to long for the wilderness and other boundless contiguity of shade where no rumor of "the Greeley movement" might ever reach them more. It is plain to be seen, however, that the aggressiveness is all on the Greeley side. The Grant men have thus far kept very quiet and made little show in the canvass, somewhat, we incline to believe, out of a very foolish and dangerous contempt for Greeley's strength. If they suppose, however, that the Sage will not give them an enormous deal of trouble in November, they make a great mistake, and they ought not to lose a moment in going to work. But we doubt whether they can get up much enthusiasm without dismissing Kramer and Casey. The Methodist Conference has been enquiring into Kramer's case, and has declared him unimpeachable, but since the Dr. Lanahan affair these ecclesiastical whitewashings do not count for much. The real active work of the canvass, owing to the lateness of the Baltimore Convention, will probably not begin till August, but we imagine the hostilities will then be fierce and bitter. We are glad to learn from the Michigan *Daily News* that ex-Governor Blair, of that State, is preparing a speech "on the finances of the country and the financial Administration of General Grant which will astonish the American people when delivered." If it does, it will be a very wonderful speech.

The Grant ratification-meeting at Boston on Saturday evening seems to have been a not particularly enthusiastic affair, the movements of the Regular Republicans nowhere having in them any show of feverish anxiety; but it was a good and serviceable meeting, so far, at least, as concerns the principal speech. This was by Judge Hoar, who devoted himself mainly to three things—the President as known to the speaker, Mr. Sumner's speech, and the fact that in opposing Greeley and Brown the Republican party is opposing the regular old-time Democratic party, with the South once more at the head, reinforced by a certain number of a certain sort of Republicans. The ex-Attorney-General said that, when he remembered the modest, simple, and direct man who used to sit at the head of the table in Cabinet meeting, when he recollected how firm an ally of Mr. Sumner's the President had been, he could but think as he read Mr. Sumner's speech that it must have been made about some other man.

Judge Hoar gratified himself with a little story having application to this torrent of abuse, and with a little dab at Mr. Wendell Phillips, "that eloquent orator and amiable critic of mankind." The story is to the effect that the Rev. Dr. Walker, the leading Unitarian divine, and former President of Harvard College, and Judge Shaw, Chief-Justice of the Massachusetts Supreme Court, were guests at a dinner in the Revere House, Boston, where wine was drunk, the sale of wine by tavern-keepers being at the moment a prohibited act under Massachusetts law. This not being concealed from the knowledge of our silver-tongued friend, he proceeded to inform the voters of Massachusetts that Dr. James Walker was a corruptor of youth, and that Lemuel Shaw had set at defiance the law of the State. Mr. Sumner's accusations against General Grant would fare much the same, Mr. Hoar said, as Mr. Phillips's tirade against Dr. Walker and the Chief-Justice. Mr. Hoar desired once again to bear his personal testimony to the care taken by President Grant in the selection of judicial officers; and apropos of the President's giving offices to his friends and relations, wanted to know what a President was to do when the great State of New York offered him for a choice a choice between a man like Fenton and a man like Conkling.

How strangely politics are mixed, how unpredictable from day to day is the course of the next week's events, how certainly it will be well for prophets ambitious of prophesying true things to wait till the 10th of August, or thereabouts, and perhaps later, the Faneuil Hall ratification meeting, like every other political event, showed pretty plainly. It was exponential of a condition of politics in which we have the young Ku-klux making their advent into national politics as supporters of the chief adviser of the Force Bill; in which Mr. Sumner is expected to be opposed to Mr. Frederick Douglass, Judge Hoar, and Gerrit Smith; in which Mr. Fernando Wood, Mr. Reuben Fenton, and Mr. Greeley strike hands with Mr. Wiliiam Tweed, Mr. J. T. Hoffman, and Mr. Thomas Kinsella, for true reform; in which it is more than doubtful if the protectionist State of Pennsylvania will not reject the Tyrtæus of protectionism; in which the New York *Tribune* and the Chicago *Tribune* lie down together; in which to prevent insolent dictation respectable people are supporting Mr. Roscoe Conkling, and to prevent corruption and cheating are thinking whether Morton and Cameron are not as good as Hank Smith, Oakey Hall, James O'Brien, and the Ring Democracy; in which the Democracy is loudly called on to die, and swallows Greeley because it is determined that it will not die if the offices can save it, and thinks it will not die anyhow; in which everybody says that a candidate for whom most people have a contempt is the candidate whom "the people" are determined to have; in which, in short, everybody—unless it be this same "people"—finds himself momentarily just where he would have supposed it next to impossible three months ago that he should be found. This state of things Faneuil Hall, of course, exemplified. Everybody well recollects how Mr. Hoar fought only last autumn to destroy General Butler's chances for the governorship. The fight was not at all an ordinary political contest; it was a bitter war waged upon Butler partly because he attempted running the party himself, partly because he was thought to be unfit for any office; but here we have him on the platform delivering a speech in favor of Grant, and reminding his fellow-speaker that the men who went to Cincinnati to nominate Greeley had, as he very well recollected, worked against his own nomination at Worcester. Impudent as this was, it had to be put up with apparently; though the General may yet pay for his bit of effrontery. Let us trust, as we each swallow our "bitter pills" and other fashionable forms of political nutriment, that, after the medicine has been gulped, we may not be the ones who have nauseated ourselves and yet kept our disease. The measles are better than some remedies for measles we have heard of; and we have known people to take their remedy and keep their measles too.

The *Christian Union* is good enough to treat the *Nation's* confession of a preference of Grant over Greeley as a sign that we have "returned to the Republican party," and to welcome us back with triumphant cordiality. The Chicago *Evening Journal* crows over it in the same manner. We read these things with much the same feeling with which we should read the announcement that the editors of the *Nation* were this week taking their breakfasts as usual, or that the paper was printed in the same type as in May last. We have supported the Republican party as an instrument of good government. We supported General Grant, expecting him to be a good President; being disappointed in him, and satisfied of the degeneration of the party into a machine for the distribution of spoils, we supported the Cincinnati Convention, in the hope that it would supply a better candidate than General Grant and a better organization than the Republican party. It has not done so, and, accordingly, there being nobody else in the field, we say frankly we prefer there should be no change at present. We never said we would support *anybody* Cincinnati put up, or would take anybody in place of Grant; so that our position is perfectly logical as well as perfectly clear. We have returned to no position we have ever left. We have simply gone about our ordinary business in the ordinary manner, as we understand the business of a journalist. We seek good government, not through Tom in preference to Dick, or Dick in preference to Harry, but through Tom, Dick, or Harry, whichever promises best. We support no party as an object of loyalty or allegiance, but simply as we support a stage-coach or a steamboat, as a means of getting to a certain desired point.

The quadrennial "loss of influence" and "circulation" among the various papers, on both sides, which take positions in the canvass which somebody else disapproves of, is now going on at a great rate. The subscribers of the Chicago *Tribune*, we are told, are falling away like leaves in wintry weather, and it is becoming almost a wonder that the proprietors go on printing the paper. In like manner, there is a perfect rush of subscribers from the New York *Tribune* to the *Times*, and the Springfield *Republican* is just staggering along, a shadow of its former self. On the other hand, we have equally reliable evidence that the New York *Times* has sunk into a very feeble condition, nobody looking into it but a few postmasters and appraisers; while the Hartford *Courant* excites nothing but pity for the proprietors among its former readers. The number of papers we have known to go sadly to ruin at those periods for not being on "the right side" is very great—so great that one marvels that any paper in the United States should be over five years old. Opposing impeachment consigned scores to certain death, and now the unfortunate survivors have to choose between Grant and Greeley, apparently with a certainty of extinction whatever they do. The question has been raised by one *Tribune* subscriber, whether he has not, by Greeley's defection to the Democrats, been defrauded of a portion of his subscription, the paper contracted for having totally changed its character. We think he has nothing to complain of. The subscriber to a newspaper takes the risk of all aberrations and backslidings on the part of the editor, pending the discovery of some machine for keeping editors in a state of perfect agreement with all their readers. Various inventors are now at work on this, as its effect, if successful, on newspaper property would be something marvellous.

The tears of some men, and of many women, flow readily, but we never supposed that the most lachrymose woman could weep over the Fourteenth Plank of the Philadelphia Platform. An odder thing nobody ever cried over. It is like crying over the Woolly Horse or the Cardiff Giant. The *Woman's Journal* assures us, however, that the sight of it "makes the tears, womanlike, rush out for very gladness." One lady writes to the editor "that she wept tears of joy over it." We should like to see the faces of the cunning old males who drew the Plank when they read this. They will not weep, we warrant. If the women are going to cry in this way when the men light on a good dodge, what a scene of sniffling and wailing our political conventions will be after the women get "their natural rights!"

An amusing illustration of the somewhat muddled view of the marriage question taken in some "circles" of our society has just been produced in the report of an interview with Miss Matilda Heron, the actress, who is now in San Francisco, claiming to be the widow of a certain Harry Byrne, recently deceased. She is and was during Byrne's life also the wife of a certain Stoepel, still living. The question under discussion is whose wife was she in Byrne's lifetime? This she solves by asserting that "she married Mr. Byrne twenty years ago, *and with the exception of a short interval* has ever since regarded herself as his wife." It is also true that she married Stoepel, but "this was done under a misapprehension of facts." This "misapprehension of facts," she explains, was the belief that Byrne did not care for her. On finding that he did care for her, "she suffered terrible agony," and "went directly to the East and told Stoepel her situation," but, "contrary to her expectation, he took the matter quite coolly," and proposed a separation at once, on condition that she should "deed him" half her property, which she did, thus securing the custody of her child. Miss Heron is now engaged in "hurling her scorn at those who aim their blows at female virtue," and we wish her every success; but her plan of taking a recess during one's married life, that is, of ceasing to be married "for a short interval," is one we cannot commend. She goes occasionally to see Harry Byrne in his coffin, and says he looks "as natural as life," but she finds the spectacle very trying.

The Emma Mine is in great trouble, which makes it clear that Mr. Schenck left that interesting enterprise in the nick of time. There were some astounding disclosures recently before the English courts, showing how the promoters of the venture secured "influence" in London by distributing shares among desirable people. The London Stock Exchange now refuses to allow the stock to be quoted on the official list, owing to the violation of the rule of the Board which requires "that the prospectus shall set forth the arrangements for raising the capital"—the Board requiring that two-thirds of the stock of new companies at least shall be thrown open to the public in the first instance, in order to guard against the secret retention of large quantities of it for "promoters" and others who lend a hand in "putting it off." The chairman of the company is very angry at this exclusion, and says "the jobbers" will get the benefit of it by being able to deceive the public as to the real price of the shares. The news from the mine itself is also melancholy. The supply of ore is exhausted; indeed, we believe it was exhausted just about the time General Schenck advised the British public to take the shares greedily, and since then we fear the "monthly dividends" have come out of the "capital." We are able to state, however, that another shaft is being sunk in search of another rich vein; when that vein is discovered there will be more dividends.

It really seems as if some progress had been made with the Treaty. It is now announced that in some way or other the arbitrators were led to express an opinion that the indirect claims could not properly be submitted to them, and the litigants are of course delighted on both sides to be rid of them in this way without any compromise of their dignity. A touch of the comical is lent to this part of the affair by the consideration that perhaps nobody was better pleased by this disposition of the claims than Mr. Bancroft Davis. The point came before the arbitrators, probably incidentally, in the course of the discussion about the adjournment. Great Britain asked for an adjournment, it is safe to suppose; the United States made some objection; the Commissioners enquired what the adjournment was called for, and were told it was to enable the parties to come to an agreement about the indirect claims. "Let us see your indirect claims," said the Commissioners; Mr. Davis blushingly handed them up, and the Board, having looked at them, said it was hardly worth while to adjourn about that, as they could never entertain such demands. This, or something like this, is what has happened, so we suppose the negotiations will now go on in their usual course. It is now to be hoped that, in the interest of peace and good-will, the Board will award the United States a gross sum, and not leave the damages to be assessed item by item. This will not only be a tedious proceeding, but, as is evident from the reports of the two Committees made to the British Government, a very irritating one.

The Irish Catholic clergy, under the presidency of Cardinal Cullen, have met, and drawn up a long and fierce, though for them moderate, protest against the late decision of Mr. Justice Keogh, of which we gave some account last week. They contest the judge's conclusions about the conduct of the clergy in the election, but the point of most interest in their discourse is their treatment of the charge made against one of the priests, that he intended to use the confessional under the new Ballot Act as a means of political intimidation. They say that Judge Keogh, being a Catholic, must know that "nothing necessarily falls within the precept of the confessional but mortal sin"; that the Roman ritual "sternly imposes on the priest the duty of abstaining from curious or useless interrogation," and of putting such questions only as are "moderate, discreet, and opportune." We believe that in practice this injunction is carried out in our day pretty faithfully, and that the confessional has been mainly brought into disrepute on the matter of pruriency, irrelevancy, and unseasonableness by the casuists and commentators. The Church could not hold the women, as it does in all Catholic countries, if Peter Dens was really a confessor's manual.

The Right, or in other words the majority, in the French Assembly have come to an open rupture with M. Thiers, partly owing to their refusal to adopt the tax on raw material on which he had set his heart, and partly to differences in the bill for the reorganization of the army, of which we made mention a fortnight ago. One of the concomitants of the rupture has been the resignation of all the ministers, which, however, they have been persuaded to withdraw. As the regulation of the budget and the reorganization of the army are the two things of all in which M. Thiers considers himself the highest authority, the refusal of the Assembly any longer to work under his control on these matters is of course fatal to a good understanding, and he is now relegated for support almost entirely to the radicals of the Left, who are only a small body, and they stand by him solely because they look on him as their best defence against a monarchical restoration. He is not perhaps a good republican, but he is opposed to all change, and the existing situation is the next best thing to a republic. What will happen next it would be hard to predict, but it is quite certain that M. Thiers's influence is ruined, and that the Assembly is now prepared to accept his resignation should he offer it. The passions of the war have subsided, the machinery of government has resumed its regular working, the army has been reorganized and is in good hands, and the monarchical intrigues have come to an end, and new leaders of opinion in the Chamber have begun to show themselves. The Ducs d'Aumale and d'Audiffret-Pasquier are getting the control of the Right, while Gambetta, who leads the Left, is becoming sensible and moderate, and begins to be listened to with attention and even respect.

The Germans are busily engaged in providing for the disposition of the indemnity received from the French, which is being rapidly paid off, and which will in all amount to the nice little sum of $1,244,000,000, not counting Alsace and Lorraine, and the sums levied during the war by way of contributions. It is the most prodigious transfer of wealth, in hard cash, from one people to another which has perhaps ever occurred. $176,000,000 have already been disposed of in various ways, pending the final distribution by act of the Reichstag, most of it in payment for the railways of Alsace and Lorraine, and in pensions and compensation to persons injured by the war; but $30,000,000 goes into the Imperial "war treasure," which is always kept stored up at Berlin, ready for any sudden emergency. The bill now under consideration gives in round numbers $30,000,000 to the fortification of Alsace and Lorraine, which will certainly be hard to retake by the time the Prussian staff has done with them; $45,000,000 go to the various minor states for "incidental expenses" during the war; and $660,000,000 are to be divided among the German states—North Germany, as it existed at the outbreak of the war, getting about $535,000,000, and Bavaria, Würtemberg, Baden, and South Hesse the rest. Altogether, counting in Alsace and Lorraine as taxpayers, the London *Economist* estimates that Germany will receive $1,440,000,000; her own war expenses were, all told, $277,500,000, which leaves a net balance in her favor out of this one transaction of $1,162,000,000. There has certainly been nothing like this in history. Napoleon I. made war pay for itself, and something over, but he never came anywhere near this rate of profit, though he began his fights himself.

THE FIFTH AVENUE "CONFERENCE."

WE never expected the late attempt made by the Conference at the Fifth Avenue Hotel "to unite all the elements of opposition" to General Grant to result in anything important, and, consequently, have little to say about it as an incident of the present canvass. But as a study in "practical politics" it is worth a good deal of attention, and may be made profitable for reproof and instruction, as well as conducive to some healthy and innocent entertainment. It is to be remembered that it originated in a desire on the part of some who were dissatisfied with the nomination of Mr. Greeley at Cincinnati to procure a second nomination by a "Convention of Notables"—that is, a small body of prominent men in sincere sympathy with the aims of the Liberal Republican movement. But when the arrangements came to be made, Mr. Schurz insisted that the Conference should be made up of persons favorable to Greeley as well as those opposed to him, and his demand was acceded to, thus repeating over again the mistake made at Cincinnati, when Greeley's alliance was deliberately and sedulously courted. The probably disastrous consequence of that alliance was explained thus, a fortnight before the Convention met, in a letter of great earnestness and lucidity, by one of the chief promoters of the movement, whose sad forebodings have all been fulfilled, but who is, nevertheless, himself at this moment one of Greeley's most ardent advocates and adherents. It will thus be seen that nobody can go very far in this "beneficent revolution" without having a good thick moral hide, and those who went thus provided into the Conference of last week had a day of pure enjoyment. For those, however, who think as we think, that something like decency, consistency, singleness in the use of language, respect for truth, for character, and self-respect, are necessary to the proper conduct of "beneficent revolutions," there was a great deal that was repulsive as well as laughable.

For instance, one of the arguments which was most freely used at Cincinnati to console those who were disappointed by the work of the Convention was that, whatever other objections might be made to Mr. Greeley, he was sure at least to prove a popular candidate. The people, we are told, who would have coldly accepted Adams or Trumbull, would hail Greeley with delight. On Thursday, however, friends of Greeley from various States rose in their places in the "Conference," and man after man, without a single exception, testified that the nomination of Greeley was received in their respective localities with disappointment; many said it was received with "disgust." Nearly all likened Greeley to "medicine," while several likened him to particular kinds of medicine, such as jalap, calomel, and tartar emetic. All, or nearly all, testified, too, that Adams's nomination would have been cordially welcomed, and would have carried everything before it; and declared that it had taken some weeks, and the disappearance of all prospect of anything else, to bring their constituents up to the point of supporting Greeley at all.

So much for the friends of Mr. Greeley considered as political prophets. We shall now take the liberty of considering them as political moralists, who are going to purify and elevate politics, and put a stop to the sinful games of "Grant's office-holders." We take up this branch of the subject with sincere regret, fearing we may bear hard, or seem to bear hard, on some gentlemen for whom we have very great respect, and who, we sincerely believe, are being led by their dislike of Grant through a slough of self-deception, by which some of them will be seriously injured.

The object of the Cincinnati movement, as this object was set forth by divers "independent journalists" and popular orators, was to purify the Administration by putting in Grant's place a person identified by his character and antecedents with certain loudly preached reforms, and to purify the government generally by embodying those reforms in legislation. The gentleman nominated was universally acknowledged at the Convention to be in no way a legitimate expression of the aims of the movement. In other words, he was not a reformer in any sense in which that word was used by its promoters. Moreover, the proceedings of the Convention were opened by an eloquent speech from Senator Schurz, in which he proclaimed the elevation of our politics to a higher plane to be its great purpose; repudiated in strong terms the use of the body for the mere purpose of "beating Grant"; and indeed laid it down that if that were to become its sole purpose, "it were better it had never met." It may, therefore, be imagined, though it would be difficult to describe, the effect produced on a spectator gifted with an average sense of humor and some slight capacity for honest indignation, at hearing Mr. Greeley's supporters rise one after the other at the Conference to say what they could in his favor, and not one of them say anything in his favor except that he was sure to beat Grant. Only one gentleman attempted to show that he would prove a "reformer"; but this attempt, we believe, gave both the orator and his audience genuine pain. The question, which one of all the objectionable measures of General Grant's Administration, except the San Domingo scheme, Greeley had not supported, was asked by Mr. Parke Godwin. The answer came from a Maine Greeleyite Democrat, Mr. Pillsbury, and it was the sort of answer by which a smart loafer evades his adversary in a corner-groggery debate—that "the Christian world never quotes St. Paul previous to his conversion." It throws some curious light on the "moral" complexion of the "beneficent revolution" that Mr. Greeley's friends thought this excellent, and laughed over it heartily; his "conversion," be it remembered, having taken place as soon as he heard he was nominated. It would resemble Paul's if the voice which Paul heard on his way to Damascus had cried, "Saul, Saul, what will you take to become a Christian?" and Paul had replied that he would become a fair, lukwarm Christian for a prætorship for one term, and leave the question of persecution to the people in the Comitia. One gentleman, when stating what led him into the (for him) singular position of a supporter of Mr. Greeley, acknowledged that all he expected from Mr. Greeley's election was "a change," which was a curious admission, for George Francis Train would furnish "a change" as well as Horace Greeley. To crown all, Senator Schurz, in explaining his position, in the evening, acknowledged that he expected no reforms from Mr. Greeley, would not predict any, and that he believed "he was surrounded by bad men."

In short, the only benefits which were mentioned as likely to result from Mr. Greeley's election were the reunion of the North and South and the defeat of General Grant, and of course this is equivalent to an admission that the whole movement has degenerated into "something to beat Grant." Mr. Schurz and some others persuade themselves that it will be more difficult to "beat Grant" or to break up the tyranny of party four years hence than now, but why this should be we do not understand. If they really believe Greeley is going to be elected, it is hard to see why they should believe that the continuance of Grant's tyranny would not keep in activity the causes which are now likely to lead to his overthrow. To those gentlemen —and there are a few—who declare that in four years more of Grant the Republic will have ceased to exist, the only proper reply, if they are in earnest, is a recommendation to take good medical advice and to avoid excitement and animal food.

If General Grant is re-elected, the professed reformers will not be responsible for him. He is not their man. They will have protested and fought against him, and have made an honest effort to provide something in his place. If Mr. Greeley is elected, however, through the support of the originators of the Cincinnati movement, they *will* be responsible for him. He ought not to be their man, but they have made him their man. To present him to the world as a candidate with whom they are, after all their preaching, satisfied, is surely not respectful to an intelligent community. More than this, it is not safe. Should Mr. Greeley prove the kind of President which all ordinary modes of judging human character lead us to expect he will prove, it will be difficult for any of them to ask the public to trust them again.

The hopes which they permit themselves to entertain, and which they are proclaiming through the country, of the good results of the political confusion that will follow from Mr. Greeley's election, one can hardly help regarding as the result of a species of frenzy. They have no warrant in the political experience of any free community. They ask us to believe that a man who has been all his life singularly crotchety, fickle, and easily deceived, will change his ways at the ripe age of sixty-two; that the evil influences which forced his nomination on them against their better judgment, and to their great sorrow and dismay, will, before 1876, have totally disappeared and left a clear field for the saints; that "the bad men" who now surround Mr. Greeley and manage him will leave politics and confine themselves to agriculture and the printing of tracts; and that after having had firm hold of the patronage of the Government for four years, they will, unlike Grant's men, allow the Schurzes, Whites, and Bowleses to step in at any moment and "purify" in every direction. What can a rational man say of expectations like these? We believe the well-recognized distinction between demagogues and reformers consists in this: that the reformer never proposes to overturn anything without producing a well-considered substitute for it, while the demagogue is always prepared to overturn without being able to state, and generally without caring, what will take the place of the thing he destroys. He makes confusion first and leaves the rest to chance. Is there not an unpleasant resemblance to the demagogue's procedure in the plans of some of our Greeleyite friends? Is not their theory the very one with which the mob of rioters in this city started out in 1863 to demolish the Provost-marshal's office?

ELOCUTION.

We are on the eve of an outpouring of oratory such as has probably never been witnessed in the history of any people. There have been Presidential canvasses enough before now; but then there never were so many voters to talk to in the United States as there are to-day, and there has been added to the constituency, since the last Presidential election, a body of persons technically known as "the colored vote," whose capacity for listening to oratory is not surpassed, if equalled, by any people in the world. Moreover, the absence from the contest of any principle—the fact that it turns almost wholly on the comparative merits of two candidates, of whom their respective supporters are half ashamed and would fain be rid—is likely to swell the flow of language beyond all previous dimensions. The defects of Grant and the defects of Greeley can in no way be so well covered up as under a cloud of words, and as neither side has any policy to set forth beyond the total overthrow of the other side, and the relegation of its chief to guilty and conscience-stricken obscurity, speakers will practically have space itself—the measureless past and measureless future—to range over and peer into. What a vast field has been opened to ambitious and energetic orators may be inferred from Mr. Sumner's speech, by which the fray may be said to have been opened. If it be just matter of reproach against Grant that he has disregarded the example of Tancred and Louis X. of France, and that the commencement of the practice of nepotism by the Pope of Rome, just "twenty years before the discovery of America by Christopher Columbus," failed to impress him with the peculiar impropriety of reviving it in the very continent which Columbus brought to light, how many other illustrations of his depravity and blindness does history not contain! And then when we think of the voluminousness of Greeley's record, the number of subjects with which the great man has dealt after his fashion, the number of men of all sorts whom he has helped or hindered, the number of his errors and shortcomings already made known or ready to be made known, we must feel that it would take the tongues of angels to stump this continent adequately during the next three months.

The college commencements, too, which take place at this time of the year, produce a flood of oratory of their own at which the old stagers who are having their "engagements" dealt out to them by the astute "managers," who are just now "moulding public opinion" in so many "headquarters" all over the country, smile disdainfully. Hundreds of young men during the present and coming month deliver speeches of greater or less merit, under greater or less difficulties of temperament and training, and go out into the great world to deliver thousands of speeches, and thousands of sermons more, to warn their fellow-citizens during the next forty years against coming Greeleys, or to kindle their enthusiasm for the Better Life or the Good Estate. So that the subject of oratory, which occupies much of the attention of instructors of youth during the month of June in every year, occupies the mind of the whole community in a somewhat painful manner this year. Some, who are tired of speech-making, have only one wish with regard to oratory, and that is, that it may speedily and for ever disappear from the list of humane arts. Others, and they are the vast majority, who believe that it meets one of the needs of human nature, and must always play a prominent part in the government of free states, enquire daily, as they writhe or doze under torrents of rant or commonplace, delivered by madmen or clowns, whether early instruction could not do more to make the public speaker a more natural or more pleasing being. The subject of teaching elocution has consequently of late years furnished matter of much excited debate in various colleges, and revealed a great deal of diversity of sentiment. The controversy has been stimulated by those admirable lectures—in some respects unrivalled lectures—which Henry Ward Beecher has been delivering to the theological students at Yale College, and in which he has taken the strongest ground in favor of early and careful instruction in elocution—that is, in the management of the voice and body in public speaking.

The opponents of elocution, and its advocates, as a part of the educational curriculum, do not, however, we make bold to say, approach the subject from the same point of view, and are therefore likely to fight on interminably without reaching any satisfactory conclusion. Those who live in the world and occupy themselves with the affairs of daily life, who see what takes place in the public meeting, at the bar, and in the pulpit, or, in other words, who watch the working of the agencies by which public opinion is shaped and the current of affairs directed, are deeply and often painfully impressed, and well they may be, by the extent to which what are called "educated men" and "thoughtful men" neglect, and even despise, the arts by which influence over the popular mind is won and retained. The press has either slipped out of their hands or has not been taken hold of by them, and the stump has gone all but completely into the control of demagogues and charlatans, or of well-meaning but foolish and slenderly furnished persons, whose sense of the right is apt to make the right contemptible. Nevertheless, there are many examples, both in the pulpit and on the stump, or, to speak more respectfully, on the "rostrum," of the enormous advantages which a really well-trained orator with a well-stocked mind still possesses, even in the rudest contests of the forum; plenty of illustrations of what might be done, by men who to silver tongues and graceful gesture added conscience and knowledge, to stem the tide of ignorance and folly, and to strengthen the supremacy over our affairs of "the sober second thought" which has already arrested our steps on the brink of so many precipices.

On the other hand, those who are charged with the duty, as teachers are, of making boys into sober, thoughtful, conscientious men—of instilling in them the love of truth, the love of thoroughness, hatred of shams, pretences, deceptions—of building up, in short, in the youth of the country that force called *character*, without which neither eloquence, nor valor, nor wealth, nor resources can save the state—are insensibly but almost unavoidably driven into so shaping their instruction as to fortify their pupils against what they conceive to be the bad tendencies of the time. Now, one of the strongest tendencies of the time impels every young man almost irresistibly towards becoming an orator. Public opinion, too, does not exact of him that he shall be an orator in any high sense of the word. It gives the rewards of oratory almost as readily to a Sickles or a Cochrane as to a Schurz or a Curtis, and it does not require of an orator that he should think, but that he should talk. In other words, there is the same strong temptation pressing in young men to mount the stump without caring what they say, as there is to go to the bar without knowing any law.

It is hardly to be wondered at that, in the presence of these strong temptations which society offers to a young man to talk without thinking, it should go hard with many instructors of youth to do anything for the glorification or embellishment of talk apart from thinking; and there are probably not many instructors of youth who ever forget that the ages of political and social and literary decline have been precisely those in which the manner of saying things has been most sedulously cultivated. There is no logical or necessary connection between shallowness and folly and rhetorical finish; but it is not wonderful that some thoughtful men should fancy that there is, and act accordingly.

THE PROCESS OF RECOVERY AT THE SOUTH.

CHARLESTON, S. C., May, 1872.

I HAVE just returned from a visit to the largest rice plantation in this State, if not in the entire South, and a description of what I saw may help to give your readers some idea of the struggle with hard fortune in which many of the old planters are now engaged.

Leaving Charleston on one of the mornings of the past week, I was ferried across the Ashley River by a steamboat which, since the war, has served to connect the terminus of the Savannah and Charleston Railroad with Charleston proper. A ride of thirty-nine miles by rail to the station, and six miles further by carriage into the heart of the forest, brought me to the end of my journey—to the house of Mr. B., built on a "pine-barren" elevation in the midst of a tract of rich alluvial bottoms. This is the general character of that portion of South Carolina known as the "Low Country" district, and in which rice is grown as the chief product. The finer grades of cotton have a limited space for cultivation allotted them, but rice is the staple production, and hundreds of thousands of bushels yearly are exported to all parts of the world.

The entire South cannot show a tract of land more richly endowed by nature than this same "Low Country" region. I doubt whether any portion of the United States can surpass it. The luxuriant foliage of the forests is simply grand. Great numbers of live oaks, with long streamers of the gray moss peculiar to a damp, salt atmosphere, and waving gracefully to and fro in the breeze, form a striking contrast with the bright green of numberless varieties of trees. These forests stretch for miles upon miles over a wide extent of territory, only broken at long intervals by clearings around some wretched negro hut, built of rough logs and chinked with clay. Along the banks of rivers and creeks, where the land lies sufficiently low to be flooded at high tide, the swamps have been made to produce some of the finest rice in the market. Fish of fine quality, and in great abundance, dispute with the alligators for possession of the streams, while game of every description, from bear and deer down a long list, not only exist, but are found in the greatest abundance. Under the old régime, these lands were counted among the richest possessions of the wealthiest planters in the State, and the titles of their owners could be traced back to royal grant. Here almost princely style was kept up by the planters, and they probably enjoyed as many of the comforts and luxuries of life as ordinarily fall to the lot of mortals. Now, however, no portion of the South, with perhaps the exception of the line of Sherman's march to the sea, shows more plainly the desolating influences of war. With but a single exception, not one of the fine old residences—many of them erected in colonial times—no building of any kind or description, unless the negro huts can be called such, remained standing at the close of the war in this whole district; and a very considerable portion of it is still *in statu quo*. It may seem strange, perhaps, that with such natural advantages there should be no greater progress made during these seven years. But this can scarcely be wondered at when the difficulties in the way are properly apprehended.

For a considerable time after the close of the war, there was not a single white man in the whole district now supposed to be represented in Congress by R. C. De Large, and it was a matter of life and death for one to make his appearance, so excited had the negroes become under the influence of their leagues. Mr. B. was the first white man to venture among them, and time and again his life has hung upon the slightest thread. On one occasion he was shot at as he stood in his yard at night, and, by the mistake of the assassin, one of his negro foremen standing beside him was killed in his stead. Nor have capitalists felt disposed to place money where the principal could only lie idle or the interest be eaten up by taxes. But more than this, the deadly fever lurking in the shades of this wonderfully luxuriant vegetation during the warm months has ever been a serious drawback to the full development of this portion of the State, and it now deters not only strangers but even the oldest inhabitant from attempting to inaugurate a new order of things. Wherever there is rice cultivation, these malarial influences are attendant. It is true that the planters resided on their plantations in the winter, but the first or tenth of May found them rapidly moving away to other portions of the State, or to watering-places at the North, there to remain until a heavy frost assured their safe return. This low country fever, formerly supposed to be fatal, can now be broken in its force by proper medical treatment when applied in time; but the poison remains in the system to such an extent that nothing short of an absence of a year or more will suffice to eradicate the seeds of disease. The danger of contracting the fever is limited to the time the dew remains upon the ground, and so, by having summer-houses in the higher and more healthy spots known as "pine barrens," by remaining within doors from the time the dew commences to fall until it has wholly disappeared under the heat of the morning sun, and by a plentiful use of quinine, the white overseers manage to get through the time "between frosts"—a period of four or five months. A single violation of such precautions may bring the penalty. With considerable truth they may say with the Psalmist, "In the midst of life we are in death." But it often happens that these "pine barrens" are by no means within reasonable or convenient distances, and overseers are forced to spend a very considerable portion of each day upon horseback in going to and fro between their homes and the plantation. Mr. B.'s overseers, six in number, ride from fourteen to twenty miles every morning after the sun is up, and back again the same distance in the evening before the sun goes down. But the most curious part of the thing is that what is destruction to the white man has not the slightest effect upon the negro. A case of fever among the low-country negroes is never known. How it would affect those from the up-country has never yet, I believe, been fully ascertained, although the better opinion seems to be that while not possessing an entire immunity, they still would not be so severely affected by it as the white man. The causes for this strange exemption from disease so disastrous in its consequences to those belonging to the Caucasian race, and some means of communicating this very desirable virtue to the latter, may yet prove worthy the successful attention of a second Jenner. Notwithstanding all the difficulties in the way of rice cultivation, a number have tried it since the war, and, among them, several Northern men; but the obstacles in the way, especially the very formidable one of labor, have, in many cases, proved too much to be overcome. It must be remembered, also, that aside from all the difficulties incident to the general development of agricultural resources at the South in the culture of cotton, corn, etc., there are some peculiar to rice-planting. Cotton or corn fields suffer little, or perhaps even gain, from an entire abandonment. Not so with a rice-field. The mere disuse of the land for a single season entails positive loss, and the longer the time, the greater is the loss.

It is hard to realize this without previously understanding how great is the labor and care necessary to make a successful crop. Rice lands, as I have said, are original swamps reclaimed from the water. They must be banked in and divided into trunks and sections, so that they may be flooded or drained as the necessities of the crops demand. The water must now be put on and again drawn off, and often, in the case of fields lying side by side, one must be under water and another be perfectly dry. The exact times when these alternate conditions must be complied with require the exercise of the greatest care and nicest discrimination. The whole system of banks, trunks, ditches, and flood-gates is exceedingly expensive as well as complex. An insignificant break in a bank or leak in a flood-gate may in a single night cause the loss of a year's patient industry, and so important is it that such accidents should be guarded against, that "trunk-minders" are appointed, whose sole duty it is to watch night and day alongside the banks and flood-gates. Especial care, too, must be taken lest the fields be flooded with *salt* water. In times of prolonged drouth the salt of the ocean impregnates the river water at distances from the sea which seem almost incredible, and one application of such water will suffice to destroy the crop.

From what I have said, it may be readily seen how disastrous must be such entire neglect of these lands as occurred just previous to and immediately following upon the close of the war. Mr. B. assured me that he always calculated upon losing the crops of the first two years upon these lands while in the process of regeneration. He pointed out *one* flood-gate just completed which had cost one thousand dollars. And there are dozens —I might say hundreds—such scattered over his land, 50,000 acres in extent. Just consider this. The land which he thus controls either in his own right or by lease was formerly divided into *nine* plantations. The negroes living on these plantations and now dependent upon Mr. B. for their daily bread are over 2,000 in number. He employs six white overseers, and under the latter are thirty or forty negro foremen. His mules are reckoned by hundreds. His expenses, at a rough but moderate estimate, are in the neighborhood of $125,000 yearly—$20,000 alone go to pay the rental of some of his land which he has leased for terms of three or five years. While I was with him he was having a little "meadow-lot" of 1,000 acres fenced in as a cattle-range. And yet the war left him literally without a cent in the world, and nothing but a combination of courage, tact, energy, and perseverance could have given him his present success. All that he has done has been accomplished solely by the aid of borrowed capital, upon a portion of which he paid thirty-six per cent. interest, and from that down to twelve. And after all this, his first three crops were failures, and a debt of a hundred thousand dollars a natural result. But he has struggled and fought his way, until to-day—seven years from the commencement of his efforts—he is in a fair way to realize a well-deserved success.

A PHOTOGRAPHIC FIELD-DAY.

LONDON, April, 1872.

A MOST interesting institution as an illustration of English æsthetic culture, and a delightful one to have made the acquaintance of, is the Amateur Photographic Field Club, in whose company I passed a day of last week amongst the first spring leaves and delicious sensations of one of the loveliest spring openings I ever remember in England. The club on whose privacy this letter may possibly intrude, but I hope not offensively, is composed of gentlemen devoted to photography as an art of recreation as well as æsthetic culture, and the sole end of its organization is to meet one day in each summer month at some selected locality where English nature is in a lovable mood, and, after spending the day in picturesque quest, to rendezvous late in the day at the inn of the locality, and talk over the hunt and what it had developed, and whatever else the news of the day suggested. In saying that it includes the best of the English amateurs, I say that it includes the most expert and artistic landscape photographers living, in spite of all professional competition—a proof the more, if one were needed, of the value of general culture; and when I add that the photographic enthusiasm is a most complete solvent, excitant, and developer, any one initiated will comprehend all I mean, which is all that could be said of club intercourse.

The locality of the day was Esher, a quiet Surrey village on the Mole, an equally quiet, willow-guarded stream, such as in England, *faute de mieux*, carry the title of rivers; a level country, fertile for the most part, and with an enormous common. The member for the day under whose guidance the meeting is conducted, Mr. H., was of our squad, and, on arriving at The Bear, the inn of the rendezvous, we found that two or three others had arrived by previous trains, and we entered our names for the benefit of those who should come by later instalments, and set off for the common.

The ordinary equipment of the clubbist is a small, portable camera, with an indefinite number of slides for dry plates—generally for half-a-dozen—a folding tripod stand (which serves at need as staff), focussing cloth, and a lens of the construction which the peculiar quest of the amateur suggests. If he is after architecture, he carries a Ross or Dallmeyer rectilinear; if for landscape and picturesque subject, a landscape lens of almost any make, but I find Grubb's generally preferred. With all this the load is less than ten pounds for the sizes generally preferred by amateurs, and the results I find are as satisfactory as if more ambitious and cumbersome apparatus were employed. Of the squad of five who took the road to the common under H.'s lead, three were provided with this description of fabrique, one with a more ponderous dry-plate apparatus, and one, H. himself, with a tent for wet collodion of his own invention, which weighed little more than our dry-plate equipment. There is *per se* a satisfactoriness in using wet collodion and finishing your picture on the spot, and the temptation to invent and have constructed mechanical appliances for this end has given rise to an infinitude of tents and dark boxes on all conceivable plans, some of which are portable in one hand, and others can only move swung on a pole between two strong carriers, and which fold in all the curious and ingenious ways which mechanism provides for. H.'s was one of the extremely portable and compressible, which means for the most part that it requires a long time and much patience to get to work with it.

The Queen has a beautiful place at Esher, Claremont (the residence of the queen of Louis Philippe during the last years of her life), and our road ran along the grounds for a mile, the ungrateful and inhospitable paling only now and then giving satisfactory glimpses of the velvety turf of the park glades, the broad shadows of the great oaks spreading over it with the faint and gauze-like quality of the unleaved tree-shadow; but the ugly Greco-English villa, with that most preposterous of all dwelling architectural features, the Grecian portico, overshadowing the windows beneath it, was conspicuous at every turn of the road. It does seem as if every architectural sin to which the fertile Eden apple-seeds had given causation, ever so indirect, have come to their most perfect development under the art culture of England. Nowhere in the world does one meet such architectural monstrosities as here.

The day was, for our purposes, perfect: only occasional breaths of wind stirred the tree-tops, not a cloud in the sky all day long; and we tramped through the dust of the Queen's highway, like so many respectable jewelry pedlars, down the turnings past the park until we debouched on the common, where H. declared it to be his intention to "have a shot" at some Scotch firs, of which groups stood here and there towering above the thickets of furze. Those of my readers who don't know what Scotch firs are may be told that they are excessively like our pitch-pine, only more irregular and slightly more picturesque, so that H.'s fondness for the firs seemed to us like settling down to the first tolerable subject to be rid of his load. The rest of us, therefore, after a half-hour spent in reconnoitring dispersedly in the immediate neighborhood of the firs, finding no subject worth the using of our limited dry plates, left H. to his humid recreation and plunged into the wooded plain beyond. It was too much, for a mile or so, like one of our pine barrens with an occasional boggy spot, to be studied as English landscape, and we, without guide or direction, began to think that Esher was a mistake. Presently, however, we struck another high-road, and, turning back toward the village, we came upon one of those wide views of garden country, fertile farms, fields of springing corn, and wide pastures, with here and there white cottage-walls seen amongst the trees, and glimpses of the Mole, almost flush with its banks—one of those not pictorial but lovely and memorable phases of nature which scarcely any even of our widest and longest cultivated valleys can show—so superbly stocked with the wide-spreading meadow elms, so rich and green as to its surface, miles and miles of almost prairie level melting away in the gray mist and bloom of an English distance! We happened, on the very edge of the common, on a cottage fenced in with ditch and hedge, just such as doubtless have been the farm-laborers' habitations for centuries, identical as to thatch and wall and door—this little enclosure itself, perhaps, reclaimed from the common, generations ago, who knows?—with wall-flowers in the borders, a lumbering shed, like the cottage, densely thatched; al*l* in a certain haphazard keeping and the perfection of the picturesque. How we all rushed at it, swarmed over the tiny garden to find points of view, and rejoiced in the uncomfortable little den! To us the fever-breeding thatch a foot deep in malarious humidity was a godsend, and I don't think one of us wished the poor farmer a more healthful dwelling, as with cheerful, even hilarious, interest he gave his consent to our planting our cameras where we best liked, and wondered what human interest there could be in such *œconomia* while the Queen's grand villa was so near. I took my place near the bee-hives, down in the uttermost corner, focussed, uncovered my plates, and sat down in the shade of the hedge to muse.

The charm of any plate working is that you are never in a hurry. If clouds intervene, if unwished for or pertinacious curiosity insists on finding out what you are taking, or if even, as often happens, impertinent vanity insists on being photographed malgré the photographer, you have only to put the cap on your lens again and wait till the cloud or the vulgarity or the impertinence has melted away, and then uncover, and the operation goes on again. And so we took the cottage. A far-off glimpse of another and larger—a farm-house with towering hay-ricks and doubtful suggestions of palings and moat, white, foamy trees in blossom—lured us on a mile further: prosperous agriculture; divers children with red cheeks and white blouses climbing up the palings, photographic obtrusions with their bashful flitting, opening and shutting the wicket, hanging on it as it swung to and fro, and then cutting away as they saw that we noticed them; a solitary duck going in obstructed gyrations in the weedy water of what we at first took to be a moat, but found was only a huge puddle—stagnant, and filled with dwarfish aquatic plants, another delightful fever-nest put there to make reflections and the parish doctor's bill.

I thought, as we planted our cameras, of the square and painful dry-goods boxes with green doors and window-blinds which we in New England find comfortable, and how my photographic friends would be shocked with all the accumulated angularities and unendurable proprieties—perhaps as much as a town councilman or supervisor at home would be horrified at that undrained marsh and that miasm-feeding thatch. One sees that every cloud not only has a silver lining, but that either side may be the silver one to somebody. We went our way to the rendezvous chuckling over the unfortunate clubbists who had not been happy enough to find so much human discomfort; stopped two or three times by the way to "pot" some other little bits; wound up with the village green, where the half-holiday was being knocked into cricket-balls, and the old church where the hideous paling shut one into such close quarters that Dallmeyer's widest angle rectilinear hardly served to bring the church all on one plate. By that time the hour of dinner had arrived and the appetite, and we dropped in by ones and twos until we were ten, with our ham and eggs, chops, village bread and butter, with huge tankards of foaming ale or tea, *au choix;* and, the first quenching of the thirst over and the sharp edge of hunger dulled, we followed the law of clubs and talked. One had been as far as Walton with reverent quest of the souvenirs of the regicides, and three had been down by "Wolsey's tower," a most apocryphal antiquity of most unquestionable hideousness, which stands in a lonely stretch of park-land amidst aged oaks and elms overlooking the mall, but which our antiquarian members cameraed for its name. I doubt if it had seen a hundred years. It looked to me like the fantasy of a retired parvenu who had died when the battlements were on, no one since caring to put in the doors and windows. It certainly was of perpendicular gothic, but it was not only in Henry VIII.'s time that they abused that style. However, there were, I feel confident, some good negatives made of a bad subject on that field-day.

We took the last train back to London, after one of the most interesting days I have ever passed in rural England. In the course of a few days the secretary will call us together to compare notes and negatives, each member being obliged to furnish a certain number of prints annually to the portfolio.

W. J. STILLMAN.

THE PRUSSIANIZED FRENCH ARMY.

PARIS, June 4, 1872.

I CANNOT imagine a more profound social revolution than that which is involved in the new French military law. It is something more than a political law; it touches all the relations of life; it will, for good or for evil, completely alter the whole organization of France. It is certainly worth notice that France, though it now hates Germany with a bitter hatred, is adopting the German ideal of an armed nation. We are doing, after Sedan and Metz, what the Prussians did after Jena. I have been several times to Versailles to attend the discussion of the law in question, and have found myself not far from Baron Arnim, the envoy of the Emperor of Germany. I could not help looking at him with great curiosity. His is a name which a few years, and I may almost say a few months, ago would have evoked in the mind of a cultivated Frenchman only feelings of sympathy; yet I observed him with sadness, and I wondered what could be his sentiments while he was proudly and disdainfully looking at a French Assembly engaged in the difficult work which his ancestors and the friends of his ancestors had successfully accomplished in their own time. The efforts of the German liberals and of the German patriots had a central idea—the constitution of Germany. In the darkest days which followed Jena there was some hope left for Germany; the kings, emperors, and dukes were all the vassals of Napoleon, but the nation did not accept the odious bond of slavery, and its own conscience promised to it a brighter future. France has been humbled, not only in the person of its rulers, but as a nation, and its political divisions are so profound that they occupy its attention and its time more than the desire of national regeneration. There was joy in Paris after the capitulation of Sedan among a large class of people, because this national misfortune was felt to be the end of the Empire. I remember hearing the sad news at Brussels, where I was anxiously waiting. A young and enthusiastic republican came to my hotel, and said, almost with exultation, "The French army has capitulated at Sedan; the Emperor is a prisoner." "Yes," said I to him, "but Alsace is lost." I saw at one glance the whole future, and I measured in an instant the consequences of such a momentous event. After her disaster of Jena, Prussia was even more humbled than France, but the revolutionary feeling did not become a secret ally of the oppressor. The whole country instinctively was drawn to its old dynasty, to its military aristocracy; the professors, the intellectual teachers of the country, did not separate the cause of Prussia from the cause of the Prussian monarchy; all minds were united by a secret bond. What makes me more distrustful of the future of France is the terrible antagonism of the international revolutionary spirit and the old national tradition. The men who made war against the Germans after the 4th of September were the very men who had advocated the cause of Prussia at the time of Sadowa, not for any love for Bismarck, but because at that time they considered Austria as the representative of reaction. They are now supporting the cause of King Amadeus in Spain, not because they love kings, but because Amadeus takes the place which might have been occupied by the Duke of Montpensier, who is an Orleans prince. They are completely one-sided; they cannot look at any question except in its relation to their own republican interest. They belong to the school of internationalism, which is not founded on principles, but merely on convenience. They would be the allies of despotism if despotism could serve their projects.

The *mot d'ordre* in the Republican party is now the military regeneration of France by means of the compulsory service. We are going to make an army on the Prussian system, with *Einjährige*—with a term of service of four years for some, of one year for others; the Republicans advocate the same term of three years for all, but the Government did not dare to make such a sweeping reform at once. The men of the same levy will be divided into two classes, the one-year class and the four-year class; and the Government would even be favorable to the free substitution of one-year men for four-year men. General Chanzy, who is one of the framers of the bill, said in my presence that he considered it an impossibility to bring at first all the young Frenchmen under the yoke of the three years' service; but this three years' service is the present ideal, and it is hoped that it will be obtained by degrees. The system now proposed supposes the existence of permanent *cadres* of 140,000 men, and of a permanent force, obtained by levies, of 418,000 men, with the power of *tripling* this number in time of war. These numbers have been almost literally copied from the German rolls. The Chambers in Germany accept this permanent force of 418,000 men as a necessity (one man in a hundred of the population), and the financial arrangements of Prussia with the confederate states are based on this. This number is a minimum, which is above discussion; the war-budget is not open to criticism as long as it remains within this bound. This solid substratum of an army can hardly be built where there is not a sort of secret understanding between the Chambers and the Government. Will it be so in France? Will the Opposition allow the Government always to have this minimum of 418,000 men? Will the war-budget of the Republic be accepted by the Monarchists, or the war-budget of the Monarchy by the Republicans? All military laws will be vain, if the door is constantly open to a change, if nothing is permanently settled, if some numbers, some things, are not placed as it were above discussion. For the present, there is a sort of unanimity. The parties differ in the Chamber on the articles of the law, but the general features have been accepted by all parties, by the Duc d'Aumale as well as by Gambetta. Will it always be so, however? All parties have now a legitimate hope of coming to power; but will the Republicans, if the constitutional monarchy is established, leave it without reluctance the use of a permanent army of 418,000 men? If the Republic lasts, will not the Monarchists be afraid to see such a powerful and dangerous weapon in the hands of a Gambetta, of a Rabagas? The army, after all, must always reflect to a great extent the sentiments of the people. If the country is not politically disciplined, if the citizens are not law-abiding, the army will itself become revolutionary. It is not enough to make an army; if a common spirit does not move it, it will become a herd of armed men.

There are many men in Germany and in the United States who have an equal admiration for Germany and for republican institutions. But I will ask them to answer frankly this question: Do they believe that a Germany organized without royalty, without monarchical institutions, could have accomplished what Wilhelm and Bismarck have accomplished? Do they believe that the national-liberals, that all the various *Vereine* which hold their meetings across the Rhine, could have succeeded in striking those quick and terrific blows, and in turning the German army into the most powerful and perfect instrument of destruction? The art of politics is an empirical one; it deals with facts and not with theories. France has a perfect right to become republican if she chooses; but then she ought to renounce the system of large standing armies, to adopt a policy of non-intervention, and to renounce for ever her lost pretences. For Germany will not become a republic for many years to come; the spirit of the Hohenzollern will control it for a long period yet; it will be an armed nation, something more than a nation in arms. The only way to conquer a force is to oppose to it a stronger force. France is still capable of a great military effort. She has even now 150 regiments of infantry, 80 regiments of cavalry, and 30 regiments of artillery. But the army is spiritless, because the country is divided against itself. The whole future of the army as well as of the country lies in an enigma. What is to be our future? is in everybody's mouth. What will be the motive power of the country and of the army? We are forcibly reminded here of the predictions of M. Renan in his "Moral and Intellectual Reform of France." He doubts whether France can ever become thoroughly Prussianized and accept a Spartan organization which turns every man into a soldier. According to the terms of the new law every Frenchman will be in the active army from 20 to 25; in the reserve, from 25 to 30 years; in the first ban of the territorial army (this is the equivalent which has been found for the landwehr), from 30 to 35; and in the second ban, from 35 to 40 years.

The principle of the territorial or provincial corps has only been adopted for the second army, composed of the landwehrmen, not for the first. The men between twenty and thirty will still be thrown indiscriminately into all the regiments; the reasons for which are various. There is first the old prejudice arising from the belief that the national unity would be endangered by the existence of provincial regiments. It is thought that Breton regiments would not have the same spirit as regiments of Gascons, of Basques, of Provençaux, and the army has always been looked upon as the apparatus in which all the elements of the French nationality are, as it were, chemically mixed together. But this is perhaps not the strongest reason in favor of the dispersion of the conscripts in all the regiments. It must be sought in the danger which would arise from the existence of Parisian regiments and of a Parisian army. It is thought that such an army would be a permanent revolutionary force, which it would be impossible to discipline. In every French regiment you will find new men whom their comrades call the Parisians, who are generally very clever, quick-witted, but unruly, disobedient, and always ready to criticise. During the last siege of Paris, a few regiments were formed of purely Parisian elements. One of these regiments, of artillerymen, occupied the barracks of Vincennes on the 18th March. Instead of keeping the old donjon against the insurgents, it opened the doors to the Commune, and forced its colonel to flight. It is easy enough for Prussia to have a Pomeranian army, an army of Westphalia, etc. There is no city in Germany which is a country in itself. But fancy what a Parisian army would be, recruited in Paris, officered by Parisians, and located in Paris. It would, no doubt, become a danger for the state and for the rest of the French army. This is the true reason why the principle of territorialism has not been adopted for the active army, and has only been accepted for the landwehr. But the great advantage of territorialism is thus lost, which is the rapidity and cheapness of the mobilization. Our wandering regiments are now often very far from their depots, and, when the army is mobilized, all the men on furlough or in reserve must join their depot before joining their regiments. As it is, the new military law is a sort of compromise between the old French organization created by the laws of 1818 and 1832 and the Prussian system. Of necessity, the army which it will create will become a more perfect imitation of the German army. We are only taking the first step. If the country can bear such a sacrifice, we shall soon take another; if the country is too reluctant, we shall have to return to the old sytem of conscription.

Postscriptum.—In my letter on "French Protestantism," I said that the Lutherans and Calvinists meet in the Consistorium. This is a mistake. The Lutherans have only two chapels, and keep apart from the Calvinists. But the Calvinists or Reformed of all shades have a common organization. As for my other remarks on the numbers and importance of the Protestant Church, I believe myself to have been in the right, and I have nothing to change.

Correspondence.

AN ERROR CORRECTED.

TO THE EDITOR OF THE NATION:

SIR: Your London correspondent, Mr. Stillman, in his letter dated May 7, remarks that "the *début* of the New York Museum on the London market has been a costly one."

Permit me to say very briefly that the Metropolitan Museum of Art has not yet been in the London market for the purchase of *any pictures whatever.* The statement of the newspapers that an agent of this Museum made several purchases for it at the Gillott sale is wholly erroneous and unfounded. No purchase was made there for the Museum, and no order whatever was sent for such purpose. Consequently, Mr. Stillman's criticism on the management of the Museum and the wisdom of its purchases has no significance except to show "what *might* have been" true, *provided* thus and thus had been done.

As these statements are injurious to the interests of the Museum, I am sure you will gladly correct them. Very respectfully,

G. P. PUTNAM, *Rec. Sec.*

NEW YORK, June 4, 1872.

⁂ If European dealers and auctioneers intend to use "the New York Museum" in this way as a lever, the trick should be exposed.

DO THE FRENCH LISTEN?

TO THE EDITOR OF THE NATION:

SIR: I have been impressed with the accurate knowledge of French manners and language shown by a writer in *Blackwood's Magazine;* but we are none of us infallible: "aliquando dormitat bonus Homerus." In a passage quoted by you he says:

> "A second example is the total absence, in French, of any word equivalent to 'listener.' It seems hardly credible that with thirty-seven millions of talkers no provision other than the cumbersome paraphrase *celui qui écoute* should have been made for auditors. The only interpretation of so odd a blank is in the supposition that each Frenchman chatters for himself, not for others; and that, not caring whether he is listened to or not, he has never recognized that he has no denomination for the person to whom he speaks. He has the verb *écouter*, but no corresponding substantive."

This is pretty merciless satire, and is assented to by the critic in the *Nation*, No. 363. Now it somewhat curiously happens that the French *have* the word *écouteur* in not unfrequent use:

> "Ecouteur, -euse, *s.* Celui ou celle qui écoute, qui cherche à pénétrer les secrets d'autrui.
>
> "Vous me savez assez alerte pour voir les gens sans qu'ils m'apperçoivent, et assez maligne pour persiffler les écouteurs.—*Jean Jacques Rousseau.*
>
> "*Fam.* Ecouteur aux portes.
>
> "*Prov.* A fol conteur, sage-écouteur."

It is most commonly employed for those who overhear what was not addressed to them, but this makes the word only the better "equivalent to listener." Yours respectfully,

L.

[We think even "L.'s" quotations show that the equivalent of *écouteur* is "eavesdropper," not "listener." "Listener" in the common sense, in which it is ordinarily used in English and in which *Blackwood* used it, means one who likes to hear talk, and remains silent and attentive when talk is going on; for this there is certainly no French equivalent. *Ecouteur* bears the same relation to it that our word "spy" bears to "looker-on," or "bystander," or "witness."—ED. NATION.]

Notes.

THE opening of the Adams Academy, in Quincy, Mass., in September next, is an event of more than ordinary interest. It is not often in this country that so historical an atmosphere surrounds any new institution. Originally endowed by President John Adams, with whom in the closing years of his life the foundation of such a school was a favorite idea, the Academy building, which has only just been erected, stands on the site of the house in which John Hancock was born, and which was subsequently owned and occupied by Josiah Quincy, jr., of Revolutionary fame, who was associated with John Adams in the famous defence of Captain Preston and the British soldiers on their trial for "the Boston massacre." Hancock's father was pastor of the First Church in Quincy, then Braintree, and the house in which he lived must have been long since demolished, as only the remains of a cellar marked the place where it stood when the ground was deeded to the town of Quincy by the second President, fifty years ago. The documents in this case, by the way, afford a curious landmark indicative of the change which has come over the system of education during the last half-century. The battle between physics and the classics had not then begun to rage, and Mr. Adams was evidently warmly attached to his "humanities." Not only did he prescribe that "a schoolmaster should be procured learned in the Greek and Latin languages," but also "if thought advisable, the Hebrew, not to make learned Hebricians, but to teach such young men as choose to learn it the Hebrew alphabet, the rudiments of the Hebrew grammar and lexicon, that in after-life they may pursue the study to what extent they please." What degree of proficiency in the latter language Prof. Dimmock, who is about to leave Williams College to take charge of the new Academy, may have, we cannot say. We imagine, however, that he will find no difficulty in acquiring all that will be called for. Meanwhile, in view of the great reputation and utility of the Phillips Academy at Exeter, it is agreeable to know that the Adams Academy, which is intended to be an institution of a similar character, is to be organized by one so competent as Prof. Dimmock, whose success as an instructor is well known among all friends of Williams College, not only throughout New England but in New York and the West.

—Mrs. Mary Cowden Clarke's Shakespearian "Concordance" appears to have had the effect of stirring up another lady to link her name with that of the poet, and what the Englishwoman did for the dramas, Mrs. Horace Furness, of Philadelphia, has done for the "Poems" strictly so-called. We have before us, in a pamphlet, her very complete index to all the words in "Venus and Adonis," that portion of the Concordance having been printed first and separately, "in order that certain details which types alone can make clear may be mastered" by the compiler. We should say that the index is only too full and minute, though perhaps there is no need of our saying much on this head. Still, the bulk of the work, its cost, and the labor of the index-maker, are no doubt increased when we have the prepositions, the definite and indefinite articles, the conjunctive words, and words similarly inconspicuous, treated as if they were terms which stick in the reader's memory and for whose sake he seeks concordances. For example, take the case of the sixth line of "Venus and Adonis," to which, as it happens, the first of Mrs. Furness's references is made: "And like a bold-faced suitor 'gins to woo him." It is quite conceivable that a reader might recollect several of the expressions in this verse. He might want to know where "'gins to woo him" occurs; or whereabouts "bold-faced" is to be found, or "bold-faced suitor"; but why should the "a" be printed on his memory? Of this "a" by itself, as of any other unattached "a" in all the poems, it is probable that he would have not the least morsel of definite recollection. We can see but one good end accomplished by Mrs. Furness's plan of putting every word, no matter how insignificant, into her concordance, and that is a statistical end, and one of no importance to the reader or even to the student of the poems. Whoever will count Mrs. Furness's first page or so of references may learn that in "Venus and Adonis" the indefinite article is used one hundred and thirty-six times. As for the ill accomplished by the plan as here carried out it is not great to be sure; but there is an increase of cost and of bulk, and neither is desirable. But how very much the good of the index overbalances any fault it has, a glance makes pretty clear, and an attentive examination puts beyond peradventure.

—He that is slow to anger and ruleth his spirit, frequently saves himself from very ridiculous positions, and though all the rest of us who travel are under obligations to the British traveller for the perpetual grumbling and growling which he keeps up when in foreign parts, and by which he improves those regions as places of sojourn, there are places, and this country is pre-eminently one of them, where our friend and relative never opens his wrangling and fault-finding mouth without making out of himself an absurdity. This was well known to all Americans; but the latest illustration of it is worth attention. A very angry British gentleman wrote to the Springfield *Republican* last week in these terms. The hollow mockery of the "Yours Respectfully" is evident when one remembers that "An Englishman" was no doubt threatened with an apoplectic seizure when he took his pen in hand, and had to unbuckle his stock before he could proceed to express his indignation:

"TO THE EDITOR OF THE REPUBLICAN:

"In your weekly of the 14th inst. you have a leader headed 'Women Suffrage in England.' You say Jack Bright, the manager of the cause, is a good fellow, but a bungling tactician and a nobody in the House. To say the least about the matter, you make two very great mistakes. Jack Bright, well known as John Bright, did not manage the cause. The same Jack Bright, instead of being a nobody in the House, wields a greater power than any other single man, not even excepting the premier himself, and the same may be said of his power out of the House. The writer of this will take the liberty of sending a few copies of the *Republican* to England for the purpose of showing how the American newspapers instruct their readers generally on Englishmen and English institutions. Yours Respectfully,

"AN ENGLISHMAN."

As the editor informs Iracundus, the fact of the matter was that the types made "Jacob" into "Jack," the average American compositor not being aware, as a general rule, that Mr. John Bright has a brother Jacob.

—Norman McLeod, D.D., is the third British man of letters who has died within a month, the others, representing Ireland and England as he Scotland, being Mr. Charles Lever, of the consular service, and Henry Lytton Earle Bulwer, Baron Dalling, a well-known diplomatist. None of them was of very high distinction in literature, though Mr. Lever was widely known and widely liked, as he deserved to be; indeed literature may almost be said to have been with each of them a secondary pursuit, religion, theology, and pastoral work having taken up most of Dr. McLeod's time, and the public service and social life having much occupied that of Mr. Lever and Lord Dalling, better known as Sir Henry Bulwer. Doctor McLeod, born in 1812, became a successful Presbyterian minister of a more liberal kind than is altogether common in his native country, and deserves mention as having done something towards ameliorating the condition of Scotch children on the Sabbath-day by giving them in "Good Words for the Young" and other publications some readable Sunday literature. He had been partly educated in Germany, and had seen something of various countries outside of Scotland, the United States among others, and may be supposed to have thus been made more liberal-minded.

—Baron Dalling will be longest known in literature by his incomplete biography of Palmerston, a statesman in whose diplomatic school he was practised, and by his "Historical Characters," a work in which he discusses with much knowledge a few public characters contemporary with him. The "Talleyrand" and the "William Cobbett" (Tauchnitz edition) we recollect best; but that they were all good, in a good kind of writing, the reader may see who will compare them with the similar work of another contemporary of Lord Dalling's, Miss Martineau. The difference is the difference between the work of a man of the world and that of an able woman—a partisan determined that the world shall be better, and clear that she knows how to make it so. The cast of Lord Dalling's mind was different from this, and a cautious, trained diplomat, latterly a little superannuated by changes rather than years, is lost in his death. He had been not undistinguished nor unserviceable. He was born in 1804, being an elder brother of the novelist, entered the diplomatic service at the age of twenty-four, when he was attached to the British embassy at Berlin, and before death reached the dignity of minister at Washington and ambassador at Constantinople.

—Mr. Lever began life as a physician, and is said to have been a good one, and to have rendered efficient service in the North of Ireland during the outbreak of the cholera in 1832. He was made by the Government the medical superintendent over a large district, including the towns of Londonderry and Coleraine, and, to reward his zeal and skill, was shortly afterwards given the post of physician to the Legation at Brussels. We may suppose, however, that his gaiety, his social disposition, his wit and tact, were almost as operative in securing him this promotion as his knowledge of medicine—a profession which he now soon abandoned for a lifetime of constant novel-making and of nearly as constant civil service abroad, his friends and friendly patrons keeping him in consulships, which he creditably administered. His first novel he began in the Legation at Brussels, and it was of a kind which he continued to write for some years, which, indeed, it may in a way be said that he continued to write all his life. Most readers, however, who laughed over "Charles O'Malley," the best known of these early stories, would deny that it had anything in common with "Lord Kilgobbin" and "Sir Brooke Fosbrooke." The discovery of the resemblance, though it may be made, requires a deeper examination than it is necessary to give these novels. The novelist had latterly grown more thoughtful than the bookmaker who strung Irish stories and jokes into "Harry Lorrequer," and the later novels, whatever the course of the story might be, were the expression of long years of watchful study of social life—or, perhaps we might better say, of certain classes of men and women who figure at once in social life and in public affairs. But no doubt we may make both assertions, for to the last, if Mr. Lever's eye was keen for a diplomat, a minister, a conspirator, it was good, too, for such humorous and naturally-marked characters as the owner of O'Shea's Barn or of Kilgobbin Castle. The rollicking fun of "Charles O'Malley," a book full of fighting, punch-drinking, singing, hard riding, had no noteworthy resemblance to the close observation, statecraftiness, elaborate wit, and reflective remark of the later novels, and the same class of readers, if we may judge, will not be found to enjoy both the late and the early. The luckier the reader who grew up with them, and had his fun out of Lorrequer's blackened face and Mickey Free's courting Consule Planco, and has been amused and entertained with the last story from Mr. Lever's pen—that in which he told his audience that he wrote it in breaking health and in broken spirits, and that he bade them good-bye. On the whole, few men of our generation have more innocently and unpretendingly given a greater amount of amusement; and this has latterly been mingled with much sensible talk and instruction, pleasantly conveyed, as befits an experienced, clever man grown old in a busy life.

—At a meeting of the Reichstag, on April 15, Dr. Prince-Smith brought forward some original notions of copyright. "Copyrights are infringed," he said, "only when the first publisher has published too small an edition or put his price too high. Now, if he leaves unworked any field which he might have cultivated by aid of a larger edition or a lower price, it is natural and proper that some other bookseller should republish his book and reap the harvest. The first publisher receives the proper reward of his want of foresight." There is no end to the extension that an ingenious mind might give to this doctrine, which is merely Proudhon's famous apothegm inverted to read "robbery is property." We have known idealists who held that property should be at the disposal of those who could make better use of it than the owner for the time being; but never one who was willing to leave the decision of that question to anybody but himself. At all events, if a liability to be plundered is rightfully added to the ordinary penalties for a lack of foresight, it is clear that publishers should not be the only class in the community to be exposed to it.

—The first volume of Mommsen's long-expected "Römisches Staatsrecht" has just appeared, and the second volume may be expected within the year. This is to form the first part of a new "Handbuch der Romischen Alterthümer," Becker's and Marquardt's having been for some time out of print. In the new work Dr. Marquardt will be responsible for the same departments a siu the old one—that is, Administration, Public Economy, Military and Religious Antiquities; these volumes will not be long delayed. It is characteristic of Mommsen's original method of handling a subject that he devotes two volumes out of his three to the subject of the magistracy, taking this as the starting point for the entire discussion. This is at first sight surprising to one who is accustomed to take up the subject historically, beginning with the patriarchal institutions of the patrician state; the author, however, prefers to treat his subject *statically,* if we may use this expression, rather than historically, giving, of course, the successive developments of the several institutions, but omitting any history of institutions as a whole. This point of view will at least be serviceable in fixing the attention of his readers primarily upon the actual facts of Republican Rome, rather than the obsolete institutions of the monarchy. That he begins with the magistracy results from the fundamental importance of the auspices in the Roman state; these were possessed by the magistrates and gave them their sanctity. The first volume treats of the magistracy as a whole, the second will treat of the several magistrates, the other institutions being reserved for the third.

—We mentioned, in the *Nation* of May 2, the approaching sale at Leipzig of the Weigel Collection of early specimens of the art of printing. From the journals of that city we learn that the prices obtained surpassed all expectation, as well they might when the British Museum competed with the principal institutions of Europe devoted to the history of art, not to speak of a number of private collectors and dealers, notably from London and Paris. On the first day a metal-engraving print on parchment (A.D. 1100–1150) was knocked down at 1,125 thalers. The second day's sale embraced block-books, playing-cards, and engravings in stipple, and among them the highest figure was reached by a unique copy of the "Ars Moriendi" (A.D. 1450), first edition, with thirteen pages of text and eleven of pictures, small folio. This brought 7,150 thalers, the British Museum purchasing. Two later editions of the same work sold for 1,200 and 1,245 thalers. Next after it came a "Biblia Pauperum," complete (A.D. 1460–1475), at 2,360 thalers. Four playing-cards of the year 1460 went for 1,800 thalers. All these prices were exceeded (speaking relatively) on the third and closing day, by that obtained for a colored print, 7 x 5 inches, representing the Virgin Mary as Queen of Heaven (A.D. 1451), and proving incontestably that Germany and not Italy had the honor of inventing engraving on copper. This beautifully-executed design fetched the "colossal" price of 3,950 thalers. Other copper-plate impressions also commanded high prices—from 2,800 thalers downward. The total product of the sales amounted to 82,000 thalers. A large part of the collection undoubtedly went abroad, but the German Museum at Nürnberg succeeded in retaining much that was valuable and unique. We may properly close this summary with a mention of the forthcoming work on "Early Typography; or, Letterpress Printing in the Fifteenth Century," by the late William Skeen, of the Ceylon Civil Service, and author of many works of profound and varied scholarship relating to the East. He had but just finished the one whose title we have here given when his death occurred, in March last,

MORE NOVELS.*

MESSRS. HOLT & WILLIAMS have chosen an excellent novel for the second number of their "Leisure-Hour Series," namely, Turgenef's "Smoke." Like all of this author's stories, it is much subtler than it may at first seem to the reader who has learned by experience that most novels are to be read simply for the pleasure of the hour we hold them in our hands, and that only too many of them are as little worthy of memory or of serious reflection as are the visions of our dreams. With Turgenef's work, the case is very different. In our opinion, he is the equal of any living novelist, or, if that estimate be disputed, he is at any rate one of the greatest, and on that account his writings demand attentive consideration. No one, let us say, should be deterred from making their acquaintance by a vague dread of the uneasiness they may find in unknown and foreign scenes. To be sure, Turgenef is a Russian—we might almost call him, in the broadest sense, a Russian of the Russians—and in all of his novels there is a great deal that will be better understood by his countrymen than by us, so very different are the conditions of life in Russia and in the United States, notwithstanding the artificial intimacy that diplomats and politicians grow eloquent about. But yet there is nothing which need discourage the reader, nothing which is not many times made up to him by the accuracy and loveliness of Turgenef's treatment of the human heart. A hasty summary of the plot of "Smoke" would rather mar the enjoyment which so largely consists in its surprises, and would give after all but a very unsatisfactory notion of the real merit of the story, which does not lie in the machinery, but in the marvellous way in which the inner-most secrets of character are revealed. This much may be said, however, that it tells of the love of a young Russian for a married woman, whom he had formerly loved, and who had loved him in the days of their early youth. The problem is further complicated by the fact that the man, Litvinof, is engaged to another girl. In the hero we see a young man of a pleasing nature, honest, modest, and sincere, in spite of the position in which he is placed. He is neither exalted as a model of manhood nor yet denounced as a disgrace to humanity. Here, as everywhere, Turgenef understands perfectly how to keep his characters in the proper perspective. The heroine, Irene, the Countess Ratmirof, is a much more complicated character. She is a fascinating woman who interests us most, however, by reason of the incongruity between what she seems to be and what she really is. She is a coquette, but no flirt—that is to say, she possesses that charm of coquetry which consists in suggestiveness, in arousing wonder and admiration, without the heart that alone can make a woman truly admirable. She is dishonest from weakness and not from wickedness; she cannot be other than she is. Julian Schmidt, in a very interesting essay on Turgenef, has spoken of the difference of the author's treatment of Irene in this novel and of heroines like Helen in "On the Eve," who hide the richness of their natures just as Irene hides the poverty of her own, and so both kinds remain a problem to the reader. This is very true, and it is of especial interest to observe the gradual way in which this complexity of Irene's character is set before us. It is not analyzed for us. We see her in different circumstances, and have to make up our minds for ourselves; and it is only later in the story that a full perception of it begins to dawn upon us.

The most touching part of this very sad novel is the account of Litvinof's relation to his betrothed, Tatiana. She is a simple-minded, transparent girl; no heroine, bedecked with every charm, to whom Irene is to serve as a rival. An admirable, although by no means exceptional, example of Turgenef's power may be seen here in the description of the interviews at Baden between her and Litvinof, racked with grief for the pain he is causing this innocent creature, but driven on by his overmastering passion for Irene, and not by that alone, for she has already placed her future in his hands. Tatiana suffers, but suffers proudly, with a generosity towards her faithless lover that redoubles his torture; she does not fully understand him, but she knows well enough that the joy has gone out of her life. We quote a shorter extract than we could wish from this scene:

> "The door of the next room opened, and Tatiana, looking pale but very calm, softly entered. She sat down by her aunt, and gently took her hand within her own.
>
> "'Sit down, Gregory Mikhailovitch,' she said to Litvinof, who was standing like a statue near the door. 'I am very glad once more to see you. I have told my aunt of my decision, our decision; she entirely approves of it. . . . Without mutual love there can be no true happiness; esteem alone is not enough' (at the word *esteem,* Litvinof involuntarily cast down his eyes), 'and it is better now to separate than to repent when it is too late. Do you not think so, aunt?'
>
> "'Without doubt,' began Capitoline Markovna, 'without doubt, Tanioucha, one who cannot appreciate you, . . . who has decided . . .'
>
> "'Aunt,' said Tatiana, cutting her short, 'remember what you promised me. You have always said to me, "Truth, Tatiana, truth and frankness before all else." Truth and frankness are not always pleasant; if they were, the exercise of them would be no credit to us.'
>
> "She tenderly kissed her aunt's white hair, then turning toward Litvinof, continued:
>
> "'We have decided to leave Baden. . . . We think it will be best for all of us.'
>
> "'When do you go?' asked Litvinof in a low tone,
>
> "He remembered that Irene had asked him the same question. Capitoline was about to answer, when Tatiana stopped her, gently pressing her hand over her cheek.
>
> "'Soon, very soon, I think.'
>
> "'Will you permit me to ask in what direction you intend to go?' continued Litvinof in the same low tone.
>
> "'First to Dresden, then to Russia . . .'
>
> "'What difference does it make to you now, Gregory Mikhailovitch?' asked Capitoline Markovna in a shrill voice.
>
> "'Aunt!' said Tatiana again.
>
> "There was a moment's silence, broken first by Litvinof.
>
> "'Tatiana Petrovna, you know how sad and painful must be my feelings. . . .'
>
> "Tatiana rose.
>
> "'Gregory Mikhailovitch,' she said, 'say no more on that subject, I beg of you, if not for your own sake, at least for mine. I have known you longer than since yesterday, and can readily understand what your feelings are. But why open those wounds afresh?' She stopped, striving to control herself, to hold back the tears which had started to her eyes; she finally succeeded, and continued: 'Why open these wounds again? . . . But time is passing. I have one more favor to ask of you. Be kind enough to mail a letter for us; it is very important, and we have not the time to go. Wait a minute, I will get it for you.'

> . . . .
>
> "She returns with the letter. . . .
>
> "Litvinof raised his eyes. . . . It was indeed his judge that stood before him. Tatiana seemed to him to have increased in stature; her face, glorious with such beauty as he had never seen in it before, seemed as hard and cold as that of a marble statue; her simple dress fell in stiff folds like those of antique drapery; she was looking straight before her, and her cold, fixed glance seemed to come from eyes of stone. Litvinof read there his sentence; he bowed, took the letter from her hand which was outstretched toward him, and silently left the room."

The translation, in spite of occasional petty inaccuracies and roughnesses, some of which we have taken the liberty of correcting in the above extract, is commendable.

A novel that bears for its motto a quotation from "Lucile" prepares the reader for some freak of sentiment of the most advanced modern type, and that is certainly what we find in Mr. Story's "Choisy." It must be said that if a certain sort of novels grow more common, as they threaten to do, parents will have to be as eagle-eyed about what fiction, even if written in English, they admit into their house as they generally are about French novels. The plot of this story is as follows: Charley Wales, a young man with "big brown lion's eyes with baby lashes," is the son of a rich New York banker and the friend of Dick Huntley, well known for his "spotless Italian skin, blazing black eyes, and famous long moustaches, which were the envy of masculine New York." Huntley is a villain and a "runner" for gambling-houses, but yet he bears a good reputation in the world; he is a rising broker and a general favorite. One snowy evening Dick beguiles Charley to a fashionable "hell," which is described with great unction; there Charley drinks and plays freely, losing all his money, and ending the evening by what is delicately called an "irregularity" with a draft for ten thousand dollars which he has in his pocket. His father arranges the money matters, and sends his promising son abroad. He leaves behind him an amiable young woman, his cousin, and in new lands he seeks new pleasures. Our author describes these scenes of dissipation with much raciness and a lofty contempt for the meagre glances that most Americans get at these improving sides of European life. Charley falls into the hands, at Huntley's recommendation, of one Somers, a sort of King of Bohemia, and the rigs they run are set out at great length. He meets a French baroness, a *femme incomprise,* as such people, with great contempt for the intelligence of the rest of the world, call themselves. These two, the baroness and Charley, live out a French novel together; they hide in obscure corners of Switzerland, he fights the harmless duel, they make the inevitable journey to Italy—it is all complete, even to the discovery which causes him to leave her giving "a low shuddering sob and sinking senseless on the floor," while he mutters smothered oaths and laughs a clear, cold laugh. After this change in his moral nature, he meets his old love, all is forgiven, they marry. Huntley is detected in his villany by a lucky accident, exposed, and driven from the country, and so the novel ends. The baroness, by the way, becomes a confirmed gambler, and is now living, we are told, at Nice. The author, for his last words, says:

> "Stone her, if you will, ye righteous, and waken thus, as it seems your part to do, the evil that would fain sleep. Drive innocence mad by the cry of madness. Fan the spark which unnoticed would die, until you burn the world. Cry havoc, and tell us of our guilt. Torture us with anticipated punishment, until we shall forget the very name of goodness, and remember only evil."

At the risk of "burning the world," we propose to "cry havoc," and tell Mr. Story of his guilt. In the first place, if he chooses to drag his hero through the mire of America and Europe, and to show him in his wretchedness, however distasteful such a representation may be, it may yet be of use, so long as the writer is not dazzled by the meretricious tinsel of the images he calls up. The outline of many of Balzac's novels, of "La Cousine Bette," for instance, would not make an agreeable column for summer reading; but no one who has read that grim novel can forget the terrible stern morality, as impressive as that of life itself, which underlies all the immorality of the story. Thackeray's "Barry Lyndon" is no Sunday-school story hero. But those novels are not written for the ordinary innocent novel-reader, and that a novel like "Choisy" should be foisted upon him is a serious matter. The author seems to be inspired simply by a lickerish fondness of the tawdry joys he describes. He is as vain of his cheap Bohemianism as is a raw sophomore of the glory of his class. The men are as self-conscious in the splendors of their debauchery as if they were marching to execution with banners flying and trumpets playing. They console themselves under their crapulous headaches by the thought of the joys of seeing "life."

> "When Somers came in later, he found the youth stretched out in luxurious *abandon* on the sofa, encased in a crimson dressing-gown, and fairly floating in smoke. The effect by gaslight was highly dramatic.
>
> "'*Diable des Ætnas!* how you sons of freedom do smoke!' cried Somers, divesting himself of his coat, and regarding Charley with serious eyes; 'your daily portion of tobacco would shake me up, Charley, and I'm no chicken. I must look after you, you know—*vous voila gardé!*'
>
> "The speaker busied himself the while at the sideboard, which particular feature of their *ménage* he had taken good care to have a model of its kind. He got out glasses and water and a mystic *carafe,* small in size, but ominous in appearance, from which he poured a clear, greenish liquor into the two goblets, and, by gradual and regulated additions of water, transformed the whole into a milky, misty mixture that curled and wreathed itself like genii smoke."

That is the way to mix absinthe. Did the author ever read "Ouida's" novels? She is an excellent guide through the intricacies of such scenes.

If all this were for any good result, it might, in spite of its monotony, be endured; but the only moral seems to be, disgrace yourself as much as possible; it will all come right in the end. By the side of such qualities, the poorness of some of the French novels seems like a merit.

"My Little Lady," the first of Messrs. Holt & Williams's well-printed and prettily bound series of novels and poems, already alluded to, is a very readable story, far above the average of new novels. It is by an unknown author, and—judging by the knowledge with which the women are drawn, and the sentimental, sketchy weakness of the delineation of the men, as well as by the absence of any abstract observation or reasoning in what she writes—by a woman. "My Little Lady" is an appropriate title; for all of the best part, which is indeed original, is descriptive of the life of a very young girl from her fifth to her fourteenth year. In general, few novelists would be able to write anything about such a heroine that would interest readers who had mastered words of two syllables; but this volume is vastly more entertaining than many which only concern themselves more especially with the unfailing subject. The little girl is the daughter of a gambler, and naturally does not receive a conventional education; but, thanks to this independence, she has great affection for her father, and a charming ignorance of the wickedness of the world. It is in depicting this innocence that the writer achieves her greatest success. The little girl's wonderings, sufferings, emotions, are admirably represented—indeed, with a vividness that is seldom surpassed even by those who describe the familiar nursery. Winding through it there is, of course, a love story; but it is much less interesting than the account of the girl's devious career between the gambling places of Europe and the quiet convent. We recommend the story cheerfully. It gives us something which every reader will feel to be natural.

In the narrative of Wash Boltor's life it would appear to be the author's design to illustrate the career of the average American politician. The scene of action is laid in Boshville, under which designation there is but little difficulty in recognizing Cincinnati. The name of the hero might as well have been candidly spelt Bolter, for he was always found vociferous in the party which was in a position to command and bestow office. Some of Boltor's oratory goes to vindicate this erratic course. To literary polish the work has no claim. The writer is evidently familiar with the American political stump speech, and the defence of slavery he puts into one of Boltor's speeches is a model of its kind. One passage runs thus:

> "These black nomads were living in idleness, with no other mission under heaven than to kill and be killed, eat and be eaten, to be the sport of their own black princes, or a *bonne bouche* for a hungry lion or hippopotamus. In Africa they were neither useful nor ornamental; they had no arts or sciences, and in mechanical knowledge were far below a beaver or a digger-Indian. To make a long story short, the trader in his capacity of purveyor to the world, whether it be ice from the North Pole or coal from the Equator (for it generally happens that nature puts the things precisely where they are not wanted), brought, among his spices, gums, and nuts, to America, a sample of these black Aborigines. And thus these nomads, from leading an idle and useless life in a menagerie, were elevated to be co-laborers of a civilization that wears clean linen and believes in the Bible and the divine right of labor. (Applause.)"

The following little sketch gives us assurance that in some respects Cincinnati possesses features of our old New York civilization:

> "The fifteenth ward of Boshville had its fire-engine house, with the usual attendance of about fifty 'Moses,' all good with their fists, all with their mouths down at the corners, all with soap-locks, and all wearing long-toed boots, and hats resting upon the bridge of their usually broken noses. They all snarled when they spoke, all carried their hands in their pockets, and of course chewed tobacco, sneered, leered, swore, drank, and carried knives secretly."

MAGAZINES FOR JULY.

IN the *Atlantic's* concluding article about John Brown, Governor Andrew is quoted as making a remark which we dare say most of our readers have at one time or another found verified by facts of their own observation. The Governor had been invited to meet Brown, and saw at once that he was perhaps not precisely mad, but in a condition of mind decidedly abnormal: "I confess," the Governor says, "I did not know how to understand the old gentleman fully, because when I hear a man talk upon great themes, touching which I think he must have deep feeling, in a tone perfectly level, without emphasis, and without any exhibition of feeling, I am always ready to suspect that there is something wrong in the man's brain. I noticed that in conversation the old gentleman scarcely regarded other people, was entirely self-poised, self-possessed, sufficient to himself, and appeared to have no emotion of any sort, but to be entirely absorbed in an idea which preoccupied him, and seemed to put him in a position transcending an ordinary emotion and ordinary reason." Fortunately, to live in this state of tension for years together is not given to many persons; but, by moments at a time, it is probably known to most people—as in the sobering effect of great emergencies. Doubtless every railroad accident exemplifies it in several instances. In this momentary form of it, our old dramatists used it with a striking power that only the very "high tragic vein" could exhibit.

"Why Semmes of the *Alabama* was not Shot" is the first of two articles which Mr. John A. Bolles, solicitor of the Navy Department, contributes to history, and which, judging by this one, will be excellently worth having. For Semmes Mr. Bolles apparently has contempt, which, however, does not prevent his feeling something like contempt for the lawyers and statesmen who allowed themselves to talk of the Confederate cruiser as a "pirate," "buccaneer," and so on. The article is one more reminder that between 1860 and to-day we, as a people, underwent some very sharp and some very much needed lessons as to a good number of questions of national and international polity and practice, and found them hard matters to learn and to digest. Very hotly we hated "the legal mind" in those days; and it may be doubted if even yet we are quite reconciled to dismiss our passionate notions and come down to the acceptance of hard facts. Mr. Bolles's duty after Semmes was put in jail was to furnish the Navy Department with answers to a dozen or so of questions, on the affirmative settlement of which the so-called "Admiral" would have been executed. We have not here the answers to all of them, but of such answers as we have all are in Semmes's favor, while there is no indication of what was the result as to the two remaining. Mr. Bolles and his fellow-investigators had not far to go in order to learn that Semmes's ship was a true "belligerent" ship; that Semmes had a perfect right to burn captured vessels, instead of sending them into port for adjudication; that, in fact, he had no doubt learned this policy from the instructions given by our Government to Captain David Porter, Captain O. H. Perry, Captain Charles Stewart of the *Constitution*, Captain Morris of the *Congress*, Commandant Warrington of the *Peacock*, and a dozen others of our most noted sailors; that he was fully entitled to employ all the customary cheats, falsifications, and swindles of Christian warfare; that he was perfectly justified in flying the American flag, or burning a whaler that he might lure other whalers under his guns; and that "stealing chronometers" was a part of his legitimate business. Mr. Bolles has not yet reached the questions whether Semmes was guilty of cruel treatment of prisoners, and whether he was disgracefully and criminally perfidious in his conduct towards Captain Winslow of the *Kearsarge* in escaping from his captor after due surrender. To these points the August *Atlantic* will give attention, and we advise our readers to look at both articles, as a perusal of them will be useful in getting us ready for the decision of the Geneva arbitration, however that may turn out.

Mr. Parton's "Jefferson" will be a surprise to Mr. "Sunset" Cox, Mr. Kerr, Mr. Voorhees, and other gentlemen whom New England worries, and should be pondered by them and their constituents. The admiration for Massachusetts felt by Mr. Jefferson and his reforming friends, who avowed their intention to make Virginia as much like New England as possible, instead of leaving her what she was—an Old England, and a poor one at that, lost in the woods—will be a surprise to most Virginians, who, should they read this biography of a man on whom they pride themselves, will discover how intolerant, witch-hunting, persecuting, and ignorant the "Mother of Presidents" remained at a date long after the derided intolerance of the Puritans had almost wholly passed away.

"The Poet at the Breakfast Table" is continued and "The Diversions of the Echo Club" concluded, both being rather better reading than usual, and the latter containing some good criticism. Mrs. J. W. Howe, in particular, has some deserved fun made of her and the tripod, Mr. Joaquin Miller is properly rated, and Mr. Walt Whitman has more truth told about him than has latterly been falling to his lot. The critic seems to omit from his account of Mr. Whitman's poetical outfit that quality of mind which probably led Mr. Emerson to "greet him at the beginning of a great career"—a piece of criticism on an "American" poet, by the way, which ought to be satisfactory to some of our discontented poets. The quality of mind of which we speak is that intentness of pantheistic vision, that perception of the mysterious life of nature—rather that rapt contemplation of mere existence, of Being itself, whether embodied in a paving-stone, a bee, a grimy hand, a girl, a murdered man, what not—which in a greater or less degree has marked the poetry and philosophy of very many of the poets and philosophers of this century. Mr. Whitman, his education not having been properly cared for, has naturally looked upon this gift of his as being peculiarly his, and peculiarly valuable, and therefore to be used without flinching. That other men have it, and know that it is to be used within limits, and that it alone is not enough to constitute a poet, Mr. Whitman seems never to have suspected, and the result is to be seen in the generally stupid and tiresome mass of indigested, incoherent prose and poetry mingled which, with an audacity born of ignorance, he pours forth in all honesty and with an occasional happy effect. He forgets, or rather he never knew, that while "leaves of grass" are good, "beauty's rose" is, for poetical purposes, better than almost any amount of green fodder. The life of the grass, of each blade of it, is as inscrutable a mystery, in some minds as awe-striking a mystery, as the life of the soul of man. But what of it? The poet who is so stricken through and through with this truth that he cannot behave like a person endowed with discourse of reason, who fails to see that, despite all the blades of grass on a thousand hills, it is still assigned the poet as his business to be an artist—to know what to select, what to leave out, and when to leave off—is simply a poet in the rough, and of no particular value to anybody except some bedevilled transatlantic critic, who has his notions about what it is that "democracy" produces in the way of literature.

"Anecdotes of Public Men" is as readable as any of the rest of the July *Galaxy*, though the number contains several pieces that will be liked. Among the others there is a strange phantasmagoric ghost-story by Ivan Turgenef, which contains some imaginations sufficiently grisly, but perhaps less impressive than they were intended to be. Some of the picture-painting, however, is fine, and some of the satire and invective powerful and cutting. For instance, "this fable teaches," or may teach us, even in the heats of the Presidential canvass, that politics in Russia are another matter than our American politics. The vampire ghost is bearing the narrator through the air, and the two are hanging above Russian territory:

> "I had a feeling of sadness and also of indifference, almost of ennui; but not in the least because it was Russia over which we were taking our flight. No; the earth in and for itself; this flat plain that spread beneath me, the whole planet with its short-lived, helpless races, oppressed with poverty, sickness, and care, chained to a clod of dust; this rough and brittle crust, this sediment upon our planet's fiery core on which a mould is grown that we call by the high-sounding title of the vegetable world; these men-flies, a hundred times less useful than the flies themselves with their dwellings of clay and the fugitive trace of their little monotonous lives, their eternal strife against the inevitable and the immutable—how it shocked me! My heart beat heavily in my bosom; the desire to contemplate any longer these unmeaning pictures had entirely left me. Yes, it was ennui that I felt, but something sharper than ennui as well. Not once did I feel pity for my fellow-men; every other thought was swallowed up in one that I hardly dare to name; it was loathing, and the profoundest, deepest loathing of all was—for myself.
>
> "'O cease,' breathed Ellis, 'cease your thoughts, else it will be impossible for me to carry you. You are too heavy.'
>
> "'Home!' I cried to her with the tone in which I had summoned my driver once when at four o'clock in the morning I took leave of the friends at Moskow with whom I had been discussing Russia's future. 'Home!' I repeated, and closed my eyes."

"Tammuz and the Mound-Builders" we venture to call a profitable article—though we have not read it, and though we know nothing about the ancient Tyrians or about American antiquities. The author shows to his own satisfaction that the Cardiff Giant is a Phœnician figure, and the work of Adonis's worshippers, who fled across the Atlantic from before the face of Sennacherib. For other articles the *Galaxy* has two instalments of novels, more of General Custer's "Life on the Plains," and some poor poetry. "The Scientific Miscellany" is full and interesting, and the "Drift-Wood" is very good. The "Galaxy Club Room" is devoted to epigrams, old and new, and the "Nebulæ" deals largely with music as a social entertainment and with the stage; and about the latter some good remarks are made, especially under the head of the histrionic temperament in its relations to happiness and reputability. The literary criticism also is more than fairly good, though we should say that less praise of Miss Rhoda Broughton with her female variety of Guy Livingstoneism might be desirable. That authoress might very well be recommended to a certain young person of whom we have heard, for she is enough like Guy to be a welcome addition to the slate-pencil quarry and chalk quarry of British modern fiction. The young lady in question had been persuaded to read Mr. Bret Harte's "Condensed Novels," the expectation of her mentor being that when once she had seen her favorite author in his true proportions she would scoff at him and depart from him. No sooner was the travesty finished, however, than the student gets down "Sword and Gown" for a new perusal, the reading of the other brummagem having had the effect of making her "homesick for Guy."

In *Harper's* there is nothing of special moment. One illustrated article is about Rome; another short one is about the guillotine, and has some horribly suggestive pictures; another is about the recent exploration at Golgos, in Eastern Cyprus, with its Greek and Egyptian antiquities; another is a chapter or two of Anthony Trollope's "Golden Lion of Granpere"; another, by Mr. M. D. Conway, is on Mazzini, and is enthusiastic rather than instructive; Señor Emilio Castelar contributes a second paper on European Republicanism, and is very hopeful of its future. More useful, perhaps, than any of the rest of the magazine is Mr. Charles Nordhoff's third article on California, in which he gives information and advice to such as contemplate making a home in that State. Mr. Nordhoff praises Californian soil and climate in a way that ought to satisfy a pioneer of '49 himself, and appears to have plenty of evidence with which to back his view.

The July *Scribner's* has an article on the Christian Sabbath which will make good Fourth of July reading. "Go to Italy," says the patriotic editor, "to France, Spain, Ireland, to any part of Germany, Catholic or infidel, and find, if possible, any people so temperate, pure, chaste, truthful, and benevolent as the Sabbath-keeping communities of America. It cannot be done!" How many years, now, of kissing the toe of the Pope does our editor suppose will have to be done by the wicked Italian nation to balance this American ebullition of spiritual humility and admirable contriteness of heart? By what sin fell the angels? let us ask him. We for our part can at this moment think of a certain community of Americans; a community American in a singular degree; of Sabbath-keeping Americans, also; a community to whom the lager-beer saloon, the theatre, and the race-track are unfamiliar, and the Sunday-school a very familiar thing, and there lies buried among them, his tomb a place of honor, its occupant remembered with admiration, a man who was one of the most colossal thieves, one of the steadiest liars, and one of the loosest livers that have ever disgraced recent Christian civilization. Such was Mr. James Fisk, and he lies buried at Brattleboro, in rural Vermont. Under the circumstances, a little civility to our neighbors would not be amiss, and we may profitably recollect that pharisaism and self-laudation, even though we are the very best people the sun shines on, will not indeed deprive us of our glorious superiority to the publican nations, but still will make us less entirely admirable than we might be. We hardly know any country in Christendom which need be throwing stones at the glass houses of any others, and we think our contemporary would have difficulty in apportioning the exact ratio in which Americans, Austrians, Prussians, Frenchmen, Italians, Englishmen, and Scotchmen are represented in the kingdom of heaven.

"West Point" is the title of an illustrated article whose title and the name of whose author, Mr. B. J. Lossing, explain its nature; "Draxy Miller's Dowry," a nice enough love story of its kind, with more good feeling than hard sense in it, but with much natural feeling, is concluded in this third part; Mr. W. C. Wilkinson finishes his criticism of Mr. Lowell's prose, making of the criticism a poor thing; Mrs. Fanny Howell tells of woman as a smuggler, and of the female detectives employed to watch and examine their erring sisters; Mr. Warner's "Backlog Studies" go on as formerly, and furthermore contain this time a true-sounding story about a philanthropist and his moral indignation, and there are fifty or sixty other well-filled pages, some scientific, some literary, some social, and all such as the readers of *Scribner's* may properly like. As we have charged the editor with spiritual pride and, to say the least of it, with not being a publican or miserable sinner, it is no more than fair to say that the editorial department contains some agreeable writing, well thought and pleasingly expressed, and some of it bright and amusing enough to be Mr. Warner's.

The *Catholic World* very sharply reviews Mr. Austin Allibone's "Dictionary of Authors," charging upon him, in general terms and in specified instances, unfairness or ignorance or both in the treatment which he accords to Roman Catholic affairs and the assailants of Roman Catholics. The charges appear to be sufficiently sustained, though there is a somewhat unnecessary degree of heat in the case, for example, of Burnet. Burnet was no saint; but his was not a saintly time, either in the political or the religious world. We rather find an opportunity for giving a dislikable man a sound basting than avail ourselves of an opportunity to be just, when we take the standard of an honest political era, a religious-minded church, and try by it such a man as Burnet in such an age as that of William and James and Marlborough. Plenty of scope there is for objurgation here, whether we are Protestant writers or Catholic; but how well worth while it is for any of us to take off our cravats as soon as our opponent comes in view, is a question. A principal fault in Mr. Allibone's work the reviewer in the *Catholic World* does not mention, though he objects to the undue swelling of its size by the admission of absolutely useless names. It is hard to tell what names are absolutely useless; and we should be rather afraid to see any diminution of the list; but the dictionary is needlessly encumbered with platitudinarian criticisms from sources entitled to no respect. Pages of Griswold or of citations from the *North American Review* of fifty years ago are a mere infliction upon the reader. These are faults in a very useful and respectable work, but faults they are.

Other articles in the *Catholic World* are these: a review of Eastlake's "Gothic Revival"; four chapters of Mrs. Craven's story, "Fleurange"; a short sketch showing how "Miss Etheridge" became converted to the Catholic Church; a painful story, apparently true, by the author of the "House of Yorke," a writer who may be expected to do better in the future, as she shows some capacity and some aptitude; "The Duties of the Rich in Christian Society"; a review of Müller's "Chips from a German Workshop," which, we suppose, philologists with a desire to hear something of the true faith and sound doctrine may perhaps like; more about the way in which the Church has upheld the rights of woman; and more of the neat and graphic sketching of the last days before the late siege of Paris. This, it will be seen, is a table of contents reasonably well varied; but the *Catholic World* is not yet a magazine which magazine readers not Catholic in faith will much care to read; and we fancy the young Catholic readers would be held by it more certainly and in greater numbers if it were in the hands of Catholic laymen instead of father confessors. Nobody wants partridge all the time or even half the time; and a young Roman Catholic youth or maiden, albeit heaven is at hand and hell also is near, likes light food—lighter, we imagine, than the *Catholic World* purveys, though it improves in this respect.

Corals and Coral Islands. By James D. Dana, LL.D., Professor of Geology and Mineralogy in Yale College, etc. (New York: Dodd & Mead. 1872. 8vo, pp. 398.)—Every naturalist will give this book a hearty welcome. There are so few popular works concerning any branch of zoölogy which commend themselves to the student of nature, that every substantial addition to the list has a value as a new cord between the investigators and the general public. Professor Dana has been peculiarly fortunate in his subject and his opportunities. There is a poetic interest attached to reef-building polyps such as belong to no other creatures of the sea or land. The notion that people of average education have of them is usually derived from verses or sermons, where we hear the well-worn stories about the coral "insect" and its mysterious ways. This book will go far to make an end of the cheap wonderment with which the coral-building polyps have been regarded. Simple unadorned truth concerning these creatures is vastly more wonderful than the poet's picture. No phase of life gives us such elements of the picturesque. Whether we study the coral reefs as we would a bed of flowers for beauty of structure and form, or in a broader view consider the part played by them in the economy of the earth's surface, the impressions we gain are very striking. They are to the sea what the forests are to the aerial ocean. They purify it, they afford shelter for innumerable forms of life, they store up in their ruins vast quantities of materials of the highest utility to man. They build the greatest monuments of organic life. Over the Central Pacific lie, thickly scattered, the vast towers they have reared, and for a thousand miles along many shores there are ramparts which they have built against the sea. Out of the abundant stores of his own great work on corals as well as from a few other but much inferior sources, the author has gathered all the facts that are necessary for a good knowledge of the structure, habits, and general affinities of polyps. During the voyage of the Wilkes Expedition, he had for a long period constant opportunities of studying the organization and relations of these creatures. The results of his labors constitute the great memoirs on recent polyps published among the reports of that exploration. Although it was the good fortune of Mr. Darwin, his predecessor by a year or two in the exploration of the Pacific coral reefs, to give the true explanation of their formation, yet Mr. Dana fairly shares with him the honor of having developed the geological history and value of these great structures. Not the least among the author's advantages is the training in exact statement and well-ordered concentration given by his experience in the preparation of his standard text-books of mineralogy and geology. So few of our great writers of research have made successful efforts in popularizing science, or even in making it readily accessible to students, that success in this regard is no small distinction.

The first hundred pages of the volume consist of a zoölogical sketch of coral-building animals. As far as the polyps are concerned, this is sufficient for the purposes of the general reader. The account of the Hydroids, however, is rather short, as from it alone no clear idea would be got of the nature of the communities of this class, which has probably done as much work in the successive seas of the earth as the more modern polyp corals. The Bryozoans certainly deserved more notice than is taken of them in the scant two pages which they have here. There is no figure showing the soft parts, and the three representations of the solid materials of the cells imperfectly express their range of form. After an excellent résumé of all that is known concerning the laws of the distribution and rate of growth of reef-building corals, we come to the second chapter, which treats of the structure of coral reefs and islands. The phenomena of growth among them are far more complicated than in any other of the great physical features of the earth. Nothing is wanting in the description and illustrations to convey a clear idea of the existing character and history of typical forms in all the important stages of their development. The third chapter continues the study of the physical history of the reefs and islands with special reference to the causes of their features. The series of changes from fringing to barrier-reefs and then to the atol is well shown both in the text and figures. Here the author is often led away from the strictly scientific path into giving descriptions of scenery and life on those lonely islands whose world is a little circle of land, with a few dozen plants and animals, and the oceans of air and water.

The distribution of the islands and reefs is the topic next in order, and directly connected with the concluding part of the first chapter. In the fifth, there is little except a catalogue of the living reefs and islands, with some attempt to account for their absence at particular points. We should like to have seen some further discussion of the causes of the general absence of reefs in the East Indian Archipelago, as we cannot think the lack of currents there sufficient for the argument, nor can one unhesitatingly accept the suggestion that the inundations of heated waters from volcanic eruptions might have had a considerable influence in limiting reef development. We do not seem to have got to the bottom of this question of the law of their distribution, and yet this point must be settled before we can begin to think of using living corals as data for conclusions concerning the climatic conditions of ancient seas. It is doubtful, however, whether any degree of accuracy on this point would do much to justify the conclusions concerning the temperature of past times, which many naturalists venture unhesitatingly to draw from the resemblance of the animals of two widely remote periods. Professor Dana, though his statements are made with cautious reserve, apparently concludes that the existence of reef-building Astrean corals in the rocks of the Oolitic era in Europe, as far north as the parallel of 55°, is "strong evidence that the isocryme of 68° Fahr., the coral reef boundary, extended then even to that high latitude." It would be such, we submit, only on the supposition that animals of the same tribes were generally limited to the same conditions of temperature during the stages of their development in the past; but we have very many cases where the same genus has species ranging from the equator to the arctic circle, and in the higher categories of family and order the distribution is often over that range. It was once believed that the Elephas Primigenius of northern regions proved a warm climate in that region during the time of its existence; we now know that it was really better fitted for its arctic conditions by its hairy covering than any existing mammal. It seems more reasonable to suppose a certain variation in the capacity of different species within the same groups to resist heat, which is quite consonant with the known profoundly plastic nature of organic life, rather than to suppose the prodigious physical changes which would be required in order to carry the isocryme of 68° F. to within twelve degrees of the arctic circle.

The sixth chapter discusses the changes of level which have been observed in the Pacific Ocean, and the last the geological conclusions which may be derived from the study of the work done on the coral reefs. Though discussing points which have long been the property of science, these chapters abound in new suggestions of great value to the student of the past history of our earth. Space forbids that we should consider any of the many questions which there invite consideration. Professor Dana's work is characterized by an eminent fairness of tone towards all his fellow-workers in the science. It will be a matter of satisfaction to all American naturalists to find the long and careful researches of Professor Verrill and the admirable contributions of L. F. De Pourtales of the Coast Survey both given their due place in science. Through the researches of these two distinguished naturalists this country has been able to claim the first place in the recent researches into the structure and classification of polyps. The book is well indexed, and there is appended to it a table giving the recent changes in the nomenclature of the species described in the author's report in 1849, which will be exceedingly useful to the naturalist, while it will serve to afford the unscientific reader an idea of the tangle of names which grow up around any natural object that comes into the hands of the species describer. We cannot forego the opportunity to call attention to the fact that Professor Dana is one of the few men of our modern science who have achieved success in many distinct lines. Not only in the case of the polyps, where some of his earliest and best work was done, but among works on the crustacea, on the general relations of animals, on minerals, on general geology, and even on the structure of the moon, his writings are found in the front rank.

Ivan at Home; or, Pictures of Russian Life. By Herbert Barry, author of "Russia in 1870," etc. With numerous original illustrations. (London: The Publishing Company, limited. 1872. 8vo, pp. 322.)—Since the advent of freedom and liberal institutions in Russia, the mystery which used to shroud the Northern Empire is being dispelled, and of late years we have had various books to enlighten us on what is going on in that country. Most of them, however, have been of little use because of their exaggerations, either one way or the other, and because they have expressed rather what the authors thought than what they knew of the state of things in Russia. Mr. Barry, in his previous work, "Russia in 1870," endeavored to relate facts and to describe what was actually taking place, and, as he brought much conscientiousness to the task, he produced a very fair picture. His success led him to a second venture, in which we think he has hardly done himself or his subject justice. "Ivan at Home" takes too superficial a view of the present life in Russia, to understand which aright much knowledge and experience are necessary; but its sketches of life in a Russian manufacturing village, which is a different thing from life in the agricultural districts, are pleasant and interesting.

There is much agreeable talk in the book about the customs and superstitions of the peasantry, their behavior at weddings and funerals, their religious observances and fatalism—a fatalism which Mr. Barry represents as sometimes pushed to an extent otherwise almost incredible. All the officials and institutions of the *ancien régime* come in for a share of the author's blame, and he had as good a chance as any one in Russia to test their character and ways. Perhaps he dwells overmuch on the days that are past, never to return—the burden of nearly every writer on Russia—and has too little to say of existing institutions and their workings. We all know the faults of the old Russian proprietor and the old Russian judge, but we want now to know if the new stock is superior to the old. We fear that there is still much carelessness and shiftlessness in Russia, for a whole class does not change its character in ten years. Bribery and corruption are still prevalent, though not as formerly. No rumor has ever yet tainted the fame of the new judges, but the other officials are much the same. One will be treated politely enough in the public offices, and if he waits patiently his business is sure to be attended to in its order. Small affairs pass easily enough; it is worth no one's while to stop them. But large affairs cannot wait, for business men must nowadays be prompt, and the administrative machine must be greased to make it move faster. It is no longer the chief official who takes the money, but it is his secretary, on whose good-will it depends when the matter shall be presented to the consideration of his chief. Such an official is well described by Mr. Barry on page 181, and the portrait will be easily recognized at St. Petersburg. Corruption, however, is no greater in Russia than in America, and the use and manipulation of "rings" are just being found out; and men of business who have had dealings with every European government will tell you there is very little difference in them, except in the *modus operandi*, England and Germany bearing the palm for honesty.

LEISURE HOUR SERIES.

Published This Day.

FLY LEAVES. A Volume of Verses. By C. S. Calverley. $1 25.

"Often as we read his volume did we burst into that spontaneous solitary laughter, which is the highest of all possible testimonies to a humorist's power. It was aggravating, doubtless, when one's feelings had been stirred by some unmistakably beautiful poetry, by some bright picture of nature or pathetic description, to find, time after time, that one had been cruelly hoaxed; . . . [yet] should we quote one of the pieces complained of, to show how great was the offence, the court would certainly be dissolved in laughter, and the accused would escape."—London Spectator.

"We wish that some of those prolific small poets, against whom we are for ever taking up our parable, would write as good poetry in earnest as Mr. Calverley does in play."—London Athenæum.

"A real poet, with a cross streak of burlesque."—New York Evening Mail.

"Deserves to be read from cover to cover, and the proper place (we may say for once with fitness) is on every drawing-room table."—Chambers's Journal.

FATHERS AND SONS. By Ivan S. Turgenef. $1 25.

"Two or three of his characters would be sufficient stock in trade for the entire professional career of an ordinary novelist."—London Spectator.

"Unites the skill of the surgeon with the vigor of the executioner. . . . Reminds us of some of the best passages in Thackeray, whom, indeed, M. Turgenef strongly resembles."—London Athenæum.

HAY FEVER.

HURD & HOUGHTON, - - - NEW YORK,
THE RIVERSIDE PRESS, - - CAMBRIDGE,

HAVE NOW READY:

AUTUMNAL · CATARRH (HAY FEVER).

BY MORRILL WYMAN, M.D,

Late Hersey Professor Adjunct of the Theory and Practice of Medicine in Harvard University.

With three Maps and Tabular View. In one vol. 8vo, cloth, $2 25.

An account of this disorder, including Rose Cold, giving the symptoms, the causes, the geographic and chorographic relations, and treatment. Dr. Wyman, himself a sufferer from autumnal catarrh, has for a long time been collecting facts regarding it, and experimenting upon localities where one may be free from it. The result is given in a form which will be of practical value to every person similarly affected. Maps accompany the volume containing territorial lines, to indicate the places exempt from the disease.

Copies sent by mail, prepaid, on receipt of price. For sale by all booksellers. A limited number only having been issued, buyers are advised to order the book early.

SCIENTIFIC BOOKS.

Architecture, Carpentry, Building, Astronomy, Navigation, Meteorology, Brewing, Distilling, Wine-Making, Chemistry, Physics, Philosophy, Coal, Coal Oil, Gas, Drawing, Painting, Photography, Electricity, Electric Telegraph, Engineering, Machinery, Mechanics, Geology, Mineralogy, Mining, Metallurgy, Hydraulics, Hydrostatics, Iron, Steel, Life Insurance, Mathematics, Shipbuilding, Works of Reference, etc., etc., etc.

CATALOGUE COVERING ALL ABOVE, WITH INDEX TO AUTHORS,

80 pages 8vo, sent by mail, postpaid, on recept of 10 cents. New editions revised now ready. All Scientists and those persons forming a Scientific Library should have it. Call and examine stock, which is the only complete one in the above line in the United States, and the largest of the kind in the World.

NEW BOOKS

IN PRESS AND PREPARATION.

THE BIRDS OF NORTH AMERICA.

Giving a complete account of the Birds of the whole of North America, North of Mexico, arranged according to the most approved system of modern classification, and with descriptions embodying whatever is necessary to the proper definition of the species. Prepared by PROF. SPENCER F. BAIRD, Assistant Secretary of the Smithsonian Institution, with the co-operation of Dr. T. M. BREWER and Mr. ROBERT RIDGWAY.

The illustrations consist, first, of a series of outlines exhibiting the peculiarities of the wing, tail, bill, and feet of each genus, supplemented by a second series including a full-length figure of one species of each genus. In addition to the above, a series of plates is furnished, containing one or more figures of the head, in most cases of life-size, of every species of North American Birds, including the different sexes and the ages, where these are necessary for the proper illustration of the subject. This will be furnished in two editions—one plain and the other carefully colored by hand. The greatest care has been exercised in drawing these heads, so as to render them perfectly accurate representations of the subject; and it is believed that by their aid a better idea of the species will be gained than from the examination of most of the published full-length colored plates of Birds.

The work is in an advanced stage of progress, and the portion relating to the Land Birds will be published in the course of the coming winter, in three volumes, royal 8vo.

THE RISE OF THE REPUBLIC OF THE UNITED STATES.

By RICHARD FROTHINGHAM.
One Volume, 8vo.

THE HISTORY OF THE SIEGE OF BOSTON. By Richard Frothingham. New Edition. One Volume, 8vo.

VANITY FAIR.

A WEEKLY SHOW OF

POLITICAL, SOCIAL, AND LITERARY WARES.

Containing 12 Pages of Letterpress, with which is given
each week a Chromo-Lithographed Cartoon of
a Living Sovereign, Statesman, or
Man of the Day.

"Political Portraits.—The public has long been familiar with Vanity Fair, and its weekly portraits of eminent men, and has never, we should imagine, been unable to recognize at a glance the original of each portrait."—The Times (London).

"The Vanity Fair caricatures—to call them so—have been of a high order of artistic excellence, and have made the paper in which they appeared more desirable than 'Punch.'"—The Nation.

Published every Saturday, price 6d. Terms of Subscription, post-free, to the United States: One Year, £1 10s. 4d.; Six Months, 15s. 2d.; Three months, 7s. 7d.; payable in advance.

Now Ready,

VANITY FAIR ALBUM FOR 1871.

Containing all the Cartoons (52) published during 1871, with the letterpress notices thereto relating. Price 2 Guineas. The Albums for 1869-70 can also be had, price 2 Guineas each Volume.

SOLD BY

MESSRS. SCRIBNER, WELFORD & CO.,
654 BROADWAY.

Orders sent direct to the Office should be accompanied by a remittance. Checks and Money Orders to be made payable to William Robert Blenkinsop, Vanity Fair Office, 13 Tavistock Street, Covent Garden, London, W.C.

GAZZAM'S TREATISE ON THE BANKRUPT LAW.

FOURTH EDITION NOW IN PRESS.

W. C. LITTLE & CO., Publishers,
Albany, N. Y.

W. J. STILLMAN, LONDON.—AGENT FOR the purchase of Works of Art of all kinds for the American market. Engravings, Illustrated Works, Photographs from nature or the old masters, carefully selected. Terms: for collections, miscellaneous objects, etc., 20 per cent.; pictures, etc., above $100, 15 per cent.; and for commissions for superintending stained glass windows, etc., etc., with Morris & Co. (see the *Nation* o. March 2, 1871, No. 296), or other firms, or for having copies made, 10 per cent., or by special agreement, in cases of large amounts, all charges being based on wholesale prices, which, for many articles, will bring the cost lower than London retail prices.

Refers by permission to Martin Brimmer, Esq., Charles C. Perkins, Esq., Boston; E. L. Godkin, Esq., New York.

Address Mr. W. J. Stillman, No. 8 Altenburg Gardens, Clapham Common, London, S. W., or his agent,

W. P. GARRISON, *Nation* office, New York.
